committed. The Synod recommended the churches to raise the sum of three thousand yen for the use of the Board during the year. Of course, it was not expected that so large a sum could be raised without great effort, but it was thought wise to set the mark high and to seek to accomplish as much as possible. As a matter of fact, the sum actually raised was not quite half the proposed amount. For this apparently signal failure there were, however, two main reasons:—First, the existence of separate Evangelistic Committees in all the presbyteries, except the Tokyo First and Second, toward which local contributions naturally flowed. These local organizations still exist in the Miyagi, Sanyo, and Chintzei Presbyteries—that of the Naniwa Presbytery having recently turned over its work partly to the missions and partly to the General Board. Second, the Executive Committee began the year with a considerable balance of cash in hand, which gradually increased from month to month, owing to the difficulty of getting suitable men for the work. The monthly reports of the Board's treasurer, in the *Fukuin Shimpō*, therefore, showed a large and growing balance on hand all the while. From these reports it was plain that the Board was not in pressing need of contributions, and the Executive Committee had no reason for urging the Churches to greater liberality.

This state of things, however, no longer exists, the Board's outlay now being greater than its income. The Board at present has eight evangelists in its employ; two in Shinshu, two in Ibaraki Ken, two in Tosa, one in Nagoya, and one in Formosa. Four of these have been taken on within the last two or three months, and the sum of about two hundred yen a month will be needed from this time forth in order to keep the work going.

To give the financial report somewhat more in detail:—

Balance on hand July 1st, 1895 215,332
Contributions, to June 30th, 1896 ... 1,469,763
Of this latter sum, yen 872,703 was contributed by Churches and Preaching Places; yen 441,010 by private individuals, schools, mission bands, &c., yen 156.05 by missionaries, the whole number contributing being fifteen.

Then taking the contributions of Churches and Preaching Places by their Presbyteries:—

The Tokyo First Presbytery gave ...	251,230
The Naniwa Presbytery gave	245,894
The Tokyo Second Presbytery gave...	137,774
The Miyagi Presbytery gave	109,700
The Chintzei do do	36,867
The Sanyo do do	3,300

The total of these figures does not quite tally with the amount mentioned above as having been contributed by Churches and Preaching Places, the reason being that the latter amount includes sundry contributions from Sunday Schools, and other sources not directly connected with the Presbyteries.

The total outlay of the Board for the year was yen 1,225,095, which, deducted from yen 1,469,763, leaves a balance of yen 244,668. Adding the balance on hand from the previous year, 215,332, we have yen 460,000 as the amount in hand June 30th, 1896.

In general it may be said that the enterprise is but fairly started. The Church, through the Board is gradually feeling its way toward the best methods of evangelistic work. The Executive Committee has not found the work by any means free from difficulties. One difficulty, already referred to, has been to secure suitable men for employment. Another has been the lack of united effort on the part of the Church as a whole, arising partly from the existence of the Presbyterian Evangelistic Committees, and partly from sectional feeling in certain quarters. Still another difficulty, felt very seriously by the Executive Committee, has been that of getting into good and promising fields of labour without seeming to intrude upon the boundaries of work already being carried on by the missions. The spirit of all the members of the Committee in reference to this matter has been uniformly courteous and conciliatory. If in any case it has seemed otherwise, the reason has lain outside the intention and purpose of the Committee.

If the work of the Board is to succeed it will have to do so in the face of such difficulties as I have mentioned and many others. The enterprise is purely Japanese both in its origin and in its prosecution, having no connection whatever with the missions. As such, it deserves the sympathy and the prayers of all who are interested in the advancement of Christ's Kingdom in this country.

Respectfully submitted, T. T. ALEXANDER.
Hakone, July 17th, 1896.

AUSTRALIA AND JAPAN.

By JOHN PLUMMER, M.J.S.

Sydney, June 3, 1896.

The *Catterthun's* gold has not yet been recovered from the depths of the sea, the weather having been too rough and the currents too strong, to admit of diving operations being carried on with safety, but a few days of mild weather and smooth seas will enable the whole of the treasure to be brought to land. Captain John Hall, of Sydney, who had charge of the salvage operations, speaking to a newspaper reporter, said:—"We had everything in favour at the start after getting hold of the wreck, which we did soon after our arrival from Sydney. One of the divers went down next day and landed on the fore-castle head. It was dark, and after stopping between 14 and 15 minutes he came up. He found that the decks were already sheathed with a coating of shell and marine growth to the depth of nearly 6 in. On the second dive the man landed on the poop of the *Catterthun*, where he attached a line, and the position was buoyed. A third dive was made, and the bridge was come upon, and the chart-room, in the floor of which is the entrance to the gold tank. Sticking to the ceiling of the chart-room was a skeleton, looking down, as it seemed, on the man in search of the gold. After opening up the cover of the tank, the diver was hauled up. It was at that time that the message came through, 'Found tank intact.' A fourth trip was made, but without being able to do more than buoy the position of the tank; and on the fifth trip the diver made everything ready for bursting the lid of the treasure-room open. The depth was ascertained to be exactly 25 fathoms and a foot to the door of the chart-room. A north-east swell then set in, and the current became stronger, which necessitated a suspension of work. After hanging on for a day or two, the steamer had to run for shelter, first into Seal Rocks Bay, and later into Port Stephens. A return was made to the wreck, and a diver went down, but could not reach the vessel, the current carrying him away from it when only 20 fathoms down. This experience being repeated for nearly a week became somewhat monotonous, but the *Sophia Ann* hung to the wreck until the sea was breaking over her funnel; and moorings snapping, she, with the steamer *Mermaid*, headed down to Sydney." It is doubtful whether any attempt will be made to recover the mails, as these are supposed to have become destroyed by the action of the sea-water. The recovery of the gold may lead to various experiments being made with the wreck, in view of the desirability of gaining experience in the working of deep-sea diving appliances. There are generally two difficulties to be overcome by the diver—the heavy pressure of the water and the prevalence of under currents, more or less powerful, which render it almost impossible to move about with safety. With the exception of these two obstacles, there is nothing to prevent diving operations being conducted at a depth greater than at present deemed feasible.

The battle of the Yalu River continues to furnish a subject for comment by Australian no less than by European and American writers, who recognise the importance of the successful manner in which the fire of the Japanese vessels was concentrated upon the Chinese iron-clads. The facts are generally regarded as confirming the views of Lord Kelvin respecting the state of mental, if not physical, incapacity to which the crew of a large iron-clad becomes speedily reduced by reason of the shocks due to the noise of the guns and to the concussion of heavy projectiles on the sides of the ship during an engagement in which quick-firing ordnance is employed. "If it be possible," says the *South Australian Register*, "for a few gunboats, by gathering around one of these leviathans of the deep and sending a hail of shot against her sides, to reduce her crew to a state of 'mental, if not physical, incapacity' in a quarter of an hour, it seems plain that one very strong point will be established in favour of the multiplication of smaller craft as compared with the policy of relying principally upon the immense battleships of from ten to thirteen or fourteen thousand tons' displacement which have for the past few years commanded so much attention. In an actual engagement the crews of the smaller vessels would be subjected to fewer shocks, both from the firing of their own guns and from the impact of projectiles from the enemy, and the juncture at which they had reduced the men on the larger vessels to a condition of prostration would, of course, be their opportunity to get in a torpedo with destructive effect. It is true that a single shot from one of the monster's big guns might settle accounts with any one of the smaller vessels, just as one kick from a horse when pursued by

wolves might lay one of its merciless pursuers in the dust. But as soon as one is down the other comes on, and the larger and more powerful frame of the attacked proves in the end to be no real source of safety. So far as the results of the Japanese-Chinese war may be taken to prove anything, they certainly go to sustain this general contention, because the superior size of three or four of the Chinese men-of-war failed to serve as an effective protection. The high value of a fleet of gunboats in a naval engagement may indeed be taken as having been absolutely demonstrated in that contest."

Mr. Noel Buxton, who lately arrived in South Australia from England, whither he had proceeded from Japan, was, on his arrival in Adelaide, encountered by the inevitable interviewer. Resigning himself to his fate, he spoke at considerable length concerning his impressions of Japan. "I am glad to see," he said, "that the Australian press has so many references to Japan, and I notice by the Japanese papers that the interest is reciprocated there, and that the prospects of trade between the two countries are being actively discussed. It is quite true, as was stated in a recent lecture delivered here by Mr. Alfred Bickford, that the Japanese intend to have a fleet larger than all the European fleets in the Pacific put together, but I can scarcely agree with the lecturer that this should be a reason for Australia adopting an exclusive policy towards them. The day after I left London there was launched on the Thames a first-class Japanese battleship, the *Fuji*, the largest ever launched on that river. I was invited by the Japanese Minister to be present, but I had to leave for Australia the day before the event. They have a twin ship to the *Fuji*—another vessel of 12,000 tons—which was launched a fortnight previously at Newcastle. These vessels are very much of the type which the British Admiralty have decided on for their new battleships under this year's programme. Mr. Bickford seems to think that they are building this big fleet in order to make new conquests, but in my opinion it is simply a reply to Russia, which has within the last year nearly doubled her fleet in the Pacific and has undoubtedly been intriguing to upset Japanese influence in Korea, and has largely succeeded in doing so. I have no doubt that the Japanese embarked in their recent war because they were afraid that Russia would get hold of Korea. Russia was the final objective, not China, and if it had not been for the action of Germany, and France, Japan would have succeeded in her design to stop Russian encroachments in the Pacific for ever. Their intention was to block her by obtaining possession of Port Arthur and part of the Chinese mainland. The interference of Germany was the less expected because in the early stages of the war that country had taken credit to herself for upsetting the proposals of the other Powers for inducing Japan to come to terms. The Japanese are not likely to forget the action of Germany and France. It is rather curious that until the British defended them in the matter of Port Arthur, the Japanese always believed that we were hostile to them. The new Japanese Minister, who arrived in London shortly before the event, consequently got credit for having changed the attitude of the English Government, while the Japanese Minister at Berlin, who had previously enjoyed high regard, became suddenly unpopular, although in both cases the result was due to outside circumstances. I should add, however, that the Japanese Minister to Great Britain is a very able man, and personally I am proud to count him among my friends."

Mr. Buxton entertained a firm conviction that Japan would one day figure as the firm ally of Great Britain in the East. "The Japanese," he said, "believe that their final struggle with Russia is still to come, and I should not be at all surprised to hear of an outbreak of war between the two countries at any time. It seems to me, however, that our best policy would be to bring about a triple agreement between ourselves, Japan, and Russia, by which we would get a port in the Northern Pacific, Russia would obtain some port free of ice for the terminus of the Siberian railway, and Japan would have a free hand in Korea. We are accustomed to think of the war as being over, but as a matter of fact the toughest fighting is now going on in Formosa against the half-bred Chinese who have been in that country for two centuries, and who have proved to be the best soldiers that the Japanese have yet encountered. They never risk a pitched battle, but they have done a great deal of damage by cutting off small parties of Japanese."

Respecting Japanese civilisation, Mr. Buxton said—"I don't think at present it would mix at all with the European civilisation which you have in Australia. It is fundamentally different. It is

founded entirely on the system of subjection to the head of the family, and the ideals of our civilisation appear to the Japanese absolutely immoral. I don't think they will change until the country has become generally Christianised, but undoubtedly Japan will very soon be much more Christian than it has ever been Buddhist or Confucian. Not only are the Christians increasing fast, but Christian ideas are spreading rapidly through the country and finding their way into the Japanese literature and language. At the same time I think their civilisation is for their own needs in many ways greatly superior to ours, and it is perfectly absurd to class them among the 'lower races.' At all events the Japanese have proved themselves the only non-European race sensible enough to see that they must adopt Western methods in order to remain an independent nation."

Mr. J. L. Parsons, in reference to the Anglo-Japan Treaty, states that he has been in communication with the Japanese Premier on the subject of Japanese emigration to Australia, suggesting that His Excellency should, if possible, officially give the necessary information and assurances which would allay the apprehensions of the workers of the colonies and convince Australian members of Parliament and Cabinet Ministers that they had nothing to fear; and that His Excellency had replied to the effect that the matter was under negotiation between the Governments of Japan and Great Britain, and that His Excellency had no doubt that a satisfactory solution would be reached. His Excellency thought the fears entertained by Australians were misplaced, and added that his experience had taught him that apprehensions which were without substantial foundation were the most difficult to allay, a remark which shows Marquis Ito to be a keen observer of men and human character. The *Australian Star*, the organ of the protectionist party in New South Wales, says that there is undoubtedly a good deal of truth, wisdom, craft, and real danger in both the reply and the attitude of Marquis Ito. "In the first place, it is not at all likely that such treaty conditions as would suit England and America would be equally acceptable to Australia. But that is not the crux of the matter, and still less is it that fear of actual personal invasion which foreign-traders in all colonies just now conspire to raise and to advertise in every possible way. The Japanese as a people have no desire to leave their own islands and occupy the continent of Australia. Their position with regard to us is in a superlative and intense degree that which England for so many years successfully maintained toward the producing nations of the old world. They desire to exploit our resources, to win our wealth by purchasing from us raw material, and selling to us and to all other buyers manufactured goods. They appreciate in the most practical way the opportunity which is theirs, and they propose to realise it without stir or undesirable agitation. The bogey which has been set up of effective personal invasion may be extremely useful to occupy the minds of short-sighted demagogues and those hide-bound, truly de-nationalised theorists of an obsolete political economy, who can perceive but one way in which growing Powers may be stultified and practically enslaved. Japan may for awhile assert loudly her people's right to a free entry and full rights of the territories of all friendly Powers; may indeed fan for a while the flame which that assertion will kindle. But at the same time she has a deeper game to play, whose results are of tenfold more importance. While the subject of citizen rights are under discussion the organisations of commerce and the active appliances of industry are at work, and by the time the question of rights of entry and abode is settled, it may be discovered that it really is of small importance. For by that time the manufacture and trade will be won, Japan will have the London, Birmingham, Manchester, and Leeds of the southern world, and Australia the mines, fields, and pastures of the raw materials and the mean, narrow, and serf-like life which naturally appertains thereto." These remarks may be taken as representing very largely the views prevalent among the Australian industrial populations.

LETTER FROM CANADA.

(FROM AN OCCASIONAL CORRESPONDENT.)

Vancouver, B.C., July 14.

The Dominion Elections, which on the 23rd ult. replaced a conservative government, after eighteen years of power by a Liberal majority sufficient to give the new Premier Laurier a firm seat, were an event of no small importance to Canada. What the practical result will be time alone will tell,

but one or two facts of pleasing import are made plain by the election itself.

Sir Charles Tupper, the Conservative Premier, made use of all the advantages of his position, with added promises of public works in every section of the country, thus boldly attempting to bribe constituencies and provinces wholesale. Laurier made no promises other than economical and honest government. Tupper sought to buy the province of Quebec by a compact with the hierarchy which rules French Canada in things spiritual, he to coerce the province of Manitoba in the matter of Separate Schools in return for clerical support which was expected to carry the province; Laurier, French Catholic though he be, repudiates all coercion; promises solution of the school dispute by means of conciliation and on a basis of justice to all parties.

The result is that Canada resents the attempt to rule by bribery, and Quebec by a most surprising majority refuses to be politically ruled by the bishops. This is a genuine revolution in French Canada, which has slowly followed in the wake of public schools, helped by the influence of the more enlightened provinces and the neighboring Republic. It was known that the *Rouges*, who were willing to accept spiritual guidance, but not political dictation from the Roman hierarchy, formed a growing element; but it burst on us as a surprise when they so completely overwhelmed the *Bleus*, who are obedient to Rome in all things.

One of the great problems of the Dominion has been the difficulty in amalgamating the French Roman Catholic province with the rest so that the union should be one in spirit as well as in form, and that friction should not arise on race and religion lines. But the age of mere forbearance seems to be ending sooner than was expected, and a deep Canadian *esprit de corps* has made itself felt. No one is so fitted to complete the good work as Mr. Laurier, a broad-minded Christian gentleman, French and Roman Catholic, thoroughly educated in the school of English liberalism, apparently free from all narrowness of race or creed, surrounded by a cabinet of strong men, Protestant and Catholic, emulating the same spirit, and around whom has gathered an intense enthusiasm, not simply for his political opinions but for his own magnetic personality and high moral principles.

The cry is raised here in British Columbia, "The Mongols must go." An agitation is to be carried on to raise the entrance tax on Chinamen from \$50 to \$500. And in this agitation an attempt is being made to include the Japanese with the Chinese. In this the demagog displays his usual lack of knowledge. Your readers will be interested to note the progress of this movement. It seems to be in the hands of radicals who profess to defend the rights of the working men.

LETTER FROM PHILADELPHIA.

(FROM OUR OWN CORRESPONDENT.)

Philadelphia, July 16.

Things are waxing warm politically. Both the great parties and a number of smaller ones have made their choice of candidates for the Fall election of President. The "campaign" promises to be an unusually interesting one. Both of the candidates, representing the two great parties, are rather above the average morally. They are both Christian men of an earnest faith. The political battle seems likely to be concentrated on the question silver versus gold. In this section, where manufacturing and mining are so much in interest, the silver issue sinks out of sight by the side of the tariff issue. England's prosperity since our own tariff went into effect, and the paralysis of business in this part of the States in the same time have attracted attention. We are hearing not a little about the possibility of Japan's becoming a competitor in manufactures. About every other day our papers have articles on this theme.

Philadelphia was threatened with another great street railway strike a few weeks ago. But the experience of last Christmas, when a most thoroughly organized strike signally failed, deterred our street car men from going into it again. They simply set at naught the order of their leaders, and went right on with their work.

I am just home from the great Christian Endeavour Convention in Washington. Some forty thousand delegates were in attendance. The railroads all granted "round-trip tickets" for the price of the fare one way, and this brought thousands to the country's capital besides the delegates. As Congress had adjourned some weeks previously, there was plenty of room in the hotels. The weather was intensely hot and, occasionally, very stormy; one night one of the gigantic tents was blown down, but it was re-erected a day or two later.

Three great tents were put up on the "White Lot," as it is called, the park in the rear of the White House, the President's residence. Each of these tents would seat comfortably ten thousand people. All the large churches and halls were also requisitioned for service. Notwithstanding the temptations to go sight-seeing they all seemed to be always full of people.

The meetings were full of enthusiasm. Applause was encouraged. Particular attention was paid to two things, in addition to the usual features of such an occasion, "Missions" and "Good Citizenship." Dr. Fredreck J. Stanley and the Rev. Frank S. Dobbins, both formerly of Japan, addressed the Committee on Missions. The United States Congress, by special law, allowed the use of the White Lot, and also permitted assembly on the grounds east of the Capitol. Further, the Secretary of the Navy put at the service of the Christian Endeavour people the U.S. Marine Band, the finest band in the country.

Of all the meetings probably the most impressive was that of Saturday afternoon when nearly fifty thousand people assembled on the spot where the inauguration of the President usually takes place. A choir of 4,700 voices led in the singing accompanied by the Marine Band. Patriotic hymns were sung and patriotic addresses were made.

The Christian Endeavour Army seems to stand particularly for sunshine in daily life, for intense enthusiasm, for a practical application of Christianity to the life of the citizen, for a real, vital Christianity in short. It certainly is a remarkable movement. In fifteen years the membership has grown from nothing to over two millions. Besides this there is a denominational work among the young people, an outgrowth of the movement.

Philadelphia, in common with many a great city, is now paved with sheet asphaltum. Bicycling has marvelously developed. Good "wheels," made of good materials and well put together, are now sold for \$37. Boys and girls, men and women, ride them. The tendency to radical change in the women's costume for bicycling has spent itself, and "bloomers" are rarely seen. The shortened skirt, or the "divided skirt," with an apron front, seems to be the outcome of thought in this direction.

The "wolley" cars, as the electric cars are called, have made living in the country, just beyond the bounds of the great city, a possibility. Consequently not so many people are going away for the summer as in former years. I have no doubt but that the bicycle and the electric car together will work quite a change in the style of living in many directions.

THE REGIMENTAL QUICK-STEP.

Mr. Walter Wood has an interesting article in the July number of the *Pall Mall Magazine* on "The Romance of Regimental Marches," a subject which makes a very entertaining chapter in military folk-lore.

Everyone who has seen a march past after a big review knows that the massed or regimental bands strike up different tunes as the regiments in succession approach the saluting-point. To play the Grenadier Guards past to the tune peculiar to the Royal Marines, or *vice versa*, would be a monstrous and unpardonable anachronism in the eyes of a military man, for each regiment takes a pride in its own particular march. And this is natural when we learn how closely most of these marches are connected with the history of the regiment. There is the West Yorkshire, formerly known as the "Old Fighting Fourteenth" which claims "Ca Ira" as their quick-step. For on May 23rd, 1793, the 14th formed a part of the Allied Forces storming the French camp at Famars and the work was so hot that the British were giving way, while the French bands were playing the revolutionary "Ca Ira" to stimulate the defenders. At a critical moment the colonel of the 14th dashed to the front, ordered the band to strike up the same tune as the French, and shouted to his men, "Come on, lads, and we'll beat them to their own damned tune!" And so they did, and from that day the regiment has stuck to the air which is so closely associated with the bloody scenes of the French Revolution. The familiar "British Grenadiers" is the regimental march not only of the Grenadiers, but also of all the Fusiliers, the Royal Artillery, and the Royal Engineers. The 2nd Lincolnshire go past to the tune of "The Lincolnshire Poacher," the words to which the music has been set being common to more than one county, with the well-known refrain—

Oh, 'tis my delight on a shiny night,
In the season of the year!

The men of the Border Regiment glory in the

FORMOSA.

WE find in the *Nichi Nichi Shimbun* an article that merits attention :— "Two or three foreign newspapers, without investigating the facts of the methods pursued in quelling the Formosan rebellion, have circulated very false statements on the subject. Thus the *Hongkong Telegraph* and the *China Mail* allege that the disturbances at Yun-lin had their origin in the maladministration and cruel conduct of Japanese officials and soldiery, and even go so far as to accuse the Japanese of slaughtering innocent people, abusing women, burning villages, murdering old men and children, and behaving in an utterly pitiless manner. The *London Times*, too, on the strength of information furnished by its Hongkong correspondent, has published similar assertions. But there is no truth in such stories. On receipt of the first intelligence of a renewed outbreak of rebellion, Governor-General Viscount KATSURA at once issued the following instructions to the officer commanding the Second Brigade :—

Although no pardon is to be extended to the insurgents, the greatest precautions must be adopted not to put to death any unoffending and law-abiding persons. Unless this point be kept in view, not only will serious obstacles be placed in the way of the future administration of the island, but the people that are unjustly treated will, in their indignation, side with the insurgents. On the other hand, in view of the fact that great difficulty often exists in distinguishing between rebels and peaceful people, it is evident that if too much restraint be put upon the military, the evil of excessive leniency may result. Thus the greatest care is necessary. Persons that actually offer opposition but do not carry arms, must not be killed, even though they be suspected of being rebels. They must be apprehended, and dealt with after due investigation. In order that the exact truth may be elicited by these investigations, provisional courts of justice shall be established, and to these the prisoners arrested in each locality shall be handed over for judgment.

Such was the policy adopted by Governor-General KATSURA in dealing with the rebels. At the same time, we are unable to be certain that the exigencies of the campaign may not have involved the burning of villages occupied by the rebels. But that anything occurred like the ruthless butchery of several thousands of people, seems to be either an assertion made by persons unacquainted with the facts, or a falsehood emanating from foreigners who, having some ground of discontent, are disposed to slander the Japanese. Above all, no lie could be blacker than the statement that women were abused and graves desecrated. According to our information, some of the foreign residents of Formosa, having either directly or indirectly invested a considerable amount of capital in connection with the production of sugar and camphor, which constitute the island's chief staples of trade, are seeking to excite foreign public opinion about this insurrection with the view of serving large ends of their own. By them the reports in question have been circulated. Moreover, when the island

was under Chinese jurisdiction, the missionaries used to enjoy special privileges, and were in the habit of protecting their converts by standing between them and the local officials, who made little attempt to oppose that state of affairs. Nothing of the kind has been possible, however, since Formosa came under Japanese rule, and the change has been found so unwelcome that the missionaries seem to have allowed themselves to become media for circulating false reports. To sum up, the provisional courts of justice referred to in the Governor-General's order having been actually established, and numbers of judicial officials being now engaged in investigating the cases of persons apprehended as rebels, or on suspicion of being rebels, the public had better not be misled by the misstatements of two or three foreigners."

The points made in the above article are decidedly strong. The Japanese in Formosa are called upon to deal with a state of affairs sufficiently peculiar to puzzle any administrators, and especially perplexing to administrators who, like the Japanese, have to satisfy critics resolved not to be satisfied. Until the recent war between Japan and China, there had been no instance in history of a nation's carrying on a campaign in an arena surrounded by foreign judges, from whose verdict there was no appeal, and who, while applying the highest tests of civilized warfare, were quite careless of the canons of critical justice. If German correspondents say hard things of French troops fighting in Tonquin; if American correspondents pen strong indictments of British military proceedings in Eastern Africa; if British correspondents denounce the action of Russian Generals in Central Asia, the world receives all these charges with due caution, and prefaces every decision by the comment that kid gloves cannot be worn in warfare. But whenever a rumour is bruited abroad to the discredit of the Japanese, it is implicitly believed by the foreign press in the East, and is accepted as conclusive proof that they have not yet emerged from a state of savagery. For our own part, we do not by any means suppose that the conduct of the Japanese in Formosa has been blameless. We do not think that the Japanese Ministers themselves suppose it. When, at the outset of the recent insurrection, the civil officials applied to the military garrisons to clear the bandits from certain localities, there appears to be very little question that some innocent persons suffered with the guilty. Discrimination is said to have been immensely difficult, and we can easily believe the statement when we remember that the uniform habit of many disaffected Formosans was to elude detection by disguising themselves as peaceful subjects, artisans, farmers, or what not. We can readily believe, too, that women suffered

indignity. Never yet did a campaign escape taint of that nature, though it must be admitted by every impartial person that nothing of the kind was openly charged against Japanese troops either in Korea, Manchuria, or Shantung. As to these things, however, final judgment must be reserved. But what we can see at once is that although Formosa has become a part of Japan's dominions, its affairs can not be administered like those of the Japanese empire in general. Under Chinese rule the foreign residents acquired vested interests amounting almost to prescriptive rights, and developed methods which, though not reconcilable with Treaty stipulations, are essential for preserving the monopoly that these foreigners have acquired over the principal staples of production, camphor, sugar, and tea. Japan's early attempt to bring the trade of the island within the purview of Treaty provisions, or, at any rate to introduce a system of orderly control, at once aroused the alarm and opposition of these foreigners. That was natural, whatever its propriety, and although the Japanese have evidently suffered the *status quo* to be, in great part, re-established, the apprehensions created by their opening essay have not wholly subsided, and there are undoubtedly many foreigners who would gladly see them driven out of Formosa. Connected with the missionaries, also, there is another element of difficulty. It is well known that Christian converts in China enjoy special immunity from the extortion and interference of officialdom, and that, not without practical justification, they look to the missionaries for protection. Significantly enough, nothing of the kind takes place in Japan, but in China it is proverbial. Now competent authorities allege that numbers of the Formosan brigands are Christian converts, and that they became converts solely for the sake of the immunity they hoped to enjoy under the missionary ægis. In the eyes of the missionary, who honestly credits the sincerity of every brand plucked from the burning, the execution of a convert on an accusation of brigandage is the slaughter of an innocent man. No elaboration of this point is needed to indicate a very prolific source of misconception. In short, the Japanese have very peculiar conditions to deal with in Formosa, and it is satisfactory to know that the new Governor-General, Viscount KATSURA, thoroughly appreciates the situation and approaches it in a most liberal and conciliatory spirit. We have the best assurance that His Excellency intends to treat the problem not by any means from the stand-point of Japanese administration as practised in Japan proper, but with the fullest consideration for the state of affairs that actually exists and for the interests that have gradually grown up under Chinese rule. Viscount KATSURA spent many years in Europe

and America. He is essentially a genial, large-minded man. It was he that commanded the Second Brigade in the Korean campaign and throughout the celebrated march from the Yalu to Haicheng, and the tact and courtesy shown by him in his relations with the Chinese in Manchuria as well as with foreigners in Newchwang, of which town he acted for some time as civil governor, are doubtless remembered by our readers. He is probably the best administrator that could be chosen for Formosa, and the mere fact of his appointment should go far to restore confidence.

WHAT AMERICA HAS SPENT UPON THE DOSHISHA.

OF late we have been frequently asked how much the American Board Mission and its friends have spent upon the Doshisha. Not being in possession of statistics to answer the question, we applied to a responsible quarter, and have been placed in possession of the following figures:—

From the American Board Mission; subsidies to the College.	\$40,000
Building and Apparatus	46,500
Grants, &c., to the Girls' School	14,000
	\$100,500
Given by friends of the Board but not technically by the Board	33,000
The Harris Fund	100,000
Total	(gold) \$233,500

Of the Harris Fund, only \$75,000 has been actually paid over to the Trustees of the Doshisha, namely, \$25,000 for building purposes, and \$50,000 for investment in Japanese five-per-cent. registered bonds, the interest on which is devoted to the support of the Harris School of Science. The remaining \$25,000 is invested in the United States, and is, more or less, under the control of the Prudential Committee of the American Board. Moreover, this statement does not include the salaries of the foreign teachers, whose services have been given without cost to the Doshisha for twenty-one years. Neither does it include considerable sums contributed to the Hospital and Nurses School, the records of which are not immediately within our reach. To the grand aggregate must also be added the houses of the American Board's missionaries outside the Treaty Ports, which will eventually pass into the hands of the Doshisha Trustees, the income arising from them thus becoming available for the uses of the institution. Suppose that the salaries of teachers have cost the Board ten thousand *yen* annually—an estimate certainly below the mark—we get on that account a total of 210,000 *yen*, so that, converting into silver the gold dollars tabulated above, and taking into consideration the cost of building the Missionaries' houses, we shall not be guilty of any overstatement when we say that the American Board Mission and its friends have devoted three quarters of a million *yen* to

make the Doshisha what it is. That figure well deserves a moment's attention. The Doshisha has been a great factor in the educational life of the nation. Indeed, for those capable of imagining that Providence specially intervenes in the affairs of special men or special races, there can not be much difficulty in believing that such intervention was exercised in Japan's case. The penalty paid by this country for suddenly breaking away from its old traditions was that the foundations of filial respect were overthrown. It was hard for a son to venerate a father ignorant of everything that goes to make a man intellectually venerable, and as for obeying the ancient precept that to tread within three feet of a teacher's shadow was disrespectful, how could a student be expected to observe it when the shadow-casting instructors had no mental capacity that reached beyond the shaping of an ideograph or a recitation from the Analects, whereas he himself had dipped into HERBERT SPENCER and quarternious? Few outsiders have any conception of the dimensions of the difficulty that the educational problem presented on that account to Japanese statesmen in the opening years of the *Meiji* era, and few, perhaps, perceive that the want of discipline apparently still existing in Japanese schools, the tendency on the student's part to dictate to their teachers, is another result of the same cause. Into this breach the missionaries stepped, founding institutions like the Doshisha, and offering to the youth of Japan a new canon of ethics to replace the philosophy discarded simultaneously with the old civilization. It is scarcely possible to over-estimate the timeliness and value of the assistance thus rendered, and when we recall the story as we have seen it told by events during twenty-nine years, it seems inexpressibly sad that a splendid work such as the American Board Mission has done for Japan should end, not in a chorus of lasting gratitude but in misunderstandings and recriminations.

POINTS OF GRAMMAR.

THERE are two points, grammatical or syntactical, whichever one pleases to call them, concerning which a moment's reflection will not be uninteresting. The first relates to the use of the word "ending," in such phrases as "the week ending September 10th;" "the period ending with the death of JAMES THE SECOND," and so forth. It is the custom with the vast majority of writers, and has been the custom for an indefinitely long time, so far as we know, to use only the present participle, "ending," in cases of that kind. Why the limit? Why should not "ended" be used also? By employing both forms we obtain logical methods of expression. Thus, "the period ended with the death of JAMES THE SECOND" would at once con-

vey, even to a person totally unacquainted with English history, the fact that reference was made to a past era; and "the week ending September 10th" would signify a week the last day of which, at any rate, was still in the future. We have not, for our own part, the smallest doubt that the tyranny of usage in this matter will one day yield to the dictates of reason and common sense. It is impossible to amplify the phrases we have adduced without discovering the error of a common form for each. So soon as we begin to talk of "the week that ends on such and such a day," or "the period that ended with such and such an event," we perceive that a present participle can not be considered an appropriate abbreviation in each case. Advocates of the stereotyped form will doubtless maintain that, in the examples under consideration, "ending" is not a present participle, but a participial adjective; that it conveys no idea of time, and serves merely to imply conclusion. But it is impossible, we think, to eliminate the idea of time from such a word. We may use "sounding," "rushing," "confusing," and cognate qualifiers without any reference to time, because the fundamental attribute suggested has no relation of finality. But the inevitable conception embodied in the word "ending" is one of time, and when we apply the present participle to periods that have passed as well as to periods still uncompleted, we seem to do distinct violence to logic.

The second point is another literary conventionalism, namely, "as follows." People write, "the result of the experiments was as follows," and "the names of the contributors are as follows," completely indifferent whether the subject of the verb "follows" be singular or plural. Why should these forms be exempted from the hard-and-fast test invariably applied by grammarians in all other cases for determining the proper number of a verb? Let us apply that test by asking "what follows?" and the answer in the first example is "the result of the experiment;" in the second, "the names of the contributors." Obviously the form is false. We can not possibly say "the names of the contributors follows," yet we are supposed to be perfectly grammatical when we say "the names of the contributors are as follows." Defenders of the usage contend that the subject of the verb "follows" is, not the persons or things predicated, but the portion of the page containing the detail of these persons or things. According to their view the phrase is elliptical, and if expanded, would read:—"The names of the contributors are as in the table that follows," "or," "are according to the statement that follows." But if that be the true explanation, if, in short, the form "as follows" be nothing more than a convenient abbreviation, why employ an abbreviation shockingly ungrammatical,

period the light along the whole horizon appeared to take a peculiar tint, while the shadows cast by walls, houses, trees, or fences were intensely black and sharply defined.

Telegrams received on Sunday afternoon in Tokyo announce that the British Eclipse Expedition was a failure: the weather was cloudy throughout. The other expeditions were not more fortunate.

THE "SPECTATOR" ON FIRKET.

The *Spectator's* comments on the first great success of the Egyptian troops over the Dervishes are well worth reading, though they betray the usual fault of that prettily written journal, over-subtle analysis:—

There has been no such triumph for the British Occupation. Nobody really doubted that British officials, once allowed a controlling power, would set the finances of Egypt straight, would remodel the police, would reduce the judicial system to something like order and efficiency, would terminate the extralegal oppressions of the Pashas and Sheikhs, and would make the collection of revenue a regular process instead of a series of legalised raids upon the peasantry. Those reforms followed inevitably upon the fact of occupation by men responsible to the British people, and free from even the wish to plunder for themselves. But it was doubted whether even British energy could build up a native Egyptian Army. The officers, it was said, might make good regiments of the blacks, who passed their lives in fighting, but you cannot carve upon rotten wood, and the fellahen, born in the mud of a tropical delta and enslaved for ages, had lost, if they ever possessed, the Arab courage, and could no more be drilled into fighting men than Bengalees or the Indians of Peru. Egyptian troops would be perfect regiments for parade, being the most obedient and orderly of mankind, but would be useless in the field. Those who held this opinion were able to justify it, for they could quote the astounding cowardice of General Hicks's army, in which whole regiments, moved, we fancy, as much by superstition as by fear, threw down their arms, fell on their faces before the Dervishes, and begged as fellow-Muslims for their lives. The British officers, however, worked on, they gained hope from the behaviour of their men in some petty skirmishes, and at last their young chief, General Kitchener, trusted the fellahen frankly in the field. Egyptians, who had been well fed, well treated, and thoroughly disciplined, responded to the call; they not only did not fly, but they charged as well as the Soudanese, "who are born fighters," and the last doubt as to their efficiency in actual hand-to-hand fighting disappeared. Good treatment and steady discipline had in the course of years restored their confidence in themselves and in their officers, and they showed themselves the equals of men who for generations have despised them as "lame Arabs." That is, as we have said, a triumph for British organization, with its persistence, its lenity, and its almost automatic justice, and it is a triumph, too, for British honesty of purpose. It is not our interest to make good soldiers of the fellahen, for the instant conclusion of the Continent will be that if the Egyptians can defend themselves the main arguments for the British occupation of Egypt disappear. It was not our business, however, to consider that danger, but to show that in the creation of a native Army British administration was, as a Governor-General of Java once described it, "the most vivifying despotism the world has ever seen," and the work, which has taken fourteen years, was carried on patiently and steadily until the very nature of the conscripts seemed changed, and Arabs of the Delta charged victoriously upon the most renowned fighters among the Arabs of the Desert. The born children of Misr, where for two thousand years no man has been free, disciplined and led by British officers, scattered the descendants of the Shepherd Kings in a charge. That, and not the victory itself, is the thing for Englishmen to be proud of, for no one who reads of it, not the most satirical stroller of the Parisian boulevards, can afterwards say, at least if he knows anything of history, that the British occupation has debased Egyptians.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

RAILWAY MISMANAGEMENT.

TO THE EDITOR OF THE "JAPAN MAIL,"

SIR,—The letter of complaint addressed to you by Dr. Eldridge, and published in your paper of the 29th ultimo, having been brought to my notice, I have made careful enquiry into the circumstances. The blame for the luggage having been left behind does not appear to be altogether on the

side of the officials, for I am assured that it was first brought to the luggage-office by some *jinrikisha-men*, about 15 minutes before the train was due away, who did not know how many passengers would accompany it, nor the class they would travel, and in fact could give no information whatever about it. As is well-known, the regulations require the presentation of the passenger's ticket preparatory to the booking and checking of luggage. It was not until a minute or two before the advertised time of departure of the train, that the servant produced tickets at the luggage-office. The interval was then too short to admit of the packages being weighed, labelled, checked, and loaded, without seriously delaying the train, and this the Station-master dare not do, for fear of missing the Nippon Tetsudo Kaisha's connecting train for Nikko, &c., at Shinagawa. Had the passengers' tickets been presented at the luggage-office at the time the luggage was first deposited there, or within ten minutes of the advertised departure of the train, it would, without fail, have gone forward with the passengers.

The Station-master and the official in charge of the luggage office deny that there was the least intentional rude or discourteous treatment. They aver that they pointed out in a civil manner the difficulty there was, under the circumstances, of despatching the luggage, and that it would be forwarded by the very next train; a receipt being given for the articles, and permission for the payment of the excess weight of luggage at destination, contrary to usual practice. One article containing provisions was indeed got away by the train at the urgent request of the passengers, and this, together with the unusually heavy quantity of passengers' luggage handled for the train, delayed its departure seven minutes.

The authorities are fully aware that in operating a large Railway System such as this, occasions will now and again arise for complaint against the conduct of their employes. The courtesy and kindness of travellers, however, in bringing the circumstances direct to the notice of the management is always duly appreciated, for only by those means can irregularities be promptly seen to and notice taken of the offending officials, and repetition guarded against.

I am, Sir, your obedient servant,

MITSUGU SENGOKU,
Traffic Manager.

Imperial Government Railways,
Traffic Department,
Tokyo, August 10th, 1896.

SOME LESSONS FROM THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Recent editorials and communications in the *Japan Mail*, with regard to the relations between the "American Board" and the Trustees of the Doshisha, and the present views and purposes of the Trustees, are from many standpoints interesting. They have been received, no doubt, with various feelings by different readers. Perhaps a majority of those who care for such matters are, on the whole, perplexed and saddened.

To an onlooker, it certainly appears that when word-fencing and technicalities are set aside, and a simple-hearted view of the situation is taken, the Americans who have contributed so liberally in money and in labour to the Doshisha, and but for whose efforts the institutions now controlled by the Trustees would not have existed, have been badly used. "Profound respect," "gratitude," "loyalty," etc., are very cheap—on paper, at least. But, as President Kozaki well observes (in another connection), "The only means to remove this misunderstanding is the actual conduct and practical management of the institution." One would certainly think that "gratitude," "profound respect," etc., would, if genuine, render the persons holding such sentiments manifestly desirous to please those toward whom they were so grateful; and that, where "profound respect" was mingled with gratitude, this desire could be freely indulged, without loss of dignity, by asking and following the advice of the profoundly respected party, even though this might involve some sacrifice of personal opinions. But perhaps those kinds of gratitude and respect that may lead to some degree of actual self-effacement, are not what the President and Trustees have in mind when they use such expressions.

There is, however, another side to all this. If, on the part of those who have legal control of the Doshisha property, there is, to speak plainly, a seeming lack both of sincerity and of modesty, and a self-assertiveness that is, in the circumstances, at least not chivalrous—a morbid mood, that, in the present case, as always, blinds its victims to those delicate points of honour that are beyond the range of bargains and documents—the

question still remains, what has led to this unhappy state of affairs?

Without stopping over the vague and trite subjects of human fallibility and racial and "psychological" differences, it may be well to enquire if there is anything in the past policy or methods of the American Board and its employes, that will account somewhat for their present misfortune. For it is important to remember that the disagreements here considered are not between Japanese Christians and American Christians, as such, but between Congregationalists in Japan and Congregationalists in America. Other missionary bodies in this country, some with considerable property, have gotten on, for the most part, quietly and amicably with the Japanese brethren who have held this property for them.

Now, strangely enough, it is notorious that of all the denominations having missions in Japan, none has made such conspicuous efforts to appear conciliatory to human sentiments in general and Japanese sentiments in particular, as this very Congregational body. Other missionaries may have been personally kind, in various ways. They may have been quietly tolerant, or even sympathetic, toward manifestations of national spirit on the part of their adherents. They may have discreetly avoided seeming to antagonize liberty of thought; and they may have endeavoured to arrange with the help of trusted Japanese friends, so to administer their schools, &c., as not to wound needlessly the sensibilities of Japanese people, or show any disrespect to Japanese laws. Such, to a greater or less extent, has been the course followed in all the Protestant missions. But the Congregationalists have entirely outdone them all on these lines. They have preached, or otherwise taught, "patriotism" almost as prominently as though it were a part of Christ's teaching. They have exalted independence of thought as though that were a cardinal virtue in the New Testament morality. They have held up education as though it were almost coördinate in importance with belief in Christ. They have, in general, endeavoured to appear as champions of nineteenth-century inquiry, progress, and enlightenment—of course claiming these as the offspring of Christianity—rather than as simple evangelists of a God-given and complete message of reconciliation between God and man.

Every one having a fairly wide acquaintance among missionaries in this country will recognize the general and substantial correctness of the foregoing statements. Missionaries of a conservative turn have been heard to lament, in private, the influence of the "Kumi-Ai" on their people; while even those who rather sympathize with these methods of propagandism than disapprove of them, yet admit the conspicuousness of the Congregational missionaries in the use of them.

Of course consistency requires action in accordance with teaching. If a man's nationality and his patriotic sentiments are worthy, from the Christian teacher's standpoint, of particular attempts to honour and conserve them, race distinction—"the colour-line"—is at once drawn. The foreigner thinks he must "show his faith" by appearing to efface himself as much as possible, just because he is a foreigner, regardless of other considerations. If independent thought is, for the Christian, *per se* a good thing, then no uttered thought, made with any show of good intention or respectability, is a proper subject for "rebuke," "reproof," or even for "exhortation." If education is of supreme importance, then when its interests appear to college-trustees to diverge materially from the interests of aggressive preaching of Christian truth, they may easily enough think it right to act as the Doshisha trustees have acted. And so on.

It seems, then, that the Doshisha Trustees have merely learned a little too well, and put in practice a little too completely, principles that they have been taught. True, somewhat more of graciousness and of generosity, somewhat more of a nice sense of obligation, than they have shown, might have been expected of servants of the Lord Jesus Christ; indeed, one would think these ought to have been caught by personal contact with the many amiable and honourable Americans who have worked for the Doshisha. Whatever discredit may lie here belongs solely to those who have shown themselves lacking in these regards. Nevertheless it is, on the whole, evident, at least to an outsider, that the A.B.C.F.M. are now simply reaping what they have sown.

The above conclusion seems pretty obvious, and may be of value to some missionaries. If so, a brief examination of the moral aspects of the matter will be still more useful.

The ideas about mentioned as being made, in various ways, very prominent in the teaching of this particular body of missionaries—namely, patriotism, independence of thought, education, and progress in general—are recognized by civiliza-

ed men everywhere as corresponding to things good and important. To the Japanese temperament they appeal with, perhaps, extraordinary force.

It is, however, a noteworthy fact that *nothing that can fairly be construed as a commendation of a signle one of them*—in the sense in which a man of the world would understand it—is to be found either in the Gospels or in the Epistles. Orderly, respectful subjection to civil authority is enjoined (1 Pet., ii, 13; Rom. xiii, 1; Titus, iii, 1, &c.), but nothing is said of patriotism, properly so-called. Indeed, the Christian being viewed as saved out of a world (John xvii, 16) fast going on to judgment (Acts, xvii, 31), a pilgrim and stranger (1 Pet., ii, 11) whose affections (Col. iii, 1, 2) and even "citizenship" (Philips. iii, 20, R. V.) are in heaven with Christ, any special provision for earthly patriotism would seem quite out of place. As to race-distinctions *within the Church*, they are expressly disavowed (Colos. iii, 11). The injunction "Prove all things," etc. (1 Thess., v, 21) is addressed to persons belonging body, soul, and spirit, to the Lord, and hence in a position to be guided by the Holy Spirit; and in fact, it closely follows the warning, "Quench not the Spirit, despise not prophesyings"; so it can hardly be taken as teaching what is generally understood by independence of thought. Indeed, how foreign to the Apostle's thoughts are present-day notions on this subject, may be gathered from 2 Cor., x, 5; "Casting down imaginations and every high thing that exalteth itself against the knowledge of God, and bringing into captivity every thought to the obedience of Christ". The word "education" does not occur; but "philosophy" is repeatedly spoken of, and most certainly *not* with commendation. And it would seem that worldly "progress" could scarcely enter very largely into the calculations of persons living according to Titus ii, 12, 13: "... Denying ungodliness and worldly lusts, we should live soberly, righteously, and godly in this present world; looking for that blessed hope, and the glorious appearing of the great God and our Saviour Jesus Christ".

If, then, such stressing of these "smooth things" is without any definite warrant in the only writings that are universally recognized as authoritative sources of Christian doctrine; if, indeed, some of the things in question are hard to reconcile with plain New Testament teaching; why have they been so paraded by a body of Christian missionaries? The answer is obvious: The thing has been done with a view to gaining attention, and winning favour and sympathy; and that, too, not without a certain kind of success, as is shown by the large dimensions of the Congregationalist work in Japan. Yet, *cui bono?* Who is pleased now, either with what exists, or with what may be reasonably looked for, in view of the facts now made public? It is not hard to see that mere flatteries have, after all, been taken at their true value, and so of course they are not paid for in the sound coin of honest fraternal affection.

It really appears, then, that these unlucky American friends have taken too much pains, on the whole, to be pleasing and politic, and not enough to stick to their professed business of teaching those things taught by Christ and His Apostles. Sad experience has now demonstrated to some of them (it may be hoped) that there is an error somewhere in the plan of trying for influence first, and—perhaps—especially in case they should ever get satisfied themselves as to what truth is—preaching the truth afterwards. The sum-total of the results of that policy does not seem very happy. Let it be understood that there is here no accusation whatever of deliberate, conscious trickery. But it is plain that sentiment and speculation have been too much mistaken for the Gospel of Christ, and flattery for Christian charity.

The moral effect of such a course must of necessity have been bad. Seeking for men's praise, for influence, when the Master's approval and the Master's glory alone are supposed to be the object before one, is a practice, alas! more easy to fall into, more easy to point out in others, and more easy to imitate, than it is at all times to challenge, condemn, and avoid. Here again there appears to have been teaching—surely not deliberate nor by precept—and but too ready learning, in the Doshisha institutions; only it happens that the teachers, not being any longer the most commanding audience, are not the ones now played to by the pupils.

These reflections, respectfully commended to Christian people, may well close with a quotation from the great Apostle to the Gentiles, and another from the words of the Son of God Himself: "Do I now seek to satisfy men or God? or do I seek to please them? for if I yet pleased men, I should not be the servant of Christ." (Galatians, i, 10.)

"How can ye believe, which receive honour one

of another, and seek not the honour that cometh from God only?" (John, v, 44.)

Enclosing my name, and thanking you for the space granted,

I am, Sir, yours very faithfully,

X.

DYSENTERY AT KARUIZAWA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The telegram from Karuizawa to the *Nichiichi Shimbun* and on which you have a paragraph in your issue of the 10th inst., announcing that an epidemic of dysentery, of a bad type, had made its appearance in this place, and that over 70 persons had already succumbed, is without foundation.

As the paragraph referred to is causing considerable anxiety to people who have friends staying here, I have thought it wise to send you this contradiction of the rumour.

I am, yours faithfully,

W. JNO. WHITE.

West End, Karuizawa, Shinshu,
August 12th, 1896.

THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since you have made mention of our separation from the Doshisha, perhaps you will kindly allow me to make a very brief statement of our position.

Last April, the Trustees voted not to receive aid from the American Board either in men or money after the end of this year, which they afterwards explained as meaning, not that they wished us to leave the school, but that they wished to form new relations with us. Thus the question was forced upon us whether we, missionaries of the American Board, could enter into new relations with an institution which declined to receive help from that Board; and also whether, even if that difficulty could be explained away, it was best for us to continue teaching in that school. Whatever may have been the case when the Doshisha was founded, the Japanese Government now makes such full provision for education (at least for young men) that there seems to be no occasion for missionaries to spend their time in teaching for purely intellectual ends. As one of the graduates of the Doshisha said to me only yesterday, that school has no reason of existence unless it differs from the Government schools. Formerly it seemed to us that it did differ from the Government schools in not only imparting thorough intellectual education but also building up a nobler character, in making stronger and better men. Ex-graduates have gained an enviable name far and wide in Japan by their moral earnestness and strength of character. The foundation of this, we believe, was the living faith in Christ as a motive-power to high purpose and right living which characterized its founder and the most of its teachers. No attempt was ever made to force this upon the students; attendance at all strictly religious services was voluntary; but it was the prevailing tone or spirit of the school; and thus the school, not as an agent of propagating a sect, but as a nursery of noble character and true patriotism, seemed to us worthy of our co-operation.

That the tone or spirit of the school is different now is undisputed, and is testified to by students and teachers. Two of the leading trustees recently admitted it to me, and asked our further co-operation only on the ground that the condition of the school will be reformed in the course of two or three years. Perhaps they are right in their anticipation; we certainly shall be very glad if they are; but we do not see such indications at present as to give us much encouragement, and it seems to us that as missionaries we can spend our time more profitably in other ways than in teaching there. If any one asks why we do not remain in the school and help improve it, the answer is that as foreigners we have very little, or no, influence in the management of the school, and it seems to us that we have power to do very little good there at present.

We, however, have no controversy with the school and no desire to antagonize it. It is simply that it seems to us best not to accept the invitation of the Trustees to enter into the proposed new relations.

I am, Sir, yours, etc.,

DWIGHT W. LEARNED.

Kyoto, Aug. 11th, 1896.

AN OPEN LETTER.

TO MITSUGU SENGOKU, Esq.,

Traffic Manager, Imperial Government Railway.

SIR,—The report, published in yesterday's *Mail*, of the result of your careful, though entirely *ex parte*, inquiry into the circumstances upon which I based a complaint of mismanagement and discourtesy against certain railway employes at the Yokohama station, as it consists entirely of a denial of the facts, and, consequently, implies misstatement on my part, compels some notice from me. Pardon me if, in replying, I am, to secure clearness, forced to reiterate a portion of my former letter.

You say that my baggage was brought to the luggage office by jinrikisha men only, but some fifteen minutes before the time for departure of the train.

My packages arrived at the station not less than forty-five minutes before the leaving of the train for which they were intended, and were, at once, taken to the luggage counter by my boy, who, then and there, gave all needful information and, unsuccessfully, endeavoured to have the baggage weighed, and to pay for the excess over the allowance for the number of tickets required.

More than this; my family reached the station before the ticket window was opened, their tickets were the first purchased, and my daughter, with my servant, immediately proceeded to the luggage office where every effort was made to secure the necessary attention, again without success. From the bores in charge of this department the ladies appealed to the station-master, still failing to receive the service to which they were entitled, the station-master vying in rudeness with his inferiors.

I do not know what, in the code of ethics governing the relations of railway officials to the travelling public in Japan, may be considered as rude and impertinent conduct or language; but, in any other country with which I am acquainted, the lie, unprovokedly and repeatedly given, and by more than one employe, would I think, warrant the accusation of insolence which I have made, and still make, against your subordinates.

If any package of mine, whatever, other than those carried in their own hands, was sent by the train in which my family left Yokohama, it was entirely without their knowledge, and without the granting of any special receipt or check for the same. That the sending of this package, if it was sent, was, in any degree, responsible for the undoubted delay in the departure of the train, permit me to question, especially in view of a semi-apologetic message received from the station master, after my boy had succeeded in arousing his suspicion that I would not tamely submit to outrage, to the effect that the whole trouble was caused by the fact that H.E. Count Yamagata and suite travelled by the train concerned, which, if true, would better have served you as an excuse for the delay of seven minutes than can my one little package.

As to the baggage as a whole, I gladly admit that it did arrive at its destination twenty-four hours late, and that it was duly, and courteously, delivered upon the presentation of the receipt which had been, with the utmost difficulty, extorted from the Yokohama baggage-master.

Every statement I have made in this, and my former, letter is susceptible of proof, which, Sir, had it been asked for, would have been at your disposal during your investigation of my complaint.

Finally, and with regret, to the charge of carelessness, insolence, and neglect of duty which I make against your employes, I must add that of conscious, deliberate, and detailed falsehood.

I am, Sir, very truly yours,

STUART ELDRIDGE.

Yokohama, August 13th, 1896.

THE CHURCH OF CHRIST IN JAPAN

REPORT OF THE BOARD OF HOME MISSIONS OF THE CHURCH OF CHRIST IN JAPAN, FOR THE YEAR ENDING JUNE 30TH, 1896.

This Board has recently completed the second year of its existence as an independent body. At the meeting of the General Synod in Nagoya, a little more than a year ago, the number of members was increased from ten to twenty, and a thoroughly representative body elected. The newly elected Board met before the adjournment of the Synod and organized for the work of the year. In addition to the usual officers, an Executive Committee was appointed, consisting of five members residing in Tokyo and Yokohama, into whose hands the general management of the work was

strains of the old Cumberland hunting song. "Do ye ken, John Peel?" "The Pibroch of Donuil Dhu" is the marching tune of the Cameron Highlanders:—

Pibroch of Donuil Dhu,
Pibroch of Donuil.

The 1st battalion Argyll and Sutherland Highlanders swing by to the tune of "The Campbells are Coming," the Sherwood Foresters to "The Young May Moon," and the Connaught Rangers to the rattling air of "St. Patrick's Day." For the cavalry, "Bonnie Dundee," which is the cantering tune of the 15th Hussars, makes an admirable accompaniment to the beat of the hoo's and the jingle of the accoutrements.

LATEST TELEGRAMS.

REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, August 10.

The Irish Land Bill has passed through Committee of the House of Lords.

The action between Colonel Plumer's column and the Matabeles, in which five impis were routed, lasted for seven hours.

London, August 12.

At a reception held by the London Chamber of Commerce in honour of Li Hung-chang, the latter promised that he would do his utmost to make the remotest corner of China accessible by railways.

("SPECIAL" TELEGRAMS TO THE "JAPAN MAIL.")

Hakodate, August 9.

It is cloudy and rainy weather here, with thunder, and there appears but little prospect of its clearing up to-day.

Hakodate, August 10.

No observations were obtained at Akkeshi on account of fog and clouds. It ceased raining and cleared up here at 1 p.m., and the progress of the eclipse was clearly seen.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, August 7.

The Government have been twice defeated in the House of Lords by a majority of fifty votes in Committee of the House on the Irish Land Bill. It is believed they will be compelled to shelve the measure in order to avert a conflict between the Lords and Commons.

The situation in Crete is daily growing more acute.

London, August 8.

The acquittal of Major Lothaire on the charge of murdering Mr. Stokes, a British trader, has been confirmed on appeal by the court at Brussels. The English newspapers comment bitterly on the decision.

Colonel Plumer's column has routed five Matabele impis. The British loss was Major Kershaw and four others killed, with fifteen, mostly officers, wounded.

Exchange on London at Paris 25.16
Exchange on London at New York 4.89½
(Tel. Trans.)

London, August 11.

Intense heat prevails in New York. One hundred and twenty deaths from sunstroke have been recorded within the past five days.

H.E. Li Hung-chang has been entertained at a banquet at the Crystal Palace by two hundred and fifty of the leading Chinese merchants, the Manager of the Hongkong and Shanghai Bank presiding. Replying to the toast of his health, Li Hung-chang spoke of the services rendered to China by the Bank.

(FROM THE "N.C. DAILY NEWS.")

London, Aug. 6.

Gloucestershire playing Sussex at Bristol made a total of five hundred and fifty-one runs in the first innings; of which Dr. W. G. Grace made three hundred and one.

The Australians have beaten Warwickshire by an innings and sixty runs.

London, August 7.

H.E. Li Hung-chang has received the Grand Cross of the Victorian Order.

(FROM THE BANGKOK PAPERS.)

London, July 17.

Senator Guichard, who was elected Chairman of the Suez Canal Co. in 1893 in succession to M. Ferdinand de Lesseps, is dead.

London, July 19.

The Cubans have defeated a Spanish column with heavy loss, capturing the General.

London, August 3.

An excursion train has collided with an express train near Atlantic City, and fifty persons have been killed and many injured.

H.E. Li Hung-chang has arrived in London. His reception was of the simplest nature.

Earl Delawar's Eleven has beaten the Australians by four wickets.

It appears to be settled that T.I.M. the Czar and Czarina will visit Paris in September.

(FROM TONKIN PAPERS.)

Paris, July 21.

The British steamer *Sierra Parima*, from Mauritius to Rangoon, has been totally lost on the Maldives.

Paris, July 25.

The Budget Committee has adopted the budget for the Colonies with some reductions, notably, one of 500,000 francs for the troops in Indo-China.

(FROM THE JAPANESE PAPERS.)

Gifu, Aug. 8.

Yen 3,000 has been given by Their Imperial Majesties to the relief fund.

Nemuro, Aug. 9.

From the 6th inst. up till last night fine weather prevailed, but this morning heavy rain suddenly set in, accompanied by thunder. The storm still continues, rendering observations of the eclipse entirely out of the question. Much sympathy is felt with the foreign astronomers who came so far and have had their journey for naught.

Kobe, August 9.

A heavy thunder-storm raged here last night. Lightning struck the Electric Light Company's buildings and did some damage. The sky is cloudy to-day.

Osaka, August 9.

The weather being cloudy observations of the eclipse were not effected to the satisfaction of the astronomical observers.

Aitugishi, Hokkaido, 2.59 p.m.

Owing to the thick fog (or mist) nothing was seen of the eclipse.

4.50 p.m.

At Aitugishi the eclipse could not be seen on account of the heavy clouds that obscured the sky the whole day.

Prof. Kikuchi Dairoku, Prof. Ashino, and six naval officers were present.

Kyoto, August 9.

Marquis Marshal Yamagata has arrived at the Nanjen Temple.

Soul, Aug. 8.

Li Ji-u, who is said to have behind him the powerful backing of many high officials, has petitioned not only that the King return to the palace, but that he should drive away the foreign troops, and remove all foreign merchants from Soul, and arrest and punish the enemies of the late Queen. The document is much biased against Japan.

Kyoto Aug 13.

Viscount Nomura, accompanied by his son, arrived here at 3 p.m. yesterday. He called on Marquis Marshal Yamagata for a few hours, and left for Inomichi (Bingo) this morning.

Moji, August 12.

The steamer *Fukuoka Maru* when making the entrance to this port collided with a British steamer. The Japanese steamer sustained serious damage, and began to fill.

Nagano, Aug. 13.

The village people of Fujisato-mura, who were opposed to the selection of a certain site for the school and village office, set fire to the school building and village office, and destroyed them.

Fukui, Aug. 13.

Governor Arakawa has started for Tokyo to ask assistance of the State from the Reserve towards relief works.

Tokushima, Aug. 13

A feeble earthquake was felt here at 4.40 p.m. yesterday.

Bakan, Aug. 13.

The O. & O. steamer *Gaelic* is giving assistance in the rescue of the *Beino* (?) (*Venice*). The passengers are safe.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday-season; it will reopen on Friday, the 2nd of Oct.

28—K to Kt 3
29—K to R 3
30—Resigns.

(a) Up to the present the game has proceeded on well-known lines. In a measure White was forced to do something heroic, as Black threatened to demolish White's centre, but the course adopted by White shows great boldness and daring.
(b) Black could not reply with R takes R, for then White's bold sacrifice would at once have yielded a paying return by 15—Q takes P ch., K to B 4, 16—Q to R 5 ch., winning a piece.
(c) Apparently best, as Black threatens P to K 4 with a double attack.
(d) This does not look very good, but it would not be easy to suggest a good defence. If K to K 2 18—Kt to K 4, Q takes P with an interesting position. Black could likewise have made some room for his king and queen by playing P to K 4, which he could follow up with K to K 4, &c.
(e) Played with remarkable dash and daring, such as one seldom sees in tournament games. But of course it was neck or nothing for White.
(f) This reminds one of alproblematique coup de roi. It is brilliant, but it hath its weakness.
(g) White escapes punishment through this move. Black ought to have played P to K 4, which move would destroy White's attack.
(h) Black has hardly anything better, as mate was again threatened by Kt to Kt 6 ch. If Black took queen.
(i) The game is rich in strong situations. He could not play R takes Kt on account of Q to Q 8 mate.

49—B to K 5
50—Q to Kt 5
51—K to R sq.
52—R takes Q
53—Resigns.

(a) This is considered a weak defence to White's third move, as it enables White to adopt (as he does in the present game) the Ruy Lopez attack with advantage. Mr. Lowenthal, in the *American Chess Monthly* (1860 p. 255), gives an exhaustive analysis of the various defences here, and shows that Kt to K B 3 is best. That analysis in a condensed form will be found in the "Games of the Chess Congress," p. 131.
(b) Converting the opening into a Ruy Lopez. 4—P to Q Kt 4 may be played, but it is inferior.
(c) A weak defence. White acquires a decisively superior game.
(d) If 43..... B takes P 44—Kt takes B P, &c.

GAME No. 547.

The following game was played in the tournament for the Championship of the City of London Chess Club. The honour was deservedly carried off by Mr. Lawrence:—

FRENCH DEFENCE.

WHITE. T. F. Lawrence.
1—P to K 4
2—P to Q 4
3—Kt to Q 2
4—P to K 5
5—B to Q 3

8—P to B 3
9—K B P takes P
10—K Kt takes Kt
11—P to Kt 3
12—Kt takes P
13—Kt takes B ch.
14—P to Kt 4
15—P takes Kt
16—K to Q 2
17—R to R 2
18—Q to Q 3
19—P to K 4
20—K to B 3
21—B to K 3
22—P to K 5
23—Q to K 4
24—Q to Q 3
25—Q to Q 2
26—P to Q 5
27—P takes P
28—K to Kt 4
29—K to Kt 5
30—Resigns.

This form of the opening, 3—Kt to Q 2, is the invention of Dr. Tarrasch, the idea underlying the move being to be able to support the Q P with the Q B P in answer to Black's P to Q B 4.

Steinitz played the same variation against Schiffrers in the recent match, and continued 5—P to K B 4; but not having been successful with it, as the game below shows, Mr. Lawrence did not follow him any further, and played 5—B to Q 3. The variation, of course, has two sides—the reverse being that White has to give up the centre; but he gets a good attack. Black's attempt to break the centre with 8..... P to B 3 was probably premature. It is clear that he could not afterwards capture the isolated K P (because of 12—Q to R 5 ch., Kt to B 2; 13—B takes P followed by Kt to Kt 6), he played, therefore 11..... P to Kt 3, and captured the K P afterwards. It is an interesting point whether the pawn could be taken with safety. In the way Black played it, he came out with the inferior position; therefore, nothing remains but instead of 13..... Kt takes B ch. to try at once 13..... P to Kt 4, and even if he were to give up eventually the pawn ahead the position would not be inferior to White's.

Mr. Lawrence's attack is very spirited, but Mr. Jones could have emerged without harm had he played as suggested. As it happened he had to give up the piece ingeniously sacrificed by his opponent, his only chance afterwards being to play for a draw with Bishops of different colour with 19..... B to Q 2, and if 20—B takes P to develop R to K B sq., &c.

19..... P to K 4 is a mistake, and he might as well have resigned at once.

GAME No. 548.

The following is the game alluded to in the review of the above game:—

FRENCH DEFENCE.

WHITE. W. Steinitz.
1—P to K 4
2—P to Q 4
3—Kt to Q 2
4—P to K 5
5—P to K B 4
6—P to B 3

BLACK. E. Schiffrers.
1—P to K 3
2—P to Q 4
3—Kt to B 3
4—K Kt to Q 2
5—P to Q B 4
6—Kt to Q B 3

7—K Kt to B 3
8—P takes P
9—Kt to Kt 3
10—P to Q R 4
11—K to B 2
12—B to K 3
13—R to B sq.
14—B to Q 3
15—P takes P
16—Kt to B 5
17—R takes B
18—P to Q Kt 3
19—B to Kt sq.
20—B to Q 2
21—B to K 3
22—P to R 3
23—P to Kt 4
24—K to Kt 2
25—R to B 7
26—Q to Q B sq.
27—Q to B 5
28—R takes R
29—R takes Kt
30—R takes B
31—R to K sq.
32—R takes R P
33—P to Kt 4
34—B to B 2
35—R to R 7
36—R takes P
7—P takes P
8—Q to Kt 3
9—P to Q R 4
10—B to Kt 5 ch.
11—P to B 3
12—Castles
13—Q to Q sq.
14—Kt to Kt 3
15—Q takes P
16—B takes Kt
17—Kt to Kt 5
18—B to Q 2
19—B to R sq.
20—B to R 4
21—Kt to B sq.
22—Kt to Q 3
23—B to Kt 3
24—Kt to K 5
25—Q R to B sq.
26—Kt to Q 3
27—Kt to R 3
28—Kt takes Q
29—B takes B
30—Q to Kt 3
31—Q to Q 6
32—P to K Kt 4
33—P takes P
34—B to K 5
35—R to B sq.
36—Kt takes B
Resigns.

Steinitz plays 5—P to K B 4, instead of B to Q 3, as Mr. Lawrence in the above game; but he gets the inferior position by being compelled, in order to defend the weak Q P, to displace 9—Kt to Kt 3, and to further weaken the Queen's side with 10—P to Q R 4, to prevent Black's P to R 5.

He gives another chance to Black with 15—P takes P, bringing Black's Queen into play, and Schiffrers could have taken better advantage of his opportunities with 16..... Kt to Q 2. He feared, however, an unsound sacrifice, viz., 17—Kt takes P, Q takes Kt; 18—Kt to Kt 5, Q to R 3; 19—B takes P ch., Kt to R sq., with a fine game, followed up by Kt to B 3.

Steinitz again could have played better with 21—B takes Kt, B takes B; 22—P takes B (best), P takes B, and although Black would get an attack on White's exposed King, it is doubtful whether it would be sufficient to win.

Steinitz tried afterwards to dislodge the B at R 4 with 22—P to R 3, whilst he could have done it better with 22—R to Kt sq. and P to Kt 4.

Finally Schiffrers could have forced exchanges of Rook and Queen with 22..... Q to Q sq., but as (through 22..... Kt to Q 3) Steinitz was induced to fall into a trap, whereby he lost the exchange, there is nothing to be said against Black's Knight's move. After the loss of the exchange White's game is over.

AMERICAN NEWS.

A crisis has been reached in the affairs of the Brooklyn Chess Club, brought about by the propensity of one of its directors, Dr. Broughton, to air his views as to what the club ought or ought not to do in the public press. Mr. Marceau, the president of the club, went so far as to state that he would tender his resignation unless the obnoxious director were expelled, and Pillsbury expressed himself in a similar strain. A ballot was taken, which resulted in favour of Broughton's retention. Upon the vote being announced all the members who had voted for the expulsion formally severed their connection with the Brooklyn Chess Club and expressed their intention to form a new organization. Twenty-eight members of the old club—which include Marceau, Duval, Helms, Elwell, Pillsbury, Showalter, Hodges, Barry, Burrill and Hymes—will form the nucleus of the new organization.

Steinitz accompanied by his adopted daughter, Miss Hedwig, left for Europe a week ago, Pillsbury and Showalter are also on their way to the Nuremberg battle ground, and all are expected to reach their destination by the 20th inst.

The following names appear on the official list of entries for the Nuremberg tournament:—
America—Steinitz, Pillsbury and Showalter.
England—Lasker, Blackburne, Bird, Teichmann, Mason and Burn.

France—Janowski.
Germany—Tarrasch, Lipke, Bardeleben and Walbrodt.

Austria—Weiss, Maroczy, Marco and Schlechter.

Russia—Tschigorin and Schiffrers.

Below is a list of the previous great tournaments, with names of first-prize winners:—

Resigns.

NOTES BY GUNSBURG.

(a) This move betrays White's intention to castle on the queen's side. This is always a very risky expedient in the French defence, especially at this stage.
(b) An excellent move, which at once gives Black an advantage, from which, curiously enough, White could not protect himself.
(c) This seems no better than 11—P to R 4, which Black could follow up with P to B 5; 12—P to Q R 4.
(d) This move turns out badly; K Kt to Q 4 would deserve preference.
(e) Excellent play.
(f) Q R to B sq., perhaps, should have been played, but the objection to the move was Kt to K 5; 14—B takes Kt, P to B 4; 15—Kt to Q 4, B takes Kt; 16—P takes B, P to R 3; 17—B to R 4, P to Kt 4.
(g) Black continues to play with very good judgment. This move threatens B to Kt 5, etc. It is absolutely necessary, therefore, that White in some way should make room for his queen.
(h) Q takes R was preferable. But Black would still have a good continuation at his disposal by B to Kt 5.
(i) White has got into a singularly unfortunate position. P to K B 3 is impossible on account of Q takes R P. Even 18—K to K sq. will not answer, for after B takes Kt Black threatens either Q to Q 7 or P to Kt 4.
(j) To prevent mate by B takes Kt ch. followed by Q to K B 3 mate. But of course White's game was hopelessly lost for some time; whatever he does makes no difference.

H. E. Laver, the chief mate of the steamer *Wuhu*, was charged at Hongkong last week with assaulting a Chinese boatswain and was bound over on his own recognisances of five cents to keep the peace for one day. The mate explained that while the wind was blowing hard, he ordered the complainant to stand by the anchors, as they were on the point of departing to a place of safety. The boatswain replied that it was none of his business. The mate was so annoyed at the boatswain's refusal that he "let him have it in the eye."

Local stocks continue unchanged as per last quotations.

Yokohama, August 10th.

We gather the following from our Hongkong Agent's Circular of the 1st instant:—The net profits of the H. & W. Dock Co., after paying all charges, &c., amounting to \$569,073.12 (against \$402,713.90 for the preceding half-year), to which has to be added the balance of undivided profits on the 31st December last, viz. \$54,474.30, which gives a total of \$623,547.42 (against \$487,974.30 for the second half year of 1895) will be distributed as follows:—

\$7,500 towards payment of Auditors and Directors' Fees, the payment of a dividend at the rate of 8 per cent, and a bonus of 4 per cent. to shareholders, (making \$187,500), a bonus of \$20,000 to contributing shareholders, writing off \$51,578.29 from property account, placing 2 lacs to Reserve (increasing that fund to 4 lacs) and carrying forward the balance of \$156,969.13 to a new account. This is a record half-year.

An extraordinary meeting of H. G. Brown & Co. is called for the 17th inst., when a proposal for the winding up of the Company will be brought forward.

The liquidation of the Hongkong Dairy Farm Co., having been proposed at a meeting held on the 6th ultimo, a confirmatory meeting took place on the 28th ultimo, by which the old Company was to be wound up and a new company formed with a capital of \$75,000, shareholders getting one new share of \$7.50 for every old share, \$5 being deemed called-up, with a liability of \$2.50 per share.

A small lot of Japan Breweries is wanted at \$225, whilst Grand Hotels are for sale at \$170. Other local stocks remain unchanged.

Yokohama, August 13th.

Indo-Chinas have been purchased from Hongkong at \$52.50 and Boyd & Co. from Shanghai at present market rate. Grand Hotels have been sold to-day at \$170. Iron Works are offering at \$105. Brett & Co. Debentures are wanted at \$104, and a small lot of Japan Brewery shares at \$225.

Beauty and Purity Found in Cuticura

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
taries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
MR. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1891, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas-
and the demand became so great that I was obliged to lock up
the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout
World.
May 21st, 1896

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to
contain all the cream of the original milk.
In the process of manufacture nothing but
water is removed, nothing but the best
refined sugar added.

Avoid low-priced brands from which the
cream has been abstracted, and ask for
the "Milkmaid" Brand, the best for all
purposes.

June 14th, 1895.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 22ND, 1896.

BIRTH.

At 7, Mount Adon Park, Dulwich, London, S.E., on 9th July, the wife of WILLIAM HOGGAN of a daughter.

DEATH.

At Karuizawa, on the 17th instant, CORA AUGUSTA, wife of Professor Garrett Droppers.

SUMMARY OF NEWS.

FIVE hundred new telephones will be installed in Tokyo next month.

It is announced, though not officially, that Korea has refused to grant Japanese contractors

the privilege of building a railway from Sôul to Fusan.

THE death is announced of Sir J. E. Millais President of the Royal Academy.

THE Bank of Japan has declared a dividend of 13 per cent. for the past half-year.

A NUMBER of Greek Volunteers, with artillery, have landed near Candia, in Crete.

RUMOURS of coming changes in the Cabinet have been very persistent these last few days.

MR. EDWIN DUN, U.S. Minister to Japan, returned from a visit to the States on Monday.

DR. NANSSEN has returned to Norway, having reached four degrees nearer the North Pole than any explorer.

THE baseball match on Saturday was won by the home team, Yokohama making 12 runs to the *Yorktown's* 11.

THE Department of Justice has applied for funds to enable it to start 90 additional branch courts next year.

THE Russian press unanimously accuses Great Britain of fomenting the disturbances in Crete in order to divert the attention of Europe.

A VERY destructive fire broke out in the Shinjuku District of Tokyo on Wednesday morning, and two wards were utterly wiped out.

SAN DIEGO is making a strong effort to become the terminal port on the Pacific slope of America for one of the Japanese lines of steamers.

AT present twenty-two trains per day run between Yokohama and Shimbashi, but from September 1st they will be increased to 24.

THE men of the German gunboat *Ilis* went down to their watery grave singing a patriotic hymn, having first cheered for the Kaiser Wilhelm.

T.I.M. the Emperor and Empress have graciously contributed toward the relief fund of Ishikawa Ken yen 1,200; and yen 1,000 to Toyama Ken.

DURING the week the Y.C. & A.C. have easily defeated, at cricket, teams from H.M.S. *Grafton* and the P. & O. steamers *Formosa* and *Bombay*.

THE fall in silver is ascribed to American dealers unloading large stocks because they have abandoned all hope of Mr. Bryan's success in the Presidential campaign.

THE head-mastership of the Cavalry Riding School, rendered vacant through the death of Colonel Hirasu, was given on the 15th inst. to Lieut.-Colonel Akiyama.

THE Emperor William's yacht *Meteor*, whilst racing off Southsea, collided with the yacht *Isolde*, smashing the mainmast of the latter and killing her owner, Baron Gedwitz.

THE *Sayonara*, with a liberal time allowance, has won the "Nandeska Cup;" *Mary* won the "Kingdon Prize." Her average speed on Saturday was 6.3 knots.

THE storm of Tuesday broke over Lake Biwa with terrific force and many villages upon its shores were inundated, the waves, in some cases, rising over the roofs of houses.

H.E. LI HUNG-CHANG had a long farewell audience with the Marquis of Salisbury on August 14th, at which the question of the tariff in China was discussed the whole time.

COUNT AND COUNTESS MUTSU returned from Hawaii on Monday morning. The Count had

recovered considerably, but since his return a slight relapse has been experienced.

HEAVY rain storms during the week damaged the Tokaido railway and blew down the telegraph wires connecting Tokyo with the South, but communications were partially restored by Friday.

THE candidates for the approaching examination of high class officials total 220; 76 are graduates of the Imperial University, others are officials now in the Government service, and others students in the Imperial University.

MR. C. E. SCHWEYER, a native of New York, who had been in Japan about eight months, and was on the staff of the *Japan Advertiser*, died in Yokohama on Thursday from the effects of sun-stroke, received during the base-ball match on Saturday.

THE Kencho steam launch and the Quarantine launch getting into each others way on Monday morning, drifted on to the stern of the P. M. steamer *China*. When the *China* went astern the Kencho launch was sunk, and the other vessel lost her smoke-stack.

H.E. LI HUNG-CHANG, speaking at a banquet held at the Hotel Métropole, London, said that the difficulties between England and China were the result of a misunderstanding, but that England had been fair, and China had gained her confidence and respect. His Excellency hoped that his visit would remove some of the obstacles to complete harmony, and stated that peace was China's dominant desire.

THE Queen's Speech at the prorogation of the British Parliament states that portions of Turkey, especially the island of Crete, continue to give cause for great anxiety. While maintaining neutrality, the British Government had endeavoured to effect a reconciliation, conjointly with the Powers, by proposing to establish in Crete a system of Government which would be acceptable to Christians and Mussulmans alike.

THERE is not much alteration in the Import trade. More business has been done in Yarns—chiefly "gassed 2-folds"—but the fall in exchange and the rise in raw cotton in the States have hardened prices, which are likely to be higher before they are lower. Shirts are also on the upward grade, though a great amount of business is not passing at present. Fancy Cottons are generally quiet, Turkey Reds being the only line in much request. Though there are buyers in the Metal market, the trade is generally dull, the offers made for "spot" lots being actually less than home values. There has not been much done in Kerosene—it has been a hand-to-mouth business for some time—and buyers, in view of probable higher values, are rather uneasy, as there is next to no stock in the interior. In the Sugar market there has been a fair amount of trade at about late rates. In the Silk market, as exchange quotations declined daily, owners of Silk raised their prices till they reached a point at which business was impossible. In view of the facts that there are 12,000 piculs on this market now as against 6,000 piculs at same date last year, and that Italian and Chinese holders of Silk are current, the attitude of the Japanese silkmen is inexplicable. Vernacular papers talk glibly about matters being straightened out after the Presidential election in the States is over, but this has yet to be proved. Nothing doing in Waste Silk, many holders refusing to sell. There is more life in the Tea trade, and fairly large parcels of leaf have been moved during the week at full rates. Exchange fell daily till yesterday, when a fractional reaction took place. Rates, however, are not steady at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

This week the vernacular Press has recovered from the dullness of the two previous weeks. It owes its animation chiefly to the rumour that Counts Okuma and Matsukata are likely to enter the Ministry, as well as to the unexpected return of some foreign Representatives from their summer resorts, and the arrival from Formosa of the exciting intelligence that certain Japanese officers have been told off for trial by Court-martial. Thus, not a few articles are to be found strongly breathing national and party spirit, and using excited language. To some of these writings allusion has already been made in our columns, and of the remainder none are worthy of special notice. We pass, therefore, to calmer topics.

The *Fiji*, remaining sedate as ever in the midst of political excitement, has devoted itself to problems of social reform, publishing a series of essays upon meetings and *réunions* as had by Japanese gentlemen in restaurants and eating-houses. According to our contemporary, the chief features of such meetings, whatever the prime object, are eating and drinking to excess, and, what is worse, the presence of a number of *geisha*, whom the Tokyo Journal justly declares to be girls of most questionable character. Our contemporary recommends its countrymen to remodel their social *réunions* on foreign lines, and for their guidance in so doing it offers lengthy details. Unless we (*Japan Mail*) are much mistaken, the evil customs condemned by the *Fiji* are fast going out of fashion, but the articles here referred to will doubtless accelerate the reform.

The *Miyako Shimbun* has a leading article headed, "An Organization characterized by Inactivity," the gist of which is as follows:—"Nothing has yet been done in the administration of Formosa but what causes us keen regret. The principal troubles appear to be two, namely, first that the Formosan administrative organization is too complex, inactivity and lack of initiative or energy being inevitable in such an unwieldy body; and secondly, that, only unintelligent work can be expected from the officials now in the new territory, for they have no competence to settle anything conclusively, being required, in many cases, to obtain the approval of the Colonization Department in Tokyo, and they look upon themselves as merely temporary residents. The chain of responsibility will be understood from the following:—

His Majesty	Colonial Minister	Governor	Chief of Administrative Bureau
	War Minister	General	Chief of Military Bureau
	War Minister—Governor-General	Garrison	

With such a complicated organization no officials can be expected to show themselves capable of active or energetic work. It need not be wondered at that the rising of the insurgents was not foreseen and prevented. In a new territory simplicity of governing organization is an indispensable requisite. Did not Formosa become the most civilized portion of the huge Empire of China, when it was left to the sole administration of Liu? Japan, as a constitutional monarchy, cannot of course establish a dictatorship in any part of her territory. But the present organization in Formosa is too strictly faithful to constitutional principles. The old and much abused rule of the *Kaitakushi* (Colonization Department) in Hokkaido, seems excellent in comparison with the present administration of Formosa. So long as the Colonization Department in Tokyo exercises ultimate controlling power over them, Formosan officials have to refer to, or visit, the Metropolis too frequently, the result being needless and harmful procrastination in the performance of their functions. At the earliest possible date the Governor-General's Office should be made entirely independent, and the officials of the administration should be instructed to take their families to the new territory."

The *Kokumin's* short political remarks are of some interest. Statesmen of Satsuma extraction

have brought forward a proposal for the formation of a cabinet of political celebrities (*Genku Naikaku*). The idea has been warmly endorsed by public opinion, for what the Satsuma statesmen really mean is, not the assembly of all the chief *Meiji* statesmen for the purpose of conducting State Affairs, but merely the restoration of portfolios to the strong and able hands of Counts Okuma and Matsukata. The Kago-shima statesmen are earnestly seeking to enlist in the service of the State ability, energy, knowledge, patience, courage; in a word, true worth. They do not desire to hang out over the Departments of State mere gilded sign-boards. Counts Itagaki and Okuma both have party connections. If one is to be preferred to the other, it must be for the sake of considerations relating to their intellect and competence. The successful management of financial and military affairs must be founded upon a sound foreign policy. Without that, in other words, without an able Foreign Minister, financial matters cannot be properly adjusted. A coalition between the Progressionists and the Satsuma statesmen would signify Japan's glory; the union of Marquis Ito and the Liberals spells Japan's disgrace. Thus are drawn two broad lines of demarcation in Japanese politics. In the political struggle of the moment, the champions are General Takashima and Baron Ito. Which will win? The application for the Seoul-Fusan Railway is reported to have been formally refused by the Korean Government. If that be true, it sheds a lurid light upon the diplomatic methods of Marquis Ito's Cabinet. Our contemporary indulges in many other pithy comments of the above nature, all conceived with the object of enhancing the reputation of its political hero, the "Sage of Waseda."

The *Mainichi* devotes a leader to Formosa. The first topic it discusses is the cable between Formosa and Amoy. According to the *Kai-shin-to* organ, the cable still remains without an owner. It belongs neither to China nor to Japan. The question of its ownership was not settled in the negotiations between Count Kabayama and the Chinese Plenipotentiary, Lord Li. The Government ought to take the matter into early consideration, and have the cable formally acknowledged to be Japanese property. In its present ownerless condition, who is to repair it in the event of damage? A Government unable to settle such a simple question after such a long interval, must be decidedly inept and feeble. Our contemporary then speaks of opium:—"Intelligence received from Formosa says that the tax upon opium has been raised considerably by the Japanese Government, but that lately the price of the drug has fallen and the number of its consumers have proportionally increased. This singular phenomenon is easily accounted for by the fact that much opium is smuggled into the new territory by Chinese sailors and others. How incompetent must be an Administration that cannot check such irregularities! The Tokyo Journal next refers to the language used by a Government Delegate in the last session of the Diet in a speech upon the opium problem, and tries to pile up a large heap of discredit at the door of the Administration. It further urges the Authorities to change most of the officials at present employed in Formosa for abler and more trustworthy men—a not uncommon criticism."

The *Nichi Nichi* has a long article entitled "The Law of Tobacco Monopoly in actual Operation." Our contemporary states that the most important point in connection with the Monopoly is to educate fully qualified appraisers of tobacco leaves. About a thousand appraisers appear to be required. Such a number, the Tokyo journals fears, it would be impossible to obtain at the time, when the law relating to the monopoly first goes into force. On the other hand, if the appraisers be unequal to their duty, the industry of tobacco culture will gradually decline, to the disadvantage not only of those that engage in it, but also of the Government which is to have the monopoly of their produce. The authorities should take speedy

steps to have a number of persons employed at once in the capacity of appraisers, and to organise means of training them so that they shall be fully qualified for the work to which they are destined. Failing that precaution, the monopoly may prove ruinous to tobacco-growers and unprofitable to the State.

Since the War, industrial enterprises have sprung up everywhere in Japan, but nowhere so numerous and on so large a scale as in Osaka. The people of that city are sometimes called the Jews of Japan, on account of their eagerness in the pursuit of money-getting. But that eagerness, in the case of the Osaka people, is not without elements of purity and nobility. The Osaka folk use their money just as enlightened Europeans use theirs. The thriving condition of Osaka to-day is a noble outgrowth of its citizens' civilised love of money. Its industrial development is indeed marvellous, but it now begins to suffer severely from an inevitable feature of manufacturing activity, scarcity of labour. The *Osaka Asahi*, from which we quote, has much to say on this topic, but its comments offer no novelty; they are interesting chiefly because the cry for more labour constitutes an index of Osaka's manufacturing growth, and confirms the predictions often uttered that Japan's new civilization would soon bring her face to face with the problem so familiar in the West. One point, however, in the *Asahi's* writing deserves special notice. It is the very low moral standard said to exist among the male and female labourers there. The *Asahi* calls the attention of employers to this problem, and urges them to deal with it promptly.

The *Nippon*, as our readers know, is the boldest and most outspoken of all the Tokyo journals. But, as it professes to be, and perhaps is to some extent, independent of all political parties, its writings are not usually venomous, however harsh and bitter they may be. The following extract from one of its leading articles is characteristic:—"We entertain no respect for the so-called 'Meritorious statesmen' (*Genkun*). It makes us feel tired to hear of a *Genkun* Cabinet. Therefore we attach little importance to the rumoured entry of Counts Okuma and Matsukata into the Ministry, and are by no means as excited as some publicists seem to be about the matter. But among the *Genkun* of the era, Marquis Ito and Counts Okuma and Matsukata must be considered the best and most capable. Hence, did they form a triumvirate, it were permissible to hope that their Cabinet would prove better than the present one. Simply for that reason we should be pleased if the rumour about the Counts received practical verification. But our ultimate wish is to eliminate all the *Genkun* from the Government."

The *Kokumin* has a paragraph, running as follows:—"Frederick III. used to call the Great Chancellor Bismarck, 'Bismarck,' as if the latter were an intimate friend. That such close relations existed between the Sovereign and the statesmen of Prussia was one of the causes contributing to the immense successes achieved by that Power. Imperial virtue does not improve by exalted isolation. The Minister of the Household Department should consider it a duty to occasionally represent to his Imperial Majesty the desirability of receiving in audience such persons as Counts Okuma and Goto, Princes Konoye and Nijo, Viscount Tani and Mr. Fukuzawa."

Another paragraph in the same philo-Progressionist organ is this:—"The arrest of pro-Japanese Koreans is owing to the inflamed anti-Nippon spirit prevailing in Korea. Anti-Nippon! anti-Nippon! anti-Nippon! Who are they that have caused such bad feeling to grow up? Are they the Russians? Well, the Russians may have done something. But far nearer to us are the persons chiefly responsible."

The *Mainichi Shimbun* has a leading article headed, "Bank Deposits." We shall make a

brief synopsis of the article, not because it contains anything very new, interesting, or useful, but because such essays are rarely found in our contemporary's columns, so much absorbed is it by purely political themes. The banks of Tokyo have very small deposits as compared with similar institutions in London. The London and County Bank is said to have deposits nineteen times as great as its capital, and even the Bank of England, whose deposits are notoriously small, holds a sum six times as great as its capital. In our country the Tochu National Bank stands highest in this respect, but its deposit account rises no higher than eleven times its capital. The Mitsubishi and the Mitsui Banks hold only five and four times, respectively. The deposits in the Noble's Bank aggregate only thirty per cent. of its capital. The comparison, so much in favour of England, must be due to the relative poverty of the Japanese, and to the fact that the habit of saving has not taken such a hold upon them as on the English people. Wealth and the habit of saving do not grow like mushrooms. For some time to come Japanese banks, if they desire to widen the sphere of their business, will have to resort chiefly to the device of increasing their capital.

EDITORIAL NOTES.

THE HEAT IN ENGLAND.

It must have been pretty warm in London during the last week in June, if there is anything in the recent fooling of "Dagonet" in the *Referer* on the subject of hot weather. Mr. Sims would hardly do for Yokohama or Shanghai. Here is his method for escaping the heat of the day:—

Some day when Humanity ceases to be hysterical, and becomes a well-ordered and well-directed sentiment, there will be a Society for the support of respectable people who don't want to work in hot weather, and the efforts of the Society will in time arouse the Legislature to the iniquity of compelling people to work in hot weather. Then we shall have an Act of which the short title will be "The Summer Holidays Act," and under its benevolent provisions we shall all be able to sit about in flannels, and smoke, and read, and drink iced drinks, or live in house-boats on the river, or go to Ascot, or loiter about at Lord's without losing our salaries or our wages. For the work that is an absolute necessity let the employers import negroes. On such days as we have had to endure during the week that has just fizzled itself out ought to be a criminal offence to compel a white man to exert himself. "Absurd!" you say. "What is the thermometer to the capitalist and the employer of labour?" Very well, then; let us meet the difficulty half-way. During the height of summer, when to move is to break into a profuse perspiration, and to exert oneself is to run the risk of heat apoplexy, let the business hours be between one and eight o'clock in the morning, and let the blazing day be given up, as common sense suggests, to sleep and laziness. It would be to the advantage of all concerned. The shopkeepers, the restaurant keepers, the proprietors of theatres and music-halls, the omnibus companies and the cabmen would all do better business with London astrir in the coolness of night than with London panting and paralysed in the heat of the day. The shops could open about nine and the theatres and music-halls at ten. We are suffering now from a spell of heat which is quite equal to that which sends the people of surrounding lands home to their siesta from mid-day to late afternoon. In those countries there is a proverb that during the heat of the day only Englishmen and dogs are to be seen in the streets. If we are to have the heat of those countries we must adopt their customs. At any rate Humanity demands that we shall not compel Englishmen and Englishwomen to labour under atmospheric conditions which render that labour physical torture.

I have tried the experiment myself recently and found it answer admirably. All day long my house is closed up and the inmates sleep. At eight o'clock at night my household rises. At nine I breakfast, and then, with the windows open and the cool night air blowing in I work—and they work—till three o'clock in the morning, when we take a light luncheon. Another spell of work, and then a stroll at half-past six; and I come home with excellent appetite for dinner at half-past seven in the morning. After that a quiet read and to bed about ten, and a long day's sleep with the windows open and the blinds close drawn. I am quite sure that if the experiment were tried generally, and working London laboured through the night and rested through the day while this abnormal heat is upon us, it would be better for everybody concerned, and the public health would necessarily benefit by the change.

MORNING GLORY.

MANY a deep and shady lane in old England is beautified and adorned with the graceful, delicately-tinted convolvulus, that throws a crown of glory over the hedgerows and old bank cuttings at this pleasant time of the year. Residents in Yokohama will have an opportunity, from the 25th to the 29th inst., of seeing a fine collection of many-coloured varieties of these flowers at the Gardeners' Association on the Bluff. The ex-

hibition is being arranged by a private association of Japanese amateur horticulturists, foremost among whom is Mr. Yoshida, Chief of Police, and exhibits will be sent from Tokyo, Kyoto, Osaka, Nagoya, etc. The exhibition will be open from 6 a.m. till 10 a.m., each day, and the presence of foreigners is invited. Visitors will be asked to fill in, on cards, the specimen they consider to be the best, and according to the result of this ballot five prizes will be awarded.

MISSING TREASURE.

A box of treasure containing \$2,000 consigned to the treasury from Kobe per the N.Y.K. steamer *Saikyo Maru*, is reported to be missing. Inquiries are being instituted to ascertain whether any mistake was made in the shipping numbers at Kobe. In reference to the disturbance on board this steamer, in which the First Officer was the object of attack, we learn that thirty charts belonging to the *Saikyo Maru* have been wantonly torn to pieces. Another disturbance on board an N.Y.K. boat is reported, the second engineer of the *Nagoya Maru* having been set upon while the vessel was lying in Hakodate. An engineer on the *Tairen Maru* has also been assaulted on board by the Japanese firemen. These assaults on foreigners are unpleasantly frequent now-a-days and deserve the immediate attention of the Company if the good name of the Nippon Yusen Kaisha is to be preserved.

JAPANESE AND AMERICAN CIGARETTES.

THE *Nichi Nichi* says that a certain person has been making comparisons between American and Japanese cigarettes. It is said that a "Pin-Head" cigarette takes 18 to 19 minutes in smoking, while an ordinary Japanese cigarette takes only 5 minutes. He also weighed the two tobaccos, and found the Pin-Head to weigh 270 *monme*, while the Japanese weighed only 160 *monme*, both per thousand rolls. Our contemporary, commenting on these experiments, says that smokers would find it far more economical to use foreign tobacco than Japanese.

NAGAURA QUARANTINE STATION.

WE have received from Mr. K. Yoshida, Inspector-in-Chief of Police in Kanagawa Ken, some handsome photographs, printed on bromide paper, by Tamamura, of the Nagaura Quarantine Station, one of the best appointed places of its kind in the world. The largest of the photographs, 21 in. by 9½, gives a view of the whole station, with the fir-crowned hills behind, and is very well executed indeed. The smaller prints illustrate the guest-house, a handsome building; the pier; the front of the disinfecting ovens, etc.

STOWAWAYS SENT TO GAOL.

ON Monday afternoon at the British Consulate, Kobe, before Mr. F. W. Playfair, Captain Mudie of the P. & O. steamer *Ancona* prosecuted three stowaways named John Murphy, John Eddie, and Gustave Stang, who got aboard the steamer at Yokohama. The prisoners pleaded guilty and offered no explanation. His Honour remarked that the practice must be stopped and inflicted the full fine of £30 each, with the alternative of four months' imprisonment.

OLD NAVAL FRIENDS.

CAPTAIN Count Frederick C. Metaxa, formerly of H.M.S. *Leander* on the China Station, commands H.M.S. *Sultan* in the Naval Manœuvres. Capt. J. L. Burr, who was formerly in the *Porpoise*, commands the *Severn*; Captain C. J. Norcock commands the *Phaton*; and Viscount Kelburne, who, says a local paper, will be remembered in Hongkong as a member of "the middies' crew" in the Regattas, has command of a torpedo boat.

THE LATE BLOW.

TUESDAY's gale was so strong in Kobe that the *Kirkhill* and *Ancona* left the pier and anchored outside the shipping, while other vessels shifted their berths for more favourable positions.

ASSAULTS ON FOREIGNERS.

THE *Kobe Chronicle* reports that two foreigners were mobbed and stoned while proceeding through Ikuta-maye to the Hill on Monday

night. A coolie alleged that one of the foreigners had jostled him and gathered a crowd to wreak summary vengeance. One of the wounded men had a watch, chain, and pendant stolen from him during the affray, but later in the evening, the police returned them to him, in a battered condition.

DEATH OF MR. C. E. SCHWEYER.

NOTWITHSTANDING the surgical operation performed on Mr. C. E. Schwyer on Wednesday afternoon, he gradually sank, expiring about 11 o'clock at night. His body, we understand, will be embalmed and sent to New York, his native place. He had only been in Yokohama a few months, and was about 28 years of age. Exposure to the sun, acting on an old bullet wound induced meningitis, to which death was due.

THE LATE MAJOR WAUGH.

THE late Major Waugh, whose sudden death is cabled from Shanghai, had a most adventurous career before coming to Yokohama. For years he was a recognised authority on stock-breeding and racing in the United States, and his journalistic experiences related to most parts of the habitable globe.

IMPERIAL ORDINANCE.

IMPERIAL ORDINANCE No. 287, relating to the revenue derived from *sake* brewing, was promulgated by Viscount Watanabe Kunitake, Minister of State for Finance, on Aug. 17th; and also Imperial Ordinance No. 288, dealing with revenue derived from mixed liquors.

H.I.H. PRINCE NASHIMOTO MORI-MASA.

Prince Nashimoto, who graduated from the Officers' School last spring, is now attached to the Hiroshima Division awaiting his commission. On the morning of the 16th instant he left the barracks on horseback to visit a place in the suburbs. By the time he reached the level crossing on the Sanyo Railway, about a mile and a half west of Kaida Station, the train, which had left Kobe at 8 p.m. on the previous day, was approaching. The road along which the Prince had ridden being zigzag and shaded by trees and bamboos, His Imperial Highness did not catch sight of the train until it was dangerously near. He tried to urge his horse rapidly over the crossing, there being no time to turn back, but the animal was so startled by the noise of the train and the scream of the whistle that it became ungovernable, and despite the efforts of its rider and the groom, refused to advance. The Prince, retaining his presence of mind, rapidly threw himself off and escaped in perfect safety, but the horse plunged right into the track and was struck by the engine on his hind-quarters, receiving such injuries that he expired soon afterwards. It seems to have been a very narrow escape, and the Prince is to be most heartily congratulated on the adroitness that saved his life.

COUNT MUTSU.

We regret to learn that considerable as was the advance towards recovery made by His Excellency Count Mutsu during his trip to Hawaii and sojourn there, he had no sooner returned to Japan than troublesome symptoms against exhibited themselves. It is no longer possible to question the verdict of His Excellency's medical advisers, namely, that complete rest and residence in an invigorating climate for some twelve months are essential to thorough restoration. If the Count could reconcile himself to abandon politics and diplomacy *in toto*, and take a journey to the south of France or to Italy, there is every reason to believe that he might look forward to a long life of usefulness in his country's service. It seems to us that such a prospect amounts to a moral obligation. Count Mutsu has done so much for Japan, and may reasonably hope to do so much more if his life be prolonged, that it becomes his duty to make the sacrifice dictated by his physicians.

POLITICAL TOPICS.

The *Yomiuri* alleges that Counts Okuma and Matsukata, according to the decision of all parties concerned, are to enter the Cabinet, the former as Minister for Foreign Affairs and the latter as Minister of Finance. By way of corroborating this statement, our contemporary alleges that Mr. Inukai Ki, M.P., who is known to enjoy the confidence of Count Okuma, has gone to Hakone in haste with a message for the Count. Mr. Fukuzawa is reported by our contemporary to have contributed materially to bringing about this political event. The part that the Mita scholar took in the affair is said to have been this:—He persuaded his nephew, Mr. Nakamigawa Hikojiro, of the advisability of having Count Okuma made Foreign Minister, and Mr. Nakamigawa, who is a great favourite of Count Inouye's, communicated his uncle's views to the Choshu statesman, Mr. Oishi Masami, ex-Minister to Korea, gets credit from the *Yomiuri* for having brought about the interview between Marquis Ito and Count Okuma last spring, and is said to be now acting as intermediary between the statesmen.

The same paper adds that although Marquis Ito has agreed to the entry of the two Counts into the Cabinet, he himself has resolved to resign, as that course seems most expedient.

We (*Japan Mail*) do not vouch for the correctness of any of these statements, but that some important changes are imminent seems very probable. The most credible rumour is that Marquis Ito will resign his post of Minister President, a step that he has long been desirous of taking, and that he will be succeeded by either Count Matsukata, Marquis Kuroda, Marquis Saigo, or Marquis Yamagata. Probably Marquis Yamagata would be the most acceptable successor in the opinion of all parties, but His Excellency's state of health is likely to prove a serious obstacle. Should that change take place, it is expected that Count Okuma will have the portfolio of Foreign Affairs, and that, whoever may be Premier, the post of Minister of Finance will fall to Count Matsukata. At first sight such a combination seems to lack one important element of success possessed by the present Cabinet, namely, a majority in the House of Representatives. But concerning that point also rumour has something to say; namely, that Count Itagaki will remain in the Cabinet, retaining the allegiance of a large section of the Liberal Party. Under such circumstances, the new Ministry would be supported in the Lower House by the *Shimpo-to* (the Progressive Party, constituting the present Opposition), the National Unionists, and the Itagaki moiety of the Liberals, a clear majority of the whole House. To effect a result of that kind, we can well understand that Marquis Ito would make many sacrifices, but of course we are not attempting the rôle of political prophecy.

THE NEXT BUDGET AND VISCOUNT WATANABE'S RESIGNATION.

The rumour that Viscount Watanabe, Minister of State for Finance, has sent in his resignation, seems to have foundation. The proximate cause, it is stated, lies in a difference of opinion between him and Viscount Takashima, Minister of State for Colonization. The Finance Minister finds no large fund to devote to Formosan colonization and development, but Viscount Takashima's cry for money is so vehement that the former statesman sees no alternative except to abandon his difficult post. To complicate the financial problem, Count Itagaki, the Home Minister, prefers an urgent request for a large increase in Prefectural expenditures, and these things coming in the immediate sequel of the Minister's recent failure to raise another installment of the war loan, strengthens his desire to resign. We epitomise this story from a long editorial note in the *Nippon*, a journal whose statements must not be taken *au pied de la lettre*.

MR. KITAGAKI ON THE DEVELOPMENT OF HOKKAIDO.

The *Nichi Nichi* prints the following interview with Mr. Kitagaki, Vice-Minister of the Colonization Department, and formerly Chief of the Hokkaido Administrative Office:—"No one will deny that it rests with the State to develop the resources of Hokkaido so as to make the island the stronghold of the north, and also to open up Formosa in order to make that possession the barrier in the South. But I regret to say that at present there is a tendency to forget the north, all attention now being directed to the South." The Vice-Minister then entered upon a historical review of the development of Hokkaido, and expressed a conviction that a bright future awaits that island. He then proceeded to speak of the steps necessary to be taken. Alluding to railroads, he said:—"The first railroad ever built in Hokkaido was that between Otaru and Ikushunbetsu, constructed when Count Kuroda was at the head of the old Colonization Bureau. The influence of a railway in the work of colonization is really wonderful. The growth of Ishikari and Otaru, since the construction of the Colliery Railroad, with respect to population, commerce, agriculture, and banking, gives conclusive evidence of this. It is also attributable to that Railway that in Sapporo and other places the materials for the manufacture of linen cloth, beer, flour, silk, and other things, can be procured and brought in sufficient quantities to the neighbourhood of the factories. If these experiences make me keenly alive to the advisability of building more railways in the island, military considerations also impress me to a commensurate extent. The Authorities have already framed the following plans of railway building, which, when fully carried out, will establish steam communication between the opposite shores of the island and bring all important places into touch. Part of the scheme has been sanctioned by the Diet and these lines are now in process of construction:—

1.—A Branch Line from Otaru to Hakodate through Oshamambe and Mori, over 146 miles in length.

2.—A Trunk Line reaching Akkeshi and Abashiri eastward from Sorachifuto, 352½ miles long.

(a.) Sorachifuto-Asahigawa Section 35½
In this Section a branch from the River Mem on the Uryu Plain to Mashiki, 40 miles long, is to be built.

(b.) Asahigawa-Tokachifuto Section 154
In this Section a branch from the mouth of the River Ribetsu, a tributary of the Tokachigawa, 89 miles long, is to be built.

(c.) Tokachifuto-Kushiro Section 46

(d.) Kushiro-Akkeshi Section 27

(e.) Akkeshi-Hyocha Section 27

In this Section a branch from the mouth of the Chirakiribetsu River on Lake Akkeshi to Nemuro, 65 miles long, is to be built.

(f.) Hyocha-Abashiri Section 63
The present railway from Hyocha to the Sulphur Mine is to be connected with this section.

3.—A Trunk Line from Asahigawa to Soya 180 miles long.

Twenty-two miles from Asahigawa the line enters Teshio Province. Thence it is to run along the Teshio River to its confluence with the Nayoro River, where, branching off from the Kitami trunk, it is to proceed to the sea, and thence to Soya along the coast.

4.—A Trunk Line from Nayoro to Abashiri, 167 miles long.

(a.) Nayoro-Okibe Section 55

(b.) Okibe-Wakubetsu Section 28

(c.) Wakubetsu-Abashiri Section 84

Of these lines, that from Asahigawa to Nayoro is the most important in its bearing upon colonization and requires speedy completion. I had intended to submit it to the last Diet as a continuous work for five years, but financial considerations preventing me from so doing, a part, to wit, 35½ miles from Sorachifuto to Asahigawa, was alone presented to the Houses as continuous work for the fiscal years 1896 and 1897. The Diet gave its consent, and estimates have since been published. The lines from Asahigawa to Nemuro, and Abashiri on the east, and to Soya, on the north, are to be submitted to the next Diet. Mr. Kitagaki

then took up the subject of harbours, and said that Hakodate, Otaru, Akkeshi, Nemuro, Fuku-yama, Esashi, Mashike, Soya, Saruma, Abashiri, Kuriroura, and Kawamori have all to be reconstructed. But as it is impossible to undertake all these great works at one time, the Authorities will pay attention first to Hakodate, Otaru, Akkeshi, and Saruma, or Abashiri in the Province of Kitami. He then described the work that citizens of Hakodate and Otaru have accomplished in the matter, and their intention of starting a dockyard at Hakodate as soon as the embankment works are completed.

LIEUT.-COLONEL UYEHARA INTERVIEWED.

Lieut.-Colonel Uyehara, who returned from Russia in the *suite* of H.I.H. Prince Fushimi, was interviewed by a representative of the *Yomiuri* at Kobe. His Imperial Highness sailed from Kobe on the 10th March, and reached Marseilles on April 16th. The day following he went to Paris and stayed there until May 11th, when he started for Berlin. He reached the German capital the next day and remained until the 16th. Moscow was reached on the 19th, and after attending the Coronation ceremonies the Prince left the Russian capital for home on June 10th. Arriving at Vienna on the 11th, he left the day following and arrived at the Hungarian capital, Buda-Pesth, the same day. Here he stayed until the 17th. Then he returned to Paris on the 19th. On the 5th of July he left Marseilles, touching at various ports on the way, among them being Hongkong and Shanghai. He reached Kobe on the 10th in sound health. Throughout both long voyages, despite occasional spells of bad weather, His Imperial Highness was always in good health. During his stay in Moscow he was treated by the Russian Court in a manner fully equal to his rank and mission. To all the members of the Prince's suite the Czar made a present, on their departure, of a gold watch bearing his Majesty's crest. In Paris His Imperial Highness was received with the greatest possible politeness and kindness, the President of the Republic giving a splendid *soirée* in his honour. At Marseilles the Prince found that many French officials of high rank had been despatched by President Faure to meet him. In Berlin he did not see the Emperor on the outward journey as His Majesty was away from the country, but the treatment he received from the public and the Government was most cordial and courteous. At Vienna the Prince had an interview with the Austrian Emperor, and also with the Emperor William, who was then visiting the Austrian capital. The German Kaiser was pleased to hold a long conversation of many hours' duration with the Prince. The Austrian Emperor gave His Imperial Highness a splendid dinner, in the course of which His Majesty was pleased to make many courteous and complimentary remarks. Though travelling *incognito* on shipboard, the Prince was received wherever the ship touched with enthusiastic politeness, and the Governor of Hongkong went so far as to fire a royal salute when the ship called at that Colony on her eastward voyage. The Lieut.-Colonel then narrated the difference that has come over the feelings of the Europeans towards Japan and the Japanese since the War. "Years ago, Europeans appeared to think it derogatory to have Japan ranked as a friend, but at present these Western nations court our friendship and are pleased if they secure it."

GLYPHIC ART EXHIBITION.

The Glyphic Art Society announce an exhibition to be held in the rooms of the Japan Fine Art Society, Uyeno Park, from the 1st to the 15th of September. This will doubtless be an opportunity for witnessing some of the best productions of modern Japan in metal, ivory, and wood-carving.

OSAKA AFTER THE WAR.

The *Yiji*, describing the condition of Osaka after the war, says:—Commerce and industry since the War have made immense strides everywhere in Japan, but nowhere in such large proportions as at Osaka. Not only have new companies grown like mushrooms within the city, but many companies lately established in the vicinity, and even as far away as Kyushu, are eager to establish branch offices in Osaka. This has caused an immense rise in the value of land. A few years ago, land could be procured even in the best parts of the city, such as Shinsai-bashi-dori and Doton-bori, at 40 or 50 yen per *tsubo*, but now an offer of 200 yen is said to be unlikely to tempt a holder. With a view to the future reconstruction of the harbour, the streets have been extended to the south-east of the City, and in that quarter land is rapidly rising in value, and it is prophesied that at the present rate of increase, sites in Ajikawa-dori may soon command a thousand yen per *tsubo*. House-rent has risen to exorbitant rates, yet no unoccupied houses are to be seen. Houses recently erected are occupied, even before the doors and *shoji* are fitted. Generally speaking, house-rent in Osaka is two-and-a-half times higher than in Tokyo. The *shikikin*, or deposit that an occupant has to place with the proprietor as security, is also very large, and when the occupant removes, 20 per cent. of the amount goes to the proprietor. When a house is destroyed by fire, whatever the cause, the proprietor appropriates the whole of the *shikikin*. Under the circumstances, landlords often experience great difficulties when attempting to evict a tenant, generally having to resort to the law for help. As another consequence of the expansion of industrial enterprises, competent managers and accountants are in great demand, and young men from the Osaka Schools are largely sought after. There are plenty of opportunities for men of able business capacity in Osaka. Transactions in what are called "potential certificates"—issued by various companies to confer the right of subscribing to the shares of the companies when once they have been regularly established—have been very active of late. Some of these certificates, as is well known, have changed hands at five, six, seven, and even eight or nine yen above their proper value—one yen. When, in the near future, these certificates come to be exchanged for regular shares, disturbances may be expected in economic circles in Osaka.

A JAPANESE COUNT ON LI HUNG-CHANG.

A certain Japanese Count is said to have unburdened himself as follows to a representative of the *Chuo Shimbun*:—"Li Hung-chang appears to have been welcomed everywhere in Europe, but he seems to have been completely duped in Russia, as it is said that he concluded a secret contract allowing the Northern Bear to extend the Siberian Railroad into Manchuria?" This was the opening question, to which the Count responded. "Li is not a person to be duped by any Russian. No one short of a Bismarck stands on a level with the old Chinese in the arts of political negotiations. During the progress of the Shimonoseki Conferences, an American naval officer visited me and asked what kind of a man the great Chinaman was. Upon being counter-questioned by me whether he had any news to tell about Li, the American officer said, 'I lately saw the Viceroy and asked him what he was going to do in the face of the oft-repeated defeats of China.' The veteran statesman made no reply at first. Nothing daunted by his silence, I repeated the question several times, until he quietly said that he meant to let the Japanese armies take the Regent's Sword and march on as they pleased, but that he entertained no fears of them!" "There," said the Count, "you see Li's greatness displayed in its broadest light. His intellect is by no means superannuated. He fears no Russians or other foreigners but acts on the old Chinese principle, that, under heaven,

there is no soil other than that belonging to the Middle Kingdom, and that there lives on earth no man who is not a Chinese subject. His compliance with the Russian proposals respecting railway construction in Manchuria was a master stroke. It may be taken for granted that he had solely in view the development of Chinese interests. Contrary to your conception, Russia has been duped by him. After the completion of the proposed railways, Newchwang and Talien will become the great marts of the world. And who but the Chinese will reap the greatest benefits? Great schemes are evolved in Li's great mind, and he takes adroit advantage of Russia's ambition. Li is not a man to be outwitted by Russians, but in the whole Chinese Empire there lives not another man who is his equal in intellect and knowledge of the world." We should like to be informed by our contemporary who this very oracular Count is.

ELUCIDATING THE TRUTH.

In a recent article the *Kobe Chronicle* wrote as follows:—

We ourselves, for the sake of mutual good-will, try to be as pro-Japanese as reason and justice allow, but we cannot blind ourselves to the fact that the Japanese police system is diametrically opposed to European notions of what is right, and however much change is made, even at the best there is bound to be trouble, which should be minimised and not ridiculed.

These assertions about the police system of Japan, its diametrical opposition to European ideas of what is right, and the troubles that are bound to come however much the system may be changed, seemed so interesting, and their confirmation or contradiction was evidently so important to the foreign communities in Japan, that we invited our contemporary "to say plainly in what respects the Japanese police system is diametrically opposed to European notions of what is right," and thus "to co-operate in elucidating the truth of this important question." Here is the *Kobe Chronicle's* reply:—

The *Mail*, while affably patting us on the back and complimenting us in a way that is quite seductive, attributes to us a few statements we never made, such as that the police system is "bad" and that the Japanese are to blame because paternalism and individual liberty are likely not harmonise; and then our contemporary asks us to "explain," and stipulates that we shall not quote attested cases. We do not intend to quote cases; in fact, we do not intend to explain anything to the *Mail*. The general foreign community understand and appreciate us; the enlightened section of Japan does the same, and the *Mail* may whistle.

As to our having "attributed to the *Kobe Chronicle* a few statements that it never made," the answer is that we simply quoted its own words. Apparently it now desires to withdraw its accusation against the Japanese police system, and seeks to do so by pretending that it never applied the adjective "bad" to the system. With that kind of subterfuge we have nothing to do. If to be "diametrically opposed to European notions of what is right," is not to be "bad," the *Kobe Chronicle* must publish a special dictionary for its readers. Further, we never made the remotest allusion, either direct or indirect, to a probable want of harmony between Japanese paternalism and the individual liberty of the West. When the *Kobe Chronicle* accuses us of having attributed to it a statement relating to that topic, it soars into the cloud-land of pure imagination. The main point, however, is that, on being invited to support or withdraw a sweeping general charge against the Japanese police system, the *Kobe* journal bids us "whistle." Were it not like breaking a fly upon a wheel we might comment on this curious method of evading a dilemma by subterfuge, falsehood, and rudeness. But methods vary in different strata of journalism. Perhaps the temporary editor of the *Kobe Chronicle* imagines that he has made the *amende* handsomely and shown laudable skill in retracting a charge that could not be substantiated. Such a hallucination is just conceivable. Facts, however, not fashions, being of importance, it is enough to note that the accusation against the Japanese police system stands unproved.

EDUCATION IN FORMOSA.

The *Nippon* states that Mr. Izawa, Chief of the Educational Bureau in the Governor-General's Office, recently delivered a speech on education in Formosa. He said:—"At present the work of the Educational Office includes only teaching of Japanese and the compilation of text-books. The educational charts edited by the Mombusho have been used, but are found unsuitable in many respects. I therefore mean to compile others more fitted for Formosa and the Formosans. No book hitherto published in Japan can be of any use in Formosa. But I by no means think that the actual work of printing can be done in Formosa to any considerable extent, so unskilled are the Formosan printers and engravers. In the teaching of Formosan youths, spoken Japanese is first taught; then they are made to master the elementary forms of epistolary communications, both ordinary and official. This will occupy the learner about a year, and qualify him for the lower grades of service in the Headman's Office of his native village or town. Besides this, two other courses, respectively of two and four years' duration, are to be inaugurated. The students are to be taught history, geography, and other branches of necessary knowledge. Youths so educated will be instrumental in developing civilization in the new territory. Lastly, language schools have been established in places where prefectural and sub-prefectural offices are situated, and students are being enrolled. Similar institutions have been provided for in the Pescadores. The Japanese teachers who went to Formosa last April are now perfectly familiar with the native tongue; the arduous shown by them in the study has been remarkable, but such rapid linguistic achievements reflect credit upon my colleagues also. Two elementary schools have been established, one attached to the language school at Hasshiran and the other to a similar institution at Moko. Another is to be shortly attached to the language school at Dai-ryuto. The pupils hitherto received into the elementary schools are all children of well-to-do and more or less educated parents. Their application and mutual encouragement has been remarkable. As to the education of Japanese children in Formosa, steps have been taken for establishing ordinary Middle and Elementary Schools. The higher courses of education cannot yet be inaugurated, but certain privileges have been secured for graduates of Formosan Middle Schools respecting their entrance to higher institutions in Japan. Funds alone are wanting to start these schools. It is hoped that the next meeting of the Diet will enable me to execute my educational plans by April next."

THE POSTAL SERVICE.

The principal subjects submitted to the consideration of the Chiefs of First Class Post and Telegraph Offices at their meetings, now being held in the Department of Communications, are said to be as follow:—

I.—In the collection and distribution of all kinds of postal matter, the principal centres should be attended to with greatest diligence.

II.—To attain this object it would be undesirable to establish many Third Class Offices along branch lines, irrespective of geographical considerations, and so waste time in collection and distribution.

III.—Does not the Parcels Post service interfere with the speedy distribution of other postal matter? If so, what preventive measures should be adopted?

IV.—Which is the more advisable, to take steps for the more speedy distribution of parcels or to reduce the charges upon them?

V.—Lack of room in Post and Telegraph offices causes much delay in the collection, sending off, and distribution of postal matter. Sufficiently spacious offices ought to be provided.

VI.—The training and distribution of experts should be made more perfect.

Besides these subjects, the Communications Department has reported upon the advisability of improvements in the foreign mails and cable matters.

KENRI-KABU.

It might be worth the Government's while—indeed, for our own part, we think it would be emphatically worth while—to take some measures for restraining the sale of what are called *kenri-kabu*; that is to say, documents entitling their holders to shares in a projected company. The speculative mania has certainly attained dangerous dimensions in Japan, a result that history should have prepared the nation to anticipate, for in every country the period immediately succeeding a victorious war has been distinguished by excessive and unsound commercial and industrial enterprise. These *kenri-kabu*—which, be it observed, are not even actual shares, and upon which only one *yen* has been paid up—seem to play the part of inflating media. They originally belong, of course, to the projectors of companies, and it is evident that if the mere fact of acquiring the right to have a hundred shares allotted to him, enables a projector to realise a substantial profit by selling that right, the result is that, in many cases, projectors become the very worst type of speculators, their pecuniary interest in an enterprise ceasing altogether weeks, perhaps months, before the enterprise has even been organized. Moreover, these transactions are evidently capable of serving to “make a market,” and from many indications we entertain no doubt that they are managed with that very object. Thus, A, B and C are three persons interested in directing public attention to the stock of an enterprise to which they have attached themselves for purely speculative purposes. A, as the projector, receives five hundred *kenri-kabu*. These he offers for sale at the Stock Exchange, and an agent of B's buys them at 5 *yen* each. Next day, C's agent comes to the Exchange seeking potential shares at 5½ *yen*, and thus, by an in-and-out process, the market is so successfully “made” that not only do the potential shares attract *bond fide* purchasers, but the real shares, when they come to be offered, sell at a high premium. The Stock Exchange becomes, in fact, an instrument for company-mongers to exploit the public. A wholesome reform would be the enactment of a regulation interdicting all transactions in shares upon which the first installment of capital, at any rate, had not been paid up. It appears to us that the Directors of the Stock Exchange should take up the question without awaiting official intervention, for it is plainly their business to provide that the Exchange shall serve the convenience of investors generally, instead of being the tool of scheming speculators.

MORE ABOUT THE RUMOURED MINISTERIAL CHANGES.

The *Fiji* states that two different views are taken by politicians and statesmen with reference to the rumour of Count Okuma's entry into the Ministry. One view is this:—

It would undoubtedly be a great political change to see Count Okuma holding a portfolio. The Count is a highly talented statesman fully worthy of the reputation he enjoys. He has also an exceptional amount of self-confidence, which no one has ever been able to measure. When he entered the Government years ago, he did not tell any of his political followers until the very eve of his appointment to what stage his negotiations with the statesmen in power had been carried. None the less he was able to handle the *Kaishin-to* politicians so skilfully that they did his bidding with the greatest eagerness all the time he remained in office. He may, therefore, accept the portfolio of Foreign Affairs with entire confidence in the support of the old *Kaishin-to* and the present *Shimpo-to*.

The second view runs thus:—It is very easy to see that Count Okuma would not be able to carry his political views into effect while Marquis Ito remained at the head of affairs. If knowing that, as he must know it, he nevertheless accepts a portfolio, it will be a political surrender on his part, amounting almost to suicide. By such an act he would alienate all his political

friends and followers. Hence it is entirely inconceivable that he should join the Administration at a date so early as rumour indicates. The story must have been designedly invented by some persons over-eager to have the great Waseda Count at the head of the Foreign Office.

It is alleged by not a few Tokyo papers that Marshal Marquis Yamagata declared to one of his interviewers his firm conviction that the fittest Minister for Foreign Affairs is Count Okuma, and for Finance Count Matsukata.

Several Tokyo papers devote whole columns to the subject of Ministerial changes. We give the gist of their comments, commencing with the *Nichi Nichi Shimbun*. On all sides, says that journal, it is regarded as eminently desirable that a Cabinet should be formed combining the so-called “statesmen of high merit,” a Cabinet consisting, for instance, of Kuroda, Saigo, Oyama, and Matsukata of Satsuma; Ito, Yamagata, and Inouye of Choshu; Itagaki and Goto of Tosa; and Okuma and Oki of Hizen. But a statesman of sufficient ability, influence, or reputation to exercise controlling attraction over these stars, is wanting. Hence, however much such a Cabinet may be talked about, it can never be actually organized. All future Cabinets must, like the present one, be a mixture of statesmen of the first merit and of the second. Viscount Watanabe, rumour alleges, holds himself unequal to the task of carrying out the great *post-bellum* financial measures, and is therefore inclined to resign, in which case Count Matsukata is likely to take the Viscount's place, for now not only is he perfectly reconciled with the present Ministry, but also the Liberal politicians have no objection to urge against him. In view of the especial importance of Financial and Foreign Affairs after the War, the Cabinet desired, it seems, to invite Count Inouye to preside at the Foreign Office, on the one hand, and Count Matsukata at the Treasury Department, on the other. But it being known that Count Inouye cannot be induced to re-enter public life, Viscount Takashima suggested the advisability of giving the portfolio that the Choshu statesman would not accept, to the “Sage of Waseda.” It seems, however, very unlikely that Count Okuma will be suffered to join the present Government, so strong is the exception taken to him by Count Itagaki and other powerful statesmen. However assiduously Viscount Takashima may work in favour of Count Okuma, the result will probably be abortive, for the Count's admission to the Cabinet would necessitate other changes in its *personnel*, and in view of that fact, it cannot be conceived for a moment that the prudent and peace-loving Premier and his colleagues will agree to the proposal of the Minister of Colonization. Viscount Shinagawa is also spoken of as a candidate for a portfolio. In his case, rumour is much more likely to prove true than in the case of the former Progressionist leader. The Viscount would not be objected to by the Liberals, for the policy of the National Unionists, his followers, at least so far as *post-bellum* measures are concerned, is nearly uniform with that of the Government and the *Fiji-to*. As to Marquis Yamagata and Count Inouye, we have learned, from a most trustworthy source, that they did indeed meet the other day at the Fuki-ro, Yokohama, and that a most frank conversation ensued about State affairs, but it is untrue that they discussed changes in the *personnel* of the Cabinet, in connection with Counts Okuma and Matsukata, in the sense of ousting any of the present Ministers.

The *Fiji* states that nothing now lies in the way of Count Matsukata's return to power. As to Count Okuma, our contemporary alleges that Baron Ito and the Liberals seem to be his only opponents. In the Tokyo journal's opinion, however, the Liberals will not go so far as to stake their relations with the Government upon Count Okuma's appointment to the Foreign Office. Baron Ito is the Count's most obdurate opponent, and it may be presumed that he is doing everything possible, on the one hand, to threaten the Premier with the disaffection of the Liberals, and, on the other, to prevail upon the Liberals to show a resolute front against the

Waseda Count. But neither Marquis Ito nor the Liberals are likely to be deceived by the Baron. In spite of all opposition, Count Okuma's rumoured appointment may take place.

Other papers say much, but that much is mostly a mere repetition of what they have already said, seasoned with a little fiction. Space forbids the reproduction of such writings. But it is worth while to note the *Kokumin's* allegation that Counts Matsukata and Okuma will surely enter the Government, and that upon their assumption of office, Messrs. Narikawa Shogi and Kato Takaaki will be appointed Vice-Ministers of Finance and Foreign Affairs respectively, and that Baron Tajiri will be sent as Minister to England.

THE “TOKYO SHIMBUN” ON THE RELATIONS BETWEEN THE LIBERAL PARTY AND THE GOVERNMENT.

“It was not for the sake of power and influence that the Liberal Party established friendly relations with the present Government, but merely because they saw that their policy, as regards State affairs after the War, had become uniform with that of the Government. Therefore, so long as the Cabinet maintains its policy unchanged, so long will the Liberals support it in all measures, domestic as well as foreign. But should it adopt a line diverging from their views they will at once pass into the opposite camp. The idea that the *Fiji-to* will submit to that test must be foreign to any one conversant with the character of the Party.

“The organs of the Progressionists have circulated a rumour that Count Okuma is about to enter the Ministry. Their writing is embroidered with apt allusions and fine figures of speech, as language used in such cases always is. It must be received by the reader with a proper amount of caution. For ourselves, we have no need to be apprised of the stages to which the Count's rumoured negotiations have been carried. We positively state, once and for all, that Count Okuma will never find himself in the Cabinet until the tie between it and the Liberal Party has been severed.

“The Liberals are determined never to come to terms with Count Okuma and his political followers. While both parties were out of power, they always stood resolutely opposed to each other. There can be no reason for their coalition as Government parties. They differ widely from each other in views and motives, as well as in the methods they advocate for attaining their aims.

“Such has always been and still is the Liberals' feeling towards Count Okuma, and therefore they made it as a condition of their alliance with the Government that Count Okuma should never be given a portfolio. That condition, we know, was readily accepted by the Ministry. It must consequently be impossible for Marquis Ito's Government to receive Count Okuma as a colleague, so long as it enjoys the friendship of the *Fiji-to*. If, however, the Government prove false and give the Count a place in the Cabinet, the Liberals will certainly regard the Ministry with greatly altered eyes.”

Whether the above very emphatic utterances represent the sentiments entertained by the section of the Liberals that would certainly secede if Count Okuma came into power, or whether they may be taken as reflecting the views of the whole Party, we (*Japan Mail*) are not in a position to state.

THE MANSION HOUSE FUND.

It appears that the idea of inviting the British public to subscribe for the relief of the sufferers by the Seismic Wave on the north-east coast of Japan, originated with the Japan Society. The meeting to inaugurate the charity was to have been held on July 21st at the Mansion House, by permission of the Lord Mayor, but we are not yet in possession of any information as to the result.

INTERVIEW WITH MARQUIS ITO.

THE *Daily News* recently published a report of an interview between its special correspondent and His Excellency Marquis ITO. Several topics of much interest were discussed, and many utterances of a peculiarly outspoken character were attributed to Marquis ITO. We have taken steps to ascertain how far the views expressed by Marquis ITO on the occasion of His Excellency's meeting with the *Daily News*' correspondent, are truly reflected in the London journal's report, and we are in a position to assert, with regard to a large portion of the interview, that the correspondent, in obtaining material, must have either incorporated the opinions of other persons or incorrectly transcribed those of Marquis ITO. Under these circumstances, the document ceases to have any value as a reflection of the Prime Minister's views. We are pleased to have received authority to make this disavowal, for it has always seemed to us a mistaken policy on the part of Japanese Ministers and prominent statesmen to leave uncontradicted the singular sentiments often attributed to them by alleged interviewers acting on behalf of the press: Count OKUMA has been conspicuous for that kind of indifference. The *Mainichi Shimbun* has made quite a feature of interviews said to have been granted by him to its representatives, and the Waseda statesman has thus suffered not a little in public estimation, for had he authorized a newspaper to publish all the views ascribed to him by the *Mainichi*, he would have to answer for much indiscretion. But the general, we might almost say the universal, rule in Japan is to take no notice of statements published by newspapers, so long as they concern an individual only, and the Japanese public, conscious of that apathetic attitude, attributes comparatively little importance to second-hand representations of this or that person's opinions. Looking at the matter from the point of view of newspaper progress, we doubt whether anything could be more unfortunate than such indifference. The results are that reporters set no limits to their imaginative faculties; that editors feel no sense of responsibility for the contents of their columns; and that the public gradually ceases to attach any real value to what appears in the newspapers. Of course there is much to be urged in favour of the argument that if the necessity of contradiction be once recognised, it becomes imperative always, since an uncontradicted assertion then inferentially acquires the stamp of endorsement. But, after all, that is a method of shirking one of the obligations imposed by celebrity. Small men may retire within their shells, and leave the paragraphist or interviewer to babble at will, pleading that since they are without means to supervise all publications, their

only alternative is to ignore all. But great public characters ought to furnish themselves with such means, because, in the first place, distortions of their views may have widely mischievous effects; and, in the second, their apathy tends to demoralize the press by obliterating its sense of responsibility. We are persuaded that if people in Japan showed a little more resolution and activity in holding journalists responsible for everything appearing in their columns, the press would soon develop a far more trustworthy character.

EDUCATION IN JAPAN.

THE twenty-second Annual Report of the Minister of State for Education has just been published. It relates to the year 1894, and contains a mass of interesting information. During the first half of that year, the portfolio of Education was in the hands of the late Baron INOUE KI, whom the nation regards as one of its greatest educationists. But in August his shattered health compelled him to retire, and in October Marquis SAIONJI, the present Minister, came into office, immediately succeeding Mr. YOSHIKAWA, who had held the post *ad interim*. It may be noted here that the expressions of dissatisfaction, so frequently uttered by a section of the press and by politicians in opposition, with reference to educational affairs, ceased almost entirely when Baron INOUE came into office, and have remained unheard during Marquis SAIONJI'S administration.

The general facts with regard to education in Japan at the end of 1894, as exhibited by the Report under review, are these:—

The total number of children of school-going age, out of a population of 42,426,921, was 7,320,191, and of these the number receiving instruction was 4,518,137, or 61.72 per cent. of the aggregate. In connection with this question of percentage, which, after all, is the chief test of the attitude of the masses towards education, it is to be noted that, whereas the number of children receiving instruction in 1873 was only 28.70 per cent. of the school population, it rose to 61.72 in 1894. That most satisfactory development was not uniform, however. Up to 1877 the percentage steadily increased until it reached 40. Then ensued a comparatively stationary period lasting three years, and then, from 1880, the upward movement commenced again with marked rapidity, until the point of 51 was attained in 1883. The next two years showed a slow but steady decline, which, from 1885, became very rapid, reaching its maximum in 1887, when the percentage fell to 45. Thenceforth, the upward tendency reasserted itself slowly until 1891, when the percentage reached 50, but very rapidly during the next three years. In short, statistics show that the four years, 1884,

1885, 1886, and 1887, were an era of marked educational stagnation, if not retrogression, in Japan, whereas the three years 1892, 1893, and 1894 were so conspicuous for development that the percentage of children receiving education rose from 50 to 61.72, an unprecedented rate of growth. The causes responsible for these fluctuations constitute a study of the greatest interest and importance to Japanese educationists, but we shall not attempt to discuss them here.

A striking difference exists between the percentages of male and female children receiving education. The general average of both sexes, as stated above, was 61.72, but when we consider the sexes separately, we find that 77.14 was the percentage of boys, and 44.07 that of girls. In 1873, the number of girls receiving education was only 15 per cent. of the school female population, and the curve of development thenceforth shows variations almost identical with those of the curve indicating the changes of the male percentage. In no country does the education of girls command the same attention as that of boys, but it is certainly a regrettable fact that while only 893,116 boys out of a total of 3,907,349 were not receiving education at the close of 1894 in Japan, no less than 1,908,938 girls were in that condition out of an aggregate of 3,412,842. In fact, speaking approximately, for every boy brought up in ignorance, there were fully two girls.

It is often said that education has been carried too far in this country since the Restoration, and that many youths, being thus raised above the status of their parents and taken out of the only grade in life where they can hope to find bread-earning employment, are driven to join the ranks of political agitators. To assent to, or dissent from, that criticism would be impossible without fuller information than has hitherto been collected by statisticians. A partial guide, however, is afforded by the Report now before us, for we find there a chart showing the career of pupils after graduation in Ordinary Middle Schools during 1894. It should be premised, perhaps, that the curriculum of Ordinary Middle Schools is designed to prepare pupils either for practical pursuits or for admission to higher educational institutions. (The education given in the Elementary Schools is too limited in character to afford any justification for the criticism we are now considering.) There were 81 Ordinary Middle Schools in the empire at the close of 1894, the pupils numbering 22,331, and the graduates, 1,304. Of these graduates only one-sixth remained without occupation at the time of the Report's compilation, the rest having either passed on to higher and special courses of study in other institutions, or found employment of various descriptions. That is a tolerably reassuring record, and when we observe the great demand now existing for technical experts

of all descriptions, it is perhaps, a reasonable conclusion that the fear indicated above need not be very seriously considered.

Turning now to schools and teachers, we find that the total number of educational institutions throughout the empire at the end of 1894 was 25,637, an increase of 43 as compared with the preceding year; and the total number of teachers and instructors was 69,845, an increase of 1,465 as compared with 1893. It is noteworthy that while the school-going population has steadily increased since 1890, the number of schools was greater by 2,231 in the latter year than at the close of 1894. The total of public schools, indeed, showed development in 1894 as compared with the preceding year, though it was greater by 1,758 in 1890; but the number of private schools steadily fell from 2,484 in 1891 to 1,950 in 1894. The number of teachers, too, attained its maximum (77,010) in 1891, then suddenly fell to 66,824 in 1892, and then began to swell once more until it reached 69,845 in 1894. The decrease in the number of private schools had long been foreseen as an inevitable result of the present system.

Evidently there is an unfortunate disproportion between the number of teachers and that of students. In the public elementary schools there were only 2.64 teachers or assistant-teachers per school, and each had to instruct 55.60 students. The case is worse when we come to regular teachers—as distinguished from assistant-teachers—there being only 1 to every 91.03 pupils. The deficiency seems to be chiefly due to the very paltry emoluments enjoyed by persons engaged in education; namely, an average annual salary of 118 yen for regular teachers and 64 yen for assistant-teachers. There is a movement in favour of increasing these wretched stipends, so as to render school-teaching more attractive; but several years must elapse before any substantial change takes place. Of course it must be noted in this context that many of the poorly-paid teachers are men who, having obtained their education at public expense, are bound by contract to serve in the capacity of instructors for a fixed term of years. Concerning foreigners employed for educational purposes, whether in the Department of Education or in private schools, a steady decrease of number is to be recorded. The Department had 51 foreigners in its service in 1890, against 37 in 1894, and the foreign instructors in Government public and private schools fell from 276 in 1890 to 250 in 1894.

The total income of the public schools (23,488) for the year was 11,909,021 yen, and the total expenditure, 11,376,862 yen, being an average of 484 yen approximately per school, and 3.30 yen per pupil. Economy has certainly been carried to a very fine point when the annual expenditure on

account of schools giving education to 147 pupils, on the average, is only £54, and when the yearly outlay on account of each pupil is 7 shillings, approximately. As for the source from which the income of the public schools was obtained, local rates and taxes furnished 7½ million yen; tuition fees 2½ millions: voluntary contributions and interest on school funds, half a million each, and the remainder came from sources that need not be enumerated here. Tuition fees were of the lightest character: they varied from 80 sen to 2 rin per month; that is to say, from 20 pence to the fifth part of a farthing.

Everybody is familiar with the kind of building in which the children of Japan receive their education—a wooden shanty of the simplest and most economical construction. It is not surprising, therefore, to find that the average cost of such buildings has been only 510 yen, yet the bare fact that 23,488 public schools, in each of which 147 children are taught, have been erected at an average outlay of less than £60, is sufficiently striking. The area covered by each school and its grounds averages 226 *tsubo*, or about one-fifth of an acre. In the schedule of public-school property the total value of this land is entered as 2,059,209 yen, or less than 39 sen per *tsubo* (36 square feet); a singularly low valuation, as it seems to us. The schools possess also a considerable area of landed property—22,294,499 *tsubo*, or 18,579 acres, approximately—the capitalized value of the revenue from which stands at 633,900 yen. How that figure is calculated we are unable to discover, but supposing it to represent ten years' purchase, we arrive at the scarcely credible result that these lands produce only 3.40 yen per acre. The schools have a substantial reserve fund, aggregating 5,392,111 yen.

Naturally, the state of education varies in different parts of the empire. Ishikawa Prefecture—doubtless better known to our readers as Kaga, on the west coast—heads the list with an average attendance of 73.03 per cent. of its total school population. Miye comes next with 72.57 per cent., and then follow Shiga (71.88 per cent.); Nara (71.45 per cent.); Miyagi (70.32 per cent.), and so forth. Of the three cities, Osaka has the best record (68.63 per cent.); Kyoto comes second (67.88 per cent.), and Tokyo is last (62.14 per cent.). The salaries paid to teachers, also, vary largely. Nowhere does a regular teacher receive more than 50 yen a month, and only two Prefectures—Kanagawa and Nagano—enjoy the distinction of possessing such highly rewarded instructors. In Wakayama and Tottori some of the regular teachers receive as little as 3 yen or 3½ yen a month; and as for assistant teachers, it is not uncommon to find their salaries put down as 1 yen, 1.20 yen, 1.50 yen, or 2 yen. The fact is

worth noting that female teachers, while they do not, in any case, attain to the maximum emoluments of the other sex, have nevertheless a better general record, no female regular teacher receiving less than 5 yen a month, and only in six Prefectures does the minimum stipend for female assistant teachers fall below 3 yen monthly.

Such are the general facts relating to education in Japan. A few special points remain to be noted.

Among the instructions issued by the Minister of State for Education during the year under review, we find one that illustrates in a most striking manner the radical change of educational methods in Japan since pre-*Meiji* days. "Tasks demanding the taking of notes," says the Minister, "and all mere memorizing lessons, subject pupils to an excessive mental strain, and such subjects should not be introduced except in cases of special necessity." Is it not strange to find such an injunction issued in a country where, thirty years ago, the early training of young people was confined to the acquisition of ideographs which the student learned to recognise solely by the mechanical faculty of memory without any appeal whatever to reason? The Minister recognised, also, and attempted to remedy the thoroughly evil habit, so flagrant a few years ago, of students' combining to dictate conditions to the faculty of their school. Instruction No 2 says:—"To make pupils reverent to their teachers and superiors is the most important principle of moral education, and education falling short of this point must necessarily tend to the formation of vicious habits, such as haughtiness and disobedience, so contrary to the true purport of schools; and school directors and teachers, bearing this well in mind, should devote themselves to the moral education of pupils. Pupils is Government and private schools should not be allowed, by forming parties of more than three persons, to submit their opinions, or to persist in seeking a personal interview with school directors or teachers, or in demanding explanations from them; and in cases where pupils combine to offer resistance or commit acts of force against teachers or directors, or to obstruct school lessons, or to absent themselves from attendance, contrary to the admonitions given them by teachers or directors, those most offending should be suspended from school attendance for a period of not less than one week and not more than one year, or should be expelled from the school." On the whole this instruction seems to have worked well. We do not now hear so often of combinations on the part of students to impose their will upon the faculty of a school. But the evil is not by any means eradicated.

In the matter of foreign languages, German was placed on practically the same footing as English. In nearly all cases where the English language formed an

item of the regular course of instruction, the option of substituting German was left to a student.

Technical education received considerable development, the Diet having sanctioned a proposal that a sum of 150,000 *yen* yearly might be paid out of the Imperial Treasury towards the support of schools established for that purpose. At the close of the year 1894, Japan had 59 technical and special schools—29 public and 30 private—with 777 instructors and 11,792 students.

THE SILVER COINS OF GREAT BRITAIN.

MR. MIGEOD'S remarks on the effects of bimetallism in the British empire—published in our correspondence columns—are difficult to follow. We see no occasion whatever for the re-coining to which he alludes. His position, as we understand it, is that if, in consequence of the introduction of bimetallism, a ratio of exchange were fixed between gold and silver, it would be necessary to recoin the subsidiary silver tokens now circulating throughout the British Empire, so that their intrinsic gold value might correspond with the fixed ratio. Why should it be necessary? Surely the mere fact of fixing a ratio would at once impart to those tokens a corresponding gold value. For example:—Eight half-crowns now represent a sovereign, that equivalency having been determined in the days when an ounce of gold exchanged for 15 ounces of silver, approximately. But at present, since an ounce of gold buys 30 ounces of silver, in round numbers, the intrinsic gold value of 8 half-crowns is only half a sovereign. Suppose, now, that by international agreement the ratio between gold and silver were fixed at 1 to 16, then our eight half-crowns would immediately acquire the intrinsic gold value of fifteen-sixteenths of a sovereign. Mr. MIGEOD writes as though he thought that if bimetallism, with a fixed ratio of 1 to 16, were introduced, it would be necessary for England to recoin her silver tokens, putting into each twice the weight of silver it contains at present. But if that were done, eight half-crowns would possess the intrinsic value of thirty-sixteenths of a sovereign. Possibly our correspondent's difficulty arises from a hypothesis that an arbitrarily fixed ratio would not affect the relative values of the metals themselves, but would affect their coinage values only. That, however, is obviously a misapprehension. In point of fact, no recoinage would be necessary. At present a shilling, though intrinsically worth only one-fortieth, circulates as one-twentieth, of a sovereign, and no inconvenience results from such a flagrant divergence between intrinsic and nominal values. If the ratio between the two metals were fixed at 20 to 1, instead of 30 to

1 as it is now, the intrinsic value of the same shilling would be increased by one third, and seeing that it circulated comfortably as a subsidiary token before it acquired that improved value, it might be trusted to play the same rôle still more comfortably under the new conditions. By no process of thought can we follow Mr. MIGEOD. Even his arithmetic seems faulty. If the total subsidiary silver coins of Great Britain represent sixteen million sovereigns to-day, it follows that their intrinsic gold value is only eight million sovereigns, and to make their nominal and intrinsic values equal, their weight would have to be doubled, an operation requiring eight millions sterling, not sixteen millions, as Mr. MIGEOD states. We need not pursue this branch of the subject any farther, but may pass at once to our correspondent's second apprehension, namely, that the ratio between the exchangeable values of the metals themselves could not be fixed by the ratio between their coined values, and that, consequently, the intrinsic gold value of silver subsidiary coins might rise so high as to make it worth while to melt them and sell them for gold. Such a proceeding would be so easy, Mr. MIGEOD thinks, that the police could hardly restrain it, and thus "the Government would find itself obliged to buy back at an increased rate the silver now bullion, but which, a few days before, it had issued from its mint as the standard coin of the realm." We fail to see any practical importance in that suggestion. Nothing of the kind happened throughout the long lapse of time when a fixed ratio actually existed between silver and gold. The ratio remained undisturbed by any fluctuations in the production of the two metals. As to our correspondent's final fear that England would be obliged to part with all her gold were the yellow metal purchasable at a comparatively easy rate, it seems to be based on the singular assumptions that, under a bimetallic system, the silver currency of a country must have a substantial gold basis, and that silver-using countries like China, Japan, and India would at once proceed to lay in large stocks of gold for the purpose of forming such a basis. That theory is entirely novel to us. India, China, and Japan give themselves no concern whatever at present about a gold basis for their silver currency. Although silver is subject to grave fluctuations of its gold value, and although that value has depreciated enormously during the past twenty years, the countries that use the white metal are quite content to rely on it. Would they be less content if its gold value were not only considerably appreciated but also fixed and invariable? Surely not. With international bimetallism, there would be no danger of either of the precious metals flowing wholly in any one direction, except as a matter of convenience re-

gulated by factors quite distinct from those that our correspondent refers to.

We have devoted space to the consideration of Mr. MIGEOD'S arguments, not because we consider them very serious, but because we hold it to be the duty of a newspaper to discuss any and every phase of this vital question. At the same time, we wish to disclaim all intention of advocating such a heroic readjustment of the gold and silver ratio as that now adopted by a section of the Democratic Party in the United States. Bimetallism, according to its best exponents, has three great aims:—first, to provide a sufficient supply of precious metal to meet the world's demand, gold alone being inadequate to discharge that function; secondly, to make the supply as nearly as possible a constant quantity, for whereas the annual production of gold or silver, independently, is subject to large variations, their combined production has always been tolerably uniform from year to year; and thirdly, to restore stability to the ratio between the two metals, so that international commerce shall no longer be hampered by perpetual fluctuations in exchange. That sober programme does not lend itself to any sweeping alteration in the present ratio of gold and silver values, nor does it contemplate condemning the world to suffer the converse of evils already responsible for so much distress.

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

The *Rikugō Zasshi* and the *Tetsugaku Zasshi* both refer in terms of admiration to the recent revival of interest in the writings of Kant throughout Europe, as evinced by the special efforts the Germans are making to give greater prominence to his teachings. On April 1st was issued the first number of a new magazine called *Kantstudien*, to be devoted to the discussion of Kant's doctrines and to the publication of matter connected with his life and teaching, under the editorship of Dr. Faipinger, of the Halle University. The new German organ has obtained the support of some of the chief psychologists of Europe, many of whom have promised to furnish material for publication. Professor Nakajima Rikizo, of the Imperial University, has been asked to report on the progress of *Kantstudien* in Japan. He is now engaged in the preparation of an essay on the subject.

In connection with the above, it is pertinent to notice that the translation of an exposition of Kant's "Critique of Pure Reason" by Mr. Kiyono Ben, referred to in our last summary, has been favourably reviewed by several literary organs. The *Rikugō Zasshi* commends the wisdom of Mr. Kiyono in selecting an exposition of Kant's great essay for translation before attempting to render the work itself into Japanese. "The Critique of Pure Reason," without explanation, even supposing it were well translated, is too abstract and technical a treatise to be intelligible to any but the most advanced students, but the exposition is not beyond the comprehension of any one fairly well acquainted with mental science. The *Rikugō* is of opinion that the works of Kant are destined to accomplish great things in Japan among high class students, and thinks that it is a subject for congratulation that such a capable translator as Mr. Kiyono should have undertaken to render Japanese readers familiar with the writings of

one of Germany's greatest thinkers. Mr. Kiyo-no is now engaged in translating Kant's *Prolegomena*, and it is said that he purposes tackling the "Critique of Pure Reason" itself later on.

The *Awoyama Hyōron*, a religious organ, under the title of "Christianity and Hebrew Literature," informs its readers that the study of Hebrew is growing popular among a certain class of Biblical students. Hitherto, says this magazine, the Japanese have been content to obtain information bearing on the sources of Western Civilisation from foreign investigators, but of late the number of those who aspire to examine for themselves the literary productions of the Hebrews has largely increased. To admire the Bible and yet to show no zeal in the study of the languages in which it was written, is, observes the *Awoyama Hyōron*, very inconsistent. Specially important is it that men who aim at becoming evangelists should be acquainted with the Bible as it was originally written.

The *Shirayuri* has some hard things to say of the Akamon-ha (University writers). According to this organ, the pens of this class of contributors to current literature are largely employed in sounding the praises of the men of their own party and in condemning outsiders; moreover, their literary style is barbaric and pedantic, says the *Shirayuri*. They introduce German, French, and English to an unnecessary extent and quote half a dozen authorities when one would do equally well. But the *Hakkō* holds an opposite opinion in reference to the merits of the members of the University Literary Society. According to this authority, these writers are conspicuous for their superiority to the ordinary run of modern scribblers. They are permeated with advanced Western thought and write with an enlightenment that is rare by found among contributors to the magazines of the day. But there is one remark which we feel it our duty to make, says the *Hakkō*. We have never met anywhere with such ill-chosen ideographs to express thought as are to be found in the pages of the *Teikoku Bungaku*. When contributors to this organ are not quoting the opinions of others, but expressing their own thoughts, we cannot say that there is anything very superior about their literary production. When compared with the writings of classical authors the deficiencies of the *Teikoku Bungaku* are manifest. The remarks of the *Hakkō* seem to us somewhat contradictory here, but what the writer means is that the University writers merit no such severe censure as is passed upon them by the *Shirayuri*; but still the standard to which they attain is by no means high.

A recent number of the *Shigaku Zasshi* (Historical Magazine), under the heading "Foreign Investigators of the Japanese Legal System" gives a list of the principal foreign works on Japanese Law, which, for convenience of reference, we here append.

1. (a) "Land Provisions of the *Taihō Ryō*," by Professor J. Tarring, Transactions of the Asiatic Society of Japan, Vol. VIII.

(b) *De la propriété et de ses formes primitives et la propriété archaïque Japon*, by M. Emile de Laveleye. The first of these works has passed through four editions.

2. "The Feudal System in Japan under the Tokugawa Shoguns," by Mr. J. H. Gubbins. Vol. XV. of the Transactions of the Asiatic Society of Japan.

3. *Kampōritsu oder Hiakkajo. Ein Japanisches Rechtsbuch aus der Mitte des vorigen Jahrhunderts, herausgegeben von Otto Rudorff*. Tokyo, A.D. 1888.

Also *Mittheilungen der deutschen Gesellschaft für Natur und Völker Kunde Ostasiens*, by the same author.

4. *Beitrag zur Kenntniss der Geschichte des Japanischen Strafrechts*, by Professor Michaelis, German Asiatic Transactions, Vol. IV.

5. *Japanisches Familien und Erbrecht*, by

Dr. H. Weipert, German Asiatic Transactions, Vol. V.

6. *Die staatliche und gesellschaftliche Organisation im alten Japan*, by Dr. K. A. Florenz. Vol. V. of the German Asiatic Society.

7. "Notes on Land Tenure and Local Institutions in Old Japan," edited from posthumous papers of Dr. W. B. Simmons, by John H. Wigmore.

8. *Zum Japanischen Recht*, by Karl Friedrichs. Published in the *Hikaku Hōgaku Zasshi* (Comparative Law Magazine) No. 10. 1892.

9. *Studien aus dem Japanischen Recht*, by Dr. J. Kohler. *Hikaku Hōgaku Zasshi*. No. 10.

10. "Materials for the Study of Private Law in Old Japan," by John H. Wigmore.

Vol. XX. (Appendix) Proceedings of the Asiatic Society of Japan (1892). For an exhaustive account of all the books published on Japanese Law the *Shigaku Zasshi* refers its readers to Wenckstern's "Bibliography of the Japanese Empire."

A work of considerable historical importance, the *吾妻鏡, Asuma-Kagami*, which contains a minute history of the Bakufu from the days of Yoritomo downward, is now to be given to the world in a readable form. It is announced to appear in December next, and already subscriptions are solicited by the publishers, the Dai Nippon-zusho Kaisha. The work will consist of 2,600 pages and be sold at 6 yen per copy. By ordering at once and paying 1 yen in advance the book may be obtained for 4 yen 50 sen. The editing of the work has been undertaken by the Historical Section of the Imperial University, Messrs. Takakawa Komakichi, Yoda Kiichiro, and Narikawa Shunichiro being the editors. The new edition will bear the title of the *校訂増補吾妻鏡 Kōtei-Sōho Asuma Kagami* (the Azuma Kagami: revised and enlarged).

At a meeting of the Historical Society held on June 13th, Mr. Torii Ryuzo read a paper on "Liaotung antiquities," giving the results of investigations carried on in the peninsula last year, and Mr. Saito Agu contributed an essay on "Foreigners in Nagasaki in the Tokugawa Age," furnishing an account of the connection of the Dutch and Chinese with prostitutes and of the action of the Tokugawa Government in reference to this connection. Both papers are said to possess considerable historical value.

The *Teikoku-Bungaku*, as usual, contains a large amount of useful matter. An article entitled, "Chinese Learning at the present Time," calls attention to the various stages through which public opinion has passed in reference to the value of Chinese studies. The late Prince Iwakura, though an earnest advocate of the introduction of Western learning, was opposed to the shelving of Chinese studies; and, owing to his influence, Messrs. Kawada, Shigeno and others founded the 斯文學會, *Shi-bungakukai*, and expended a considerable sum of money in trying to revive interest in classical subjects. But the death of Prince Iwakura was the signal for the commencement of a gradual decline, and ten years later the pro-Chinese party had retired into obscurity and Chinese learning became a general object of ridicule. Recent events have given a new impetus to the study of the ethics and the laws of the Celestials. To foreign investigators belongs the credit of having revived interest in a subject that had lost all charm for ordinary Japanese minds. The popularity of the Japanese, which for some years past has been increasing in the West, has led scholars to inquire whence they derived their chief elements of strength as a nation and has thus involved a study of the Chinese system of government and ethics. But the new movement, it must be borne in mind, having originated with foreigners, will be of limited influence—it will, in fact, be confined to purposes of investigation and comparison only. So that it would not be true to say that there is any widespread

revival of interest in Chinese studies for their own sake.

In connection with the above we are told by the magazine already quoted that a meeting of Chinese scholars whose age is over 60 years has been held at the Kinkikan, Kanda, Tōkyō, and that a committee of 18 has been appointed to report on the necessary steps to be taken for the resuscitation of Chinese learning. The *Teikoku-Bungaku*, under the title of "A New Occupation for Chinese Scholars," makes the following suggestions. (1) That Chinese scholars should collect and edit all Chinese works suitable for use as text-books in general schools. (2) That they should collect and preserve copies of all rare works. (3) That they should make a selection from the teaching of Confucius and Mencius of such doctrines as are suited to the moral needs of the rising generation. (4) That they should make a thorough investigation of Chinese history, specially with a view of throwing light on Japan's connection with China in the past. (5) That they should collect and systematically arrange material bearing on (a) Law, (b) Political Economy, (c) Philosophy, (d) The Fine Arts, (e) Customs, (f) and General Literature. (6) That they should prepare books containing the most advanced western thought for circulation throughout the length and breadth of China, to serve as light-bearers to her benighted millions. In order to accomplish these objects, says the *Teikoku Bungaku*, it is necessary that Chinese scholars of the old type should relinquish their conservatism and be willing to utilise the services of men whose minds are cast in modern moulds. The place hitherto occupied by Chinese learning in the minds of the Japanese, concludes the *Teikoku Bungaku*, can only be retained by a thorough reform in the methods of study and by showing that the literature of the neighbouring continent may contribute its quota to the general progress on which this nation has resolved.

In the pages of the organ which we have just quoted, attention is called to the low rank which literature holds in the minds of the nation compared to commerce, industry, and kindred subjects. The *Waseda Bungaku* and the *Taiyō* both express the same conviction. They say that there are many signs that the nation is satisfied with a very low standard in literary matters, and that its interest is centred on money-making. According to these authorities the public is drifting into frivolity and superficiality, and the desire for reform and greater earnestness in the religious and literary worlds is not likely to be realised in the near future.

On the subject of humorous verses, the *Teikoku Bungaku* has a few remarks worth quoting. Our contemporary is of opinion that Japanese poetic speech has words adapted to the expression of the most lofty thoughts and beautiful ideas; that there is nothing amiable or charming which cannot be put into language by the skilful writer. With this richness in terms referring to the higher planes of thought, there are not wanting expressions well calculated to excite the laughter of women and children. But there is a grave deficiency in high class humorous language adapted to amuse refined and educated minds. This defect, however, is a characteristic of modern literature. In the Tokugawa era and the age that preceded it, high class poetry of the humorous kind was constantly produced. Although one or two leading journals have made an attempt to cultivate the talent of humorous verse-writing, according to all competent judges, they have signally failed, the modern *Kyōshi* being quite unworthy of being ranked with the best ancient specimens of 狂歌, *Kyōka* or *Kyōshi*. Modern attempts at poking fun in verse do not amount to more than puns (*Wortspiel*), or what the Germans call *Mutterwitz* Antithesis. It is not worthy of the name of humour. No modern successor of the great 蜀山, Shokusan, exists. As an illustration of what is possible in this line

take that verse of Shokusan's which runs thus:—
*Kimi ga Kokoro iyo iyo wave ni hodokenu wa
 Musubu no Kami wo inori sugita ka?*

The reference is to a lady who has not responded to the advances of a lover. She is represented as having prayed so fervently that she might be bound to some one that she feels as though she were bound and is unable to open her heart even to the man who loves her. "Is your increasing reluctance to relax (even) to me to be attributed to the fact that you have prayed overmuch to the god who binds?" This says the *Teikoku-Bungaku* is something more than a skilful choice of words. It is the idea, rather than the words in which it is expressed that is so pleasing. Shokusan was a thinker. Hence his verses occupy a different hemisphere to the modern contributors to the poetry columns of our daily newspapers.

The *Tōyōtsugaku* contains a short notice of Mr. Lafcadio Hearn's latest work "Kokoro; Hints and Echoes of Japanese Inner Life," promising a fuller account later on. Mr. Hearn, says this organ, was born in the Greek Archipelago, of French and Irish parents, was educated in Paris, resided for some time in Louisiana, where he was engaged in literary work, and also in the West Indies, where he acquired a thorough knowledge of the customs and mental characteristics of the inhabitants. For some years past he has lived in Japan. He is a man of exceptional power. We read in the same magazine that Mr. Jennings, has published an Almanac entitled "The Proverbial Philosophy of Confucius," with a wise saying for every day of the year, in imitation of the Shakespeare and other calendars.

Under the title of "Literature and the Nation," the *Waseda-Bungaku* discusses some of the tendencies of modern literature. Various literary organs have of late been dwelling on the influence of literature on national sentiment, progress, and institutions. The *Nihon-jin* takes an unfavourable view of the situation. It regrets to see so much foreign influence and foreign bias in the literary productions of modern writers. The accusation that these scribes are but retailers of foreign goods is well warranted. Even the writers of fiction, whose function one would suppose to be to render familiar to the world the national peculiarities, customs, and institutions of Japan, employ their pens in describing foreign manners and phases of life. Surely the excellencies and defects of their own countrymen furnish topics enough for such writers. Fiction, more than any other class of literature, should be national, not cosmopolitan. Its value and success depend on the faithfulness with which it describes the life of the people for whose perusal it is written. These borrowers from foreign sources expend their energy in portraying character that is alien and hence which lacks the charm attached to home life and native sentiment. The heroes of their romances are strangers to us, and we can never feel towards them as we do to our own kith and kin. The *Mesamashi-gusa* takes a broader view of the question. The study of human character, says this organ, as displayed in the lives of individuals, is preparatory to a study of mankind as a whole, and this again becomes the groundwork of philosophical belief of some kind or other. It is when this last stage is reached that the mind is placed in possession of something like a complete theory of life. There is no denying that when ideas reach the philosophic stage, they lose their national character altogether. How far the various aberrations, and eccentricities of mankind, the abnormal states and strange situations in which men and women are placed, with which the novelist deals so largely, are, when recorded, conducive to the cultivation of a national spirit is a very difficult question to settle. Abnormal types of character, superstitious ideas and the like are pretty much the same all the world over. To dwell on these is to treat topics that are common to all mankind. Is this conducive to nationalism?

On the above subject, under the heading

"Poets and Nationalism," the *Taiyō* has something to say. If, observes this organ, poets are desirous of winning for themselves lasting renown, they must cease to express their individual idiosyncracies and aim at becoming the mouthpieces of national feeling. In saying this our meaning is not to be understood as expressing a wish that poets should deal less with the concrete and more with the abstract, but that they should endeavour to blend the particular with the general, parts with the whole, and similarities with differences in such a manner that a true picture of life will be the result, and thus national sentiment will have found a voice. Under the title of "Morality and Poets," the same magazine says, while nations outlive individuals, yet they again are outlived by the human race. Though we have no intention of depreciating national poets, to express the sentiments of mankind as a whole is undoubtedly a grander rôle for a poet to play. But this latter kind is not to be looked for in our country at the present time. Hence it is that we exhort verse writers to aim at becoming national organs. The *Teikoku-Bungaku* considers it most desirable that poets should be permeated with nationalism, should seek to arouse patriotic feeling; they should be well versed in history and should aim at appealing to those instincts which are common to all classes alike. Poets who simply re-echo foreign sentiments and draw no purely national inferences therefrom can never be regarded as literary representatives of the nation. The *Shonen-bunshu* and the *Kokumin-no-Tomo* express the same opinion. Commenting on the above, the *Waseda-Bungaku* concludes that in many cases the poet who is the spokesman of a nation is also the spokesman of the world. It is by observation of the peculiarities of a race or a people that the data for extensive generalisations are found. That Japan stands in need of poets to express the ideas and the problems which belong essentially to the stage of progress which the nation has now reached, and that universal regret is felt that such writers are not forthcoming, are facts which no one can doubt.

The *Kokumin-no-Tomo* and the *Taiyō* hold different opinions as regards epic poetry in Japan. The former laments that a nation whose history extends over 2,500 years should not have produced a single epic poem. To this the *Taiyō* replies that there is no real cause for regret in the circumstance to which the *Kokumin-no-Tomo* calls attention. What are called epic poems, continues the *Taiyō*, are not actually suggested by history, though the epic poet often weaves historical materials into his poem. Epic poetry originates with religion. The poet gives a kind of objective reality to certain subjective religious ideas. The part which such poems have played in rendering religions popular is no mean one. The valiant deeds which the heroes of these poems are made to perform are represented as religious service and attain increased distinction thereby. The Aryans are essentially a religious race and with them these poems are common, but the Turanians, to which the Chinese and Japanese belong, have never been subject to strong religious emotions nor permeated with religious ideas. They are essentially a practical minded race, whose tendency it is to describe events and phenomena in a matter of fact way without any of the transformation to which epic poets subject them. The absence of epic poetry in our literature is to be considered as a result of the bent of our race genius, is in no sense accidental, but the outcome of circumstances over which we have no control. A natural, and not an artificial, method of describing events agrees best with our inherited mental peculiarities. The *Waseda-Bungaku* is of opinion that before the question of whether there is any epic poetry in Japan can be settled the term 叙事詩 *sofishi* (descriptive poems), which is used as an equivalent of the Greek term *eros*, must be more clearly defined than has been done by the two writers whose views we have just given.

On the 25th of last month a new magazine

made its appearance, which, if we may judge from its first number, promises to be an acquisition to the literary world. The title the new organ bears is *Sekai-no-Nihon*, an appellation which is explained in the opening article. Some eight or nine years ago the term most in vogue was *Nihon-jin no Nihon* (the Japan of the Japanese). This was subsequently changed to *Tōyō no Nihon* (The Japan of the East), but has lately given place to the title we have chosen for this organ, *Sekai no Nihon* (The Japan of the World). What happened in this nomenclature to which we have referred, continues the *Sekai no Nihon*, occurs in the case of a variety of things. Names are mostly relative, and change with the relation which objects bear to other objects. There is no denying that Japan passed from being known to her own sons and daughters to be known to Oriental Powers, and that recent events have made her known to the World. Henceforth she has to bear in mind that her acts are scrutinised by the world. Her policy must be shaped anew so as to meet the exigencies of the new situation. There is nothing more important than her foreign intercourse and hence nothing more imperative than the avoidance of internal dissension and disorganization. The editor of the *Sekai-no-Nihon* is Mr. Takenokoshi Yosaburo, the author of the *Ni-sen-gohyaku Nenshi*, to which reference was made in our last Summary. Mr. Takenokoshi is well-known among journalists, having been employed, in succession, on the editorial staffs of the *Kokumin Shimbun* and the *Yiji*. It is said that Mr. Motono Ichiro, of the Foreign Office, and some 30 other writers have promised to contribute to the new organ. It is predicted that the *Nihon-no-Sekai* will become a formidable rival to the *Taiyō* and the *Kokumin-no-Tomo*, but it is added, it will contain features of its own. It will aim at being a high class critical, literary, and political organ, ranking in Japan with such magazines as the *Contemporary Review* or such journals as the *Spectator*. In the opening number the editor alleges that the new magazine belongs to no political party. Though it purposes to give greater prominence to political discussions than to anything else, it will welcome contributions from specialists on Art, Literature, Religion, and other subjects. It will aim at furnishing the literary world with the most advanced thoughts on every topic. The opening number contains, among others, articles on "A Change of Policy in reference to China;" "Western Civilization;" "The Origin of the Franco-Russian Alliance;" "The New Japanese Civil Code and Foreign Civil Codes;" "Were the inhabitants referred to in early history the real aborigines of Japan?" "Religion and the Fine Arts;" "The Development of the Japanese Language and Literature." The new organ is to be issued fortnightly. The first number is over 100 pages in length. In addition to articles on Japanese subjects the *Nihon-no-Sekai* supplies its readers with information on current foreign topics.

In an article entitled "Methods of Teaching Foreign Languages," the *Waseda Bungaku* remarks that what is known as the *Hensoku*, 變則* method, that is teaching the pupil the meaning of the original without regard to pronunciation or syntax, has been almost entirely abandoned and students are now taught according to regular foreign methods (*Seisoku* 正則). But it is desirable that instruction in foreign languages and instruction in Japanese should be rendered uniform. The *Taiyō* is of opinion that wherever possible the same teacher should be required to teach Japanese and English or German, but the *Waseda-Bungaku* thinks that this plan is not feasible; nevertheless, says this organ, it is well to bear in mind that there is a close connection between the teaching of Japanese and the teaching of foreign tongues, so much so that no Japanese is thoroughly competent to teach his own language until he has mastered some foreign tongue, and the reverse, says this writer, is still

* Abnormal method. For a good definition of the term, vide Gubbin's Dictionary, p. 193.

more true to fact. In this connection it may be worth mentioning that the Waseda Semmon Gakkō has abolished the English Preparatory School hitherto connected with the main institution and has created an English Language Section in the Main School, which is to rank with the Law, Political Economy, and other sections. The services of several English teachers have been bespoken and the faculty is resolved to render this section of the school thoroughly efficient. Mr. Katayama Senahi, lately returned from England, has charge of this branch of the Semmon-gakkō.

In recent years a number of magazines designed for home reading and for women's perusal have made their appearance. There is the *Yogaku Kōgi*, which, as its title implies, devotes itself to the exposition of subjects of interest and importance to women and supplies its readers with items of news. There is the *Yogaku Zasshi*, which makes a specialty of female education, discussing manners and customs and expressing decided opinions on the great questions of the day in female circles. There are the *Katei* (家庭) *Zasshi* and the *Nihon-no-Katei*, which are designed to supply the wants of women of little education. Among Christian organs the *裏錦 Uranishiki*, which, as its name implies, beneath an unprepossessing exterior contains a large amount of valuable matter. Then the Buddhists have their *花ノ園生 Hana-no-Sonō*, a flower garden well stocked with plants of delicate colours and refreshing fragrance. The aim of this magazine is to provide matter suited for all classes of female readers. The *Nadeshiko* (撫兒) occupies a middle position between such organs as the *Yogaku Kōgi* and the *Nihon-Katei*. The *Taiyō* regularly devotes a certain space to the discussion of household subjects. There are numerous other organs designed for circulation among women and children, which seem to find sufficient support to warrant their continuance from month to month. The *Yogaku Kōgi* is a very high class magazine adapted to the homes of the upper classes and to well educated women. The *Yogaku Zasshi*, while containing first class matter, also publishes articles suited to the capacity of women of ordinary education. The *Uranishiki* is well adapted to the wants of educated and refined Christians. It is a thoroughly pro-foreign organ, in a good sense of the term pro-foreign, and is edited with considerable literary ability. The *Hana no Sopo-ō* contains, among religious discourses and a variety of miscellaneous matter, some extremely polished essays. All things considered, the *Yogaku Zasshi* is *facile princeps* among this class of periodicals. It has been said, we think with some truth, that the great defect of many of the magazines designed for women is one of style. Many of the articles are too florid and contain difficult ideographs where easier ones would serve the writer's purpose. The *Kana* placed at the side of these characters is by no means an indication of their meaning. In many cases very shallow thoughts are expressed in grandiloquent terms. This may be only a stage through which this class of literature is passing, the concealment of poverty of thought under a rich verbal foliage being not uncommon among a certain class of aspirants to literary fame in the West.

RUMOURS OF FRESH TROUBLE IN KOREA.

There appears to be no truth whatever in the stories circulated within the past few days that a fresh insurrection has broken out in Korea, and that the Japanese have been the object of an attack. We have made inquiries in responsible quarters, and are informed that no telegrams in that sense have been received officially in Tokyo.

† A pink, *Diānthus superbis*, but the term here is to be understood in the sense of *nade-yashinaitaru kodomo*, a child that is well cared for and well brought up.

FORMOSAN NEWS.

Our Tokyo contemporaries all write in an emphatic manner of the opening of a Court-Martial in Formosa for the trial of a number of officers, who, it is alleged, are accused of cowardice in the subjugation of the recent rebellion. These officers, we are told, are Lieut.-Colonel Masuda Teruto, Captain Furuichi, Sato Tsunemasa, and Captain Ishizuka Retsusaburo. They are arraigned in consequence of the investigation of Major-General Tatsumi. Some of the Opposition papers, write that the opening of the Court-Martial is in some way connected with international questions.

We take the following from the columns of the *Yomiuri*:—The Governor-General, we are informed, is in no hurry about taking any steps towards subduing the savages in Formosa. He means to leave them alone, until the Chinese rebels have been completely subjugated. The Garrison in Formosa consist of Conscripts raised in 1894 and 1893. The term of service for those of 1893 will expire in November, so the Authorities are said to be taking steps for bringing them home and sending conscripts drawn in 1895 to fill their places. The number of gendarmes and policemen now in Formosa is over 3,200, but this force is felt to be insufficient. The Authorities, we hear, intend to increase the force to the same ratio, at least, of that in Japan.

For commercial as well as military reasons, the Authorities, we learn from the *Shogyo Shimpō*, intend to reconstruct the harbours of Kelung and Taku. But as to the materials to be used and the expenses of the work, nothing is yet ascertainable. The Authorities think, however, that financial considerations may prevent them from undertaking the reconstruction of both harbours at the same time, and in that case they deem it wiser to commence with Kelung. The work at Kelung may be started at the beginning of the next fiscal year, that is, April 1st, 1897.

In regard to the officers alleged to have been charged with cowardice, the Metropolitan journals of Monday write that a telegram has been received by the Governor-General from Major-General Tatsumi, which says that Major Sato and Captain Furuichi have been put on the retired list and Lieut.-Colonel Masuda and Captain Ishida are to be tried before a Court-Martial. We also learn that Major-General Tatsumi has been appointed President of the Court-Martial. The Court will sit at Taipei.

The *Nippon* has received a letter, dated the 6th instant, from Formosa, from which we gather the following:—The police force now in Formosa consists of 230 officers and 1,387 men, the number of stations and sub-stations being 62. This force being found insufficient, the police are to be increased to 3,000 with a corresponding increase of officers, stations, and sub-stations.

It is rumoured that the civil officials in the Governor-General's Office will have the privilege of wearing swords. In Tainan the sanitary authorities daily go the rounds and whenever they discover a plague patient, they sent him to the Epidemic Hospital, and the house is closed and cut off from communication with others. When a patient dies the body is disinfected and buried. Tainan has already 29 eating-houses inhabited by over one hundred women of questionable character. Nothing of interest has yet been discovered regarding the Formosan fisheries. Mr. Kayaba, an Expert in the Productions' Bureau of the Governor-General's Office, is in the neighbourhood of Giran making investigations and observations in the matter. Mr. Ota Minoru, a whilom M.P., is superintending the establishment of a fishery station. The fish caught off Kelung and Tamsui consist principally of sea-perch and ground-shark.

The Higashi Honganji of Kyoto has decided to spend 360,000 yen in the coming ten years for propagating Buddhism in the new territory.

Mr. Miyauchi, Governor of the Pescadores, was interviewed at Nagasaki in regard to the afforestation of the Pescadores. He said that

in November last, 3,500 young pine-trees from Taipei were planted. They were healthy trees, yet all withered within twenty days of transplanting. The chief cause of this was the long voyage of three weeks that the trees had to pass through. Some trees, about 3,000 in number, from Amoy were next tried with not much better results. Next, seeds of the *fuku yarabo* and *adan* (the two latter herbaceous trees capable of growing in salt-water) were ordered from Okinawa. They reached the Pescadores on March 10th, being sent from the Loochoo capital in November last. After sowing they grew very well at first, but being unable to withstand the dry weather all perished after a time, except the *fuku* planted in the barracks, which have reached a height of about 5 sun. The next plan to be tried is to build a stone wall, 6 feet wide and 15 feet high, for protecting the trees against the winds. The trees for future experiments will be wild pines from Japan. These will be sent from Nagasaki in pots, each of which is estimated to cost 50 to 60 sen.

The following items are taken from a letter[†] dated the 6th instant, received by the *Nippon*:—A police constable, going his rounds a few days ago, was shot through the neck from behind and fell dead. Some policemen, a few steps ahead, hearing the sounds, turned and witnessed the death. They found that the shots came from some rebels posted on a neighbouring hill. Upon one of the insurgents being killed by a policeman the rest fled. The dead Chinese was found to possess a splendid Murata rifle and 30 rounds of cartridges.

A great lack of labourers is experienced in Taipei. This, according to a Chinaman, is due to many coolies being away in Taichu and Tainan, the rebels having engaged them. The same Chinaman says that a rebellion may rise in the neighbourhood of Taipei by the Fall.

Captain Furuichi Ryuhachi, we read in the Tokyo papers, who was put on the retired list recently on account of disgraceful conduct, had received the decoration of the Golden Kite, 5th Class, on the 30th of June last.

Governor-General Katsura is reported to have replied as follows to an interviewer, who tried to take him to task on account of his long stay in Tokyo:—"I have no objection to proceeding to Formosa at any time. It is an utter misconception to imagine that I could do better work for Formosa in Taipei than in Tokyo. I have been to Taipei, and what I saw there convinced me that the present plans for tranquillizing and opening up the new territory are very inadequate. They appear to me to stand in need of vast enlargement. To achieve that end, perfect administrative and military organizations have to be secured and means must be devised to eradicate the bad Formosan manners and customs and to transplant better ones in their stead. Now as to the funds required for attaining these objects, I have to negotiate with the Ministers of State. Did I leave the negotiations with my subordinates I should not be able to obtain sufficient sums of money. I hope the nation will allow me to stay in the capital until I have seen all my plans and designs fully ripe for success."

THE OPPOSITION AND THE GOVERNMENT.

The leaders of the *Shimpo-jo* (combined Opposition) now in Tokyo, are said to have held a meeting at the head-quarters of the party on the 7th instant, and to have adopted the following resolution:—"Resolved, that as the Government has neglected up to this day to take any steps for the relief of the suffering caused by the inundations in various prefectures during last month, therefore we hold that the Government has not properly fulfilled its duty. We consequently call upon the Government to employ, for the above purpose, whatever means are placed within its competence by the Constitution, and we further consider it proper that a special session of the Diet be at once convened to make arrangements adapted to the occasion."

KOREAN NEWS.

Li Ji-u, once a Provincial Headman, who petitioned that the King should return to the Palace, and was in consequence censured by the Cabinet, recently reappeared before the Russian Legation together with his friends and again presented the petition. He said his grief was unbounded at seeing his King the inmate of a foreign legation.

The Premier, In, sent in his resignation in consequence of a difference of opinion between himself and Han, Minister for Justice, respecting the appointment of a successor to Chhoi, late Judge of Han-sŏng. The resignation was not accepted by the King.

A Chinese mandarin in Sŏul is negotiating a China-Korean Treaty. Thirty-five Chinese policemen are in the Korean capital performing the duty of escort, but they wear non-official garments.

Mr. Fukui Saburo and others lately formed a syndicate called "The Korean Business Encouragement Union." They aim at starting a prosperous carrying trade in the interior of Korea. Mr. Ozaki Saburo is staying at Ogura's, in Ri-hyŏn. It seems that he has not accomplished much of his mission, but he is in excellent health. These items are taken from a letter dated August 5th, received by the *Yifu* from its correspondent in Sŏul. Below we give some news contained in a letter, dated August 2nd, sent by the *Nichi Nichi's* correspondent in the Korean capital:—The Korean Bank, promoted by An Ke-ju, Li Wan-yong, and others, lately decided to establish itself as a purely private affair, as it could not be placed under the immediate supervision of the State owing to several causes. Among these is the delay in the publication of the Bank Regulations, and also an objection raised against it by Mr. Brown, Foreign Adviser to the Department of Finance. A rumour that the King expressed his unwillingness to leave the Russian Legation when Mr. Waeber attempted to persuade his Majesty to return to the Palace, seems to have been floated to show the Koreans that the Russian Minister applies no force to retain the King in the Legation, and also to pacify some patriotic Koreans, who are fanatically desirous of the King's returning to his Palace.

A letter, dated Aug. 5, from Fusan, received by the *Miyako Shimŭn*, says that the Japanese war-ship *Kongo* entered that port on the 28th proximo from Shanghai. She is cruising with some graduates of the Naval School, and is to leave for Gensan and Vladivostok soon and thence return home to Kure.

The local Government lately notified Japanese residents that they would have to pay the industrial tax from the current month, a tax that used to be levied before the War. The Consul and representatives of residents are negotiating with the local officials upon the matter.

The imports at Fusan for the first half of this year totalled yen 639,694.361, and were less than exports by yen 153,069.921. The chief import was cotton muslin, valued at 122,700 yen, and the next, kerosene, that totalled 42,451 yen. Japanese cotton cloths are in the greatest disfavour at present, selling only in small quantities at from 1 yen 50 sen to 1 yen 25 sen per *hiki* (two *tan*). Rice is unaffected by the Osaka speculation, though dealers are expecting a further rise. Quotations, which appear likely to remain at a standstill for some time, vary from 6 yen 80 sen to 6 yen 85 sen for first class and middle class uncleaned grain.

The Tokyo Newspaper Agency reports:—Since Russia rejected the proposal to lend Korea \$500,000 and declined to station a Russian garrison in Sŏul, the Korean Ministers have come to look back with veneration on Japan's high-spirited kindness. Han, Minister for Justice, is holding consultations, it is said, with some of his colleagues as to the advisability of asking of Japan the favours denied by Russia. The Japanese advisers employed by the Judicial Department, who hitherto were looked upon with coldness, have commenced to receive very different treatment. The *Hochi* states that the

application of the projectors of the Sŏul-Fusan Railway was placed before the Korean Ministers of State on the 12th instant, but there is little hope of them granting the concession.

MARINE INSURANCE COMPANIES.

The Tokyo Marine Insurance Company was the first of its kind in Japan. This company was soon followed by the Nippon Marine and Land Insurance Company, and later by the Osaka Insurance Company, and the Imperial Marine Insurance Company. After a time, differences arising between the Marine and Land and the Osaka Companies, the former entered into a combination with the Tokyo Marine and the Imperial Marine Company, leaving its rival utterly friendless. The Osaka Company soon after succumbed to the combined rivalry of the other companies and quietly withdrew from the field. At the time of the Japanese-China War a much greater number of ships than at ordinary periods were engaged on the Seas of Japan, and in consequence the three companies had a great run of business. This prosperity caused the combined companies to behave in a haughty and meddlesome manner toward shipowners, and thereupon the Nippon Marine Transportation Union was organized. A new Insurance Company, called the Nippon Marine Insurance Company, with a capital of 3,000,000 yen, was also started. This Company, upon commencing business, proposed cooperation with the others, but the proposal was rejected. Then the young Company entered into an engagement with Messrs. Jardine, Matheson and Co., of Yokohama, and the result was brisk competition and the consequent lowering of premiums. In the report for the first half of 1896, the Tokyo Marine Insurance Company states that the working had resulted in loss, but the Imperial Marine Insurance Company distributed for the same period a dividend of 10 per cent., mainly from the profits made on advancing money to shipowners. The Nippon Marine Insurance Company, however, made a profit on its legitimate business.

ENGLAND AND INDIA.

It is impossible not to condemn the policy adopted by the Home Government in the matter of employing Indian troops for the purposes of the Soudan campaign. The principle of making use of Indian troops to fight the battles of the empire outside India, is most excellent, but when they are thus used, nothing seems less fair than that any part of the expense should be borne by India, unless Indian interests are directly concerned. The line of argument adopted by the Home Government in this instance was that all out-of-pocket expenditures should be met by the Imperial Treasury, but that India ought to disburse the pay of the troops, since she must have done that, at any rate, even had they not left the dependency, and since India has a vivid and direct interest in the preservation of the communications between herself and England. But the Viceroy of India replies that, as to the first argument, the establishment of the Indian Army is already at a minimum, and if any of the troops are taken for service abroad, funds must be supplied to replace them, if necessary; and as to the second, the Soudan campaign does not bear the construction of a military operation for preserving the communications, inasmuch as these would not have been imperilled had the Egyptian frontier remained at Wady Halfa, instead of being pushed farther south. The sum involved does not exceed sixty thousand pounds, and for the sake of such a bagatelle the Government has taken a step that will provoke adverse criticism from every class in India. Indeed, the Viceroy, in one of his despatches, says plainly that he protests in the strongest terms against a policy "that exposes the Indian Government to attacks to which there is no adequate answer."

INDUSTRIAL ENTERPRISE IN CHINA.

Mr. Consul Jamieson is the first official that acknowledges frankly the influence of the Shimonoseki Treaty in securing for foreigners the privilege of carrying on industrial enterprises in China. Beginning with the Shanghai Chamber of Commerce, there has been a persistent endeavour to prove that the conditions of that treaty had no effect in settling the question, and that Her Majesty's Minister in Peking had, in fact, settled it effectually before the treaty was negotiated. Mr. Jamieson, however, in his report on the trade of Shanghai for 1895, writes as follows:—"I have in previous reports spoken of the establishment of native-owned cotton-mills at Shanghai, and of the efforts which foreign merchants were making to obtain a share in what promised to be a very lucrative industry. Their claims, which were based on the wording of certain of the old treaties, were bitterly opposed by the officials both in Peking and in the provinces, firstly, because it was an innovation, and, secondly, because some, at least, of these officials were personally interested in the already existing mills, for which, indeed, they claimed a monopoly. The fight took place over the right to import machinery, in which the officials were clearly in the wrong, but, even if forced to give way on that, as, indeed, they practically were, they would have found ways and means to frustrate the successful working of foreign-owned mills. If China had been victorious in the war, the claim would almost certainly have still been refused. Fortunately, however, for those interested, and most fortunately of all for China herself, a clause was inserted in the Japanese Treaty expressly conceding the right to import machinery and establish manufactures at all or any of the open ports, and, further, granting the same immunity from taxation inland as is secured to foreign-imported goods. No sooner was this privilege established than half-a-dozen foreign joint-stock spinning and weaving companies were in the field. Four were successfully floated, three British and one German, and mills to run about 40,000 spindles each are now in course of erection. They will be ready to commence operations before the end of the year. Two Japanese companies came forward at first, but they seem to be waiting on events."

THE "GAELIC."

The agent of the O. & O. Company in Yokohama, Mr. B. C. Howard, received a telegram on Saturday afternoon that the O. & O. steamer *Gaelic* had been floated off the Hamo Bank and was proceeding under easy steam to Nagasaki. She appears to have fractured the plates on the starboard bilge.

From the *Kobe Herald* we gather that on the morning of the accident the channel leading into Shimonoseki Straits was crowded with junks, and the *Gaelic* collided with one in consequence of the junkman luffing just before he reached the steamer. Had he held on he would have gone clear. The steamer's way was stopped and a boat lowered to rescue the junk's crew. While picking up the boat it was seen that the big liner was dropping down upon the beacon placed on the Vojibei rocks. They attempted to get her under way again, but the tide caught her under the quarter and before steering way was obtained the *Gaelic* had been driven on to the Beacon. Water came into all three of the forward compartments, more especially into No. 3. The junk that caused all the trouble partly righted after the crew had left her and eventually drifted to Shimonoseki. The *Gaelic* in all probability will be temporarily patched up Nagasaki, afterwards proceeding to the Hongkong dock for thorough repairs. When she left Nagasaki her passenger list included:—For San Francisco—Miss Hennessey, Miss Smith, Dr. and Mrs. Lowson, Mr. Chamberlain, Mr. Mitchell. For Yokohama—Mr. Lichtenfelder, Major Hatton, Mr. and Mrs. Wright. For Kobe—Lieut. and Mrs. Matthews.

DEATH OF MRS. DROPPERS.

Just as repeated communications from correspondents to this journal had led us to hope that the very sad case of Mr. and Mrs. Silver Hall's bright little boy would be the only calamity attributable to dysentery at Karuizawa, the shocking news comes that Mrs. Garrett Droppers succumbed to the malady on the 17th instant. No particulars of this most lamentable event have yet reached us, but rumour says that Mrs. Droppers' illness had lasted only three days when the end came, and that a physician summoned from Tokyo for purposes of consultation had not started when a telegram arrived saying that all was over. It is scarcely possible to exaggerate the profound sentiment of grief that will be inspired among the residents of Tokyo and Yokohama by the terribly sudden and untimely decease of this young, gifted, and most lovable lady. In such a case "the guest divine" seems to have utterly mistaken his portal of call, and our sense of the fitness of things is outraged by the sudden summons of one apparently so rich in the promise of a long, joyful, and joy-giving life. But it has always been so: "death loves a shining mark." We can not venture to address any words of sympathy to her bereaved husband, all words must seem so trivial in comparison with his grief.

It never through my mind had passed
That time would e'er be o'er,
When I on thee should look my last,
And thou should'st smile no more.

THE "ILLIS."

Only two persons in the *Illis*' ship's company were married men, one being the Commander. The relief funds at Shanghai, Chefoo, and Nagasaki are being liberally subscribed to. The *Peking and Tientsin Times* of the 8th reports that the details of the loss of the *Illis* are, in the meantime, being kept quiet until the official enquiry has been held; but little items leak out, and we now hear that the engines did not break down, but were simply not powerful enough to keep the vessel off the rocks. Before striking, all hands were called on deck and three cheers given for Emperor William, then all joined hands and sang a hymn. Immediately after striking, the vessel broke in two, the after part sinking in deep water. The fore-part remained on the rocks, and those who were eventually rescued clung to the fore-rigging. Two of the strongest men, after the sea had somewhat abated, swam ashore and walked to the light-house, where they procured boats and returned to the wreck and succeeded in taking off their companions who, by this time, had been thirty-six hours on the rigging.

THE WEST RIVER.

Mr. Wenyon, who, in company with Mr. Cowen, recently accomplished a remarkable journey from Canton through the provinces of Kuangtung, Kuansi, Hunan, and Hupeh to Chungking in Szechuan, does not think that the districts traversed by the West River offer great trade possibilities. "Between Wuchoufu and Kweilin there are no fewer than 360 rapids, and he strongly inclines to the belief that the country will be better reached by the Yangtze route. The trade crossing the Tungting Lake is enormous, and if a line of steamers could ply from Hankow to Changsha an inestimable boon would be conferred upon that region, for, like most inland waters, the Tungting Lake is subject to sudden and severe storms, and the least sign of suspicious weather is enough to stop traffic for days. Hunan, in Mr. Wenyon's opinion, is very rich in mineral resources, notably anthracite coal, and of the prospects of the new treaty port of Shashi he is very sanguine, believing it greatly superior to Ichang." It will be seen that this account differs considerably from one recently published. Doubtless Mr. Cowen who went, we believe, on behalf of *The Times*, will have much information to impart.

THE DAYS OF CAPTIVITY.

The Israelites having spent—according to Bible history—several centuries in bondage in Egypt, it is natural to expect that some traces of their presence there should exist among the various records furnished by modern excavations. But until quite recently nothing whatever had been found. Captain W. M. Flinders Petrie, the well-known Egyptologist, has been the happy person to discover a ray of light among this darkness. Last December, he commenced to excavate an important district at Thebes. Three months of excavation brought to light seven temples, among them that of Merenptah, supposed—unfortunately there is still a hypothesis—to have been the Pharaoh of Exodus. Merenptah, it appears, was a man of Vaudalic tendencies. Having expelled all his foreign enemies, he found himself without a sufficiency of men to build his own funeral temple, so he proceeded to tear down one of the temples of his predecessors and utilize the materials. Among these materials was a magnificent block of black syenite, on which was inscribed an account of the religious benefactions of the monarch whose temple Merenptah treated so ruthlessly. This block Merenptah caused to be set in a wall with its face inwards, and on the polished back he caused to be chiselled the story of his own doings. In the closing portion, the "Triumph of Merenptah," occurs the following paragraph:—

"For the sun of Egypt has wrought this change; he was born as the fated means of revenging it, the king Merenptah. Chiefs bend down, saying, 'Peace to thee'; not one of the nine bows raises his head. Vanquished are the Tahennu (N. Africans); the Khita (Hittites) are quieted; ravaged is Pa-Kanana (Kannan) with all violence; taken is Askadni (Askalon?); seized is Kazzem; Yenu (Yanoh) of the Syrians is made as though it had not existed; 'the people of Yisraal is spoiled, it hath no seed'; Syria has become as widows of the land of Egypt; all lands together are in peace. Every one that was a marauder hath been subdued by the king Merenptah, who gives life like the sun every day."

It remains to be determined what is meant by "The people of Yisraal is spoiled, it hath no seed." But, at any rate, there is the allusion, clear enough.

WESTERN JAPAN AND KYUSHU AFTER THE WAR.

A certain personage, now on a tour of industrial and economical inspection, writes thus to the *Nichi Nichi*:—Entering Hiroshima, I find its prosperity so great that no parallel can be found elsewhere in Japan. This state of things, of course, is due to the War. The prosperity of Shimonoseki is hopeful, and the future of Moji marvellous in its potentiality. When the Branch Office of the Nippon Ginko purchased land at the rate of 8 yen per *tsubo*, it was thought an expensive purchase worthy of a great Bank. But now the same land is valued at more than 30 yen per *tsubo*. In Fukuoka Prefecture much rice and coal is produced and the prosperity now enjoyed has hitherto been unknown in that remote province. In that one Prefecture, I am told, no less than seventeen different railways have been projected and not a few banks established. Kumamoto is thriving, and its inhabitants are eager to make it the centre of commerce and industry in Kyushu.

WOMEN IN WAR.

According to the newspaper reports of the engagement at Ferkeh, it appears that "when the enemy had been driven off and their camp taken, their women were triumphantly appropriated by the Egyptian troops." Women fare ill in *fin-du-siècle* warfare. They are butchered in Mashonaland and "triumphantly appropriated" in the Soudan. Happily such things are not allowed in the Orient, or, if they do happen, are publicly execrated in a deserving manner.

TENDENCIES IN THEOLOGICAL THINKING.

"Theology has made great and rapid advances in recent years." So says the prospectus of *The International Theological Library*. "The time has come when it is practicable to combine British and American scholars in the production of a critical, comprehensive commentary that will be abreast of modern biblical scholarship." So says the prospectus of *The International Critical Commentary*. That two such series of religious works are in process of compilation shows that marked changes are coming over theological thinking. The last quarter of this century has found out ten times more than the world knew before in several important lines of thought. And with this new historic, philosophic, scientific, and psychologic knowledge it was inevitable that there should come a world-movement in religious thought, a searching review of the past, a testing of interpretation, a breaking up of old forms, and attempts at reconstruction. In all this it is evident that the deep foundations of Christian truth are as firm as ever, perhaps firmer. Men of faith rather than men of doubt, are offering to the world in scores of publications the results of their investigations so far. And I will simply mention in the briefest possible manner some of these newer aspects of truth that are having wide emphasis.

CHRISTIAN CONSCIOUSNESS.—Whether or not some press this too far in settling questions of interpretation, the relative worth of different parts of the Bible, and rules for faith, it is certain it has gained a real place in modern thinking and is a real force in overcoming this age of doubt. From Schleiermacher through Coleridge down to the present time there has been a growing use of this phrase until now it is asserted that "the Christian consciousness is the source of all valid thinking upon the ultimate realities of the universe, and that the common colossal defect of former systems of theology is that they defer hardly at all to the creative Christian consciousness" (*The Christ of To-day*, Gordon). Some strong thinkers would stem this stream of thought by asserting that Christian consciousness, whether of the individual or the collective consciousness of the Church, is human and subject to error, and it must be judged by the standard of the Bible (*Every Day Theology*, Stearns), but it will not down. The Christian consciousness exalts the fact of Christ's universal presence in the hearts of His followers, wherein He becomes their life. It is a protest against "the mean view of the world which owns no power above those which build railroads and sets steam-engines agoing" (*Life of Christ*, Neander). It is used in the interests of reverent liberty in interpreting parts of the Scriptures hard to reconcile with God's Fatherhood. It is not confined to the learned, nor excluded by scholarship. It is found in beautiful examples among those not learned in the wisdom of this world. "It is the image of Christ ever renewing its youth among men. There is no better preparation for preaching than a living and soul-stirring Christian consciousness" (*The Independent*). In the theological thinking of to-day it stands as a most convincing assurance of Christian truth, subordinating objective revelation and exalting faith alone.

THE CONSCIOUSNESS OF CHRIST.—A similar phrase, with deeper meaning, is taking a high place. In this age of doubt and transition the consciousness of Christ is called the great constructive principle of Christian faith. "The reality of the introduction of the mind of God into the world in the consciousness of Jesus is a creative source of all theology" (Gordon). What this consciousness of Christ yields may be described as "the distinctive and differentiating doctrine of the Christian religion." (*The Place of Christ in Modern Thought*, Fairbairn.) Thus, all our knowledge of God's deepest nature, of his revelation to humanity as individual, social, racial, and of the modes of being that constitute the Godhead, comes directly through this unwavering consciousness of Christ. Not anthropology

and justification by faith, as Luther claimed; not the sovereignty of God, as in Calvin's system; not the Christian consciousness and the incarnation, as the newer Christologies assert; but the consciousness of Christ towards God, towards man, towards Himself, is the thought that is being claimed as the corner-stone of coming systematic theology. What is being aimed at will be referred to in part under subsequent heads.

THE MEANING OF HISTORY.—The time was when theology concerned itself mainly with the history of the Jews, regarding them as God's chosen people, the only possessors of a revelation from him. But the whole world has now come together, and brilliant advances in historical studies have forced scientific thinkers to tell the meaning of the history of the whole human race, not merely in its present historic manifestation of nations whose countless millions have lived and died with no knowledge whatever of the revelation through Israel, but the meaning also of all the prehistoric millenniums of untold and horrible sufferings, out of which has come at last this humanity of which we are a living part. It was difficult for loving hearts in former times, when science had not yet revealed the long prehistoric ages, and when yet these swarming Eastern nations were unknown, to accept the thought of eternal punishment for all so-called heathen. But now that the East and the West have come together, and evolution has put back the race perhaps for 100,000 years, the old thought of only a remnant being saved, and all the rest lost in eternal darkness is so repugnant to the very Christian consciousness that Christ himself has built up, that heart and soul cry out against it. There *must* be a meaning of history that fits in with, and does honour to, the Fatherhood of God, as the consciousness of Christ attests it, and that does not violate it and disgrace it beyond expression. This thought, implied in guarded language for some decades, now refuses any cover of words, and is spoken on the house-tops with no church censures. Even a Methodist Bishop (Foster, before Pittsburg An. Conference, Sept., 1894) in an annual conference, is reported as having said, "If I could concede for a moment that the world as I know it is lost, and I know it from rim to rim, having travelled in all its lands, having seen its dissolute, despicable millions, having seen its shame and filth, and if I were compelled to think that my God, whom I worship, would by any possible method of condemnation send down to Hades 1,200,000,000 of my brothers, that know not their right hand from their left, and save a few of us who are a little better perhaps in our morals, I would not go to heaven if I could. I could not worship such a God as that. I would join the hosts of Hades in rebelling against such a God. Our God is not a God of that kind. God is love, and is saving all He can." And Dr. George A. Gordon affirms, in rather more classic language, "The Christian thinker of to-day has won his freedom to regard God as the Father of all men, to conceive of Him as eternally interested in the whole race; and to remove all limits of time and place from the redemptive scheme of Christ. He has the right to affirm, if he solemnly believes it, that on this side of death or on that, God and Christ and the moral universe are unchangeably the same; that all the divine punishments are chastisements; that God's final purpose in scourging His children is to bring them back to Himself; and that even in hell the worm must gnaw and the fire burn in the service of the Eternal Grace."

The scope of history in theological thinking is immensely enlarged, and the tendency is to accept either the doctrine of conditional immortality, the religious way of saying "the survival of the fittest," or to take the ages of evolutionary processes as "the redemptive movement of God." If we retain the old exclusive consciousness of sin that insisted on the universal corruption of the race, making men by nature the children of the devil, we gain relief in the permissible doctrine of the ultimate annihilation of the unfit, while, if we hold to

the creation of man in God's image, fallen, yet still in the Father's infinite love, we may joy in the God whose saving love is limited to no time or place. "Within evangelical bodies, modifications of belief on the subject of the future state have won more or less of acceptance" (*Church History*, Prof. G. P. Fisher).

REVELATION.—Revelation has a recognized meaning now commensurate with the progress of knowledge. We used to have natural and revealed religions, and the distinction is still held in conservative minds. But the very title of a book widely known, *The Self-Revelation of God* (Harris), shows a growing recognition of a wider revelation than that given to the chosen people. Dumb nature has always been permitted to bear witness to the wisdom and power and glory of the Creator, but when it comes to man the general tendency has been that there was no other revelation given under heaven save that to the Jews. Now, however, the study of comparative religion has brought out the question of the relation of non-Christian religions to Christianity, and the answers are numerous and weighty as showing that all religions are in some degree revelations of God to His children. "I have been deep in my study of the ways of God in heathen religions. The past of mankind does not now seem a black ocean covered with fog, and storm, and wrecks drifting everywhere, but a long wake of light crosses it, coming from the light that lighteth every man in the world—the Spirit of God. In that gleam the nations have steered their barques and have made toward heaven. He hath not left himself without witness" (Dr. Brace in *The Congregationalist*). The ground is being freely taken that "all religions are of and through God." "Revelation is a fact co-extensive with mankind." All religions have germs of divine truth, some more than others, while Christianity is the Supreme Revelation of God and the fulfilment of all others. "It is surely the business of the theologian not to flout other witnesses of God as superfluous, but to reconcile all revelation with that in which the Christian rejoices" (*Studies in Theology*, Denney).

EVOLUTION.—"Evolution is revolutionizing the religious thinking of our time" (*The Congregationalist*). Theologians used to be very conservative toward evolutionary thought. Pres. Noah Porter, only ten years ago, delivered his celebrated address before the Nineteenth Century Club, New York, on Evolution, in which he said:—"If what is popularly known as evolution shall become the prevailing philosophy, then the Christian faith and Christian feelings, and the conduct and character which they inspire, must be abandoned forever by man and for man." But he also said, "Evolution in some senses and uses is sound in philosophy, true in science, and not only harmless to, but wholesome in theology. In its noblest significance it may spiritualize nature, ennoble man, and honour God."

It is this latter conception that has been realized to a large extent. Bald, atheistic, materialistic evolution has no wide acceptance anywhere that I know of. There is an evolution that hesitates and is agnostic, yet reverent. There is also an evolution positively and aggressively theistic, which posits God just as Jesus taught—as spirit, immanent yet transcendent, the Eternal Thinker and Planner, who is behind all law and life as the necessary ground, and whose supreme character is love. If there is a struggle for existence which, looked at only from one side, yields untold ages of wrongs and selfishness and brutality and bloody strife, it is being seen that this very struggle brings about "the maximum of life and the enjoyment of life with the minimum of suffering and pain" (Wallace), and a closer examination brings to light a corresponding struggle for the existence of others, an altruism, that is even more powerful than the egoism. So that where the struggle for existence abounds, this altruistic struggle yet more abounds in every social and family and governmental relation, being now clearly seen far back in the evolution of the animal world, and rising in humanity till it culminates in the Cross of Christ—the expression of the infinite Love of God. The bearing of the evolutionary

philosophy on theology is this, that "the universe must be so conceived as to be worthy of its God, and the God so conceived as to be equal to all the needs of his universe" (Fairbairn). "Evolution is distinctly in favour of the doctrine of a future life" (Prof. John Fiske).

THE SUPERNATURAL.—With the wider belief in the reign of law there has come a tendency to unbelief in the miraculous of eighteen centuries ago. The Ritschlian school lays no stress at all on the miracles. But there has also been a growing tendency to acknowledge most reverently a wider sphere of the supernatural far beyond the bounds of the historic revelation of God in Jesus of Nazareth. God is seen in all history, educating the race, bringing humanity up out of savagery and brutality into civilization and moral living until in the fulness of time he sends his Son. This larger view makes Jesus the Supreme Miracle, and all his marvellous works are natural to Him. In other words, the Son of God has taken such a strong hold on the hearts of His followers that they believe in His supernatural power because of His divinity, and not so much His divinity because of His miracles. This leaves us free to interpret wherever we can on naturalistic lines. It gives us a Bible that we believe not because it is inspired, but that we believe is inspired because it is so "full of the profoundest truths that appeal directly to the judgment and conscience of man." Jesus, the Christ, appears manifesting the infinite love of God in such a way that humanity seems to be grounded in the Godhead, and this makes belief in the supernatural rational, and even a necessity. The vast dignity and worth of a single soul is so apparent that nothing less than God in man can explain us to ourselves. We are living close in touch with the Infinite Power every hour, and the miracles of eighteen centuries ago cannot have the force in reason and the authority over faith that the living Christian consciousness gives to the heart that responds to the voice of God. "The argument for the divinity of Christ from prophecy and miracles is absolutely destitute of cogency for the representative modern mind," is an extreme way of stating this trend of thought (*Outlines of Social Theology*, Hyde). Yet faith in the supernatural is rising to such an extent that a return to faith is a recognized movement, seen signally in the clear position taken at last by Prof. Romanes.

SOCIOLOGY.—The Kingdom of God is receiving a new interpretation. "Human society is the unfolding of one universal will, and religion is essentially social" (Hyde). The application of Christian teaching to society, and the expansion of theology in social lines, are taking place at the same time. There is no longer a satisfactory resting place in individualism, for this tends to produce separation and disintegration. It is being seen that grand as are the fruits of three centuries of Protestantism the emphasis has rested full long enough on the worth of the individual, and now the movement is toward faith in the moral and spiritual worth of society. It is not denied that Christ was a great individualist, appealing mainly to the single soul, but it is being discovered that He was also a great socialist. Political Economy has almost become a branch of theological thinking. Revivals are carried on more on ethical lines and we hear prayers for a revival of civic righteousness as one manifestation of the Holy Spirit, and sermons on the love of God as producing better social conditions. There is a growing faith that God is not only in the church, but is in the family, the store, in politics, in the slums,—everywhere, setting up a kingdom which is something larger than the Church. "The church used to be considered a home for souls rescued from a lost world, while now it is coming to be regarded as an instrument for the redemption of Society" (Dr. G. L. Walker). Faith, hope, love, those sacred virtues that Christianity has brought out in such strength and beauty, are social virtues. "Sociology shows us the union of God and man, expressed in divine institutions wrought out by human service, and embodied in a universal life of love in which the will of God is accomplished through the

instrumentality of man" (Hyde). "With a new conception of the corporate unity of mankind, theology has become more altruistic, and a new theory of preaching—which holds that man must be a follower of Christ not merely to save himself, but to be a saviour, in his own place and measure—has been adopted of inward necessity."

TRINITY.—"This doctrine is fundamental to Christian faith and to the humanity that believes itself made in the image of God." Father, Son, and Holy Spirit—this revelation of the Godhead seems to Christian thinkers not only not less necessary, not shaken at all by the immense advances of knowledge, but more and more necessary as the only possible way of escaping from deism, atheism, agnosticism, and pantheism. God has never seemed more God than He is to-day throughout the thinking world. Christ has never been more sincerely recognized as the Eternal Son of God—gathering up into Himself all humanity in vital relation to the Father—than He is to-day. The Holy Spirit has never seemed so divinely operative in the whole history of the race as He appears now. And while systematic theology is not so much believed in and relied upon as of old, the Life of God in his children, and the Life of Christ in his followers never was so large an article of faith as it is in these days. The great defect in the Nicene Creed, in that, while it represents the inward relations of the Godhead, does not sufficiently emphasise the relation of Father, Son, and Spirit to humanity, is being remedied, not so much in formal statements of the Trinity as by the wide insistence of God as Father not only of Christ but of all men; of Christ not only as God's Son but as the representative of divine humanity; and of the Spirit not only as a personal part of Godhead, but as the light that lighteth every man. "I believe in the Trinity as attested by the Christian experience."

Thus, in these transition times, there is not one whit of yielding in faith in the supreme revelation of God, nor one particle of abatement in loyalty to the divine Son of God. Under this basal faith, even more profound than in the past, all differences on minor questions are more tolerantly treated, a newer work for the redemption of the whole man is going on, and a deeper spiritual union of the broken body of Christ, is being longed for, and prayed for, and laboured for, in the growing faith that the kingdom is the Lord's and the victory sure.

J. H. DE FOREST.

STRAW HATS.

This year the fashion of straw hats among the *jeunesse d'orte* of Japan is for narrow brims and black silk bands. Last year fashion inclined the other way. The most noted summer-hat makers in Tokyo are Messrs. Tobaya, Hikagecho, Shiba District, Messrs. Nozawa Shoten, Otemachio, Kyobashi, Mr. Yoshii Yasukichi, Hatagocho, Nihonbashi, and Mr. Kashiwagi Daishiro, Nichome Ginza. Prices in Tokyo vary from 4 to 5 yen to 14 to 15 yen per dozen, while hats sent into the country vary from 4 to 5 yen per dozen. At present in the streets of Tokyo people are rarely seen without hats, but before 1871 every one went bare-headed. About the year 1880 straw hats commenced to be manufactured in Tokyo. Long before that, however, in 1871, one Omori, a Nagasaki man, came to Omori, and there started the manufacture of straw-hats, but ere long he was compelled to give up the business so small was the demand for his wares. In 1875, Messrs. Koseki Kyemon, Kawada Tanigoro, Kawada Senzo, Ishikawa Takejiro, and two other persons took up the business abandoned by Omori. These manufacturers, after severe struggles and many bitter experiences, have succeeded in establishing a prosperous home trade, while they also export a quantity of their goods. An immense amount of straw is exported to England, and it is said that even hats and braid are exported to Luton, England, the centre of the straw plait industry. The farmers of Saitama, Nagano, Shizuoka, Aichi, and Okayama Prefectures, produce the best straw for hat-making in Japan.

GREAT FIRE AT SHINJUKU.

At about a quarter before twelve on Tuesday night a fire broke out at Shinjuku, in the centre of the prostitute buildings in that rather sparsely populated district of the metropolis. The fire originated in a mews in the First Ward, and, a strong south-westerly breeze blowing at the time, soon assumed portentous dimensions. When our reporter left the Shinjuku Police Station, at 3 o'clock this morning, about 300 houses had been reported entirely destroyed, with perhaps fifty others badly damaged. The blaze was so bright and the fury of the fire so strong, that one could easily read a newspaper two miles away by the glow, the low, rapidly scudding clouds reflecting the flames with a peculiar and striking intensity. The mews was at No. 95, Ichome, Shinjuku-machi. The immediate cause of the fire was unknown. But in less time than it takes to write it, all the circumjacent houses were ablaze. Two wards were wiped out. On either side of the highway—here very broad—were numerous brothels, all of the better class—if the term be permissible. Here the flames spread with such amazing rapidity that the inmates had hardly time to escape, any removal of their belongings being quite out of the question. Bands of scantily-clad women were thereafter disconsolately walking up and down in the vicinity, without a place to go to or a friend to ask for aid. Some found shelter in brothels near at hand; but the majority were homeless and exposed to the fully force of the heavy storm of rain which came up at 3 a.m., drenching everybody to the skin. Many houses burned like so much tinder; in a minute or even less the whole building would disappear in a lurid tongue of flame. The barracks of the Third Regiment of the Imperial Guard being close at hand, several detachments were soon despatched to assist the work of the firemen, and they did yeomen's service. That is now getting to be a feature of all fires in Tokyo: the military invariably work with cheerful alacrity and in perfect order. Shortly after one a.m. the scene was most striking. Every approach to the place of the disaster was filled with myriads of lanterns, like so many giant glow-worms, each lantern dancing up and down as the bearer pressed at full speed through the crowd. Withal very little noise and none of the accustomed firemen's yells; only the crackling of the flames and the sigh of the gale. No accidents to life or limb were reported up to daybreak, through several persons were missing, two prostitutes among others. One of the most striking features to foreign eyes was the painful lack of street lighting, the huge paper lanterns swinging in front of every house serving rather to emphasize than to relieve the pitchy darkness. On the other hand, the police discipline left nothing to be desired, and order was rigidly preserved. This is the largest fire the metropolis has suffered for an unusually long period.

THE NIPPON RAILWAY.

The Nippon Railway Company's Report for the first half of 1896 states that the three new lines projected by the Company have all been carried considerably toward completion. The Sumidagawa line has been completed all but the roadway at the Sanriki bridge and the wharf at Sumidagawa Station. The rails, together with those laid down last year, now extend 3 miles 75 chains. Work on the Tsuchiura line is nearly completed. What remains is only a little earthwork, the making of bridge-platforms, the building of station offices and other structures. This line will be opened for traffic some time before the end of the year. Engineering work on the Iwaki line is progressing satisfactorily. The line between Mito and Taira is finished all but two-tenths. For the convenience of superintendence, this line was divided into five sections: the Mito-Namerikawa, Namerikawa-Hisanohama, Hisanohama-Kumamachi, Kumamachi-Haranomachi, and Haranomachi-Iwamura sections.

THE SŌUL-FUSAN RAILWAY.

Rumour alleges, says the *Kokumin Shimbun*, that the Korean Government has sent a diplomatic note to Minister Hara, intimating its refusal of the Japanese application for constructing a railway from Sōul to Fusan, but the Foreign Office Authorities deny that any such note has yet reached them, nor have they learned from the Japanese Representative in Sōul that a communication of the kind has been received by him. Thus the matter appears to remain *in statu quo*, and it is likely to remain so for a long time to come. The projectors of the railway may have to send to the Korean capital representatives much abler than those at present pushing their interests there. In the event of final refusal, the Japanese Government, it is said, contemplates negotiating a special Treaty with Korea with reference to railway connection between the capital and Fusan. Rumour has it that the following reasons are responsible for the Korean Government's refusal to entertain the Japanese application:—First, the rebels not being yet fully subjugated, it is advisable to postpone the proposed work for some time; secondly, the Korean Government is desirous of seeing punishment inflicted on the persons arraigned at Hiroshima in connection with the affair of October 8th, before it enters into any negotiation with regard either to railways or compensation for injury to Japanese life and property; and thirdly, the Korean Ministers differ so greatly among themselves about the proposed railway that no speedy agreement is possible. The *Kokumin* further states that the objections to the railway seem to be stronger in the Korean Household Department than in the Cabinet, and conjectures that there must be some understanding reason which our contemporary declines to lay before the public at present.

AID TO FORMOSANS.

The following advertisement appears in the Hongkong journals:—

MID-FORMOSA RELIEF FUND.

Subscriptions are earnestly solicited for the Relief of the Inhabitants of Mid-Formosa, rendered Homeless through the late disturbances, a full report of which has been published in the Hongkong and Shanghai Newspapers.

It is roughly estimated that at least Forty Thousand People have been forced to take refuge in the Hill Country, from the Towns and Villages in and around the Hoonim district.

Of this number, it is calculated that *Twenty-five thousand are without shelter and totally unprovided for*. The distress reported is lamentable, and hopeless of alleviation without material and speedy assistance.

A Committee will be formed to arrange for the distribution of money collected. Meanwhile, the Undersigned makes an earnest Appeal on behalf of the Sufferers. Subscribers are kindly requested to pay their donations to the Hongkong and Shanghai Bank, at Hongkong, Shanghai, or Amoy, specifying such payments as being on behalf of the Mid-Formosan Relief Fund.

ALLAN W. BAIN.

Taiwanfoo, South Formosa, 1st August, 1896.

TROUBLE ON THE "SAIKYO MARU."

On the recent voyage of the N.Y.K. steamer *Saikyo Maru*, between Nagasaki and Kobe, the Chief Officer, Mr. Dernburgh, was the object of a concerted attack by the Japanese crew. According to the *Kobe Herald*, the Chief Officer had occasion to call for the boatswain. The man not being forthcoming, the Chief Officer went to the fore-castle and found the boatswain gambling, and when asked by the Chief Officer, he refused to attend to his duty. The boatswain was accordingly paid off at Shimonoseki, having expressed the opinion that he did not care whether he remained on the ship or not. After leaving Shimonoseki the crew were mustered on deck and two men who abetted the boatswain were shown to Captain Conner. After tiffin that day a dozen of the men broke into the Chief Officer's cabin and hauled him out on deck, where he was with

difficulty rescued by Captain Conner and his officers. Most alarming threats were uttered against the Chief Officer; and Captain Conner, it is alleged, has been warned to avoid the discharged boatswain, who has come up to Yokohama.

SINKING OF A KENCHO LAUNCH.

The Kencho steam-launch *Hiryu* was sunk on Monday morning just outside the harbour. The officers had been on the look-out for the P. M. steamer *China*, bearing Count Matsui, hourly expected in from San Francisco. At four o'clock she was signalled and the quarantine staff went on board from their launch, leaving their crew of four or five men on the vessel, close to the Kencho launch. These men seem to have handled their craft badly, for when the *China* went astern their launch and the *Kiryu* was immediately under her. Before this was known on the steamer, however, the *Kiryu* sank. Fortunately the crew were rescued. The *Kiryu* went to the bottom the other launch lost her smoke-stack.

TELEGRAPHIC RATES.

The Shanghai General Chamber of Commerce has had some pretty sharp correspondence with the Agent of the Great Northern, and the Eastern Extension A. and C. Telegraph Companies on the subject of the increased rate of charges recently fixed by the latter. The correspondence explains itself:—

General Chamber of Commerce,
Shanghai, August 4th, 1896.

DEAR SIR,—Your advertisement of an increased scale of charges for telegrams has not unnaturally excited considerable comment, and the Committee of this Chamber are urged to make representation in opposition thereto. Before doing so, however, it is deemed reasonable to enquire if you will favour them with any explanation as to the grounds for what appears to be an exaction from the public, and I should be much obliged if you would afford an early reply, as other Chambers are pressing for united action.

I have the honour to be, Sir, your most obedient servant,
C. J. DUDGON, Vice-Chairman.
To J. HENNINGSEN, Esq., on behalf of Great Northern Telegraph Co. Eastern Extension A. & C. Telegraph Co.

The Great Northern Telegraph Company
of Copenhagen.

The Eastern Extension
Australasia and
China Telegraph
Company, Limited.

Shanghai Station, 4th of August, 1896.

SIR,—I have duly received your to-day's letter referring to my advertisements of an increased collection of charges for certain telegrams, and requesting me to furnish you with an explanation of what you are pleased to say "appears to be an exaction from the public."

In reply, I beg to refer you to the terms of the advertisement in question, which plainly set forth the grounds compelling the Telegraph Companies to augment the silver amount which they have hitherto collected in China as insufficient equivalents for their authorised official gold-rates, which are made up of their own proportion and of that payable in gold to other Administrations, exactly in the same manner as has been done by other public companies and corporations, whose tariffs are based on a gold standard and collected here in silver.

I may add that this step has been taken by the Companies with the approval of the different Governments concerned, and on the understanding that the present rate for telegrams from Europe to China, viz., 8 francs 50 centimes (equal to about \$3) per word, shall be reduced to 7 francs from the 1st July, 1897, when the rates decided upon by the International Telegraph Conference held in Buda Pest last month will come into operation.

I have the honour to be, Sir, your most obedient servant,

J. HENNINGSEN,
Manager in China and Japan.

To C. J. DUDGON, Esq.,
Vice-Chairman Shanghai General Chamber of
Commerce, Present.

General Chamber of Commerce,
Shanghai, 11th August, 1896.

SIR,—Whilst thanking you for your letter of 4th inst. in reply to that of the same date from this Chamber, I am asked to express the disappointment of the Committee at your very incomplete

response to their enquiry as to the reasons for the recent sudden and enormous increase in your Tariff of Charges.

Dealing with rates to the United Kingdom, as an example of your charges, it appears that in December, 1895, you reduced the same from \$2.30 per word (which had long prevailed) to \$2.00 per word, a reduction welcomed by all though not unexpected or uncalled for in view of the vast increase which had undoubtedly taken place in the volume of messages transmitted and the corresponding beneficial effect on your revenue.

In face of this, and notwithstanding the fact that the course of silver exchange has not proved disadvantageous to your companies, you now without a word of warning or regret raise your rates from \$2.00 to \$2.75 per word, i.e., 37½ per cent., or over 20 per cent. more than you charged prior to the reduction in Dec., 1895, and your only reply to our enquiry as to your reasons is, that you intend to place local rates on a parity with gold charges elsewhere, regulated at your pleasure.

Your revenue is derived in the main from mercantile firms, many of whom pay several thousands of pounds sterling towards your support every year, and it is in explicable that an addition of 37½% to your tariff should be considered justifiable at a few days' notice, and presuming treated as a matter of trifling importance. Your Directors in taking such a course are apparently ignorant or have ignored the fact that though the volume of trade may be increasing, the margins of profit have narrowed to an extent which often causes telegraphic expenses to check business, and your action therefore means that messages will be restricted in every possible manner both in number and in length. Thus whilst your revenue will probably derive little or no advantage, you will have turned satisfaction into dissatisfaction amongst those to whom you are almost entirely indebted for your success in the East.

In addressing you thus plainly, the Committee have no desire to depart from the friendly and mutually advantageous relations of the past, for they feel assured that the results of your action cannot have been duly considered, and they will therefore be obliged by your transmitting by wire to your Head Office the protest and expression of views which they now record.

E. F. ALFORD, Chairman.

To J. HENNINGSEN, Esq.

On behalf of the Great Northern Telegraph Co.
Eastern Ext. A. & C. Telegraph Co.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

DYSENTERY IN KARUIZAWA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The *Nichi Nichi Shimbun's* report is incorrect. In Karuizawa only one person has succumbed to dysentery, and the total number of cases, even including one or two of doubtful character, do not exceed eight. Excepting two cases, each at a distance of over a mile, I know of no others nearer than Kutsukake, 3½ miles distant, where a severe epidemic prevails.

If you will kindly publish this, you will ease the minds of our friends,

Your obedient servant,

J. N. SEYMOUR, M.B.

Karuizawa, August 11th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In behalf of justice, I write to correct erroneous accounts of the sickness and deaths at Karuizawa. The only death among foreigners, was Mr. and Mrs. Silver Hall's dear little boy—and the only dangerous illness has been confined to that family. One other case was that of a Chinese Missionary—who came to Karuizawa with chronic dysentery—hoping to gain strength to undertake the home-voyage. One more, a slight, and now convalescent case, completes the number among foreigners. Among the Japanese there has not been a single death, a very few cases of dysentery, most proving only diarrhoea. A Chinese Missionary M.D. performed a successful surgical operation on the face of a little girl. This brought him into "repute," and as he practised "gratis" he was besieged with cases, but none was the much dreaded dysentery. I am writing this for the sake of the villagers of Karuizawa, whose winter comfort largely depends upon its summer visitors. The exaggerated accounts that appeared in your columns only provoked a smile from foreigners, but they are of greater moment

to others. The agitation has done good in calling attention to the necessity of pure milk and water. There is much sickness in surrounding villages, and, one, Kutsukake, has been practically quarantined by the police. Thanking you for the courtesy of inserting this.

Yours truly,

AN AMERICAN MISSIONARY.

[The exaggerated accounts referred to were taken from, and credited to, a vernacular newspaper. Moreover, since the above letter was written, a foreign lady has died of dysentery at Karuizawa.—Ed. J.M.]

RAILWAY MISMANAGEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Dr. Eldridge's letter and the reply thereto have made me decide to recall my intention of not communicating a little incident that occurred last summer, when we, too, were starting for Nikko. We, with servants and baggage, reached the Yokohama station in time for the noon train on Friday, but found that, owing to a temporary change in the schedule, that train was not running. Whereupon we requested the officials in the baggage office to receive and hold our baggage till the 7.30 a.m. train next day, Saturday. At 7.10 next morning we were promptly on hand, paid at once all dues on baggage stored—so much for each piece for two days—and requested the checks. The latter could not be given, we were of course told, until the tickets were presented. In vain we pleaded that it was getting late, and the ticket office was not open. When the latter was finally opened it was within five minutes of the time for the train to start; and though we purchased tickets instantly and hastened with them to the baggage room, the clerks absolutely refused to do anything with the baggage, as we were "too late!" If there had been the least delinquency on our part, either as to time of arrival or as to courtesy, we would have submitted quietly to the inevitable. But as it was, we succeeded in gaining the station-master's attention just as he was about to dispatch the train, and it was owing to his courteous attention to the matter that there was a delay of ten minutes which resulted in ourselves and baggage being safely stowed away in the train we wished to take.

Realizing that the baggage clerks have their hardest work in the hottest weather, when they must often be sorely tried, we were loth to complain. But that was neither the first nor the last time that we have been subjected to similar though smaller annoyances, and from the same cause—viz., the failure to open the ticket-office early enough. And therefore we suggest one simple remedy, as a relief to both clerks and travellers, viz., the early opening of the ticket-office.

I am, Sir, yours truly,

A. S. G.

August 16th, 1896.

EFFECTS OF THE ESTABLISHMENT OF BIMETALLISM IN THE BRITISH EMPIRE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of the general interest that bimetalism exercises, and more especially in America, where the election of a new President for the United States seems likely to turn largely on the currency question, it may not be out of place to consider briefly how the British Empire might be affected, were the currency tampered with to bring about a state things that rests on a faulty basis.

Let it therefore be assumed that Parliament has sanctioned a bimetallic system. The restoration of the sterling coinage is the first step, which would consist in increasing the amount of silver in all the subsidiary coins now current, or, and the result would be identical, in establishing a new coinage for the whole Empire instead of only for the United Kingdom and Australia. In any case the subsidiary silver coins must no longer remain at a nominal value which is almost double their intrinsic value. Assuming then roughly and for the sake of argument that silver is now at half its former price and also that the total amount of sterling silver current is £16,000,000, in order to put that silver coinage on a strict bimetallic basis, there would be entailed an expenditure of £16,000,000 + £x, "x" representing the enhanced cost of the silver to the Government owing to such a great demand being put on the market. What x would be it is hard to say. It might be 5 per cent. in addition, that is £800,000.

To put its own coinage right would therefore cost England £16,800,000, and it remains to be seen whether England would be justified in incurring such an expense.

As the argument now stands, the gold and silver coinage would be in the same ratio to one another as the raw metals—approximately; but this ap-

long the same lines as the morning subject.

On Friday the first hour was devoted to a prayer meeting led by the Rev. N. W. Utley, and was followed by a paper on "St. Paul and the Planting of the Church," by the Rev. J. A. B. Scherer, of Saga. In his absence the paper was read by Mr. Price. The evening meeting was led by the Rev. J. Y. McGinnis, of China.

On Saturday morning the session was opened with a Bible Reading led by the Rev. W. Wynd, of Osaka. A question box was then opened by the Rev. A. D. Hail, D.D., of Osaka, which led to an interesting discussion of missionary policy in Japan. There was no evening meeting on Saturday.

The Sunday morning service was conducted by the Rev. J. N. Crozier, of China. Sunday evening being the closing meeting of the Conference it was led by the President, who gave an interesting address summing up the various subjects which had been discussed during the week. The Conference as a whole was a most enjoyable one to all; the series of Bible Readings being one of the marked features of the meetings. The usual business meeting of the Conference was held on Monday, August 10th, and, after making some few alterations in the rules governing the Conference, the following Committee was elected for another year:—Revs. S. H. Wainwright, R. A. Thomson, H. McC. E. Price, J. A. B. Scherer, A. D. Hail, and J. N. Hayes, of China.

The Conference then adjourned.

KARUIZAWA CONFERENCE.

Karuizawa, Shinshu, Aug. 11, 1896.

The conference opened on the 10th with pleasant weather and a good attendance. Rev. J. L. Dearing presided, and introducing the first speaker, said that self-support, the topic for the day, was not a local question only. The churches at home were asking, "How much longer will it be before the churches on mission fields will be capable of sustaining themselves financially?" All are agreed on the desirability of self-support as soon as possible; the questions are what is actual self-support, and how soon can it be realized.

Rev. E. S. Moore, in opening the subject, asked a pertinent question relative to the possibility of self-support in new and older stations, the grouping of weak churches, the precluding of a mercenary spirit, the avoidance of partiality, of educating men out of sympathy with their probable environment, making the pastorate more desirable than work under a missionary, placing inexperienced evangelists in places remote from missionaries, and the advisability of the evangelist's touring rather than working alone in a place, where little progress seems to have been made.

Dr. MacGregor spoke from the standpoint of a missionary in China. The Doctor has kindly furnished the following digest of his remarks. In Amoy our experience has been that a native ministry is essential to the effective carrying on of mission work. The preaching of the Gospel by the general body of converts is valuable in supplementing the work of trained ministry, but cannot take its place. In our work we have from the beginning aimed at building up a self supporting church. The salaries paid by the Missions to preachers in their employment, have been such that the native congregations are able to pay their ordained pastors at a higher rate. This has been systematically kept in view. The native church formed under the care of the Reformed Church Mission and the English Presbyterian Mission, has been organized under the care of a synod with two presbyteries. The presbyteries require that no congregation may call a pastor unless prepared to offer him 10 yen a month with a dwelling house. The salaries of ordained men may vary from 10 to 15 yen. No man is ordained unless called to the ministry by a congregation prepared to support him. The preachers in the employment of the Missions are paid from 5 to 8 yen a month. Now among these preachers some are from time to time recommended to the Presbyteries for license, and when, after examination, they are licensed, they are eligible to a call from any congregation prepared to support them. When a congregation numbers 50 or 60 communicants it is generally expected to be able to support an ordained pastor. The average amount contributed by the native Christians is from 2 to 3 yen per communicant (including women). In providing their church buildings the congregations as a rule are helped by the missions or by the missionaries individually. Dr. MacGregor said further, in answer to questions, that parish school teachers were paid salaries less than pastors, and that teachers in the higher and theological schools were not paid above pastors. In the Amoy church they have no Home Mission Board, but they have what might be termed a Foreign Mission Board,

that conducts work among the Hakka population, about 100 miles inland from Amoy. The money used by this Board is supplied by the Chinese. Theological students are supported by the Mission and students in the Middle School as well, except that the latter contribute to their education one yen a month.

Rev. Mr. Arnold, of China, called attention to the fact that self-support had succeeded best in the poorest district, Shantung. In Mr. Arnold's field it was still a struggle to maintain the principle. He instanced the case of a converted story-teller, a man of power in preaching, who has attempted self-support but finds his touring time greatly diminished by the time required for the conduct of his business.

Rev. E. C. Noyes, of Maebashi, was then called for, and in responding regretted that although there are many self supporting Kumi-ai churches which have never received a dollar from the Mission, and many church buildings erected without such aid, yet self-support has become more and more difficult during the last few years. The recent reduction in appropriations from home, however, has not been an unmixed evil; for when the proposition was made to a certain church to unite with others in supporting a collegiate pastor, not only this church proved its ability to be self-sustaining, but another church, hearing of this heroic effort, determined also to be independent.

In the evening, the devotional meeting was conducted by Rev. Mr. Hudson, of China. The plan for the three devotional meetings on the programme contemplates a study of the First Epistle of John, taking one of three sections each evening. The service last evening was an exceedingly interesting one, the Christian fellowship, joy and cleansing, and the two attributes of God, light and love, being the themes. A deeply earnest and spiritual tone prevailed.

The topic for Tuesday evening was "The Language." Bishop Bickersteth presided, and called on Bishop McKim to speak on "Colloquial Japanese." The latter said that he was never more astonished than when asked to speak on this theme, but he had concluded it must be on account of his age! Romaji was discontinued and the beginner urged to make the acquisition of the *kana* his starting point; this to be followed by grammar study, and reading the New Testament; this in turn to be succeeded by such books as the *Kyuo Dowa*, *Shingaku michi no Hanashi*, and finishing with *Gogaku Hitori Annai*. Absorbing is better than attempting to memorize long sentences. Young missionaries were advised to write their first sermons. A good plan is to preach to your teacher and have him give you the same in more idiomatic Japanese.

Rev. Mr. Roston, of China, read a paper on the Chinese characters and the study of them. The source of these 40,000 and more word symbols, used by more human beings than any one system, must ever remain a mystery. It is a living system by which we in our time may hold intercourse with the ancients of thirty centuries ago. Under the division of how to study the character, the method used by the Chinese was given; "a selection of characters written on small pieces of red paper, cut into squares, are placed before the pupil, who has not the faintest conception of the meaning of the words before him, neither does he know until later in life, when it begins to dawn on him that such and such a word has such and such a meaning; for his teacher's task is simply to repeat the words over and over to him until he can associate the sound with the character." The method suggested as among the best by which the foreigner may acquire a knowledge of the character were given in the converse order of their importance. First, that of copious reading with the faithful use of the dictionary. Second, by analytical study, that is, by an intelligent observation and division of characters into their component parts of radical and primitive. Third, by the use of certain selected lists of characters, and the constant and thorough study of them. Fourth, that of writing the character from dictation of the colloquial and rendering the same in proper literary style; which plan of course presupposes a fair acquaintance with the character. By this method is claimed the combined study of the colloquial, the character, and the cultivation of style.

Rev. W. J. White then spoke on "Christian Literature in Japan." It has been a growth of 22 years. The first Christian literature in Japan consisted of Christian books from China, Dr. Martin's Evidence of Christianity being one of the most popular books, especially acceptable because of its excellent Chinese style. One of the first Christian tracts was "A Conversation about Christ," written by President Iwuka. This tract has been widely used and much blessed. Japanese Christian hymnology received its first contribution from Dr. Nathan Brown;

it was a metrical version of the Lord's Prayer. In preparing tracts it is quite essential that they should pass through the hands of a competent Japanese for revision of style before being published. The Tract Society hope to secure more practical sympathy from the Japanese pastors in having them write tracts themselves. The committee are also expecting to ask the Japanese pastors to preach on the Society's work one Sunday in the year, and to ask their people for contributions on that occasion. An annual meeting of the Society where the whole question of Christian literature may be discussed, is also in contemplation.

Following Mr. White, Bishop Bickersteth, referring modestly to his attainments in the language, recommended first securing a teacher who knows no English. Dr. Hepburn once told the Bishop that the first Japanese sentence he learned was, *Kore wa nan to iu mono desu ka*, "but" said the Doctor, "I didn't know which word meant which." But even with this slight knowledge great progress was possible. A second recommendation was to aim at the possible. Be content to secure a simple expression. A Jesuit missionary of the old days, had, as one of his rules, "not to remember words of no use to me in my gospel work." Thirdly, go through the same book frequently. This is a most tedious business, but a good method. Again, avoid too much style; too much Chinese makes the discourse unintelligible. Finally, never begin studying without prayer.

In the discussion following, Dr. MacGregor said that in Amoy, Swatow, Ningpo, and Formosa there were Romaji editions of the scriptures. The women and girls are almost ignorant of the character, but they can learn to read the Romaji in a few months. However, Romaji is not used for aggressive work, because only those already Christian are familiar with it.

Dr. Poppen then reminded the Conference that a residence of four months in Japan qualified him to speak on the subject of Chinese characters. He had not as much regard for the characters as he had for the difficulty of acquiring them, and he ventured to predict that in the economy of the future the time and labour necessary to such acquisition will be found too valuable to be so expended.

Bishop McKim warned us against the fascination of the study of the characters, and placed the commencement of the third year of study as the proper time to begin.

Rev. Mr. Elliott advised learners of the language to be listeners rather than conversers, to listen to all kinds of speakers, and never to discontinue studying. Some one asked Dr. Verbeck at the Conference two years ago what the best method of studying the language was, "I don't know of any special method; you'd better keep on studying," was the reply. Rev. Mr. Noyes urged strongly the necessity of thinking in Japanese, and avoiding any method that assumed first thinking in English.

The session on Wednesday was chiefly occupied by the reading of Dr. Poppen's able paper on "The Unity of the Scriptures." Nature and reason cannot be appealed to in vindication of the unity of scripture. Scripture is a unique realm. Whosoever receives Christ as Lord receives His word as proof; whosoever does not receive Him as Lord looks in vain for sufficient proof. Proof must be of the nature of its kingdom. 1. What did Jesus say of the Old Testament? 1. "The scripture cannot be broken." "How then could the Scriptures be fulfilled?" All the Scriptures pointed to one thing; they gave the programme of His life, hence they must be fulfilled. The Law, Psalms, and Prophets are organically connected, 2. Jesus regarded the Old Testament as final throughout. "Have ye not read?" "To-day is this Scripture fulfilled in your ears." In His temptation, too, Christ quotes Scripture as final and authoritative. Even in its minutiae—the tense of a verb, the terminal letter of a word, even to its jot and tittle the Scripture is final. 3. Scripture was a whole. Christ conceived of the Old Testament as a unit, referring to Himself, "for they are they which testify of me." The passage, "I desire mercy and not burnt-offerings," is a dictum combined of the sayings of two different prophets; God used various agents, but there was one Primary Author. If it is questioned, Does not Christ abrogate some of the Law since He repeatedly says in the Sermon on the Mount, "but I say unto you," it may be answered Christ does not contend against the Law but against the false exegesis which the doctors had put upon it. The Jews cherished two things as peculiarly holy, the Temple and the Law. The Jews charged Jesus with sin against the Temple but never with sin against the Law. The apostles, like Christ, conceived of the Old Testament as one codex. Moreover, they cited Scripture and not authors. "As it is written" is absolute proof. Paul quotes in Romans III.

from various parts of the Old Testament and refers to these quotations as from the "Law," yet technically none of them are found in the Law. The codex as a whole is a *lex sancta*. "It was not possible that He should be holden of death." Why? because, it is written. It is the "mouth of David" but "by the Spirit." It is objected that the apostles do not quote the Old Testament exactly; but why not, if the same Spirit inspired both prophets and apostles?

II.—To vindicate the New Testament, we must start with the Old. The New is postulated by the Old, vindicated by Christ and confirmed by Christian experience. We read of no opposition in the early Church to adding the New to the Old. The Scriptures of the Old Testament demand the New as their complement just as the New Testament demand the Second coming of Christ as its complement. Christ perpetuated the revelation through the apostolate, promising them the Spirit. He compelled by His Spirit the apostles to give mandates, and the Apostle John to "write." Redemptive agency is like a tree; it must grow and become perfected. The Scriptures are a revelation because at the same time the working out of the redemptive agency. God has completed Revelation, but He has not yet given us the full eye-power to see it all. The study of this is the purpose of theology.

Following this paper arose a discussion of modern criticism. Bishop Bickersteth regarded the scriptures as the record of the development of the Kingdom of God in this world. He distinguished between revelation and written scripture, and urged that Christ drew His argument from the standing truth of scripture. A charitable attitude toward criticism was the right position; for the later critic refutes the former, and in the end the truth prevails to our infinite gain. Rev. Mr. McClellan of China took exception to the introduction of Dr. Poppen's paper, and reminded the conference that the critics were men of piety as well as honesty. Rev. Mr. Brand referred to the large number of quotations of the Old in the New Testament. Christ is found in Genesis and all through the Bible. The Bible does not contain the word of God; it is the word of God. Rev. Mr. Moore spoke of the confirming evidences of the monuments, of the superior acquaintance with Hebrew of the apostles over modern critics, of the possibility of partitioning any book of the Bible in the same way that the critics have treated the Pentateuch, as for example Dr. MacRealsham's fictitious division of Romans into two distinct documents, of the dissatisfaction of certain critics with their own position, e.g. Prof. Sayce, of the tendency of making our own experience the test of judgment, and of the fact that it is easier now than it was ten years ago to believe as our fathers did, because the conservative position is being more and more fully vindicated. Bishop Awdrey called attention to the main thing—finding out the mind of Christ and the mind of God. We should not prejudice the critics but believe that they will be guided to the truth. And we should be careful how we too interpret Scripture because of our liability to lean to our own understanding. Rev. Mr. Noyes, preferred, rather than the way indicated in the paper, to prove the unity of scripture from the standpoint of the development of the Jewish people. The Jewish religion was bound up in their national life.

The second devotional meeting of the Conference was held in the evening, the topic being the second of the three portions of I. John, the number of those taking part indicating their interest in the theme.

Karuizawa, August 15th.

"How to win souls for Christ," was the title of Miss Dickerson's paper at the ladies session on Thursday morning. To be a successful breadwinner is honourable, but "man shall not live by bread alone." Nations stand pledged to protect their nationals; how can we estimate the value placed by God upon a living soul? "They that turn many to righteousness shall shine as the sun." "He who winneth souls is wise." Great tact, quick sympathy, and love, are essentials. Only Christ will attract. The work of winning souls is one of warning, entreaty, and patience. The time is now. The spirit of prayer is first, last, and always our mightiest weapon. "Never lose your faith in souls." Each one must find out her own "how."

Miss Parmelee of Mayebashi followed with a paper on the work of the Women's Christian Temperance Union. Probably there is no obstacle to Christianity in Japan—next to the innate evil of the human heart—so great as the drink traffic. This W.C.T.U. originating with the women's crusade in Ohio, now extends throughout the world. It is the grandest organization; "this organized mother-love" of women in the world. The W.C.T.U. work has been

more than the antecedent of Dr. Parkhurst's reform movement and much of the reform legislation. The World's W.C.T.U. has developed into a multitude of departments, because in promoting any reform you run sooner or later against the drink evil. Among these departments may be mentioned, the introducing into schools-books of information on the evil effects of alcoholic drinks and narcotics, the preparation of temperance lessons for the Sunday Schools, international arbitration, bands of hope, loyal legions, bands whose object is to secure mercy to animals, social purity, and Florence Crittendon methods; the establishment of coffee-houses; the "polyglot petitions" which have now 7,000,000 names attached, and is ultimately to be presented to all the governments of the world; food reform, anti-opium, flower mission; and evangelistic methods. The Japan auxiliary was organized in Yokohama in 1895. Various committees are at work on social purity, evangelistic work, literature, &c. The Japanese Kyofukwai works in harmony with this auxiliary. The committee on foreign work propose opening a coffee house in Yokohama. Besides these there are Japanese temperance organizations throughout the Empire. Miss Clara Parish, who comes as a temperance missionary, is expected to arrive in Japan next September. Miss Monro of Tokyo presented the cause of the Society of King's Daughters which was organized in Tokyo in 1888. The object is to introduce the Christian girls to each other, to teach them to do Christian work, and to deepen their own spiritual lives. The name, King's Daughters, was proposed by a lady who did not know of a similar organization in America. There are now about 20 societies in Japan, some parents permit their girls to join the King's Daughters while they are unwilling to have them join the Church. Some of the girls teach in an industrial school, make over old garments for the poor, and devote their energies to works of charity. Miss White of China spoke on the topic of the Holy Spirit. Certain of her school girls, she said, otherwise of excellent conduct, seemed to make progress in the realization of Christian peace very much as the pilgrims used to advance—three steps forward and two backward. In studying the meaning of the vision of the golden candlestick, they were all impressed with the truth that any other than a Spirit-filled life, meant the burning out of an unsaturated wick, with a resultant bad odour of temper and uncharitableness. A real revival visited the school, and it permanently transformed the lives of the girls. Andrew Murray says of those who take care principally of their own faith, that they live lives of "prolonged infancy."

The following speaker, Miss Noyes, has been working in Madura, a city of India, about 10° above the equator. Work was begun there 45 years ago. Gradually home after home has been opened, there are now 38 Bible women working in Madura. Sometimes in teaching one woman they have the whole household come to listen. These Bible women last year actually preached to more than 76,000 women in the various homes where custom confines them. Before they become Christians they paint on their foreheads the symbol of the god they worship, thus a devotee of Vishnu will be marked by the crescent. The Indian village is a number of thatched mud huts huddled together. The people, eat, dress, sleep in the narrow streets, where also are to be seen numbers of bullock carts, dogs, and donkeys. The faces of the women one meets on the streets seem hopeless and sad; it is a pleasure to look from them to the bright faces of their Christian sisters. It is the old women who keep up caste, who refuse medical aid to sick daughters, and take the little children from the schools. Seeing the work of Bible women, the men have asked, "Why can't we have Bible men?" All our schools are entirely supported by mission aid.

The question-box of Thursday evening kept the Conference "after hours." Among the queries and answers were the following: 1. Is the question of self-support complicated by the paying of higher salaries to school teachers and ordained pastors than to ordinary evangelists? Rev. Mr. MacNair was convinced that dissatisfaction does exist and that school salaries should be reduced. 2. Is due importance given to Christian literature in Japan? Rev. W. J. White replied that the increasing demand for tracts seemed to show the growing sense of their importance. They are not, however, as much used by all as they deserve to be. A tract is an ever present discourse; intelligible, too, where a conversation might prove inadequate. Tracts should be used auxiliary to preaching and the distributor should be familiar with the contents of the tracts he uses. The Societies' finances are in good condition. The Tract Society thoroughly examines tracts before publishing them. Later speakers mentioned the existence of lists of Chris-

tian books and tracts published in Japan and the interest the Boards abroad take in this department of the work, as evidenced by grants of funds for translation and publication of new literature. The Baptist Mission has issued a catalogue of all Christian publications of all denominations in Japan. The list is fairly complete. 3. What should be the attitude of Christians toward apparent discrepancies in the Scriptures? In view of the solution of doubts in the past through the discoveries resulting from Egyptian, Palestine, Assyria, Babylonian exploration, is it wise to follow the example of those who are content to suspend judgment and wait for further light? Bishop Bickersteth, in response, advocated the *a posteriori* method of dealing with Old Testament difficulties rather than a *a priori*, which assumes that a perfect understanding of the Old Testament would remove difficulties. He was willing to admit discrepancies. The theory of development may have been unwisely applied. Should we suspend judgment? Yes and no; we do not need to suspend judgment in regard to revelation, though we do in regard to inspiration. Inspiration depends on revelation. There is no doubt about God having revealed Himself in both Old and New Testaments. Our faith does not rest on particular texts. Our business is not to teach some theory of inspiration, but God has truly made known His will to us. 4. To what extent do Biblical students of the school of Wellhausen, Driver, Briggs, etc., agree in their critical conclusions among themselves, and what measure of success have they had in convincing men of the conservative side, such as Green, whose scholarship and candor they themselves recognize? The critics substantially agree among themselves, replied the Rev. Mr. McClellan, that the pentateuch is composite, with emendations, accretions, etc., that the Levitical code is of late date, that some of the Psalms were written late, that the Book of Daniel is later than Daniel's time. Textual criticism is fairly accurate, but not absolute. It is largely a matter of MSS. How far have conservative scholars receded? Both in Scottish and English colleges most of the professors have gone over to the critical views.

The following digest of Rev. Mr. Gale's paper on Missionary Experience in Korea, was read at the Friday morning session.

Korea, lying west of Japan, so as to form a convenient wedge for the Japanese on their way to China, has a population of about 12,000,000 and an area half that of Japan. The land rises in a series of low mountain-ranges, which the Koreans look upon as dragons, as sites for ancestral graves, and as atmospheres over the land, propitious or unpropitious. You may maltreat a Korean with impunity, woe betide the stranger who touches an ancestral grave. The people claim to be a race descended from the gods, slightly mixed with Chinese. Tablets dooming foreigners to death formerly adorned the roadsides. But since the treaty was signed, ten years ago, not an American or European foreigner has been injured in the slightest. All are treated with the utmost kindness. Missionary work has been going on for the past few years unmolested. Last October there were 528 baptized Christians, of whom 202 came in during the year. There had been 500 more applicants. There are 19 organized congregations and 42 places for regular worship.

Soul, which is said to be the most picturesque city in the world, contains much to make one shudder, owing to that horrible feature of Eastern life, the constant presence of the dead. The writer saw a hundred or more unburied bodies propped up on sticks along the wall outside the city gates. They were unburied, because the victims of small-pox, and their burial before the end of three months would be unpropitious to the rest of the family. The Korean mental make-up is peculiar and mystifies the foreigner even more than the language, which at first seems a hopeless barrier. The word for work in Korea is synonymous with "loss," "evil," "misfortune." The man who leads an idle existence in Korea proves his right to a place among the gentry. The writer tried the experiment of living in the interior in order to acquire the language. In a village on the west coast, 200 miles from Soul, a room 6 feet high, 8 feet wide, and 16 feet long, was placed at his disposal, where for three months he was surrounded by a host of curious natives from early dawn till late at night. He escaped only once by hiding near an ancestral grave for half an hour, when he was discovered by the villagers who feared he had begun "to feel lonely." These villagers took an interest in the Bible teaching offered them, were apparently open-hearted and honest in their questions, and entirely kind and well-disposed. Now a large self-supporting church exists in the village. In spite of the startling cut of their dress, and their belief that the world is flat, and that the sun

revolves about Korea, they differ in heart but little from the average man in the West; and from the Mandarin to the coolie, there are many true gentlemen among them. One such was an old farmer named Nam, who was patient in great poverty, humble and modest in prosperity, whose honesty, faithfulness, and hunger for the Gospel and desire to take the message to his friends, combined to make a character of sterling worth and beauty. Another striking figure was a city-physician whose stock of instruments consisted of "two murderous-looking spears" and who classed all diseases under the heads of "desperate cases and general weakness." For the latter he prescribed pills made from tiger-bones, which being the strongest part of the strongest animal might logically be expected to be strengthening in any case. The writer once only saw a Korean man of the people out of debt and in the possession of so large a sum as \$45. The problems of Korea seem to grow greater and greater. Women are imprisoned and degraded, labour is dishonourable, the race is sold to ancestor-worship and Chinese superstitions; advance in any line is regarded as lawlessness; independent thought is treason, there is nothing for a loyal subject to do but to drag out his existence in the old ruts his father walked in. During the last two years, Missions have progressed; but war and rebellion have swept whole villages away. The present government is most unstable, the king delighted with the protection of the Northern Bear that in time will probably devour him. The political atmosphere of the East is charged with uncertainty, and the future holds, the writer fears, nothing but sorrow for Korea.

At the close, Mr. Gale, in reply to a number of questions about Korea, made the following statements:—

The Government formerly sustained a school for boys in Seoul, but this is now entirely in the hands of the Methodist Mission. The Presbyterians have a boys' school also. The work among Korean women is being carried on by a foreign missionary, a lady living in Seoul.

The Koreans cannot read Mandarin, but are able to read Wenli; their own language is not used as a written language by the scholarly class. Some of the Christian tracts are written in Chinese, some in Korea; the Chinese always preferred, though many cannot read it.

The climate is not unhealthy, but malaria prevails.

Japanese influence in Korea after the war was good, up to the murder of the Queen. Since then Japan has lost almost all her influence in Korea, although the Japanese officials were much less corrupt than the others.

The lives of foreigners in Korea to-day are safe. But care must be exercised, especially in the choice of one's servants.

Korean Christians find difficulty in keeping the Sabbath. Every fifth day is market day and frequently falls on Sunday.

The work of preaching in street chapels is very successful, more so than street preaching, to which the punctilious, propriety-loving Koreans do not take kindly.

A national system of education exists, but it is not very good, especially since the last year. Schools are found in all the Korean villages, but attended only by the scholarly class. This class makes up one-half the population. Chinese learning only is taught in these schools: they are not open to the public, but families associate themselves together and engage a mutual teacher.

The "Japanese Society for Education," begun shortly after the war, has not as yet met with much success, the difficulty being the strong prejudice existing in the minds of Koreans against Japanese. The Koreans no longer look to China for assistance, but for cherished traditions and all noble ideals. They are thoroughly Chinese in sympathy.

The speaker also by request gave a graphic outline of the political events in Korea of the past year, beginning with the murder of the Queen Oct. 7, 1895. He was one of the two Missionaries who spent the following night with the King.

On the evening of the 14th, the Conference closed with a Devotional Meeting, led by the Rev. Elliot, of Toyama, on 1 John iv., 7.

REPORT ON THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1895.

SIR E. SATOW TO THE MARQUIS OF SALISBURY.
Tokyo, Feb. 22nd, 1896.

MY LORD—I have the honour to transmit herewith enclosed to your Lordship a Report by Mr. Vice-Consul Longford on the Foreign Trade of Japan during the past year.

An endeavour has been made in drawing up this Report to comply as far as possible with the

suggestions contained in the letter addressed to your Lordship by the Association of Chambers of Commerce of the United Kingdom on December 2nd and last.

The Report will be found to contain—

1. Descriptions of the conditions and requirements of trade in Japan.

2. Notices of probable openings for British trade.

3. Reference to some special classes of goods used in Japan, e.g. cotton yarns.

4. An account both of the marked progress of the manufacturing industry in Japan, with special reference to textiles, and of the increasing import of raw materials.

5. Some practical suggestions which seem worthy of consideration by British manufacturers and merchants.

Hitherto the annual reports on the trade of Japan have rarely been furnished till the summer was far advanced, sometimes even later. This Report, however, has been prepared in time to admit of its being despatched by the Canadian mail of the 28th inst., so that it should be in your Lordship's hands about the end of March.

The great expansion which has taken place in recent years in the volume of the foreign trade of Japan, the increasing wealth of the people, the rapid development of manufacturing industries, and more especially the growing demand which the next few years are likely to produce for all kinds of metals, machinery, war materials, ships, etc., in addition to the ordinary staples of trade, combine to render the present period of commercial activity in this country one worthy of the interest and attention of British manufacturers.

I have, &c., (Signed) ERNEST SATOW.

GENERAL REMARKS.

The foreign trade of Japan has hitherto only been dealt with by Her Majesty's Consuls in annual reports, in each of which it has been the custom to review the whole trade of one year. The great expansion which has recently taken place in the value of that trade, the undoubted hopes that are justly entertained, not only by Japanese, but by foreign manufacturers and merchants, that this expansion is but the earnest of a much greater one that is soon to come, the steady increase of the industrial capacity of the Japanese people, and more especially the interest which, prompted in the first instance by the renown of Japan's military success, has at last been stirred in England as to her commercial possibilities, justified during the past year some departure from the old rule. Two reports were accordingly prepared on the whole foreign trade, and have been published in England during the course of the year, giving the statistics of the trade and reviewing its progress (1) for the first half (2) for the third quarter of the year, and to the latter was added a brief postscript containing some details of the trade during the month of October. The annual return of the whole foreign trade of Japan issued by the Department of Finance, from which all annual statistics have hitherto been invariably compiled, has not yet been published, and while therefore it is perhaps impossible to review the trade of 1895 with as much detail as access to that return would admit of, sufficient information with regard to it can perhaps be given, with the aid of the previous reports and the Japanese monthly return for November and December, to justify its publication without awaiting the more liberal material that the annual return would afford. Early information as to the trade in foreign countries is one of the points upon which stress has been laid by the Association of Chambers of Commerce of the United Kingdom, and the present condition of trade and its prospects in Japan now seem to justify the experiment of endeavouring to meet that desire by sacrificing, to some small degree, detail in tabular statistics.

The result of the year's trade is such that it may be said to have been satisfactory to all interested in it, to the manufacturer in England, for whose productions there has been an increased demand; to the British merchants in Japan, to whom the year has been a good one; and to the Japanese producer, whether agriculturist or manufacturer, who has found for his goods a market abroad to an extent far beyond that achieved by him in any previous year. At the beginning and during the early stages of the war with China a check was naturally given to general consumption of every article that was not an absolute necessity of life and to the sinking of capital in permanent investments, while the monopolisation by the Government for military purposes of the greater part of the shipping and railway transport facilities necessitated a decrease in the amount of the productions of the Japanese farmer and fisherman placed upon the market for sale to foreigners.

But with the conclusion of peace a revival of industry and prosperity speedily took place, which soon surpassed in its extent anything that had ever been experienced in the country in its previous history. The purchasing power of the people, being largely augmented, produced a greatly increased demand for luxuries of every kind, and a consequent marked rise of prices; the freight capacity of various railways are taxed to the utmost, while the promotion of entirely new industrial undertakings, such as railways, spinning, sugar, and silk factories, docks, &c., and the increase of the capital and capacity of those already in existence, reached an extent and variety that were almost bewildering. The payment of large dividends by the older companies and the high premiums at which their shares were quoted in the market, almost without a solitary exception, have produced what may well seem to the foreign observer a wild outburst of speculation, but money still seems to flow in abundance for every project, and its absorption in undertakings which no matter how prosperous they promise to be in the future, cannot be immediately remunerative, has exercised no deterrent influence on the amount available for the purchase of the ordinary commodities of general trade. In all classes of labour, whether skilled or not, a most substantial rise of wages has taken place, and while capitalists, rushing eagerly to place their funds in joint stock companies, are promoting the demand from Europe of machinery, metals, rails, and ships, the lower classes have not been deterred by any rise in prices from maintaining a higher standard of living than any to which they have heretofore been accustomed. Both causes have contributed to the increase of trade, and though it would be more than rash to prophesy that the present economic prosperity will be permanent, abundant satisfaction may be felt by the English manufacturer in its present, even if only temporary, existence. Sufficient capital has been already provided to cause a large demand for some years to come on the part of joint stock companies for staples under the first heading, and under the second the people in general will be hard pressed ere they forego entirely the consumption of commodities which they have for a time enjoyed.

AGGREGATE TRADE.

The total value of the foreign trade of Japan for the year 1895 amounted, in sterling, to £28,150,735, composed of:—Imports, £13,526,710; exports, £14,624,025.

These figures, which do not include foreign produce re-exported from, nor Japanese produce re-imported into, Japan, show as compared with the corresponding ones for 1893 and 1894 the large increase of £1,874,545 and £845,488 in imports; of £3,226,305 and £2,822,683 in exports; and of £5,100,850 and £3,668,171 in the total values of the whole trade. That so large an increase should have taken place in the value of the foreign trade, that this increase should owe very little to exceptional military requirements, and that it should be almost entirely caused by an increased export of Japanese productions and an increased import of the ordinary staples of trade, speaks well for the growing industry and prosperity of the country and justified even the highest anticipations that were entertained at the commencement of the year.

The distribution of the trade during the year among the foreign countries which principally shared in it was as follows:—

Country.	Imports.	Exports.	Total.
British Empire—	£	£	£
Great Britain	4,705,427	854,011	5,559,438
Hongkong	875,137	1,989,303	2,864,440
British India	1,250,188	472,250	1,722,438
Australia	107,471	138,785	246,256
Canada	1,428	215,167	216,595
Total	6,939,651	3,669,516	10,609,167
United States	966,287	5,855,135	6,821,422
France	579,944	2,638,508	3,218,452
Germany	1,274,287	361,834	1,636,121
China	2,294,285	989,636	3,283,921

The following table will show, how, taking the same years as illustrations, the values of imports have increased from those countries which chiefly supply Japan with manufactured goods. The United States may here be omitted, as, though now entering into competition, especially in machinery and metal manufactures with Great Britain and Germany, heretofore Japan's principal purchases from the States have been kerosene oil, raw cotton and flour, none of which possess any direct interest for British manufacturers. The figures, as in the subsequent case, must also be given in silver currency, as it would, at this distance of time, be more than difficult to fix exact sterling value of the silver dollar for the years 1872 and 1882, but for purposes of comparison only a com-

mon denominator is required, and the silver dollar will perhaps serve for that purpose as well as the English sovereign:—

Year.	Great Britain.	Germany.	France.
1872	\$11,907,182...	2,040,263...	\$2,489,269
1882	13,971,858...	1,196,268...	1,464,459
1892	20,789,332...	6,375,048...	3,620,500
1893	27,929,628...	7,318,133...	3,305,277
1894	42,189,873...	7,909,542...	4,348,047
1895	45,172,108...	12,233,155...	5,567,466

Large though the increase is which has taken place in the value of British import trade, it is far from bearing the same proportion with that of Germany.

The above figures for 1872 very inadequately represent the value of imports of British manufactures into Japan in that year. To the amount stated in the table an addition of at least \$4,500,000 would probably have to be made before even an approximately correct idea of the whole value would be obtained. If this be done, it will make the value of British imports into Japan in 1872 nearly \$16,500,000 instead of \$12,000,000, and that of the year 1895 would therefore be only two and three-quarters fold that of 1872. In sterling the increase is of course very much less, probably not more than 34 per cent., and during the last seven years, in which the whole value of Japan's import trade had increased by nearly \$31,000,000, the growth of the sterling value of British imports has been slow, and, as in the whole period from 1872, compared *pro rata* with that of German imports, small.

While the value of British imports shows in seven years an increase of little over £673,000 on an original trade of over £4,000,000, that of Germany shows an increase of £518,200 on an original trade of £756,087.

But if British imports have not increased *pro rata* with the whole value of Japan's import trade, some satisfaction may be found in contemplating the steady increase of those from dependencies of Great Britain. It is in the case of the British East Indies that the most marked development has taken place, and it is quite possible that even the present large value of Indian imports may very speedily show still larger increases. In nineteen years, since 1877, the value has increased sixty-two fold, from \$190,527 to \$12,001,817.

The principal seats of foreign trade in Japan are the ports of Yokohama and Hyogo (including Osaka), and these ports may now fairly claim to be respectively second and third in point of importance as commercial bases in the Far East, north of Hongkong, Shanghai alone being entitled to rank before either.

While the direct foreign trade of both ports still falls far below that of Shanghai, it is in both cases just as far in advance not only of that of any other port in China, but in Yokohama it surpasses and in Hyogo nearly approaches the aggregate value of that of the five most important ports in China after Shanghai, viz., Canton, Foochow, Tientsin, Amoy, and Swatow.

HYOGO AND OSAKA.—Hyogo is the chief seat of the import trade of Japan, and its exports are increasing largely. Osaka is the greatest commercial town in Japan, the chief seat of the cotton spinning and of many other important industries, such as matches and glassware, the head-quarters of several great joint stock companies, and in every sense a city of great wealth and prosperity. From a position of absolute insignificance, when just as little hope was entertained of its future as there was satisfaction in its existing condition, Hyogo has sprung, in little over twenty years, to the position of third commercial port in the East. Its future is now as promising as twenty, or even ten years ago, it was the reverse. Many schemes for its improvement by docks, harbour works, and new railways, and for aiding its commerce by industrial banks are either in contemplation or in actual progress. Its geographical position will give it the lion's share of whatever profit may be derived from the acquisition of the Island of Formosa; its direct connection by several lines of rail with the best harbours on the West Coast of Japan will enable it to control the trade with Russian Asia, when the Siberian railway is completed; and if a large trade should ever arise with Australia, Hyogo will also be the place at which it will be principally carried on. It is already the chief seat of the large and increasing trade with British India.

Yokohama is the principal seat of the Silk export trade from Japan. The value of this trade in 1895 was:—Raw Silk \$50,907,545; principal silk manufactures \$15,337,800; total \$66,245,355. If this amount be deducted from that of the whole foreign trade, the balance falls far below the value of the trade of Hyogo. Many Japanese do not consider it to be beyond the bounds of contemplation that ere many years the whole trade

of Yokohama may surpass even that of Shanghai. Possibilities in China must, they admit, be infinitely greater than any that Japan can ever hope to offer, but prospects in Japan are assured, and not, as in the case of China, dependent on remote eventualities of which no earnest whatsoever has yet been given.

IMPORTS.

Taking the principal items, there was a very large increase in the value of the import of raw cotton, but decreases in that of cotton yarn and piece goods; large increases in raw wool, woollen yarn, blankets, and piece goods with the exception of Italian cloth; increases in bar, plate, and sheet, tube, and pipe iron, and railway materials, but decreases in pig and nail iron and rails; and decreases in locomotives and machinery; in all cases as compared with the corresponding value for 1894.

RAW COTTON.—The import continues to flourish and to keep pace with the increasing prosperity of the spinning industry in Japan, that of 1895 exceeding that of the previous year by nearly 21,000 tons in quantity, and £477,610 sterling in value.

The whole import during the year, according to the Customs returns, was about 202,000,000 lbs. A considerable portion of this must have remained unsold at the close of the year, probably owing to the disputes which arose between Chinese importers and Japanese buyers, on account of the alleged frauds on the part of the former.

The whole quantity of raw cotton consumed by the fifty-five factories was 182,000,000 lbs., of which Japanese, 2,357,000 lbs.; Chinese 81,404,000 lbs.; British India, 71,938,000 lbs.; American, 18,552,000 lbs.; miscellaneous, 7,755,000 lbs. The latter included about 412,000 lbs. of Egyptian cotton. Assuming that the above figures represent the whole import of Indian raw cotton in 1895, these show a very large advance as compared with previous years. In 1894 the whole import recorded in the Customs returns was 56,000,000 lbs., and in 1893, 49,000,000 lbs.

Much dissatisfaction has been felt during the year by the various Japanese spinning companies at the quality of the cotton imported from China. It has been found to be so impregnated with water that from 13 to 15 per cent. of the weight is alleged to represent moisture, with which the cotton had been dishonestly saturated by the Chinese exporters. No such charge is laid against Indian cotton, and it is probable that the bad reputation which Chinese cotton is now acquiring will soon tend greatly to the advantage of the import of the latter.

COTTON YARN.—The import in 1895 shows a decrease of 805 tons, about 3,220 bales in quantity, and £134,682 in value, as compared with 1894. The whole import, amounting to about 35,000 bales, was practically of Lancashire yarns, a very few bales of Bombay spinnings being imported. The market was suffering from a want of confidence on the part of buyers, due in a great measure to the heavy losses they were incurring over forward contracts, entered into before the war broke out with China, for delivery in the autumn of 1894. Several instances occurred of dealers failing to observe their contracts. A very notable case has been on several occasions referred to in the London Press, in which one of the largest and wealthiest yarn dealers in Yokohama set the judgment rendered against him in his own Court of Justice at contemptuous defiance, and extorted, by the threat of a general boycott, in which he was supported *con amore* by all the guilds of yarn dealers in Japan, a considerable abatement on contract price from an English firm of importers.

Speaking generally, a small business was done in 1895 in ordinary 16/24's and 28/32's water twist, but none at all in mock-water or Bombay yarns, both the latter having for a long time past been entirely supplanted by the produce of the native mills. The hard water twists of Lancashire have so far met with little competition from Japanese spinnings, and being required for special purposes, for which soft yarns are not adapted, must, for the present at all events command a certain amount of the trade. In 38/42's also a small business will always be done.

In 2/32's and 2/42's two folds, especially the latter, a very large business in 1895 has to be recorded, these spinnings being fortunately interfered with so far only to a trifling extent by the products of the Japanese mills. During the autumn of 1895 the demand for gassed and fine plain yarns became greatly intensified, and a very large business was the result. Towards the close of the year, however, it became evident that the import was in excess of requirements. The result of the year's trade was, on the whole, eminently satisfactory both to the English importer and the native dealer in Japan.

Among the many factories now in course of

erection in Japan, two are said to be intended for spinning gassed yarns. As these yarns are made exclusively from Egyptian cotton, which would require to be imported into Japan at very heavy cost, it is more than probable that Lancashire, with the advantages of comparative proximity to the seat of the cotton supply, greater experience, &c., will be able to hold its own against Japanese competition in this particular line.

WOOLLEN MANUFACTURES.—A very substantial increase has to be recorded in the import not only of these manufactures, with one exception, but also of raw wool. The quantity of the latter imported in 1895 was nearly double that in 1894; that of blankets more than double; of flannels nearly, and of cloth, much more than three-fold; and of miscellaneous woollen piece-woods and cotton mixtures, nearly double. A considerable portion of the blankets and cloth was, no doubt, intended for Government use to replenish military stores which must have become thoroughly exhausted during the winter campaign of 1894-95 in the north of China, but a fair share of the increase must also be ascribed to an increased consumption on the part of the people. In Italian cloths there was a considerably decreased import in 1895. Wholesale dealings at the beginning of the year were unusually large, amounting to an "overplus" of three months' ordinary average consumption, while at the same time consumption was below the average. Prices also rose in England, and the usual import was therefore considerably checked, though only temporarily. Substantial improvements in the import have marked the close of last and the commencement of the current year, and no anticipations need be entertained as to any permanent decline.

The trade in Mouseline de laine has always been a French one, English manufacturers never having been able to compete with the prices at which those of France produce these goods. Japan now proposes to institute this industry herself, and two companies have recently been formed, one in Tokyo and one in Osaka, each with a capital \$1,000,000 to establish mouseline factories. Steps are being taken to have a formal petition presented to the Diet praying for the abolition of the import duty now levied on raw wool. This privilege has already been conferred on the cotton spinning industry. At present all the "woollen fancies" imported into Japan from Europe are made from Australian wool. If the latter is brought direct from Australia to Japan, freed from the burden of import duty, and manufactured by Japanese, not only would native consumers be able to satisfy their requirements much more cheaply than they do at present, but Japan might in time hope even to undersell European woollen productions in other Asiatic countries.

So runs the draft of the proposed petition. To supply their own requirements is a very legitimate aspiration on the part of the Japanese, and it promises, if such skill can be achieved in the manufacture as to turn out goods not inferior to those produced in France, to be just as successful as a commercial speculation, even though its field of supply is limited to Japan, as the cotton industry has already become. The Diet, a great part of whose policy might now be well described as "Japan for the Japanese," will give a ready ear to any petition which is for the benefit of industry, much more if that industry is of the nature to supplant a foreign one. The import duty on raw wool will therefore be taken off, while on the other hand, French manufacturers will have to struggle against the heavy import of 10 per cent., which under the new tariff (not yet, however, it may be added, agreed to by France) will have to be paid on imported woollen manufactures.

If Japan proposes to supply woollen manufactures to China, her attention will have to be given to other branches than mouselines de laine.

RAILS.—During the year 1895 there was a continued demand from England for rails and railway material. Practically, all the rails for permanent way were obtained from England, but light rails for portable railways, though often ordered through England, were generally obtained from Belgian makers. Pig-iron is exclusively obtained from England, but bar, plate, and sheet-iron are supplied only by Belgium and Germany. The same remark may be made as to bar, plate, and sheet-steel, 1,000 tons of which are imported annually for general consumption, and all of which is in the Basic process. The better classes of steel in the Siemens-Martin process, and nearly all that is required by the Government and great industrial companies, continue to be obtained from England. Submarine telegraph cable to the extent of about £145,000, and cast-iron water pipes to the value of £80,000, were ordered from England in 1895. Neither of these items are included in the returns of imports for 1895, both being just now arriving in Japan.

During the past fifteen years, the aggregate import of rails has exceeded 300,000 tons, and perhaps only 10 per cent. of this total was not of English manufacture. German rails were tried, and every possible effort was made by German makers and merchants to secure preference for them on the part of both the Government and private railways, but to so little permanent effect that during the last ten years, even when German merchants resident in Japan have secured contracts for the supply of rails, it has been under the condition that they should be of English make. To this rule there have, however, been very recent exceptions, a tender which does not appear to have been accompanied by the above limitation having during the month of January been accepted from a German firm in Yokohama for the supply of 1,700 tons of steel rail for the Kinsiu Railway. And in specifications issued within the last few days, inviting tenders, to be handed in before March 2nd next, for the supply of 2,200 tons for the Hokkaido railway, it is stipulated that the rails are to be made by one of four firms of manufacturers, three of which are well-known British firms at Maryport, Barrow, and Middlesbrough, and the fourth a German firm.

Tenders lately accepted from the representatives of British manufacturers include 5,000 tons for the Sobu Railway, and 7,800 tons for the Hokkai-yetsu Railway, besides large quantities of such supplies as fish-plates, dog spikes, &c. It is evident from the two instances quoted that British manufactures of steel rails must once more reckon on German competition in Japan. And another element of competition from a very unexpected quarter has also been recently added.

In the middle of December last the Sanyo Railway, in point of wealth and influence the second private railway company in Japan, in point of enterprise probably by far the first, invited tenders for the supply of 10,000 tons of steel rail and over 1,000 tons of fish-plates, dog spikes, &c. The unusually long period of six weeks was named as that within which tenders would be received, and another departure was made from the practice hitherto pursued by this company in that the tenders were invited only from chosen firms, and not publicly, and such privacy was observed that one of the largest Japanese contractors in Tokyo was entirely ignorant of the whole transaction until some time after it was completed.

One of the general conditions of the contract was:—Half-payment for first lot to be made on completion of shipment, and the balance one week after delivery, and the issue of the certificate of the engineer-in-chief as to the satisfactory nature of the material. The makers to have the right of shipping the second lot whenever convenient, provided delivery is completed before the final date above-mentioned, but no half-payment on shipment is to be made until after October 1st, 1896, nor of the balance until after Jan. 15th, 1897, even though all material may have been delivered and passed before that date. This contract has been accepted by the Illinois steel works, of Chicago, at £5 15s. 6d. per ton for the steel rails, a price 6s. per ton less than any quoted by English makers, whose works are on the coast, and who would therefore have no charges whatever to pay on account of internal transport before shipment. As the contract was made through the intermediary of one of the oldest and most experienced American firms in Japan, it must be presumed that the makers have been well advised as to business methods in this country. This may possibly prove only a very small fraction of the future requirements of the Sanyo Railway Company.

MACHINERY.—Spinning machinery has naturally continued the most important item under this heading, but the import of dynamo-electric machinery, principally from the United States, also reached to a considerable value in 1895, and a large quantity of weaving machinery for the Government woollen factory in Tokyo was ordered from Germany. Several locomotives were ordered from the United States and from England. On March 31st last the total number of locomotives in Japan was 440, about 75 per cent. of which were of English make. Three German makers have supplied about thirty locomotives in all, and the remainder have come from United States makers.

In a subsequent part of this report the subject of machinery is again dealt with. To what is there said one remark may now be added, and that is to repeat what has been already stated in previous reports over and over again, that it is utterly useless for manufacturers to send to Her Majesty's Consulate in Tokyo elaborate catalogues of their productions, prepared evidently at very great expense. To retain the number of these, which almost every mail brings, in any form in which they would be available for reference, it would be necessary to have a large room specially built for the pur-

pose; to circulate them among the ordinary classes of Japanese buyers is useless, as their contents are unintelligible. But opportunities are now open to manufacturers, who wish to bring their names before the Japanese, which may be experimentally used. These consist in two English advertising journals published in the Japanese language.

Advertising is still in its very first infancy in Japan, it is, as compared with other countries, so little resorted to either in the press, in railway stations, or on hoardings, that it would yet be rash to say whether it appeals to buyers or not. The majority of advertisements, other than those in the Press, which do appear, have a strong flavour of having been suggested, and of being paid for by foreigners. Whatever is done in this way must be purely experimental, but the experiment, if tried, need not be expensive, and at worst it cannot be more useless than the present system of sending catalogues by post. Its only drawback is that it may expose manufacturers to the blandishments of the worst class of Japan traders. Against these full warnings have been given, and if manufacturers suffer from them they will only have themselves to blame. It may be stated here that it appears pure waste of money for agricultural engineers, brass founders, makers of bedsteads, fish-hooks, horsehoes, shovels, windmills, thrashing and reaping machines, bellows, and brushes to advertise their productions in Japan. No demand whatever exists for such goods from England nor is there any prospect of it arising.

EXPORTS.

Great Britain is but a small purchaser from Japan, taking only 6 per cent. of the total exports. The trade is, therefore, of little interest to merchants in England, except in so far that as Japan sells more of her productions to foreigners, so will she be able to purchase more from them, and from this point of view the steadily-growing volume of her exports can be viewed with every feeling of satisfaction. How the value in silver currency of this trade has increased during the last 24 years is shown in a subsequent part of this report. In more recent years the sterling values also show very marked advances. The exports of 1895 exceeded those in 1894 by £2,822,683, and in 1894 they exceeded those of the previous year by £403,622.

The demand for all Japanese produce in 1895, encouraged by the low rates of sterling exchange, continued to be strong throughout the whole year, and the majority of the principal staples contributed to the large increase in the value of the whole export trade.

Agricultural products show an increase of £1,355,193, the most marked items under this heading being:—Raw Silk, £1,103,191; Rice, £192,375; Tea, £127,585; Camphor, £57,681.

Whatever energies are being devoted by the Japanese to the promotion of new manufacturing industries it is evident that the development of the old and national industry of agriculture is not being neglected. The customs of land tenure in Japan have favoured small holdings, and where a large extent of land is cultivated by one farmer his holding, though large in the aggregate, consists of many small lots, often not only far removed from his own residence, but from each other, by lots belonging to other farmers. The loss of time and labour in cultivating under such conditions has long been apparent to some of the most prominent statesmen in the Empire, and advice and encouragement have been given to farmers to enlarge their holdings so as to make a quarter of an acre the smallest lot, to endeavour to effect exchanges with their neighbours so as to make all the lots held by one man continuous, and thus not only to save time and labour, but, by the removal of the present numerous boundaries and paths, greatly enlarge the area now available for cultivation. Exemption from taxation for a period of 30 years has been promised to all the increased area that may be brought into cultivation by these measures, and it is said that the experiment has been most successfully tried in some agricultural districts in the Empire. If universally adopted an increase of about 7,000,000 bushels might be expected in the present annual production of rice alone. The Japanese farmer is, however, as conservative as his compeers in other parts of the world. Marine, mining, and miscellaneous products all show substantial increases on their value in 1894, and manufactured products the large one of £1,612,613.

DEVELOPMENT OF TRADE AND INDUSTRY.

The year 1895 having witnessed the completion of Japan's triumph in the first foreign war undertaken by her since her emergence from her old seclusion, and the spread of her renown throughout the world as a military power, it may not be amiss, when reviewing the trade of that year, to furnish particulars which will show that, great as has undoubtedly been the development of her military, that of her commercial resources have been no less

marked during the last quarter of the century, and that the success which she has already achieved in commerce and industry, though less brilliant and striking, is no less substantial than that which she has won in war. Her political importance and value are now fully recognised in Europe. Slowly, perhaps, but surely she is winning an equal recognition for her commercial and industrial importance, both of which have not only attained to an eminent position in the present, but give the fairest and fullest promise of more marked advances in the future. As an active competitor with European manufacturers in branches of industry which the latter have hitherto been accustomed to consider peculiarly their own, she has already made her influence felt, and her future progress as such is viewed in many quarters with no small alarm. But she has, at the same time, become and continues to be a large purchaser of costly European products, and the hope that she will continue to increase as such is far greater than any alarm which need be felt over her present or prospective competition in other branches of industry.

In the space of 24 years the silver value of Japan's imports increased nearly five-fold, her exports over five-and-a-half-fold, and her total trade over five-fold. Her population during the same period increased as follows:—1872, 33,110,825; 1883, 36,700,118; 1892, 41,089,940; 1893, 41,388,313. This increase still continues at the rate of over 300,000 per annum; it has, in some recent years, amounted to considerably over 500,000; and it is estimated that in the course of another century, Japan may well look forward to being in a position when she will have to provide for a population of over 120,000,000 souls.

An outlet for some of the increase will be found in the newly-acquired Island of Formosa; but even allowing for the most successful colonisation of that island, and for a very extensive emigration of Japanese people to foreign countries, by far the greater part of the increase must be provided for within the limits of the present empire. This can best be done by the gradual development of Japan as a great manufacturing country, by her conversion from a purely agricultural country into one whose chief industry will be manufacturing; and the fact that every energy should be devoted towards the promotion of that end is now being constantly urged upon the people both in the press and in public addresses by leading statesmen and officials. How much has been achieved already a very superficial comparison of the trade returns of 1872 and 1895, and a few statistics as to manufacturing industries already in operating quickly show.

The shortest glance at the returns will show how much the whole character of her foreign trade has changed in the short space of twenty-four years, how, while developing largely the export of her original agricultural and purely raw products, she has become also a great exporter of manufactures, and how she has at the same time become a most valuable purchaser of raw produce from other countries.

While, in 1872, the whole value of manufactured articles exported by her very slightly exceeded \$450,000, in 1895 it attained to no less an amount than \$37,195,200. Textile fabrics, which had no place among the exports of 1872, in 1895 reached a value of \$19,386,632. Matches, matting, glass ware, and straw plaits, now all, like textile fabrics, important and increasing exports, were then entirely unknown as such.

In 1872 the whole import trade may be said to have been of manufactured articles: It is difficult with the materials available at the moment of writing to give an exact and comprehensive statement of the value of the whole import of raw produce in 1895, but among the articles that may be classed under that heading, or at least under that of semi-raw, are the following:—Raw cotton, \$24,822,097; raw wool, \$1,136,191; metals used for manufacturing purposes, \$7,018,230; drugs used for manufacturing purposes, \$1,482,344; hides used for manufacturing purposes, \$695,984; flax used for manufacturing purposes, \$645,840. The value of pig-iron imported in 1872 was \$2,338, and its quantity, 30 tons, against 35,000 tons, value \$673,795 in 1895; while bar plate and sheet, and tube iron had no place at all among imports in 1872, and lead, steel, and tin only the most insignificant ones.

Another estimate may be formed of the increase in the imports of raw produce from the figures of the growing values of Japan's imports from Asiatic countries. These imports, which among other staples, include the bulk of raw cotton and all the sugar, while not exclusively, mainly consist of raw material, and their development is a fair index of that of the import of the latter.

The import of machinery also furnishes a fair criterion on Japan's progress in manufacturing

industry. In 1872 Japan purchased machinery of all kinds to the value of \$181,000. In the following year this amount grew to \$376,000, but so late as the year 1887 very little advance on the latter amount was ever shown in any one year, nor was the import ever considered to be of such importance as to merit more than the merest mention in any of the trade reports of Her Majesty's Consuls in Japan. In 1888 the prospects of the spinning industry first began to attract serious attention, and in that year the value of the import of machinery rose to \$2,794,389.

During the succeeding seven years down to and inclusive of 1895 Japan has purchased machinery from abroad to the aggregate amount of \$18,402,262, including:—Dynamo electric machinery, \$1,473,971; Spinning machinery, \$9,360,939; Weaving machinery, \$681,667; Paper-making machinery, \$478,739; Mining machinery, \$589,403.

In addition to what was imported, the Japanese have, it is to be remembered, already learned to make a great deal of machinery from foreign models for themselves. Numerous foundries are now in active work in every industrial centre in the empire, and while elaborate spinning and electric machinery are still beyond their power, a great quantity of simpler forms is produced, so excellent in its general turn-out as to make it very little inferior to the foreign models from which it was originally copied.

London, August 14.

Dr. Nansen has returned to Norway, having reached four degrees nearer the North Pole than any explorer.

The death is announced of Sir J. E. Millais President of the Royal Academy.

London, August 15.

In the House of Commons on Friday, Mr. Balfour, First Lord of the Treasury, stated that the Government had every hope of arriving at an early agreement with the United States relative to arbitration of the Venezuelan question.

H.E. Li Hung-chang has had a long farewell audience with the Marquis of Salisbury at which

the question of the tariff in China was discussed the whole time.

Exchange on London at New York 4.87½
(Tel. trans.)

(FROM THE "N.C. DAILY NEWS.")

London, August 8.

Prince Ranjitsinghi yesterday reached the aggregate of two thousand runs during the present cricket season.

London, August 10.

H.E. Li Hung-chang, speaking at a banquet held at the Hotel Métropole, said that the difficulties between England and China were the result of a misunderstanding, but that England had been fair, and China had gained her confidence and respect. His Excellency hoped that his visit would remove some of the obstacles to complete harmony, and stated that peace was China's dominant desire.

Australia has beaten Kent by one hundred and seventy-six runs.

Lohmann, Gunn, Abel, Hayward, and Richardson refused to play in Monday's Australian Test Match at the Oval, unless their pay were doubled. The Surrey Club refused to accede to their demand, and remodelled the eleven.

The action of the players is generally condemned.

London, August 11.

Richardson, Abel, and Hayward have withdrawn their demand for double pay, and are included in the team, which further comprises Dr. Grace, Peel, Hearne, Jackson, Lilley, Prince Ranjitsinghi, Wynyard, and MacLaren.

Rain prevented play until 5 o'clock yesterday at the Oval. England made sixty-nine runs for one wicket, Grace being out for twenty-four runs.

London, August 12.

During the second day of the Australian Test Match at the Oval the weather was fine, but the wicket was treacherous.

The English Eleven were all out for one hundred and fifty-five runs, Jackson making the highest individual score of forty-five runs, Abel being next with twenty-six.

In their first innings the Australians made one hundred and nineteen runs, the highest score—forty-seven runs—being made by Darling.

Hearne took six wickets for forty-one runs.

In their second innings England has scored sixty runs for five wickets.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday season; it will reopen on Friday, the 2nd of Oct.

SOLUTION OF PROBLEM NO. 242.

WHITE. BLACK.
1—Q to K Kt 3 1—takes Q
2—R to Kt 8 2—Anything
3—R to R 8, mate
Other variations obvious.

Correct answers from J.D., Oiso, W.D.C., Omega, and W.D.H.

PROBLEM NO. 244.

By A. NORLIN.

BLACK.

White to play and mate in three moves.

THE LATE MR. WYVILL.

Games played by the late Mr. Marmaduke Wyvill, M.P., in the International Chess Tournament, London, 1851. The notes are Mr. Staunton's.

GAME NO. 550.

SICILIAN DEFENCE.

WHITE. Andersen.	BLACK. Wyvill.
1—P to K 4	1—P to Q B 4
2—P to Q 4	2—P takes P

12—R to B 3 (b)	12—P to B 4
13—R to R 3	13—R to B 2
14—P to Q Kt 3	14—Kt to Kt 3
15—Kt to B 3	15—Kt to Kt 3
16—B to B 2	16—P to Q 5 (c)
17—B to R 4	17—Kt to Q 4 (d)
18—Q to Q 2	18—P takes R 4
19—B takes B	19—R takes B
20—Kt to Kt 5	20—Kt to K 6
21—Q to B 2	21—B to Kt 2
22—B to B sq.	22—Kt to Kt 5
23—Q to R 4	23—Q to Q 2
24—R to Q sq.	24—R to Q B sq.
25—B to K 2	25—P to K R 4 (e)
26—R to K Kt 3	26—Q to K sq. (f)
27—R to Q 2	27—R to K Kt 2
28—P to B 3	28—Kt to K 6 (g)
29—P takes P	29—P takes P
30—R takes P	30—R to B 8 ch.
31—Kt to B 2	31—Kt to Q 4
32—R (Kt 3) to Q 3	32—Q to B 3 (h)
33—R to Q 2	33—Q to Kt 3 (i)
34—B to B 4	34—K to B 7 (j)
35—K to K sq.	35—R takes R
36—R takes R	36—Q to Kt 8 ch.
37—B to B sq.	37—R to Q B 2
38—R to Q sq.	38—R to B 7 (k)
39—Q to Kt 3	39—B to R 3
40—Q to K B 3	40—B takes B (l)

And White resigned.

(a) Taking the Kt is not theoretically orthodox, because it strengthens Black's centre. Yet it may be done advantageously if White follows that move with B to K 3 and B to Q 3 speedily.

(b) It is a general fault among inferior players that they are too tardy in bringing their Rooks into play. Observe how rapidly the pieces are brought into co-operation by a master of the game.

(c) An all-important move, as it affords a fine situation for the Kt to be posted at, and opens a sweeping diagonal for the Q. B.

(d) The commanding position of this Kt gives the balance of advantage in Black's favour already.

(e) Mr. Wyvill maintains his advantage gallantly to the end. If this was necessary, to enable him to bring his Kt to K 6 again.

(f) From this moment the assault is conducted with uncommon ingenuity and spirit.

(g) This greatly serves to strengthen the attack, and is much better play than the more obvious move of K R to Q B 4.

(h) Here again Black plays with great judgment.

(i) Excellent as unexpected. From this point the game is almost "forced."

(j) Threatening mate in two moves by R to K 7 ch. and Q to K 6.

(k) This termination is truly scientific. Observe, here, the decisive superiority of taking the B with B, instead of the Q.

GAME NO. 551.

ENGLISH OPENING.

WHITE. Wyvill.	BLACK. Andersen.
1—P to Q B 4	1—P to K B 4
2—P to K 3	2—Kt to K B 3

19—B to Q 2	19—B to B 3
20—R to Q B sq.	20—R to Kt 3
21—Q to Q sq.	21—Q to B sq. (b)
22—Q to K sq.	22—Kt to R 2
23—B to K 2	23—Kt to B 3
24—P to R 3 (c)	24—Q takes P
25—Q to B 2	25—B to R 5
26—R to B sq. (d)	26—B takes Q
27—P takes Q	27—B to R 5
28—B to Kt 4 (e)	28—K to B sq.
29—R to B 5	29—R to Q sq.
30—P to Kt 4	30—P takes P
31—P takes P	31—B to K 2
32—R to B sq.	32—B to Q 3 (f)
33—B to K sq.	33—R to R 3

34—R (R 2) to Q B 2
35—P to Kt 5
36—R takes P (h)
37—R takes B
38—K to K 2
39—B to Q Kt 4 ch.
40—R takes K P
41—B to Q 2
42—R to Kt 8 ch.
43—K to K sq.
44—B to Q R 5 (i)
45—B to Q 8 ch.
46—B takes P
47—B to R 5
48—R takes R
49—P to B 5
And Black resigns.

(a) In anticipation of Black's next move B to B 3.
(b) To enable him to move his Kt.
(c) An extraordinary *l'apin* for such a player in such a contest!
(d) Extremity is the trier of spirits. It is in situations of peril like the present that the sterling player shows his mastery.
(e) Having managed to escape the immediate danger which menaced him a moment since, White now plays capably.
(f) Taking the Q Kt P would have availed him nothing, since White was sure to win either the Q Kt P or Q B P in return.
(g) Black never recovered the consequences of shutting up his K R thus.
(h) Daring, but sound. The rest of the game is beautifully played by Mr. Wyvill.
(i) The prelude to a masterly combination.
(j) It was in the expectation of White's endeavouring to extricate this unfortunate Rook that the Black Bishop was played to Q R 5, and now the unprincipled player will soon perceive the full force of that fine coup.
(k) It is clear he has no better square to retreat to.

END GAME NO. 33.

The following artificial position is ascribed to Paul Morphy. It will be observed that Black has a large preponderance of force, having all his pieces and pawns. White, notwithstanding, wins.

WHITE.
White to play and mate in 8 moves.

The Solution is as follows:—

1—Q to B 7 ch.
2—P takes B (becoming a Kt) ch.
3—Kt to Kt 7 ch.
4—Kt to B 7 ch.
5—Kt to K 8 ch.
6—Kt to K 4 ch.
7—Kt to Q B 7 ch.
8—Kt to B 4 mates.

In the checkmate position, substitute White Bishops for White Knights and the position is still checkmate.

NUREMBERG.

We take the following from the *San Francisco Chronicle* of 25th July, which will keep our readers au courant as to this great contest. We shall publish further news from time to time and some of the games as they come to hand.

The attention of chess players throughout the world is now centered on the doings at Nuremberg, at which town almost all the chess experts of note are assembled and engaged in a battle for supremacy.

It is almost, at this juncture, an impossibility to predict which player will carry off the honours of the tournament, as recent contests have shown that favourites fail to do the work expected of them. Lasker seems to have the odds in his favour, as he is a more experienced match player than his American rival, Pillsbury, a man who may, perhaps, be considered as his most dangerous rival.

The tournament opened in the ancient German city in the presence of a large concourse of people assembled to see and do honour to the distinguished visitors. Lots were drawn on the previous day to determine the order of play, and the rounds are to take place according to the schedule following:—

First round—Marco v. Schallopp, Albin v. Charousek, Schlechter v. Winawer, Porges v. Tschigorin, Lasker v. Showalter, Walbrodt v. Steinitz, Schiffrs v. Teichmann, Janowsky v. Tarrasch, Pillsbury v. Blackburne, Maroczy v. a bye.

Second round—Steinitz v. Janowsky, Showalter v. Schiffrs, Tschigorin v. Walbrodt, Winawer v.

Lasker, Charousek v. Porges, Schallopp v. Schlechter, Blackburne v. Albin, Maroczy v. Marco, Teichmann v. Pillsbury, Tarrasch a bye.

Third round—Schlechter v. Maroczy, Porges v. Blackburne, Lasker v. Schallopp, Walbrodt v. Charousek, Schiffrs v. Winawer, Janowsky v. Tschigorin, Pillsbury v. Showalter, Tarrasch v. Steinitz, Albin v. Teichmann, Marco a bye.

Fourth round—Tschigorin v. Tarrasch, Winawer v. Pillsbury, Charousek v. Janowski, Schallopp v. Schiffrs, Blackburne v. Walbrodt, Maroczy v. Lasker, Teichmann v. Porges, Marco v. Schlechter, Showalter v. Albin, Steinitz a bye.

Fifth round—Lasker v. Marco, Walbrodt v. Teichmann, Schiffrs v. Maroczy, Janowski v. Blackburne, Pillsbury v. Schallopp, Tarrasch v. Charousek, Albin v. Winawer, Steinitz v. Tschigorin, Porges v. Showalter, Schlechter a bye.

Sixth round—Charousek v. Steinitz, Schallopp v. Albin, Blackburne v. Tarrasch, Maroczy v. Pillsbury, Teichmann v. Janowsky, Marco v. Schiffrs, Showalter v. Walbrodt, Schlechter v. Lasker, Winawer v. Porges, Tschigorin a bye.

Seventh round—Schiffrs v. Schlechter, Janowsky v. Showalter, Pillsbury v. Marco, Tarrasch v. Teichmann, Albin v. Maroczy, Steinitz v. Blackburne, Porges v. Schallopp, Tschigorin v. Charousek, Walbrodt v. Winawer, Lasker a bye.

Eighth round—Blackburne v. Tschigorin, Maroczy v. Porges, Teichmann v. Steinitz, Marco v. Albin, Showalter v. Tarrasch, Schlechter v. Pillsbury, Winawer v. Janowsky, Lasker v. Schiffrs, Schallopp v. Walbrodt, Charousek a bye.

Ninth round—Pillsbury v. Lasker, Tarrasch v. Winawer, Albin v. Schlechter, Steinitz v. Showalter, Porges v. Marco, Tschigorin v. Teichmann, Walbrodt v. Maroczy, Charousek v. Blackburne, Janowsky v. Schallopp, Schiffrs a bye.

Tenth round—Teichmann v. Charousek, Marco v. Walbrodt, Showalter v. Tschigorin, Schlechter v. Porges, Winawer v. Steinitz, Lasker v. Albin, Schallopp v. Tarrasch, Schiffrs v. Pillsbury, Maroczy v. Janowsky, Blackburne a bye.

Eleventh round—Albin v. Schiffrs, Steinitz v. Schallopp, Porges v. Lasker, Tschigorin v. Winawer, Walbrodt v. Schlechter, Charousek v. Showalter, Janowsky v. Marco, Blackburne v. Teichmann, Tarrasch v. Maroczy, Pillsbury a bye.

Twelfth round—Showalter v. Blackburne, Schlechter v. Janowsky, Winawer v. Charousek, Lasker v. Walbrodt, Schallopp v. Tschigorin, Schiffrs v. Porges, Maroczy v. Steinitz, Pillsbury v. Albin, Marco v. Tarrasch, Teichmann a bye.

Thirteenth round—Porges v. Pillsbury, Tschigorin v. Maroczy, Walbrodt v. Schiffrs, Charousek v. Schallopp, Janowsky v. Lasker, Blackburne v. Winawer, Tarrasch v. Schlechter, Teichmann v. Showalter, Steinitz v. Marco, Albin a bye.

Fourteenth round—Winawer v. Teichmann, Lasker v. Tarrasch, Schallopp v. Blackburne, Schiffrs v. Janowsky, Maroczy v. Charousek, Pillsbury v. Walbrodt, Marco v. Tschigorin, Albin v. Porges, Schlechter v. Steinitz, Showalter a bye.

Fifteenth round—Walbrodt v. Albin, Charousek v. Marco, Janowsky v. Pillsbury, Blackburne v. Marco, Tarrasch v. Schiffrs, Teichmann v. Schallopp, Steinitz v. Lasker, Showalter v. Winawer, Tschigorin v. Schlechter, Porges a bye.

Sixteenth round—Schallopp v. Showalter, Schiffrs v. Steinitz, Maroczy v. Teichmann, Pillsbury v. Tarrasch, Marco v. Blackburne, Albin v. Janowsky, Schlechter v. Charousek, Porges v. Walbrodt, Lasker v. Tschigorin, Winawer a bye.

Seventeenth round—Janowsky v. Porges, Blackburne v. Schlechter, Tarrasch v. Albin, Teichmann v. Marco, Steinitz v. Pillsbury, Showalter v. Maroczy, Tschigorin v. Schiffrs, Winawer v. Schallopp, Charousek v. Lasker, Walbrodt a bye.

Eighteenth round—Maroczy v. Winawer, Pillsbury v. Tschigorin, Marco v. Showalter, Albin v. Steinitz, Schlechter v. Teichmann, Porges v. Tarrasch, Lasker v. Blackburne, Walbrodt v. Janowsky, Schiffrs v. Charousek, Schallopp a bye.

Nineteenth round—Tarrasch v. Walbrodt, Teichmann v. Lasker, Steinitz v. Porges, Showalter v. Schlechter, Tschigorin v. Albin, Winawer v. Marco, Charousek v. Pillsbury, Schallopp v. Maroczy, Blackburne v. Schiffrs, Janowsky a bye.

The first-named in each pair has the first move in each case. It will thus be seen that the American players were drawn as follows: Steinitz will have the move against Janowsky, Tschigorin, Blackburne, Showalter, Schallopp, Marco, Lasker, Pillsbury and Porges, and he will play black

against Walbrodt, Tarrasch, Charousek, Teichmann, Winawer, Maroczy, Schlechter, Schiffrs and Albin.

Pillsbury will have the move against Blackburne, Showalter, Schallopp, Marco, Lasker, Albin, Walbrodt, Tarrasch and Tschigorin, and will play black against Teichmann, Winawer, Maroczy, Schlechter, Schiffrs, Porges, Janowsky, Steinitz and Charousek.

Showalter will have the move against Schiffrs, Albin, Walbrodt, Tarrasch, Tschigorin, Blackburne, Winawer, Maroczy and Schlechter, and he will play black against Lasker, Pillsbury, Porges, Janowsky, Steinitz, Charousek, Teichmann, Schallopp and Marco.

Below is given results of the rounds already played.

First round, played on Monday—Schiffrs beat Albin in a Zukertort opening after thirty-two moves; Lasker beat Porges in a Ruy Lopez after thirty-seven moves; Janowsky beat Marco in a Ruy Lopez after thirty moves; Steinitz beat Schallopp in a queen's gambit declined after thirty-six moves; Tschigorin beat Winawer in a Vienna game after thirty-six moves; Charousek beat Showalter in a king's gambit declined after fifty-four moves; Walbrodt and Schlechter drew a Scotch game after thirty-one moves; Tarrasch and Maroczy drew a queen's gambit declined after sixty-two moves; Blackburne and Teichmann drew a two knights' defence after thirty-seven moves; Pillsbury had a bye.

Second round, played on Tuesday—Tschigorin beat Blackburne in a Giuoco piano after fifty-six moves; Steinitz beat Teichmann in a Ruy Lopez after forty-seven moves; Showalter and Tarrasch drew a queen's gambit after sixty-two moves; Janowsky beat Winawer in a centre gambit after fifty-seven moves; Walbrodt beat Schallopp in a Ruy Lopez after forty-five moves; Maroczy beat Porges in a Scotch gambit after eighty-two moves; Marco and Albin drew a Ruy Lopez after fifty-seven moves; Schlechter and Pillsbury drew a Ruy Lopez after fifty-one moves; Lasker beat Schiffrs in a P Q 4 opening after fifty-two moves; Charousek had a bye.

Third round, played on Wednesday—Walbrodt beat Albin in a French defence after fifty-one moves; Janowski and Pillsbury drew a Ruy Lopez after fifty-six moves; Tarrasch beat Schiffrs in a queen's gambit declined, sixty-one moves; Lasker beat Steinitz in a French defence after forty-one moves; Schlechter beat Tschigorin in a two knights' defence after nearly 100 moves; Charousek and Marco drew a king's gambit declined, sixty-two moves; Blackburne and Maroczy drew a Sicilian defence, forty-one moves; Schallopp beat Teichmann in a queen's gambit declined fifty-eight moves; Winawer beat Showalter in a queen's gambit, forty-nine moves; Porges had a bye.

Fourth round, played Thursday—Showalter offered the queen's gambit to Blackburne, which was accepted. The Britisher won. Game between Winawer and Charousek was adjourned. In the Spanish game, opened by Schallopp, Tschigorin won after forty-one moves. Steinitz defeated Maroczy in twenty-four moves. Tarrasch disposed of Marco after thirty-one moves. Janowski defeated Schlechter. Lasker and Walbrodt played a drawn game. Schiffrs and Porges drew after thirty-six moves. Pillsbury defeated Albin after sixty-nine moves.

The fifth round played Friday—Marco beat Schallopp. Schlechter beat Winawer. Lasker disposed of Showalter. Teichmann was defeated by Schiffrs. Blackburne beat Pillsbury. Albin beat Charousek. Tschigorin easily disposed of Porges. Steinitz only drew with Walbrodt. Tarrasch beat Janowski. The unfinished game of yesterday between Winawer and Charousek resulted in a draw after eight-four moves. The standing of the contestants to date is as follows:

Players.	Won.	Lost.
Albin	1	3
Blackburne	2	2
Charousek	2	2
Janowski	3	1
Lasker	4	1
Marco	2	3
Maroczy	2	2
Pillsbury	2	2
Porges	1	3
Schallopp	1	4
Schiffrs	2	2
Schlechter	3	2
Showalter	4	1
Steinitz	3	1
Tarrasch	4	1
Teichmann	1	3
Tschigorin	4	1
Walbrodt	3	1
Winawer	1	3

Pig Iron, No. 1	1.62 to 1.65

KEROSENE.

The drop in exchange has influenced the market. Prices are looking up and buyers are getting anxious, fearing they will be left if they do not operate soon.

American	\$2.15 to 2.25
Russian	2.10 to 2.20
Langkat	—

SUGAR.

Brown—Fair business. Manila steady. Takao firm. Chinas weak. White—Quiet market, prices steady at quotations.

	PER PICUL.
Brown Takao	\$3.85 to 3.90
Brown Manila	5.00 to 5.10
Brown Daiteng (New)	3.35 to 3.40
Brown Canton	3.25 to 3.50
White Java and Penang	6.80 to 6.90
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

The slump in exchange assisted buyers, but sellers at once raised quotations to an impracticable point. This is suicidal on their part. Italian, French, and Chinese producers meet buyers currently while Japanese look idly on! The result is a stock of 12,000 piculs against 6,000 last year, and an export for 2 months of 1,000 piculs against 11,000 piculs to same date in 1895. No comment is necessary.

BISSET & URE'S SHARE REPORT.

Yokohama, 17th August, 1896.
The following is extracted from our Hongkong Agent's Circular of the 18th inst.:—"A telegram has been received from the mine (Punjun Mining Co.) giving the result of the clean up for July as follows:—Mill ran 27 days, crushing 1,100 tons of ore,

yielding 515 ounces of smelted gold, sixty tons of concentrates calcined yielding 84 ounces of gold." The Charbonnage Mining Co. informs shareholders that the new scrip is now ready, and can be exchanged against old scrip, without conforming to the numbers, at the head office at Paris, Rue de Caumartin, No. 5, from the 1st Aug., 1896, and as the old scrip will not be negotiable on the Paris Bourse, it is indispensable that this exchange should be effected. I have since learned that new scrip for China Shareholders will be sent out here, and the exchange can be effected at the office of the local agents."

The only change to report in local stocks is that Club Hotels have declined to \$70, with sellers at that rate.

Yokohama, August 18th.

Hongkong reports by wire that H. & S. Banks have further strengthened, there being buyers of shares there to-day at 18 1/2 per cent, prem, ex the dividend of 25 shillings. This is equal to 193 per cent, premium cum dividend. Luzon Sugars are offering in Hongkong at \$65.50.

H. & K. Wharfs have been purchased to-day from the Colony at \$55.50.

EXCHANGE.

Rates have fallen daily all the week till yesterday, where there was a fractional reaction, but quotations do not close with much stability.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tri-
bunaries in Abyssinia," says—"I ordered the dragoman Mahomet
to inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In 1
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

A certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1891, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a ten-
spoonful of Ointment was worth a fowl and any quantity of peas,
and the demand became so great that I was obliged to lock up
the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1890

THE PROCEEDINGS

OF THE IMPERIAL JAPANESE DIET IN BOOK FORM.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same: and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUG. 29TH, 1896.

DEATHS.

At 210c. Bluff, at 8 a.m. on Thursday, the 27th inst., of heart failure, JOSEPH COFFIN HILL, aged 56 years.
At Sapporo, on the twentieth inst., of cholera infantum, GRANT, only child of the Rev. U. G. and Nora Murphy, Nagoya, aged one year, nine months, and eighteen days.

SUMMARY OF NEWS.

M. HITROVO's death was due to an aneurism.

PRINCE D'ARENBERG has been elected President of the Suez Canal Company.

THE latest news from Korea tells of more arrests among the philo Japanese party.

A TERRIBLE family feud has terminated in the village of Minami, Naka-gun, Sanuki, with the

murder of seven persons, and the suicide of the four murderers.

THE Swiss Residents' Cup was won on Saturday by Mr. Salabelle's boat *Eclair*.

BETWEEN two and three thousand houses were destroyed by fire at Hakodate on the 25th inst.

THE speed of the express trains on the Tokaido railway will be increased to 35 miles per hour from the 1st September.

GENERAL GOSSLER has been appointed Prussian Minister of War in room of General Broussart von Schellendorf resigned.

THERE has been a decided fall in the temperature during the past three days, due to the prevalence of northerly winds.

THE troubles in Formosa have been put down, only a few marauding bands being met with now in the less settled parts.

MR. WADA FUKUZO, of Yokohama, and other capitalists, are trying to start a petroleum refining company with a capital of yen 100,000.

THE Hon. C. Coventry, who was sentenced to five months imprisonment for the raid into the Transvaal, has been released, owing to ill-health.

DYSENTERY is now prevalent all over the eastern and central districts of Japan: in Tokyo there are not many cases. Mayebashii is very much afflicted.

THE amount of money presented or contributed by the public in the Navy Department from August, 1894, to January of this year totals yen 578,090.333.

A POPULAR ballad or madrigal recently published by Nishimura Torajiro, was suspended on the 26th inst., as it was deemed injurious to public morals.

SOUTH AFRICAN advices announce that Mr. Cecil Rhodes has arranged terms of surrender with eight of the most important Matabele chiefs in the Matoppo Hills.

H.I.H. THE EMPRESS has contributed yen 1,000 to the relief funds now being raised for the families of the men who lost their lives by the wreck of the German gunboat *Illis*.

THE Porte has informed the various Embassies that unless the landing of Greek volunteers and munitions of war in Crete is stopped, the relations between Turkey and Greece will be severely strained.

COLONEL J. C. HILL, who served through the Indian Mutiny under the Union Jack and the American Civil War under the Northern banner, died in Yokohama on Thursday morning, from heart failure.

THE political deadlock continues, Count Matsukata refusing to enter the Cabinet as Minister of Finance unless Count Okuma goes to the Foreign Office; and Count Inouye declines to enter the Cabinet at all.

PART of the treasure missing from the steamer *Saikyo Maru* has been found in the possession of the late Second Officer, Mr. Edwin Ryder. He has been examined in H.B.M. Court and remanded for a week.

SPEAKING in the House of Commons, the Right Hon. A. J. Balfour, First Lord of the Treasury, said that there was every hope of an early agreement with America relative to the arbitration of the Venezuela difficulty.

THE Sultan of Zanzibar is dead. Said Kalid has proclaimed himself Sultan, and has seized

and barricaded the Palace, having with him seven hundred armed men. H.M.S. *Philomel*, *Thrush*, and *Sparrow* have landed men and are awaiting orders. Trouble is feared.

MR. YAMADA KAITOKU, Japanese Consul in Bombay, writes, under date of 8th July, that the defects in Japanese matches are very serious and display a lack of integrity on the part of Japanese manufacturers and exporters.

MR. KAWASAKI HIROYOSHI, a Secretary in the Foreign Department, has been permitted to accept and wear the decoration of the third class of the Order of Saint Anne, conferred on him by H.M. the Czar of Russia.

THE *Times* states that Lord Salisbury has informed Li Hung-chang that he favoured the principle of an increase of the Chinese Customs tariff but must consult with the Chambers of Commerce at Shanghai and elsewhere before consenting.

THE sum of yen 16,700 was granted on the 25th inst., from the Second Reserve, as quarantine expenses in the following twelve Prefectures:—Gumma, Saitama, Nagano, Niigata, Tochigi, Kanagawa, Shizuoka, Miye, Aichi, Gifu, Shiga, and Fukui.

REUTER'S Agent learns that Li Hung-chang has made Russia no concession. The ex-Viceroy has favoured the junction of railways between the Amur and Manchuria, but no convention has been signed and no port has been ceded to Russia. It has been further ascertained that Russia is favourable to a revision of the tariff in China, and that Germany awaits Great Britain's action thereon, whilst France awaits the opinion of her Minister at Peking.

LORD SALISBURY has been installed as Warden of the Cinque Ports. At the banquet given on the occasion he said there existed in the eastern extremity of Europe a source of danger which was menacing the security of the whole of Europe; and that though Great Britain had warned Turkey of her eventual punishment, the former was in no way pledged to go to war to execute that punishment, and he earnestly hoped that the Powers would be enabled to abate the danger while there was time.

THERE is considerable improvement in the tone of the Import trade, and a good deal of enquiry, though the actual business transacted is small, and a low and fluctuating exchange during the week has been responsible for a good deal of fencing between buyers and sellers. Of Yarns and Textiles, only small quantities—very much wanted—have been taken, and this remark applies to Shirtings and Fancy Cottons, Woollens being still a drug in the market. There is a much better feeling in the Metal trade, but exchange has doubtless restricted the filling of evident requirements. There has not been much done in Kerosene, but holders of Oil are able to present a much firmer attitude, and this in face of considerable arrivals and a large quantity "floating" and known to be nearing port. In the Sugar market, all Browns are dull, but White sorts are in better favour, and prices are firmer. In the principal Export there has been more business, but buyers of Silk are choked off by the attitude of holders who strangle the market. Only a little trade in Waste. Moderate daily transactions continue in Tea, and the late increase in demand has brought forward an ample supply of leaf, parcels of which have changed hands at late rates. The principal feature in exchange during the week has been fluctuation, and there is not much stability in rates apparent at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Journalistic attention has this week been directed chiefly to the question of rumoured Ministerial changes. No member of the Metropolitan Press, with the two exceptions of the *Nichi Nichi* and the *Jiji Shimpō*, has published any article that does not relate to Counts Okuma and Matsukata, either directly or indirectly. The *Nichi Nichi's* position is essentially this:—The Progressionists and the followers of Count Okuma show themselves quite lacking in a sense of justice and consistency. When Count Itagaki entered the Cabinet, they declared that the leader of the Liberals had surrendered to the Clan Government. But now they would fain persuade the public to believe that their leader should do the very thing for doing which they abused Count Itagaki. If the Liberal leader's acceptance of a portfolio was a political surrender, Count Okuma's acceptance must be equally a surrender. Is it conceivable that they can not appreciate that flagrant contradiction? They must either be slightly delirious, or, as is more probable, although we hesitate to believe it, their present unreasonable mood must be the outcome of an inordinate desire to see Count Okuma in office, and to find some of their friends appointed to subordinate positions in the Government. Their language, advocating Count Okuma's resumption of the portfolio of Foreign Affairs, is vehement and earnest to the limit of the Japanese tongue's capacity, but as to whether the Count himself is willing to join the Government, they preserve an apparently resolute silence. On the other hand, the Progressionist leader is reported to have lately told some of his interviewers that any person rightly interpreting his thirty years of public life, will not believe for a moment that he is ready to join the Ito Government at the present juncture. Not much political insight is needed to detect an artful enigma in this silence on the part of the Progressionist organs, and these lofty-voiced utterances on the part of the Count himself.

The *Kokumin*, in a leader entitled "Love-lorn suicide of the Liberal Party," writes in the following strain:—"Marquis Ito has already proved himself irresponsible to the Liberals' love. He is ready to shake off Count Itagaki and his followers whenever he deems it advantageous to do so. Should the Liberals continue to court his favour, they will end by committing love-lorn suicide. Are they well advised in trying to build their political influence upon such a foundation as the love of Marquis Ito and Baron Ito? The time has come for them to look back with regret upon their surrender to these treacherous and faithless statesmen. If they want true love and sympathy, their only course is to turn to the men out of office. The day has arrived when the Liberals will best consult their interests by passing over to the Opposition camp. It is foolish, unprofitable, and dishonourable on their part to stand by the faithless Marquis Ito's shadow; and it is rude, imprudent, impolitic, and thoughtless to serve as tools of this or that statesman's antipathy to Count Okuma's entry into the Administration. If the Liberals still possess any fragment of the spirit that animated them ten years ago, they will not hesitate at this juncture to effect a fundamental change by forming a combination with the Progressionists and certain statesmen of Satsuma extraction. They labour under a misapprehension in regarding the Progressionist politicians and Satsuma statesmen with hostile eyes. The Satsuma statesmen are more disposed to form a responsible Cabinet, and are more like the Liberals of former days in advocating a strong foreign policy, than are Marquis Ito and his followers. It is needless to dwell upon the relations between the *Yiyu-to* and the *Shimpō-to*. If the former return to their original frame of mind, the reconciliation of the two parties will be an easy matter. If, out of the one hundred and twenty Liberal Representatives, fifty find themselves awakened to their original political views, and enter the ranks of the Opposition, they will soon see Japan's political machinery

moving in accordance with their avowed principles. Sad to say, however, not one among the numerous Liberals seems to have the spirit at present to conform with our views. Without a single exception, they appear destined to die a miserable death in support of Marquis Ito and Baron Ito's faithless statecraft.

The *Mainichi* has a leader headed "The Cabinet in Trouble," wherein our contemporary takes to task both the Ministry and the Liberals in its usual uncompromising terms. We quote a portion of the article:—"If the Ito Cabinet finds itself unequal to the task of carrying out the important *post-bellum* measures, the Ministers ought immediately to resign their posts, like men of honour and courage. If the Liberal politicians are convinced of their incapacity to successfully support the Cabinet in its management of those measures, they ought to frankly confess their incompetence before the nation and quietly withdraw from their alliance with the Ministry. How are they situated now? An increase of 27 million *yen* has apparently to be made on the expenditure side of the Budget for the next fiscal year, while the income from taxes presents no particularly bright prospects. The Minister for Finance has been compelled to resign, finding himself unequal to cope with this abnormal state of things. As to foreign affairs, they go from bad to worse day by day in the hands of an *ad-interim* Minister. Under the circumstances, the Government is devising means to place the portfolios of Finance and Foreign Affairs in the hands of veteran statesmen, now out of power, so that the country may be extricated from the toils of the present distressing complication. In a word, the Ministers show themselves entirely wanting in self-confidence, moral courage, and a sense of honour, for they are endeavouring, in their hour of need, to obtain the services of Count Matsukata, whom they thrust out of power last year amid taunts and abuse. Strange as all that seems, what is still stranger is that the organs of the Liberal Party, in their zeal to keep Count Okuma out of power, invite Count Matsukata to rejoin the Government, using language such as the veriest sycophants should be ashamed to employ. In the event of Marquis Ito's resignation, Counts Matsukata and Okuma may come into office. But they are not such fools as to incur all the risks involved in joining the present tottering Cabinet. It was known from the very first that the Counts would not enter the Ministry unless its *personnel* underwent great changes."

The *Nippon* has three articles discussing the situation. One is from the pen of a writer signing himself "Nichi-nan," and is headed "Compromise or Reconstruction?" Here is the most pregnant portion of it:—"At this important epoch in our history, we ought no longer to look to the *Genkun* statesmen for the formation of an able ministry. The tide of European politics is angrily beating against the shores of our country. The reconstruction of the Government upon the basis of the nation's real power, must be the aim of all patriots. If there be any political party sincerely bent upon the renovation of Japan's politics in conformity with the trend of the times, that party ought to cease frittering away its strength over paltry matters like the admission of one or two old statesmen to the ranks of clan Government or their exclusion from them. It ought to devote all its energy to fighting out a perfectly reconstructed Government. Three months more, and the Diet will be in its tenth session. The statesmen out of power will do far better by making preparations for constitutional battle with the Government in that session than by troubling themselves about rumours of Ministerial changes." The second article is an essay by Mr. Kuga, the *Nippon's* chief editor. The gist of it is as follows:—"The principal functionaries of the State are just now engaged solely in opposing Count Okuma's proposed entry into the Government, and have been so engaged for a month past, drawing their salaries all the same. Are they not thus guilty of neglecting their re-

gular duties? The third article is entitled "Only Dissolve!" and is from the pen of an editor on the *Nippon's* staff, who adopts the pseudonym of "Tetsu-kouron." The essence of it is this: In the formation of a Cabinet, it is useless to be troubled with political parties. Nothing need be considered except the true interests of the State. Should the Diet prove refractory, the Ministry must be determined to dissolve it, and make an appeal to the nation.

The *Asahi* writes thus:—"The *post-bellum* measures are great and important. For their successful carrying out, it is especially needful that the portfolios of Foreign and Financial Affairs be in the hands of able statesmen. In the absence of any abler persons, the eyes of the public appear to turn to Counts Okuma and Matsukata, and the question of their entry into the Cabinet has of late been very warmly discussed by the different papers. The latest information received by ourselves is to the effect that the desired change will not be effected. Why so? Is it because it is thought disadvantageous to the State that statesmen holding different political principles should be included in the same Cabinet? Or, is it because the different statesmen find it impossible to lay aside their old enmities even in the face of great national affairs? In our opinion both of these questions are to be answered in the negative. The fact is that many petty politicians, who have nothing but their own interests in mind, stand in the way of the consummation of the best of all the arrangements possible at the present juncture. We cannot but warn these politicians that their conduct will prove detrimental to themselves in the long run."

So much for the Cabinet changes. We now turn to a leader in the *Nichi Nichi* entitled "Is a Panic coming?"—"That is the great economical problem of the day. Judging from the past and present state of things, we can but believe that no panic will occur in the near future. There are persons, not a few indeed, who base their fear of an approaching panic upon frail foundations, such as the excess of imports in the first half of the present year, the mushroom growth of banking, railroad, and other companies, and the large dealings in bonds and shares. Did these pessimists confine themselves to expressions of fear, it would not much matter. But some of them ascribe the economical conditions of the time to the Government's financial policy, and urge the authorities to adopt remedial measures. Such a recommendation can not be passed over without refutation." At this point our contemporary describes the economical conditions existing in Europe and America, and states how a panic is liable to arise even from slight causes in the West. It then proceeds to say:—"There is no denying that various industrial enterprises have sprung up since the War. That is the result, on the one hand, of recovery from the industrial depression that prevailed during the War, and on the other, of a spirit corresponding with the territorial and general expansion of the country. As the *post-bellum* measures necessitate a great increase of taxes, industrial enterprises must now be encouraged rather than checked, for they tend to develop the national wealth. Among the enterprises recently projected, some are of a very speculative nature, but with these no great banks have much to do. Hence their failure, which, in the nature of things, may be expected, will not affect economical circles to any perceptible extent. A slight disturbance may, perhaps, be felt, but it will pass away after a short time, as in the instances of 1881, 1889, and 1892. The excess of imports over exports during the first half of the current year amounted it is true, to over 26 million *yen*. But as the Chinese indemnity has to be brought over from London, that feature of the trade will not be followed by any inconvenient efflux of specie. It is a superficial view, under any circumstances, to regard the growth of imports as a dangerous feature. For the development of industries, large imports are indispensable. It is an easy matter to check importation, for, if rates of interest be raised,

Industrial enterprises, which are the chief factors in producing an increase of imports, will cease to spring up. But the Japan of to-day must expand economically, industrially, and commercially. Small imports cannot co-exist with large business. It would not be sound financial policy to place any check upon importation in the present state of things. In other words, large imports open the way for large exports. They are a phenomenon to be welcomed rather than discouraged or lamented. Some publicists demand that the Authorities should prevent the present growth of industries by imposing financial checks. That is a demand to which no constitutional Government can accede. Under the old despotic régime, the Government could achieve anything political, financial, or otherwise. But the age of Old Japan is long past. In New Japan economical circles must take care of themselves. We do not think that any panic will occur in the near future, and we deem it very short-sighted that bankers and other capitalists should be at all daunted by craven cries of "Panic! Panic!"

The *Fiji* is silent on the Ministerial topic. It prefers to dwell continuously on the question of social reform. Two leaders upon that subject appear in its columns; one urging, in strong terms, the necessity of eradicating the bad habit of paying more respect to officials than to ordinary individuals; the other advocating that men in the upper classes of society should establish freer intercourse with one another. Their mutual visits, even when merely formal or complimentary, are often spoken about in the papers, as events of political significance. Desiring to avoid that, they develop a tendency to stay at home. But should they visit each other more frequently, the papers would sooner or later cease to attach any fictitious importance to their calls. It is not, indeed, so much the press that is to be blamed as their own stand-off habits.

EDITORIAL NOTES.

THE LATE COL. J. C. HILL.

THE late Colonel Joseph Coffin Hill—whose death occurred at 219, Bluff, at 8 o'clock on Thursday morning from heart failure—had served under the flag of his own country as well as under the Union Jack. Born in Massachusetts in 1840, he was not out of his teens when the Indian Mutiny broke out. He was then in Calcutta, on a tour round the world, and with all the ardour of youth and fired with a noble determination to revenge the foul murders of the English ladies in the cantonments in and around Lucknow and other garrison cities, he joined the Bengal Yeomanry Cavalry, a body of gentlemen volunteers raised in that Presidency. It seems but the other day that Col. Hill was telling the Yokohama Literary Society in his own quiet, modest way of some of his Indian reminiscences, and that the grim horrors of those thrilling days had lost none of their intense interest in the passage of the years, was evinced by the applause that greeted the veteran at the close. For his gallant services in India, Queen Victoria bestowed upon Col. Hill the Mutiny Medal, bearing four clasps for Amorah, Ferozepore, Goruchabad, and Delhi. Of this decoration he always expressed himself as being very proud. When the Civil War broke out in the United States, Mr. Hill joined the 1st Maine Cavalry, and again served with distinction, retiring with the Brevet rank of Colonel. For several years civil life at Washington absorbed his energies, and it was then that he joined La Fayette Lodge, No. 19, Washington, D.C., of the antique free and accepted masons. In this noble Order he rose to the 32nd degree, his advancement receiving the cordial approval of all his Brethren. Coming to Japan, Col. Hill engaged in business pursuits with much success, winning the esteem of all with whom he came in contact. He leaves a widow and two children to whom much sympathy is extended in this hour of their bitter grief.

The mortal remains of the late Colonel Hill were accorded a military funeral on Friday after-

noon, the Band and firing party being supplied by the U.S.S. *Olympia*. The first part of the service was conducted at the residence, No. 219, Bluff, by the Rev. W. S. Worden, M.D. Then the procession was formed for the Cemetery. This consisted of Mrs. Hill and her son, and Captain Lee, as Chief Mourners; Messrs. Eldridge, Bramhall, Colton, Brower, Hill, and Thorn, pall-bearers; the Masters, Wardens, and Brethren of the Yokohama Masonic Lodges; Admiral McNair, Major Bartlett, Captain Crawford, Fleet Engineer Bacon (members of the Loyal Legion), and the heads of most of the American business firms and others in Yokohama. Upon the coffin—which was covered with lovely wreaths—reaching the cemetery, Dr. Eldridge, made a short oration. He said that he spoke as a friend and comrade in arms, and on behalf of his fellow-companions of the Loyal Legion of the United States, of which the deceased was a distinguished member: To few had it been given as to their late companion, to take part in two of the great conflicts of this century; wars undertaken from the highest motives, the one a heroic struggle of the representatives of civilization and enlightenment against barbarism and organized murder; the other waged for the freedom of millions of the oppressed and the integrity of a great and noble State. Dr. Eldridge then referred to the part played by Col. Hill in the fights that took place ere the Mutiny was suppressed and to his decoration by the English Government. Continuing he said—A few years later, when just of age, the great civil war in the United States found him the first man to volunteer in the wide State of Maine. Again courage, intelligence, and thorough trustworthiness, ensured his rise, and he soon attained field rank, after partaking in many of the tremendous battles of that unexampled war. Loyal, tender, brave, and true as a soldier, so was our friend in his daily life. And now, O, Comrade! it can be but a brief time ere we, the dwindling remnant of those who fought and conquered by your side, shall lie with you, vanquished at last by the grim Commander Death. May we meet you in that better land, where alone the protector of the helpless, the champion of freedom, and a saviour of his country can receive his reward.

THE REMARKABLE FEAT IN TELEGRAPHY.

WE referred on Monday to the recent remarkably quick piece of telegraphing that took place between Shanghai and London. The *China Gazette* contains further particulars. On the 14th of August Li Hung-chang and his suite went down to Greenwich to visit the great works of the Telegraph Construction and Maintenance Company and to lunch with the directors. Advantage was taken of the occasion to show the distinguished Chinese a very rapid feat in long distance telegraphy, with the result that an unparalleled record was established. Previous to Li's arrival a wire had been placed at the disposal of the directors by the Post Office authorities, by which the works were connected direct with the London office of the Eastern Telegraph Company and the Eastern Extension. By the co-operation of these two corporations and the Indian Telegraph Department everything was got in readiness to transmit messages direct to Shanghai, without delay,—over a distance of some 12,000 miles. Sheng Taotai, Director of Chinese Telegraph Administration, and the Taotai Sheng Hsuan-huai, Director of the China Merchants Company, were waiting in the Cable Companies' Office on the Bund here, according to previous arrangement, for the Envoy's message. This message promptly began to arrive and consisted of 85 words in plain English (not code). It was despatched from Greenwich at 10.29½ a.m., and was retransmitted by "human relays" (that is one operator reading off the ribbon as it arrived by the receiving instrument to another who sat and worked at a sending instrument close by) at London, Marseilles, Malta, Alexandria, Suez, Aden, Bombay, Madras, Penang, Singapore, and Hongkong. It reached Shanghai at 10.47 a.m., Greenwich time,—that is in 12½ minutes, which included the time occupied in clearing the lines over 12,000 miles, for

the message to pass, and all the changes and operations involved in 12 re-transmissions. This gives less than a minute for each separate re-transmission. Sheng Taotai, in reply, sent two messages to his patron and protector, one a short acknowledgment in plain English, and the other a long one consisting of groups of figures (cipher), altogether 94 words, which were despatched from Shanghai at 10.47 a.m., Greenwich time, and were delivered into the hands of Li Hung-chang at Greenwich at 10.54 a.m., or 7 minutes actual time for the 12 re-transmissions. The return message therefore took only a little over half a minute for each transmission. Li was greatly impressed with the marvellous rapidity of the feat, and we trust the lesson will not be lost on Sheng, who controls a system of telegraphs whose average speed apparently is about that of the national wheelbarrow. At the subsequent luncheon the Marquis of Tweeddale, Chairman of the Eastern Extension Company, proposed the Envoy's health. Li in return toasted the sub-marine telegraphy, which toast was responded to by Commodore Suensen, Managing Director of the Great Northern Telegraph Company of Copenhagen.

PAYMASTER WEBSTER.

A TELEGRAM from Washington, dated July 29th, says—The Secretary of the Navy has disapproved of the proceedings, finding, and sentence of dismissal proposed by the court-martial held at Mare Island recently upon Past-Assistant Paymaster Webster, lately attached to the *Yorktown* on the China station. The officer was accused of having retained a bond exacted from his pay clerk, W. J. Tobin, after having dismissed the clerk. The Secretary finds grave informalities in the proceedings of the court which convicted the offender, and, moreover, is inclined to the belief, based principally upon the testimony of Chief Engineer Harry Webster, another officer on the *Yorktown*, that the money, amounting to \$2,500, placed in the paymaster's hands by Tobin's mother, was technically a loan, and not for a bond. For these reasons he reverses the findings of the courts and restores Webster to duty, but takes occasion to say that the transaction, in any light in which it may be viewed, is disgraceful to Paymaster Webster and to the Navy, and a violation in spirit of the statute prohibiting any officer to take money for procuring an appointment. It was scandalous, says the Secretary, that Webster should fail to pay back, after the termination of Tobin's service, money received by him in consideration of his appointment as clerk, and should he, for any length of time, persist in this failure, the Department may be expected to proceed further in the matter.

THE TROUBLES AT ZANZIBAR.

THE news telegraphed by Renter of the death of the Sultan, Said Hamid bin Thwain, G.C.S.I., draws attention to what was once the greatest slave-market in the world. The late Sultan succeeded his great uncle Seyyid Ali on the 5th March, 1893, so his reign has not been very long in duration. The Zanzibar Dominions became independent in 1856 under the rule of Seyyid Majid, a son of Seyyid Said, Sultan of Muscat and Zanzibar. They formerly extended along the mainland as far South as Tanghi Bay and North as Warsheikh; but since the cession of the coast line from Ruwuma to Wanga, including the island of Mafia, to Germany in 1890, they are now confined to the islands of Zanzibar and Pemba (985 square miles, and 165,000 inhabitants), and a ten-mile coast line from Wanga to Kipui, together with the islands of Lamu, Manda, and Patta, and the ports of Kismayu, Brava, Merka, Magdisho, each with a radius of 10 miles, and the port of Warsheikh, with a radius of 5 miles. As far as the mouth of the Juba, the Zanzibar dominions on the mainland are leased to the Imperial British East Africa Company, and the remainder, known as Benadir, to an Italian Company. Zanzibar has lately assumed the administration of the district and town of Witu (a British Protectorate), from the Imperial British East Africa Company, and has itself been a British Protectorate since November, 1890. Early in 1893,

the late Sir G. Portal obtained from the Sultan a decree transferring to the British Consular Court all cases in which British subjects may be concerned against subjects of His Highness, either as plaintiffs or defendants. The Powers having treaties with Zanzibar continue to retain extra-territorial rights. The City of Zanzibar, on the island of the same name, is the largest in East Africa, and possesses a magnificent harbour, which presents great facilities to shipping and trade generally. It was declared a free port in February, 1892.

PROFESSOR MILNE AND THE TIDAL-WAVE.

PROFESSOR MILNE, writing to *The Times* from his residence near Newport, Isle of Wight, says:—"Telegrams have told us that on June 17th enormous sea waves broke in upon the north-east of Japan, with the result that possibly 27,000 lives have been sacrificed. I am not aware that disturbances have been recorded in Europe which correspond to this date, but at Padua, on June 15th and 16th, Professor Vicentini obtained diagrams of earth movements which probably had their origin at a great distance. Because it takes about 45 minutes for earth waves to travel from Japan to Europe, and because between England and Japan there is a difference in time of nine hours, it is just possible that in the latter country there may have been heavy disturbances on June 15th at 8.30 p.m. and again on the following day at 5 and 9 a.m., the latter being pronounced. In the Isle of Wight a seismograph was first disturbed on the 15th at 8 p.m. in Japan time, but because it was two hours later dismantled for readjustments the disturbances of the 16th were not recorded."

NEW BARRACKS.

New barracks, we learn from the *Nichi Nichi*, are building in the following places, and will be completed before the year is out:—The 29th Infantry, Sendai, Miyagi Ken; 30th Regiment of Infantry, Niigata, Niigata Ken; 31st Infantry, Hirosaki, Aomori Ken; 32nd Infantry, Akita, Akita Ken; 33rd Infantry, Nagoya, Aichi Ken; 34th Infantry, Shizuoka, Shizuoka Ken; 35th Infantry, Kanazawa, Ishikawa Ken; 36th Infantry, Tsuruga, Fukui Ken; 37th Infantry, Osaka, Osaka Fu; 38th Infantry, Kyoto, Kyoto Fu; 39th Infantry, Fukushima, Kyoto Fu; 40th Infantry, Himeji, Hyogo Ken; 41st Hirosaki, Hirosaki Ken; 42nd Infantry, Yamaguchi, Yamaguchi Ken; 43rd Infantry, Marugame, Ehime Ken; 44th Infantry, Matsuyama, Ehime Ken; 45th Infantry, Kumamoto, Kumamoto Ken; 46th Infantry, Omura, Nagasaki Ken; 47th Infantry, Kokura, Fukuoka Ken; and 48th Infantry, Kurume, Fukuoka Ken.

MISSIONARIES ASSAULTED AT ARIMA.

SOME foreign missionaries from China have had rather an unpleasant experience while journeying from Arima to Sumiyoshi. Dr. Wilkinson and another missionary were hustled and stoned, and his companion thereupon fired his revolver into the air. This scattered their assailants, *kago*-carriers, but later a band of coolies went to Dr. Wainwright's house at Arima and tried to discover the name of the missionary who fired the shot. Not being successful in their endeavours, they went to the Rev. McAlpine's house and forcibly entered it by the kitchen, and were not ejected until some 15 or 20 foreigners came to Mr. McAlpine's assistance. According to the *Kobe Herald*, it would appear that had the China missionaries exercised a little tact and discretion in dealing with their *kago*-carriers the affair would not have happened. Mr. McAlpine had acted as interpreter for the China Missionaries when they engaged the *kago*-carriers, and the matter in dispute amounted to 45 *sen*.

LOSS OF A BRITISH SHIP BY FIRE.

News reached Hongkong last Saturday that the British ship *Esmeralda*, 1,250 tons, from Newcastle, New South Wales, to Manila, was burnt at sea in lat. 6 N. long. on 130 E. on June 6, 224 miles off the Philippines. She left Newcastle on April 22nd, and on June 6th, smoke was discovered issuing from the forward hatch. Strenuous efforts were made

to save the ship, but without avail. She was then abandoned by the officers and crew, who stood by to the last; eventually they took to the boats and were 32 days afloat. They were pretty well provisioned under the circumstances, and, although reduced to macaroni and canned meat, one of the boats managed to reach Mindanao safely on July 11, in fairly good health, having regard to the privations which must have been inseparable from such a voyage; another boat reached Manila, and one, in which was the chief officer and part of the crew, has not yet been heard of.

SHIPS PASSED ANJER.

THE following vessels passed Anjer on the dates given:—British ship *Adelana*, Captain Gillis, from New York for Yokohama; British ship *Zinila*, Captain Fraser, Cardiff to Nagasaki; British ship *Dalcarnie*, Captain Davies, Philadelphia to Hyogo, on July 26; British ship *Heathfield*, Captain MacKenzie, Middlesbro' to Yokohama, July 27; American ship *P. N. Blanchard*, Captain Blanchard, New York to Hyogo; British ship *Alcides*, Captain Dart, New York to Yokohama, July 29; German ship *Magdalena*, Captain Schoemaker, Philadelphia to Hyogo; British ship *Crown of India*, Captain Corsehili, Cardiff to Nagasaki, July 30; British ship *Hutton Hall*, Captain Rowland, New York to Yokohama, July 31.

FIRE ON THE "OOPACK."

SHORTLY after the arrival of the steamer *Oopack* at Nagasaki on Tuesday afternoon, says the *Rising Sun*, a rumour was circulated to the effect that a fire had broken out on board. Upon inquiry it was ascertained that she had experienced very heavy weather, and while in the worst of it, at about 9 a.m. on Tuesday morning, it was discovered that a fire had broken out in the lower hold, under the No. 2 hatch, among some general cargo. Three steam hoses were at once brought to bear upon it, but it was not until the vessel was safely in port at Nagasaki, at about 4 p.m., that it was got completely under.

IN MEMORIAM.

A SHORT service was conducted at the Union Church on Tuesday afternoon by the Rev. W. S. Worden, M.D., over the remains of the late Mr. C. E. Schwyer, whose untimely decease we recorded last week. The pall-bearers were the baseball players of the Y.C. & A.C., Messrs. Abel, Tilden, Kay Smith, E. R. Morriss, E. B. S. Edwards, Bain, and W. Merriman; the chief mourners being Mr. B. O. Squier and Dr. Eldridge. The coffin was covered with magnificent floral tributes of regard, among them being a wreath from the Journalists of Yokohama. In the course of the service the favourite hymn of the deceased, "Nearer my God to Thee," was sung.

AN "ILTIS" MEMORIAL.

Der Ostasiatische Lloyd states that at a well-attended meeting of the members of the Club Concordia, Shanghai, it was resolved to circulate a subscription-list amongst Germans residing in China, and with the money thus collected to erect a suitable monument. The committee subsequently inquired of the Municipal Council whether they would allow the monument to be erected somewhere on the grass-plot on the Bund, and to this request the Council have most readily consented.

QUICK TELEGRAPHIC TRANSMISSION.

A REMARKABLE feat in long-distance telegraphy was achieved on Friday evening, says the *N.-C. Daily News* of August 17th, when Sheng Tao-tai in Shanghai had a conversation with his great patron, H.E. Li Hung-chang in London. The Indian Government placed its wires at the disposal of the experiment, and the result was that the communication, some human relays being used, was made in about or under two minutes, though the exact times have not yet been received from London.

KOBE-TOKYO EXPRESS.

ACCORDING to the *Osaka Mainichi*, the quick train between Kobe and Tokyo, to run on and

after the 1st prox. will consist of three 1st class carriages (giving passenger accommodation for no more than 30), the same number of 2nd class carriages (the passengers not exceeding 50), and four 3rd class carriages (passengers not exceeding 200).

THE LATE MR. SCHWYER.

A SHORT funeral service will be conducted by Dr. Worden at the Union Church, at 4.30 o'clock this afternoon, over the remains of the late Mr. C. E. Schwyer. The pall-bearers will be chosen from the baseball players of the Y.C. & A.C. Afterwards the body will be taken to the P.M. steamer *City of Peking* for conveyance to New York.

ENGLAND AND THE SEISMIC WAVE DISASTER.

The Council of the Japan Society, acting as committee of the fund for the relief of sufferers from the recent seismic wave, transmitted on July 23rd by telegraph to the British Minister in Tokyo, as a first instalment, the sum of £1,000.

THE EMPRESS'S GENEROSITY.

H.I.M. THE EMPRESS has contributed *yen* 1,000 to the relief funds now being raised for the families of the men who lost their lives by the wreck of the German gunboat *Iliss*.

MR. OZAKI YUKIO ON "JIYU-TO" OFFICIALS.

Mr. Ozaki Yukio, a well-known leader of the Opposition, writes the *Fumio*, is said to have recently used the following language:—"I have nothing to do with the alleged entrance of Count Okuma into the Cabinet, and I am going to leave the capital for Kugenuma within a few days. As to the *Jiyu-to* Governors' appointment, it seems that some people have raised noisy objections: that is due to people's respecting persons in office more than those that are out. Suppose an old official, ignorant and decrepit, receives an appointment, people will write nothing against him. The objections now raised lack both wisdom and prudence. For my own part, I might have to create Vice-Ministers and Governors, should I find myself in the Government some day or another, so I pay no heed to the idle clamour."

ARMY AND NAVY AFFAIRS.

Last year the conscript soldiers' term of service was increased by four months. Under the new system, service in the Army will be three years active service, four years-and-a-half in the First Reserve, and five years in the Second Reserve. The Naval Standing Squadron is soon to start on a cruise around the coasts of Japan. The *Chinyen* (former *Chen-yuen*) will be included in the Squadron.

The Authorities, we learn, will raise, in the near future, 1,500 new gendarmes, of whom 150 are to be distributed among the Tokyo stations and the rest in provincial cities and towns. The gendarmes at present at Wei-hai-wei are soon to return home, and the 6th company of the Kumamoto Gendarmerie, which is to take their place, has already left Ujina. The Naval Department is at present enrolling recruits.

FOREIGN PURCHASES OF JAPANESE WAR BONDS.

The *Nichi Nichi Shimbun* denies emphatically that any extensive purchases of Japanese War Bonds have taken place in Yokohama, as was recently reported. Our readers may remember that rumour went so far as to mention the exact figure—over three hundred and eighty thousand *yen*—and the fact being significant as well as interesting, the *Nichi Nichi* was led to make inquiries. It finds that though a few Tanko Tetsudo Bonds were bought on foreign account in the Yokohama Exchange, no transactions occurred in War Bonds, whether as time bargains or for immediate delivery. Evidently the rumour was fabricated by interested parties.

THE CABINET CRISIS.

The *Jiji Shimpō* has a very plain-spoken article on the political situation, but its gist amounts to nothing more than what we ourselves stated in our leading columns on the 26th instant. Unlike the political crises with which experience has hitherto made us familiar in Japan, the present difficulty is not due to friction among the leading statesmen, or to any loss of public confidence on the part of the Cabinet, but merely to the fact that those now in power can not command the services of really competent men to hold the important portfolios of Foreign Affairs and Finance. The Government's weakness in that respect is precisely the strength of the Opposition—with whom Count Matsukata is temporarily allied—for the latter are in a position to furnish the two statesmen publicly accredited above all others with special ability in the realms of finance and foreign affairs, namely, Count Matsukata and Count Okuma. We gather from what the *Jiji* says, that Marquis Ito himself will under no circumstances consent to preside over a Cabinet recast in such a manner as to drive Count Itagaki out of office and alienate the Liberals, and since the Liberals are determined to secede if Count Okuma takes office, it follows that the latter contingency would involve a complete re-adjustment of the Ministry as well as of political relationships. Very few critics will be found, we imagine, to deny the propriety of Marquis Ito's attitude as described by the *Jiji*. For our own part, we do not hesitate to say that were His Excellency to remain in power after the Liberals had been forced into opposition, he could scarcely look to enjoy the confidence of any self-respecting party hereafter.

What then is to be done? One of two things only: either Marquis Ito and Count Itagaki must remain in office, adopting some temporary means of tiding over the difficulty; or they must retire, and hand over the administration to the Opposition. These are the only alternatives, in the *Jiji's* opinion. But why should Marquis Ito's retention of office be merely temporary? That is what we can not understand. Is it really a fact that no capable statesmen can be found among the ranks of officialdom to preside over the Departments of Finance and Foreign Affairs? Assuredly no statesmen will be willing to accept such difficult posts merely as a makeshift. If any nominations be made, they must be made with the firm and declared intention of permanence to the utmost limit of possibility. If Count Matsukata came into power, he would certainly hold the portfolio of Finance in conjunction with the Presidency of the Cabinet. Why should not Marquis Ito do the same? Every one that has ever been behind the scenes knows that with whatever success this or that policy has been carried out by this or that Minister of Finance, Marquis Ito and Count Inouye were the original planners of the programme. The Marquis' skill in superintending the operation of a scheme has been proved to be as great as his ability in planning it. Foreigners, at any rate, will be perplexed to understand why he should not himself step into the breach at this juncture. As to the Foreign Office, Marquis Saionji's praiseworthy loyalty in standing for so long a time in the unenviable and ineffective position of a *locum tenens* certainly ought not to be taxed any longer, for his own sake as well as for the sake of the public interests. If, as appears to be thought, His Excellency would not be disposed to agree to a transfer from the Department of Education—where, indeed, he seems to be most successful in his administration—surely an excellent Minister of Foreign Affairs might be found in Baron Hayashi, for example. It is not easy to credit the alleged dearth of able men at Marquis Ito's command.

The amount of rice in stock at Osaka is 626,722 *hoku*. Such a large stock has not been carried since the time of the Restoration, and as all godowns are full, a lot has to be stored in the open.

JAPAN'S IMPORT TRADE.

From January to July of this year, writes the *Jiji*, the excess of imports over exports totalled 33,740,612 *yen*. In a great measure, that must be due to the importation of machinery and iron in consequence of the vast industrial development after the War, and also to the increasing demand for luxuries. But the figures are too large to be ascribed entirely to these two causes: some others are at work. Looking at the returns of exports and imports since January last, we find a decrease in only two articles of import, while there has been an extraordinary increase in all others. The following imported articles show increases of more than half a million *yen* as compared with last year:—

	Quantity, Increase.	Value, Increase.
Raw Cotton	20,645,520.....	7,029,906
Cotton Yarn	4,529,106.....	3,290,639
Kanakin	6,822,990.....	633,053
Other Cotton Piece-goods	14,464,473.....	1,993,175
Muslin	11,253,761.....	1,789,847
Kefusu	2,866,269.....	883,105
Flannel	1,748,425.....	590,913
Watches	98,391.....	566,756
Machinery	—	1,288,377
Iron and Steel	18,022,237.....	704,449
Peas	51,077,928.....	1,076,771
Miscellaneous	—	2,960,642
Oil Cake	67,774,641.....	1,335,063

Total 25,597,049
Decreases are noted in the two following articles:—

	Value, Decrease.
Passenger and luggage cars	272,337
Materials for railway building	498,564

Total 770,901
The greatest increase was thus manifested in raw cotton, yarns, and piece-goods. Such increases are inevitable, as the mode of living grows more luxurious, though most of the imported cotton was perhaps exported again in the shape of yarns. Among machinery, that required for cotton spinning stands preëminent. The increases in imports during 1894, as compared with the previous year, was 29,224,784 *yen*; and in 1895 the increase was 11,778,623 *yen*. In these two years exports also showed increases, 1894, 23,533,222 *yen*; 1895, 22,866,091 *yen*. This year, however, the decrease in exports has been remarkable. The following exported articles have all shown decreases amounting to over half-a-million *yen* each (January to July inclusive), as compared with last year:—

	Quantity, decrease.	Value, decrease.
Raw Silk	551,324 lbs.	5,620,254
Habutaye	145,056 tan.	2,536,338
Other Silk Articles	79,284 tan.	981,877
Tea	7,161,789 lbs.	2,667,171
Rice	377,754	1,389,892
Miscellaneous	—	1,480,119

Total 8,728,775
Increases of over 50,000 *yen* have taken place in two exported articles:—

	Quantity, Increase.	Value, Increase.
Silk handkerchiefs.	382,579 doz.	612,304
Cotton yarns.....	4,828,701 lbs.	1,512,551

Total 2,124,855
As the War made Japan famous all over the world, it was expected that her export trade would considerably increase, but this has not been the case. Against an increase of 7 million *yen* in the importation of cotton, only an increase of one and half millions is recorded in the export of cotton yarns. Raw silk, silk goods, tea, and other important staples have been exported in much smaller quantities than in ordinary years. Of course the principal cause of the decreased export business is the business depression in the United States, while, again, the gradual rise in the value of silver may have something to do with it.

After the Presidential Election, exports to the United States may be expected to increase: therefore the present over importation need not cause anxiety.

RATES OF INTEREST IN JAPAN.

According to returns furnished by the Financial Department, the rates of interest on loans from April to June this year, have varied considerably. Towns in Kumamoto, Oita, Miyazaki, and Fukushima Prefectures in which National Banks are situated, show the highest rate, being 18 per cent. at Hitoyoshi and Saeki during the three months; and at Nobe-oka and Miyazaki during the first two months. At Yanazawa and Yashiro it was 16.4 per cent. throughout the three months. The lowest rates prevailed in Fukuoka, Gifu, and Kagoshima Prefectures, being 4 per cent. at Kokura and 5 per cent. at Yawata and Kagoshima. The averages for the whole of Japan in April, May, and June of this year, compared with those prevailing in corresponding months of last year, are as follow:—

	Max.	1896.	1895.	Decrease.	Min.	1896.	1895.	Decrease.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
April	12.51	13.60	1.09	0.02	9.56	0.54		
May	12.52	13.70	1.18	0.08	9.56	0.58		
June	12.68	13.95	1.27	0.05	9.64	0.59		

The highest rate of interest on deposits is reported from Sasayama, Hyogo Ken, and at Toyama, Toyama Ken, where it was 7.5 % in April, May and June. The next highest was at Miharu, 7.2 % during the three months. Next come Mito (Ibaraki Ken), Okayama (Okayama Ken), Kokura (Fukuoka Ken), and Hitoyoshi (Kumamoto Ken), 7 %. Chiba reported 7 % in May and April only. The lowest rate prevailed at Kurume (Fukuoka Ken), 1.8 % during the three months. The next lowest ruled at Osaka, Tsuwano, and Hirosaki (Aomori Ken), varying from 2 to 2.5 %. The maximum and minimum rates in 1895 and 1896 are compared below:—

	Max.	1896.	1895.	Increase.	Min.	1896.	1895.	Increase.
	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.	Per cent.
April	5.79	5.61	0.18	4.05	3.89	0.16		
May	5.83	5.65	0.18	4.07	3.92	0.15		
June	5.83	5.71	0.12	4.09	4.00	0.09		

Cheques were discounted during the three months at 86 places, the highest charges prevailing at Nobe-oka and Miyazaki: in the former they varied from 5 *sen 2 rin* to 6 *sen*, daily, and in the latter, from 5 *sen* to 5 *sen 5 rin*. At Takamatsu, Wakatsu, Saeki, and Yashiro the rate throughout the whole period was 5 *sen*. The lowest rate, 1 *sen 4 rin*, was charged at Yawata, and the next, 2 *sen*, at Tsuwano and Saeki. Below is a comparison for the years 1895 and 1896 (April, May, and June):—

	Max.	1896.	1895.	Decrease.	Min.	1896.	1895.	Decrease.

June	3.55	3.88	0.33	2.76	3.07	0.31		

JAPAN'S FOREIGN TRADE.

The foreign trade of Japan for the first half of 1896, writes the *Mainichi*, showed imports to exceed exports by 26,000,000 *yen*, a rare commercial phenomenon in recent years. That is owing, on the one hand, to the extraordinary depressed condition of the American market, and on the other, to the unusually large importation of machinery and other materials in consequence of the mushroom growth of industrial enterprises in this country. This over importation, however, is by no means ominous. The growth of industries is but the natural result of a victorious war. Moreover, the machinery imported will sooner or later turn out products that will be exported in their turn. Another point to be noted, is that 15,000,000 *yen* out of 26,000,000 *yen* (that is the total of the excess of imports) represented cotton and wool. Further, the greater part of the remaining 11,000,000 *yen* represented machinery and other articles of iron. Very few luxuries were imported. In the months of June and July, the Mitsui Bussan Kaisha alone is said to have exported cotton yarns to the amount of 2,000,000 *yen*. When most of the cotton and wool imported in the first half of the year comes to be exported in the form of yarn, etc., the export business promises to be very prosperous. Silk too will move off after the Presidential election in the United States.

A DENIAL.

It was stated on Sunday by the Liberal organ (*Yiyu Shimpō*) that when the Liberal Party formed an alliance with the Cabinet, they sought and obtained from the latter an assurance that Count Okuma should not receive a portfolio so long as the alliance lasted. That very remarkable assertion is contradicted by the *Nichi Nichi Shimbun*. The formation of the alliance is put by the latter journal in the month of June or July, 1895, and it then goes on to speak thus:—"In the beginning of July, when two meetings had taken place between Marquis Ito and Count Okuma, and when reports had begun to circulate to the effect that Count Okuma was about to enter the Cabinet, the Liberals entertained some anxiety, and on the 14th of the month, Mr. Hayashi Yuzo waited on Marquis Ito at Oiso, to obtain information on the subject. In answer to his visitor's inquiries, the Marquis replied that his interviews with Count Okuma had not related to the latter's entry into the Cabinet, and Mr. Hayashi conveyed the Premier's answer to the members of the Liberal Party. But the alliance between the Liberals and the Cabinet was in no manner conditional on a promise that Count Okuma should be excluded from the Ministry. In the Spring of this year, when Count Itagaki received a portfolio, a certain Minister of State suggested that, if the Liberal leader were admitted, it might be well to go a step farther, and admit other party leaders also. He added that, even though Marquis Ito had given a pledge to the Liberals with respect to keeping out Count Okuma, the Marquis would doubtless be willing to abandon that attitude now. But the Marquis had given no such pledge. The present Cabinet desires that Count Matsukata should join it; the Liberal Party also offers no opposition. With respect to Viscount Shinagawa's return to power, the Liberals are not unwilling so long as the National Unionists, his followers, agree to act in concert with the Cabinet and its supporters, the Liberals. But the Liberals totally oppose Count Okuma's admission to the Cabinet, and if the Government join hands with him, they will sever their connection and stand apart. Thus, even granting that no such promise as that alluded to above was ever made by Marquis Ito, Count Itagaki and his followers say that they will break with the Government on the day that Count Okuma joins its ranks."

OSAKA MERCHANTS.

A special correspondent of the *Yiji*, writing from Osaka, says that the merchants of that city, capable though they be as wholesale dealers, excel more in retail business. No matter how small the purchase, they welcome the customer with cordiality. In Tokyo and Osaka the language used by sellers and buyers is very different. In the former city sellers employ the politest language to purchasers, while in Osaka it is the purchaser who shows the greatest politeness. In Osaka among the great merchants many an old custom prevails. To mention a few: a great merchant's wife will not allow her servants to wear their hair in the same form of coiffure that she affects. They are also not allowed to wear *yukata*. When the wife of a merchant meets in the street a woman or a man who has served an apprenticeship in her house, she requires this person to make to her as low a bow as an old *Daimyo* required of his retainers. When an apprentice finishes his term of servitude, his master establishes him as an independent merchant. Some people think that Osaka merchants are old-fashioned in every respect, but that is not the case in their selection of modes of employment. Nowhere in Japan has Western civilization wrought so many changes in commercial and industrial concerns as in Osaka. In many petty things Osaka tradesfolk may be backward, but in taking advantage of all the latest improvements, and thus increasing their earning powers, they are perhaps the most forward of all peoples in all Asia.

THE DOSHISHA.

The following letter, which explains itself, would have appeared at an earlier date in these columns had it reached our hands. We publish it now because its perusal seems essential to a clear understanding of the position as between the American Board Mission and the Trustees of the Doshisha. The letter of the Rev. Mr. Kozaki, referred to by Drs. Gordon and Learned, has already been published in the *Japan Mail*:—

Kobe, July 7th, 1896.

To the REV. H. KOZAKI, President of the Board of Trustees of the Doshisha University, Kyoto.

DEAR BROTHER,—The Kyoto Station has communicated to us the official action of the Trustees of the Doshisha, as reported to them in your letter of May 6th. We note also the explanation of that action, which is contained in the same letter.

This action of the Trustees embodies their decision to sever, at the close of the present calendar year, the relations which the Doshisha has sustained to the American Board for the past twenty-one years, and to ask the Board "to discontinue its gift of annual subsidy and its aid of missionary teachers." You also intimate that the Board will in due course be notified of this decision. In your explanation you say, "We are anxious lest some of you may hear of these resolutions and possibly misconstrue their meaning. I can assure you that the Trustees have no intention whatever of turning you out from our institution where some of you have worked so long and so devotedly, nor any desire that your connection with it should cease. I say confidently that we all desire and earnestly hope that you will all stay here and aid us in the good work of Christian education."

The request for the continued co-operation of our missionaries contained in this, as we understand, official letter, has been made less formally by other members of the Board of Trustees. While members of the Kyoto Station have doubtless already given expression to their personal views, it has seemed best that the formal answer to this request should be delayed until the meeting of the Mission and that it should emanate from the Mission.

The appreciative terms in which you refer to the services of the missionary teachers are gratifying to them and to us, yet if we understand the intent of your letter, you now ask the missionaries, not as representatives of the Board, but as individuals, to give their aid to the Doshisha. This, however, is not possible, for the American Board has specifically instructed us to enter into no relations in which we cannot be recognized as its representatives. Even in the absence of these specific instructions we should hesitate to assent to any such form of co-operation. If this were an entirely new work, having no history behind it, the case might be different; but in view of your action severing the Doshisha from its long-standing relationship to the American Board, it would be certainly difficult to avoid at least the appearance of disloyalty to our constituency.

Our great love for the Doshisha University, and our sense of its importance to Japan, lead us to say still farther, it is not alone the difficulty stated above which stands in the way of our continued co-operation in furnishing teachers. We have been in the closest sympathy and co-operation with our Japanese brethren in the Doshisha from the beginning. While Dr. Neesima lived, the Christian spirit and purpose and practice of the institution, as represented by its President, its Trustees, and its Japanese teachers, were in complete harmony with the spirit and purpose of our Mission and of the American Board. The moral and Christian spirit and practice of the school were a unit.

During the last few years, however, it has become increasingly evident that this is no longer the case. Those fundamental principles of Christianity which were dear to the hearts of the founders of the Doshisha, to those of the American friends who have given hundreds of thousands of dollars for its support, and which are not less dear to the hearts of all the members of our Mission, have been publicly assailed or ridiculed from the platform of the schools and in other ways by persons connected with its administration; and instead of listening to the earnest protests of the representatives of the Mission, the Trustees have in one instance promoted an instructor who had been most active in assailing the Christian foundations of the institution to be the head of an important department. The Trustees have also said in their reply to the Report of the Deputation, in speaking of our protests, "the opinions considered so heretical by the missionaries are not so in our view."

There is no longer a unity of Christian feeling and practice in the Doshisha, but rather such a wide divergence, as to render it unwise, if not impossible, for any of our number to continue to co-operate as teachers in the school.

Since the present relations must terminate at the end of next December by the recent decision of the Trustees, and since, for the reasons given above, the Mission cannot advise any of its members to enter into the proposed new relations, it would seem to be better for the Doshisha and for all concerned to have the present relations terminate now, and allow the Trustees to make their plans for teachers, etc., for the next college year, thus avoiding the confusion necessarily attendant upon a break in the midst of the year. This course seems also to be required by the fact that the foreign teachers are so dissatisfied with the present condition of the institution that they are unwilling to remain longer in connection with it.

For these reasons, the Mission has instructed those of its number now employed as teachers in the Doshisha to resign at once.

We need not speak of the pain and regret with which this action is taken. We can only pray that God who founded the institution in such a wonderful manner will not desert it, but will in His own way and time bring it back to its original spirit and purpose, so that the Doshisha University may ever remain a centre of Christian light and influence in Japan.

We remain, your brethren in Christ, for the Mission,

M. L. GORDON, Chairman,
DWIGHT W. LEARNED, Secretary.

EDUCATION OF NOBLE'S SONS.

Since Prince Konoye's appointment as Director of the Nobles' School for boys he has been hard at work remodelling the regulations of the institution. His plans are now almost fully matured, and will shortly be put in practice. He thinks that the ambition of all noble youths to become soldiers is very commendable, but all are by no means fitted for military life. He is inclined to abolish the department of the University which has for its object the training of boys for membership in the House of Peers, the number of boys who prefer that department to the Imperial or foreign Universities being very small; in its stead he would start a Diplomatic Course. The Minister of Foreign Affairs is said to have warmly endorsed this proposition. It is hoped that an Imperial Edict will be issued shortly authorising that change, and that graduates in it will receive appointments as *attachés* and assistant consuls. At present the graduates of the third year course of the Ordinary Middle School are admitted to the Military Preparatory School (*Rikugun Yonen Gakko*) without any examination. Prince Konoye is consulting with the Authorities to have this privilege extended to the Naval School. Thus the institution under the Prince's directorship, will become an academy for the preparation of military and naval officers and diplomats.

A PROPOSED NEW TAX.

The *Nippon* prints the following letter from a person, signing himself "Kojimachi Yaseotoko":—"In the Budget for the 30th fiscal year now being prepared, the expenditures are found to exceed the revenues by as much as 28 million *yen*. The Minister for Finance, Viscount Watanabe, it is rumoured, has felt himself unequal to the task of adjusting that discrepancy, and means to resign. I cannot understand why the Viscount should show such a lack of moral courage. Unfortunately, I am not a portfolio-holder, but in the interests of the State, I would indicate, for the Minister's benefit, a new source of taxation. It is to be found in an assessment of the titles of nobility. I would adopt the following rates:—Prince, 500 *yen*; Marquis, 400 *yen*; Count, 300 *yen*; Viscount, 200 *yen*; Baron, 100 *yen*; Grand Orders (the Imperial family and relations exempted) 1,000 *yen*; *Sho-ichii* (first class of the first grade) 800 *yen*; from *ju-ichii* to *ju-shii* 100 *yen* for each class; *Sho-goi* (first class of the fifth grade) 80 *yen*; from *ju-goi* to *ju-hachii* 10 *yen* for each class downward.

GOLD AND THE NIPPON GINKO.

The *Fiji* last week printed a leading article headed "Gold held by the Nippon Ginko." The Nippon Ginko, it says, appears to hold at present some 82 million *yen* in gold coins and bullion, and of this sum over 80 million *yen* is security for its issues of convertible silver notes. Now 80 million *yen* is about 80 per cent. of the Bank's whole security, therefore the Bank seems to hold only about 20 per cent. of its security in silver. It is not usual for gold to be held as security for silver notes, but the anomaly need not be a cause of wonder considering the appreciation of gold. Of recent years it has risen fully 80 per cent. in value. The Bank of England is said to keep in silver a sum less than one-fourth of its total securities against circulating notes. In Japan it would not be dangerous to permit the holding of silver to a similar extent, but the silver question is a financial riddle that few can read aright. During the War, when Japan's central monetary establishment saw its securities gradually withdrawn, while the value of gold was gradually appreciating, it nominally raised the book value of its gold bullion, and so not only succeeded in preventing a shortage in its securities but actually struck a balance in its favour; then it took steps to convert this into capital. Such an act on the part of a great Bank cannot be admired. Granting that such an irregularity—for such it appears to us—took place, how can the Authorities prevent a smaller bank from arranging a similar means of covering up a shortage? But apart from that, we do not care to think of the danger that threatens Japan, in the Nippon Ginko's being allowed to hold such a large amount of gold, the value of which is always fluctuating. Suppose gold had fallen by 10 per cent? The 82 million *yen* then would have shrunk to 74,000,000, and the Bank would have had to supply the deficiency by utilizing all its reserves, to wit some 8 million *yen*. Such would have been the effect had there been a fall of merely 10 per cent. Should the American Democrats ever succeed in establishing the ratio of 16 to 1, the Nippon Ginko will find itself divested of the greater part of its capital, and all the other banks in Japan would be reduced to a miserable condition. We are not building a castle in the air. We have only laid before the Authorities the true position of affairs and are pointing out the possibilities of the future. Of course, the Nippon Ginko cannot be supposed to be ignorant of simple mathematics. Then what is it that has caused the Bank to resort to an expedient such as we have protested against? Nothing but the too strong tie that now connects the Government and the Bank. The Government, we think, allows the Bank to hold a mixed security of gold and silver, and rather prefers it to keep more of the former metal than the latter, foreseeing the usefulness of gold in the event of war, and entertaining a vague hope of seeing Japan some time or other adopt a gold standard. As to the gold standard, we cannot persuade ourselves to consent to its adoption. It is quite reasonable, we admit, that the Government should be desirous of possessing a considerable amount of gold: it is the policy of all modern Governments. But the maintenance of a war-chest is a State affair. The Nippon Ginko, extensive as are its ramifications, is essentially a banking firm carried on by a corporation of shareholders. It is a money-making institution. Now it cannot be difficult to perceive how lacking in foresight the Government is to intrust it with State affairs, and how unwise the Bank to take up the work. Therefore we advise the Government and the Bank to loosen the now too intimate bonds that bind them. As the matter now stands, the best remedy is, in our opinion, for the Government to decide to keep a certain quantity of gold in stock, to exchange against the silver of the Chinese indemnity, and to deliver the silver thus purchased to the Bank, receiving from the latter a corresponding amount of gold in return, the Government to keep the yellow metal in its own Treasury. Thus, on the one hand, the Bank would be relieved from the anxiety of holding

so large an amount of gold, subject to constant fluctuations in value, and on the other, the Government would be made secure in possession of a certain quantity of the same metal that it is called upon to keep for considerations of State. Some persons may object to this opinion, urging that to withdraw from circulation so great a quantity of gold is an economic heresy. Well, it would be found quite possible to lend part of the gold to the Specie Bank, as Count Matsukata did when he was Minister for Finance, or other devices might be resorted to without the least deflection from the main purpose. Our sole object in writing thus is to have a clear line of demarcation drawn between the affairs of the State and the business enterprises of the Nippon Ginko. The State must be founded on a sure financial basis, and the Bank should be relieved from the danger of holding so large a quantity of the State's gold bullion.

COUNT MATSUKATA'S VIEWS.

A representative of the *Fiji Shimpō* visited Count Matsukata in Kyoto on the 26th instant, and professes to have obtained from him the following statement:—"The present time is one of great embarrassment with regard to the domestic and foreign affairs of the State, and anyone undertaking to manage them should have no thought beyond the interests of the nation. In the country's foreign relations, in its finances, in its foreign trade, in its administration, there have been many results not all commendable. Men charged with the duty of framing the policy of the State must lay aside paltry personal considerations and questions of previous relationships, and must devote their whole ability to the service of the State. If I have refused to enter the Cabinet, it is because I see that no such condition of magnanimity has yet been attained. I can not but doubt that the present Cabinet is prepared to sacrifice personal considerations and existing relations. Last year, my entry in the Cabinet was preceded by several refusals, but on receipt of His Majesty's gracious commands I accepted a portfolio, and set about shaping the financial policy of the State, urging that a special session of the Diet should be held to discuss the matter. I failed, however, to obtain my colleagues' endorsement of my views, and I therefore left the Cabinet. I believe in thorough measures, not in a merely temporizing policy. Did I re-join the ministry now, the experience of last year would be repeated, and I am too old a man to be making there rapid entries and exists. The finances of a nation are like those of a household: to manage them properly for one year involves looking forward not merely to the next year, but to the future in general. As the *Fiji Shimpō* says, and as Mr. Fukuzawa contends, this is not a time to take account of people's likes and dislikes or of party connections. But I doubt whether the Minister President of State has made up his mind to that view of the situation."

This language has the ring of Count Matsukata's manner of thinking and speaking, but the romantic and unpractical paragraphs at the close might have been left out with advantage. Count Matsukata knows, no man better, that the day when party connections might be ignored has irrevocably passed away in Japan. He knows it so well that even were the Cabinet with its Liberal allies ready to welcome him and Count Okuma into its ranks, he would refuse to accept the invitation, being assured that to accept it must alienate the greater part, if not the whole, of the *Shimpō-to*. That is a point not sufficiently considered we think, by critics discussing the situation. It is all very well to throw the onus of the dilemma on the Liberals; all very well to blame them for refusing to continue their alliance with the Ministry from the day that the Cabinet includes the leader of the Opposition. But people forget to consider whether the leader of the Opposition could retain the allegiance of his Party if he entered a Cabinet that is allied with the Liberals. We confess that our imagination is incapable of perceiving any satisfactory *via media*. It seems to us that one side or the other must abandon

the arena *in toto*, and since well informed persons allege that the time is not ripe for the accession of the *Shimpō-to* leaders to power, there is nothing for it except the continued tenure of office by its present occupants, who, however, will not have gained any prestige by this unsuccessful attempt to divide their opponents, and by this tacit admission that they need the latter's aid.

VALUE OF LAND AND RENTS IN TOKYO.

The value of land is rising rapidly in Tokyo, as is well known. The following table, which we take from the *Fiji*, may interest some of our readers:—

TABLE SHOWING VALUE OF LAND AND LAND-RENT IN TOKYO.

District.	Name of Street and Number of Lot.	Price per <i>tsubo</i> , <i>yen</i> .	Monthly Rent per <i>tsubo</i> , <i>yen</i> .

These are the latest authentic figures, but in Ogawamachi, it is said, an offer of 50 *yen* per *tsubo* will hardly lead to business. Land at Honfunacho, near the Fish Market at Nihonbashi, used to command 80 *yen* per *tsubo* in the pre-*Meiji* days. So that in some respects land may be said to have fallen in value. Ginza, which one would expect to find commanding 70 to 80 *yen* per *tsubo*, brings considerably less, for the Government Authorities obtained the land on a long and low lease. After a time, when the lease has expired, rents in the Ginza, now very low, will rise, and consequently the value of land will rise considerably above the figures now prevailing for Ogawa-machi, Kanda.

According to researches made between the 31st July and the 1st of August, the amount of money in circulation was *yen* 29,760,432.75; compared with that of the preceding month there is a decrease of *yen* 139,630.50 in paper money, and *yen* 51,270.50 in bank notes.—

CABINET CHANGES.

THE question of Cabinet changes is now occupying a large share of public and journalistic attention in Tokyo. Of the three principal political newspapers in the capital, two, the *Nichi Nichi Shimbun* and the *Fuyu Shimpō* (organ of the Liberals), are working in unison to oppose the entry of Count OKUMA into the Administration, and the third, the *Fiji Shimpō*, is exerting its great influence in the opposite sense. All parties are agreed that the portfolio of Finance should be taken by Count MATSUKATA, and it is understood that Marquis ITO would gladly resign the Premiership in favour of that statesman. But Count MATSUKATA seems determined not to resume office unless Count OKUMA takes the direction of Foreign Affairs, and that consummation is exceedingly difficult to arrange. The *Fiji Shimpō*, believing strongly in the national advantages that would ensue from the accession of the two Counts to power, has allowed itself to be carried a little too far, perhaps, in its advocacy, for it has charged Baron ITO, the Chief Secretary of the Cabinet, with being the only obstacle to Count OKUMA's receipt of a portfolio. Of that accusation Baron ITO has not taken any public notice: that is to say, no response has appeared in the *Nichi Nichi Shimbun*, to whose columns the Baron undoubtedly has free access. But the *Tokyo Shimbun* has taken up the subject, and, in a vigorous article, has repudiated the notion that Baron ITO or any one else is responsible for obstacles quite inevitable in themselves. The ground assumed by the Liberal organ is that Count ITAGAKI and Count OKUMA can not possibly work together in the same Cabinet: their political differences have been too radical in the past and remain too accentuated in the present. It is not merely that the *Kaishin-to*, Count OKUMA's followers, have persistently adhered to the negative policy long ago abandoned by the Liberals; or that the former bitterly reviled the latter for changing their attitude: that difficulty is of too general a character to be incapable of adjustment. It is that the two parties have come into violent collision with reference to great and distinct administrative problems: for example, strict Treaty enforcement; strong foreign policy; the retrocession of the Liaotung Peninsula, and the post-bellum measures. On all these vital questions, the Opposition, headed by the *Kaishin-to*, not only offered the most implacable resistance to the Cabinet of which Count ITAGAKI is now a member, but are at this very moment offering implacable resistance through the mouths of their representatives touring in the provinces. If the *Fiji Shimpō* imagines that political principles can be thus lightly sacrificed on the altar of opportunism, or that statesmen holding

diametrically opposite views can join hands, at a moment's notice, to administer affairs which present themselves to them in such different lights, the Liberal leaders can not enter any such a self-stultifying route. The conviction that coöperation with the *Kaishin-to* is quite impracticable being thus firmly rooted in the minds of the Liberals, they sought and obtained, before throwing in their lot with the present Government, an assurance that Count OKUMA's admission to the Cabinet would not be contemplated, and in view of these facts, it is obviously a flagrant defect of judgment and insight to allege that Count ITAGAKI and Count OKUMA can sit to-day in the same Cabinet.

Such are the very emphatic views enunciated by the organ of the Liberals. But, as we pointed out in a recent issue, outsiders are not in a position to know whether the *Fuyu Shimpō* represents the whole Party or only a section of it. There can be little doubt that if Count OKUMA enters the Cabinet and Count ITAGAKI remains in it, the Liberal Party must break into two. And, indeed, that is the result declared by many observers to be now imminent. Possibly the *Fuyu Shimpō's* utterances reflect only the views of the section that would secede.

The *Nichi Nichi*, though silent for the moment about Count OKUMA, takes pains to reconcile its criticism of Count MATSUKATA'S conduct last year with its advocacy of his restoration to power to-day. Incidentally our contemporary discloses some interesting historical facts. Our readers doubtless know that when the war with China was drawing to a close, Count MATSUKATA was induced to enter the Cabinet and, on March 17th, the EMPEROR addressed to him a message, dwelling upon the preponderating importance of financial management after the war; saying that the question caused daily and nightly anxiety to the SOVEREIGN himself, and directing the Count to devote his energies to the task. But even before the problem had been practically approached, Count MATSUKATA developed differences on other subjects with Marquis ITO, and finally went out of office at a time when the State had urgent need of his services. It is with regard to those differences that we now learn some particulars from the *Nichi Nichi*. Count MATSUKATA, it appears, insisted that a special session of the Diet should be convened, virtually making his own retention of office contingent on the acceptance of his demand. Marquis SAIGO and Marquis OYAMA, on behalf of the Cabinet, urged him not to resign, and Marquis ITO distinctly stated that he had no objection to the summoning of a special session if the subjects to be submitted related to military and naval expansion. The Cabinet endorsed the Premier's view, and on July 2nd (1895), Marquis ITO and the Finance Minister—

Count MATSUKATA, who would thus seem to have been a consenting party—addressed the Throne and obtained Imperial consent to a special session. Thereupon, the Ministers of War and of the Navy were instructed to use all possible expedition in compiling their estimates, a task the completion of which must necessarily precede summoning of the Diet. But Count MATSUKATA, alleging unavoidable reasons, went out of office on the 25th of the same month. The *Nichi Nichi* points out that while it could not possibly approve the Count's procedure on that occasion, it has never varied in believing him to be eminently fitted for the management of the country's financial affairs in these post-bellum days, and it declares, not only that unanimity of opinion prevails everywhere as to the advisability of the Count's return to office, but also that Count ITAGAKI himself is prominent among the statesmen desiring that consummation. Why, then, asks our contemporary, does the Count hesitate, and why has he left for Kyoto?

From all this our readers will gather that the political situation is decidedly unsettled.

THE POLITICAL SITUATION.

WHATEVER may be the immediate causes that led to the present political crisis, the prospect of a satisfactory settlement does not appear to be growing brighter. Count MATSUKATA seems determined not to return to power unless he can have Count OKUMA'S assistance at the Foreign Office, and, as we explained in our last article, Count OKUMA'S entry into the Cabinet would involve a radical change in the political situation, since it would sever the connection between the Government and a large section, if not the whole, of the Liberal Party. It must be confessed that Count ITAGAKI and his followers find themselves in an embarrassing position. So long as Count MUTSU could hold the portfolio of Foreign Affairs, everything moved in a thoroughly satisfactory manner. He was, in fact, the pivot of the situation. No Department of State ranks above the Foreign Office in point of national importance, and the general opinion is that, apart from Count MUTSU, only two statesmen have proved themselves capable of holding the portfolio, namely, Count INOUE and Count OKUMA. Of these two, Count OKUMA alone is available, inasmuch as Count INOUE'S resolution not to re-enter the Cabinet seems to be irrevocable, for the present at all events. Thus the dilemma upon the horns of which the Liberals find themselves impaled is that, Count MUTSU being physically unable to serve, the Foreign Office must remain without a head of proved ability, or Count OKUMA must be invited to preside there. Among the ranks of younger officials there may, of

course, be men fully equipped for the task, but such immense importance now centres upon the skilled management of foreign affairs that no disposition to try experiments is entertained either by those in power or by those in opposition. The financial problem is not less vital, and absolute unanimity of belief prevails that Count MATSUKATA is the one man to solve it. He enjoys the entire confidence of the banking and business classes, and the mere fact of his return to power would act as a wholesome public tonic. In a word, Count MATSUKATA presiding at the *Okura-sho* and Count OKUMA at the *Gwaimusho* would form precisely the combination that the national interests demand, and it is not to be supposed for a moment that a statesman of Marquis ITO's clear insight labours under any misapprehension as to the facts. If his own retirement would facilitate the re-organization of the Cabinet on that basis, we may be sure that his resignation would be placed at once in the SOVEREIGN'S hands. Indeed, it is stated in well informed circles, that he has already signified not merely his willingness, but even his desire, to go out of office. Count ITAGAKI and the Liberals must be equally cognizant of all these things. While their Party could furnish for the Foreign Office a statesman of Count MUTSU'S competence, their union with the Administration presented no difficulty, but now Count MUTSU being temporarily *hors de combat*, their continued union means that the conduct of foreign affairs is virtually paralyzed. And it further means, if Count MATSUKATA persists in joining hands with Count OKUMA, that the services of the most trusted financier of the day are lost to the country. Confronted by such considerations, a man of Count ITAGAKI'S single-hearted patriotism might easily persuade himself to forget his previous differences with Count OKUMA, and to remain in the Cabinet with the *Kaishin-to* leader, in which event a large section of his Party would certainly range themselves by his side. But a section at least as large would secede, and thus the aged politician would have to witness the dismemberment of the great Party over which he had presided for nearly twenty years. Whether he could reconcile himself to such a painful convulsion is doubtful. On the other hand, a Cabinet organized in opposition to the Liberals could scarcely expect to command a majority in the Lower House. It is true that in some quarters, Count MATSUKATA is represented as not only quite indifferent, but even strongly opposed, to the principle of party support. The *Tokyo Asahi*, for example, professes to have information that his refusal to resume office is based, not on the difficulty of securing Count OKUMA'S assistance, but on the fact that a connection exists between the Cabinet and the Liberals. By that journal he is reported to have declared that the pusillanimous policy of looking beyond the SO-

VEREIGN for sanction must be definitely abandoned before he consents to re-enter the Cabinet. We do not believe a word of the story. In point of fact, Count MATSUKATA was the first Minister President that seriously regarded the Liberals as probable allies of the Government. Even were that not the case, he is too well versed in statecraft not to understand that the principle of party support having once received practical recognition, can never be revoked. Every Japanese Cabinet is bound, henceforth, to acknowledge that principle, and to save the country from the legislative paralysis and unsightly squabbling that prevailed prior to the war. Strong, therefore, as are the cards held by Count MATSUKATA and Count OKUMA, their game is not altogether easy, and we can only hope that the spirit of compromise, so potent in Japan, will soon provide some solvent for this decidedly difficult situation.

THE DOSHISHA.

IT does not appear that the whole truth about the Doshisha is yet before the public. A correspondent, whose sources of information are exceptional, writes to us as follows:—"As you say in your article of the 11th instant, it is inexpressibly sad that such a misunderstanding should have arisen between the Trustees of the Doshisha and the American Board Mission, considering the admirable work done by the latter in the cause of secular and moral education in Japan, and considering also the great sums of money spent by the Board and its American friends in building and equipping the Doshisha. But by what means the missionaries of the Board could have prevented the trouble, one can not easily discern. Probably they did not anticipate exactly the kind of dilemma that has occurred, but certainly some of them are known to have felt great anxiety for several years past, as they saw the growing influence of the Kumamoto men in the college; their disposition to make a clan affair of the institution, and their tendency to foster a feeling, if not of hostility, at least of indifference, to Dr. NEESHIMA. There, indeed, is the prime cause of the difficulty. The question of freedom of thought seems to be nothing more than a handle. A good many men, although themselves advanced free-thinkers, believe that the only way of saving the Doshisha from downright partisan administration, is a renewal of coöperation with the missionaries. It is thought that the Japanese friends of Dr. NEESHIMA, who gave forty thousand *yen* for the so-called *Seihobu* of the Doshisha, will use their influence against the Kumamoto administration, and in favour of the old form of coöperation. The movement said to be contemplated by these men has certainly not been inspired by the American Board Missionaries. That they sympa-

thize with it may fairly be assumed, but their openly expressed view is that such a step, to be of any value, must be originated and maintained solely by the Japanese friends of coöperative work. If the Kumamoto men had been willing to refrain from ridicule and attempts to bring their foreign colleagues into contempt, there is no likelihood that they would have found the missionary Board disposed to hamper them as regards intellectual matter. But they do not seem to have evinced that degree of moderation. The case was also embarrassed not a little by the fact that Professor UKITA—not UCHITA—while a beneficiary of Yale University, and actually in the receipt of considerable pecuniary aid, wrote a critique of the University work, including some disrespectful language of one of the most respected instructors, a man of well-earned European reputation. It is true that the latter was not mentioned by name, but the allusions were such as to preclude any failure of identification. It is further claimed that Professor UKITA has broken what Mr. HARRIS regarded as a distinct pledge to work in harmony with the missionaries, but that, of course, may be a matter of opinion. At all events, there is little probability that any friend of the Board will consent to further aids being given to the Doshisha as long as a man so antipathetic is endorsed by the Trustees. The American Board can not reasonably be asked to use its funds for the support of men who, not content with argument, persist in ridiculing its principles and its representations, neither can it be expected to refrain from protest when the income of previous gifts is used for the same perverted purpose. The missionaries of the American Board have proved very emphatically that they are in no degree afraid of freedom of thought, but they are not likely ever again to work with men unwilling either to recognise the obligations of courtesy towards their colleagues, or to admit the right of the Board, in view of all it has done for the Doshisha, to give formal counsel through its own representatives. It should be observed that the Board has never claimed the right of an active partner, but simply the right to give counsel, and now the Trustees say that, while willing to choose certain foreigners as advisers, they will not recognise the Board's competence to appoint advisers. In the case of the houses in Kyoto, the Deputation from the United States did not claim proprietorship, in any sense, but merely asserted the privilege of tenancy for a considerable term of years, and was ready to agree to fifteen years as the limit, paying enough annually to provide for taxes, insurance, and repairs. It is difficult to avoid the conviction that strong clan feeling, re-inforced by chauvinism, is blinding the eyes of the Trustees of the Doshisha to principles which they would otherwise recognise. Nothing could be

sadder or less discouraging, but as in the case of other impulsive men with whom experience has made us familiar, prejudice will gradually become fainter, and the Christian principles still rooted in the heart will re-assert themselves. Even now, these very same men, outside the sphere of temporary blindness, seem to see clearly enough, and are doing good work. One need not live long to learn that eminently good men sometimes follow lamentably erroneous courses under exceptional stress of circumstances, but seldom fail to return to the truth at last. That hope, at least, may be cherished by the missionaries of the Board, who have given, not merely many years, but the best part of their lives, to the development of the Doshisha. As to the theological question, there may not, perhaps, be a general knowledge that the Society to which the college owes its existence, has no hard-and-fast creed. The only theological restriction lies in the discretion of its managers, and their sense of loyalty to the general purpose of its constituency. Certainly there is every reason to think that it recognises to the full the true value of education. To speak of its schools as instruments of propagandism is to mistake the real thought of the Society, though it doubtless believes them to be tributary to the growth of religion, and holds that, in order to render them thus tributary, they should be made efficient as schools; equal, indeed, to the best, within the limits of the means at the Society's disposal. The contents of the Doshisha library alone are sufficient to convince anyone of the broad and candid spirit that has controlled the foreign benefactors of the institution."

In publishing the above, we can not refrain from paying a tribute to the admirably patient and moderate attitude hitherto maintained by the Missionaries of the American Board. In the presence of a disappointment that must be cruelly bitter, they have refrained from any public utterance displaying the least impatience or disposition to recriminate, and it is certain that their quiet dignity and self-restraint will do more to convince thoughtful men of the justice of their cause than any arguments however forcible and well marshalled. Thus far, indeed, neither side to the controversy has done any violence to the high principles by which such men ought to be actuated, and if an understanding could be re-established at this stage, no bitter memories need survive. It is the duty of every man to hold by the dictates of his conscience through evil report and good report. While, therefore, we would not have the Trustees of the Doshisha unduly influenced by the certainty that the verdict of the world will be against them if they persist too stubbornly in their present course, we may fairly remind them that the reputation of Japanese Christians for

gratitude to benefactors and loyal obedience to the unwritten code of honour, is now for the first time in peril, and they will do well to remember that they are custodians of something more than a solitary Professor's freedom of thought and speech.

POINTS OF GRAMMAR.

OUR recent article on some proposed innovations in the use of the English language has evoked a strong protest from "A Constant Reader," to whom we owe apologies for not having published his letter at an earlier date. But, as he rightly surmises, such questions have no imperative claim to special time or special place: their consideration must depend on the occurrence of chance intervals in the routine of regular work.

Our correspondent's reverence for the authority of recognised classics is very admirable in its way, and he makes such dexterous use of it that we feel ourselves relegated to a sacrilegious position: depicted in an attitude of presumptuous opposition to writers whose ink-pots we are unworthy to hold. Yet, having anticipated some such display of shocked protest, we are not greatly dismayed or permanently shamed by it. Perhaps as a matter of constitution, perhaps because the blows of many revilers have somewhat flattened our bump of reverence, we are not incapable of imagining the stupendous contingency suggested by our correspondent, and had it been our happy fortune to meet the great Cardinal or the celebrated composer of nautical romances, we could, really we could, have invited them to consider the possibility of omitting the second "s" from "as follows," or of spelling the plural of "valley" with "ies," nor do we think, really we do not think, that we should have sunk completely into our shoes after such a display of audacity. "Lowliness is," indeed, "the base of every virtue," but we would remind our correspondent that the "haughtiness of humility" ceases to be virtue unless it is purely subjective. All this, however, has a slightly unpleasant flavour of persiflage, and we therefore follow our correspondent's invitation to the sphere of pure logic.

He takes our points in order. It is not right, he urges, to say "the period ended with the death of JAMES II.," because the reader can not learn, without passing on, that a completed thought has not been conveyed, or that something more is about to be told about the period in question. Can he, then, acquire that knowledge without passing on in the case of the stereotyped form "the period ending with the death of JAMES II.?" Assuredly not. For it is impossible to be certain, without the aid of the context, whether "ending" is used as a participial adjective or as a causal participle. One example will suffice to illustrate this:—"The period ending with the

death of JAMES II., no time remained to make the contemplated arrangements."

"Moreover," continues our correspondent, "you must admit the propriety of the form "ending" where the historical present is used for the purpose of giving animation to the narrative. Of course we admit it. But surely our correspondent here becomes his own refutor. For if "ending" conveys the "present" sense that he assigns to it in historical narrative, then our plea for the form "ended" when the idea is purely "past," acquires additional force. "In the week ending June 15th, James II. causes a muster of his troops to be made." That is unimpeachable English, for the historian seeks to carry his readers actually into the week during which the muster took place. He asks them to conceive the muster as a present event, and, therefore, does not ask them to conceive the week of its occurrence as a finished period of time.

Next our project is traversed on the ground of euphony. "The week ending July 5th was one that," &c., is said to be pleasanter to eye and ear than "the week ended July 5th was one that," &c. Very well, but which of the two following forms is the more agreeable:—"The week ending July 2nd having been very wet," and "the week ended July 2nd having been very wet." We admit the Roland: will our correspondent admit the Oliver.

As to our "confusing matters by what we say about participles expressing time," we beg to point out that our correspondent, at this stage, confuses his own argument. In the first place, he claims, for the purposes of his immediate contention, that "ending," "as an active participle conveys a sense of time as duration," which claim he denies when advanced by us; and in the second place, he questions whether, in view of the sharp point of time indicated by its verbal root "end," the participle can be properly invested with a continuing sense, whereas he has just pleaded for its use in the historical present, or in cases where a writer divides his history into periods and marshals them all before his readers. These methods scarcely seem to belong to the realm of logic into which our correspondent has invited us.

When we come to the second point—the use of "as follow," and not only of "as follows"—we find ourselves again sternly rebuked for the audacious temerity of venturing to query the habit of all good writers. We are charged with supposing everybody save ourselves to be "ignorant of the first rule of syntax," and with failing to see that the multitude of precedents arrayable against us makes it a million to one that we are wrong. That kind of conservatism is too crippling to be commendable. Besides, we have not erred so grievously against the tenets of ancestral worship. As our correspondent himself admits, we have stated the syntactical

conception on which the form "as follows" is based, and by doing so we have necessarily admitted that it has a grammatical basis. What we urge is, why invariably employ an abbreviated form that sometimes sounds ungrammatical? Why not change "follows" into "follow" when the subject of the verb is plural? Briefly stated, our correspondent's answer is that the subject of the verb never can be plural, the reference in every case being to the list, or catalogue, or writing, or table, or paragraph, that follows. Yet he accuses us of "begging the question!" Moreover, rooted in that conviction, he defies us to parse the phrase "the names are as follow," just as though our whole argument had not rested on the question of parsing, and as though we had not clearly claimed that since the subject of the verb, in the given example, is the names written below, the plural, not the singular, form would have the advantage of avoiding any apparent violation of grammar. Our correspondent does not seem to have invoked the aid of logic in this instance, but to rely solely on dogma.

Coming finally to the plural forms "moneys," "valleys," "chimneys," we have only to point out that, as our correspondent himself admits, the cases of words ending in "ey" fall under a subordinate rule. What we plead for is the abolition of the subordinate rule, and the adoption of a uniform system. Perhaps an easier and sounder plan would be to follow the ordinary method of adding "s" in every instance. The rule that words ending in "y" preceded by "e," form their plural by changing "y" into "ies," is founded on the hypothesis that the singular form of all such words originally ended in "ie." But that is a point of philology: there is no occasion whatever, so far as we can see, to recall it by employing a special plural. We may add that, although our correspondent has no hesitation in declaring us in error because we recognise the rationale of a difference in plural forms to distinguish "storeys," as parts of a house, from "stories," in the sense of tales or narratives, the error is due to his own misunderstanding. In every English dictionary with which we are familiar, "storey" (part of a house) is an alternative form of "story." Our point is that the singular form "storey" ought to be used in preference for purposes of distinction, and that to preserve the distinction in the plural, "storeys" should be written.

The Japan Railway Company has been buying up stock of the Ryomo Railway at 95, the market price being 92.50, and the Ryomo Railway Company has given notice that a private contract for the sale of the line to the Nippon Railway Company has been arranged. All transactions in this Company's shares will be invalid after October.

BEWILDERMENT.

Here is one of the funniest specimens of mental bewilderment we have ever seen in print; it is really too good to be passed in silence:—

A Mr. Migeod, we observe, has been addressing the *Mail* on the subject of bi-metallism and the silver coinage circulating in Great Britain. It seems to us that the currency quacks, of which there is quite a multitude, for the most part involve themselves in a labyrinth of statements which admit of no proof, since they are mostly suppositions, and frequently pregnant with absurdities and unsound assumptions; though it is not our purpose to address ourselves to Mr. Migeod's remarks, but merely to make a short comment on the editorial criticism which appears in the same newspaper to which he has addressed his letter. "Surely," says the *Mail*, when speaking of the token silver coinage of England,

The mere fact of fixing a ratio would at once impart to those tokens a corresponding gold value. For example—Eight half-crowns now represent a sovereign, that equivalency having been determined in the days when an ounce of gold exchanged for 25 ounces of silver, approximately. But at present, since an ounce of gold buys 90 ounces of silver, in round numbers, the intrinsic gold value of 8 half-crowns is only half a sovereign. Suppose, now, that by international agreement the ratio between gold and silver were fixed at 1 to 16, then our eight half-crowns would immediately acquire the intrinsic gold value of fifteen-sixteenths of a sovereign.

The merest tyro in monetary science might instruct the Editor of the *Mail* on the subject on which he has written. He could tell him, for instance, that all token silver coins, when used as a circulating medium, within any country, have a conventional value for that purpose, which is independent of the metal of which they are composed, as is shown in the paragraph quoted.

The mere fixing of a ratio would not give to silver token coins, as stated, "a corresponding gold value,"—a fact which is distinctly recognised by legislation, which has determined, that no matter what may be the nominal or circulating value of English silver coins, no creditor can be compelled to make more than forty-shillings worth of them in payment of an obligation. We are told that if by international agreement, the ratio between gold and silver were fixed at 1 to 16, then eight half-crowns would immediately acquire the intrinsic gold value of fifteen-sixteenths of a sovereign. We, however, affirm that the current circulating value would remain the same as now, viz., eight half-crowns to £1. It seems to betray an extraordinary confusion in the mind of the editorial writer, that he appears to be unable to distinguish between the *intrinsic* value of a coin,—the bullion price of the metal of which it is composed—and its circulating value, when it passes as a current coin of the realm.

The writer of the above is so charmingly ignorant that, in the first place, he knows nothing of a ratio of intrinsic value having originally existed between the gold coins and silver subsidiary coins of Great Britain; and in the second, he confounds intrinsic value with legal tender limitations. As a matter of fact, great care was taken at the outset to put into every shilling such a quantity of fine silver as should be intrinsically equal to $\frac{1}{21}$ th of the fine gold contained in a guinea. Despite that care, however, it came to be estimated that when, in 1717, the exchangeability of the guinea for 21 shillings was first fixed, gold was over-valued as compared with silver to the extent of $\frac{1}{3}$ per cent. Accordingly, a new system was adopted in 1816, under which the pound of silver bullion, hitherto coined into 62 shillings, was thenceforth coined into 66 shillings, and as 20 shillings contained 1614.545 grains of fine silver, while the sovereign contained 113 grains of fine gold, the proportional value of fine silver and gold in the coins was 14.287 to 1, a ratio very closely approximating to that actually ruling in the market at the time. To-day, however, the market ratio is nearly 30 to 1, so that the intention with which the relative quantities of pure metal in the two coins was originally calculated, has been signally defeated. There should not be the smallest difficulty in understanding that if the market ratio were restored to anything like the old figures, the quantity of fine silver contained in each shilling would appreciate correspondingly. Only the grossest ignorance of financial history, as set forth in any text book, as well as of the first principles of coinage, can account for the extraordinary assertion that "all token silver coins, when used as circulating medium, have a conventional value independent of the metal

of which they are composed." It is true that, owing to circumstances never anticipated by minting authorities, silver subsidiary coins have ceased to possess an intrinsic value closely approximating to their nominal value in terms of gold. But that is an accident. The distinct purpose of British financiers in 1816 was to regulate the quantities of pure metal in the standard gold and subsidiary silver coins so as to secure parity between their intrinsic and nominal values. The question of legal tender is a thing totally apart. To mention it in such a context shows lamentable confusion of thought. As for the "affirmation" that even with a ratio of 16 to 1, 8 half-crowns would still circulate as the equivalent of a sovereign, who on earth ever suggested that they would not?

YOKOHAMA TOPICS.

Considerable excitement was occasioned on Sunday evening on Camp Hill, by the discovery of an American bluejacket in the compound of Capt. Eckstrand's house. Miss Emma Eckstrand, hearing a noise, as of some one climbing a tree, looked out and saw the man. She at once gave the alarm, but before the police arrived, the man, who afterwards gave the name, William W. Burns, of the U.S.S. *Yorktown*, tried to escape. This brought Captain Eckstrand and others on the scene and then a crowd collected. The police took the man to the police-station, where he explained that he had entered the compound with the intention of getting a more extensive view of the town, the night being flooded with moonlight. It is thought more probable that he wished to make his way to the back premises of the U.S. Naval Hospital and surreptitiously convey forbidden delicacies—beer, spirits, etc.—to the invalids there. What suggests this is that, only a few nights ago, a well-known resident of Camp Hill was roused by the barking of his own and his neighbours' dogs. Going out to see the cause, he found an American citizen hiding in a shed. Upon being interrogated, the man said that he had "wandered around by the hospital and got into the next compound unexpectedly;" he would have left the compound as quickly as he had entered only the dogs refused to allow him to stir another step. This resident has often been annoyed by the passage of sailors through his grounds making their way uninvited to the Hospital on Samaritan thoughts intent!

The troops who have been exercising and swimming from Honmoku beach, left for Tokyo on Monday, much to the relief of the foreigners who have so many bathing houses there at present. In regard to bathing at Honmoku beach, we learn that many bathers there this summer have been attacked by peculiar sore throats: bathers at other places along the Bay have not been affected.

Futami Tokujiro, a coolie employed in the Commissariat Department of the detachment of troops recently stationed at Honmoku, accidentally fell into one of the camp-boilers on Saturday. He was severely scalded, and now lies at the hospital at Noge.

On Sunday last, Mr. Ishiyama, a detective on the staff of the Bluff Police force, discovered at the house of Ishimori Tetsugoro (of no fixed occupation) Uyenomachi, Yokohama; at the shop of Ishimori Iauke, an empty-bottle dealer, 165, China Town; at Iwata Kojiro's, a second hand goods' dealer, 97, Settlement; and at Nakase Shimpachi's, a watch dealer, many stolen articles, including gold and silver watches, articles of *virtu*, and other things. These goods were stolen from Viscount Okudaira's house at Takanawa, Daimachi, Tokyo; from Marquis Kuno's, residence at Akasaka; and from Mr. Masuda's, an employé of the Nippon Yusen Kaisha.

Nakamura Hyozaihei, one of the most expert thieves on the black-books of the local police, has been arrested on information obtained by a detective, Mr. Ishiyama, and is charged with committing larceny at sixteen different places.

FORMOSAN NEWS.

The Judicial Department of the Civil Administrative Bureau of the Governor-General's Office is to be made independent from the next fiscal year and some changes in its organization may be expected.

The *Hochi* has the following Formosan news:—A band of insurgents rendered more daring by the success at Yun-lin, attacked Peh-to, when the late Captain Miyana Keita was in command of the garrison. The attack was very sudden and well sustained, and Captain Miyana might have ordered a retreat along the road leading to Shō-hwa. But, addressing his men, he said:—"Soldiers, I will not retreat, even though I see you all die by my side. After my death, however, you may obey any commands of the officer who takes my place." So saying he advanced at the head of his company and was shot down within a few minutes.

Major Harada Kitaro repulsed a number of insurgents who attacked Kagi, where he was stationed at the head of only half a company. His calm courage proved equal to the defence of Kagi. If this town had been lost the rebellion would have spread to an alarming extent, for Kagi, in the recent Formosan rebellion, may be said to have occupied a position similar to that of Kumamoto in the War of the South-West. In the recent rebellion comparatively more officers were killed than in the fighting in the Liaotung Peninsula.

The *Mainichi* remarks that the population of Formosa is usually stated to be four million Chinese and 60,000 aborigines. Recent statistics, correcting these figures, are now to hand:—In Taipei Prefecture, 555,531; Taichu Prefecture, 603,282; Tainan Prefecture, 812,203; the Pescadores, 44,820; total 2,019,841. The aborigines are not included in these figures. It is often alleged that men enjoy comparatively short lives in a torrid climate. But this appears not to be the case in Formosa. The natives speak of many persons who have lived there for more than a century. The temperature in Formosa is usually 96° to 97° at noon, and the first harvest of rice is reaped by the beginning of August; the second crop is now being planted out.

We translate the following from a letter received by the *Kokumin* from Kelung:—The drinking-water here looks very uninviting, but neither malaria nor any bad epidemic prevails. Japanese dealers are flooding the island, and many things which we could be the better without, are on the market. The streets have been well cleaned; restaurants and dealers in articles of daily use are much too numerous. Many Japanese have also commenced the manufacture of lemonade. Prices are, on the average, 50 per cent. higher than in Japan, but foreign goods can be purchased at cheaper rates than in Tokyo, as they are imported direct from Hongkong and Amoy. The native merchants are very keen-witted and compete advantageously with the Japanese. The dealers from Japan are too much inclined to return home quickly if fortune favours them a little; they are also too eager to become "official merchants." Many Chinese merchants and adventurers have arrived to undertake tours of commercial and industrial inspection, and some are now inspecting the forests and mines. Foreign merchants, dealers in tea and camphor, at Tamsui and Taipei are making large profits by employing aborigines and Chinese. Inn charges vary from 2 yen to 60 sen per day, and the railroad fare is 60 sen from Kelung to Taipei. Already the natives speak Japanese very well, and no inconvenience is therefore felt in conversing with them.

The *Hochi* tells us that Messrs. Kono Ryosuke and Shibata Keisho, Surveyors, and Mr. Kurushima, a clerk in the War Department, under the command of Captain Tamai, penetrated very far into the aborigines' territory in June last, and have just returned to Tainan. They report that they were heartily welcomed by the aborigines.

KOREAN NEWS.

The *Nippon* prints a letter, dated the 6th instant, received from its correspondent in Seoul. From it we gather the following items:—The Korean Government promulgated the new Provincial Regulations on the 5th August, by which the twenty-three Administrative Divisions have been abolished and thirteen new ones established. They are as follow:—

ADMINISTRATIVE DIVISIONS (Do), or PROVINCES.	CAPITAL TOWNS.
Kyōng-kwi-do.	Su-wōn.
Chlung-chhōng-namdo.	Kong-ju.
Chlung-chhōng-pok-do.	Chhung-ju.
Chōi-la-pok-do.	Chōng-ju.
Chōi-la-nam-do.	Kwang-ju.
Kyōng-san-pok-do.	Tai-ku.
Kyōng-san-nam-do.	Sin-ju.
Hwang-hai-do.	Hai-ju.
Phyōng-an-kam-do.	Phyōng-yang.
Phyōng-an-pok-do.	Chin-ju.
Kang-wōn-do.	Chhun-chhōn.
Ham-gyōng-nam-do.	Ham-heung.
Ham-gyōng-pok-do.	Kyōng-sōng.

Each do, or province, is to be placed under a Governor receiving the annual salary of from 2,000 yen to 1,200 yen. Han-song will be under the jurisdiction of a special Governor called *Fu-in*, who will receive 2,000 yen per year, and similar Governors are to administer Kwang-ju, Kai-sōng, Kang-hwa, Jinsen, Tong-nai, Tōk-wōn, and Kyōng-heung. The Governors of the latter places are to receive 1,200 yen annually. Che-ju is to have a Governor paid at the rate of 1,500 yen per year. The promulgation of these new regulations will certainly prove a source of political disturbance in the Peninsula, as great discontent will be produced among officials.

A host of regulations relating to local administration were issued on the same day, but are too tedious to reproduce. Nothing relating to the military, judiciary, or taxation is mentioned in the regulations, and the Government seems inclined to establish independent laws concerning them. A Treaty was lately exchanged between China and Korea for establishing telegraph connection between these countries.

The following items are taken from the *Fiyu*:—Li Ji-u, who recently gained notoriety by petitioning the King to return to the Palace, was arrested on the 9th instant, and was to be tried by the High Court of Justice. But disputes arose between the officials. Some argued that this petition was very different from that of Cheng Seng-u, being merely an expression of warm patriotic and loyal sentiments, and not containing anything like an impeachment of the Authorities. The proposed trial has, therefore, been suspended. The petitioner, however, is not yet released.

Mdme. Om-sang has considerable influence over the King. A certain foreign Minister in Seoul is reported to have everything of importance settled by his wife and the King's favourite before he brings it before the King or the Cabinet. Mdme. Om-sang is a low-born girl and comes from Phyōng-an-do. Her beauty and ability are by no means up to the standard of the late Queen, but she has nevertheless achieved enough to be dubbed a Korean heroine.

The Tai Wōn-kun is still confined in the Un-hyōn Palace. Policemen are on guard about the Palace, and Japanese are rarely allowed to see him. If the Tai Wōn-kun is thus treated, it is easy to predict what would be done to Prince Wi-hwa and Li Chun-yong, if they returned home.

A few days ago a woman in shabby clothes appeared before the Russian Legation. It was noticed that she alternately laughed and wept as though beside herself. When asked to account for her singular actions, the woman replied that she could not but regret the continual residence of her King in a foreign Legation, leaving his own magnificent Palace to the occupation of foxes and badgers. The woman's identity has not been established.

The Japanese Consul in Seoul recently despatched two policemen to report upon the conditions prevailing in Phōng-yang and vicinity.

INVESTMENTS OF CAPITAL IN ENGLAND.

During the first half of the present year, the capital of the various schemes floated in England, in the form of either foreign loans, or railways, or manufacturing companies and so forth, aggregated 79½ million pounds sterling—say seven hundred million yen. Here is a list of the various enterprises:—

Foreign Government loans	£11,067,000
Indian and Colonial Government loans ...	4,559,400
British Corporation stocks	1,993,400
Colonial and Foreign Corporations	2,271,700
Home railways	5,495,500
Indian and Colonial railways	3,448,000
Foreign railways	4,211,500
Mining companies—	
Westralian	4,256,200
New Zealand	1,074,000
Others	2,154,000
Land and finance companies	2,358,000
Cycles and Appliances	11,099,200
Horseless or Motor Cars	1,210,000
Breweries and Distilleries	9,209,400
Companies to acquire Patents	1,518,000
Stores and Trading Companies	3,046,900
Manufacturing Companies	1,965,200
Hotels, Theatres, and Entertainments	2,194,500
Lighting and Water	648,500
Docks, Harbours, and Shipping	1,203,400
Miscellaneous	4,811,700

79,494,000

It is interesting to compare this figure with the figures for the corresponding periods of the preceding three years, since we thus obtain a general idea of the remarkable growth of business enterprise in Great Britain:—

AMOUNT OF CAPITAL INVOLVED IN INVESTMENTS PLACED UPON THE MARKET.

1893.....	£25,949,000
1894.....	31,177,000
1895.....	52,189,000
1896.....	79,494,000

Out of the total for the first half of 1896, namely 79½ millions sterling, 33½ millions had to be paid up during the six months, yet, the London *Economist* says, this large demand caused no apparent diminution in the floating supplies of money. In truth, the plethora of money seeking investment in England is extraordinary. The £100 bonds of the London County Council's recent loan—a million sterling, bearing interest at the rate of 2½ per cent.—were offered at a minimum price of £104, and the average price obtained was £104 9s. 7d. some of the bids being as high as £106 10s. 7d. In 1889 the 2½ per-cent. stock of the same London Council was quoted at £91 12s. 0d. since which time it has gradually risen, until a £100 bond now sells for £104 9s. 7d; or, indeed, for as much as £106 10s. 6d., an appreciation of over 16 per cent. in seven years. India, too, can now obtain money at a better rate than 2½ per cent., the stock of her last loan of £2,400,000 at that rate having sold for £103 6s. Comparing these figures with the price—£106 10s. 7½d.—at which the Chinese 6 per-cent gold loan of 1895 is now quoted, and with the fact that Uruguay's recent attempt to float a million of 5 per-cent. bonds at 71½ was not successful, we can not but be struck by the enormous importance attached by investors to the "quality" of a borrower. If people in England really appreciated the state of Japan's finances, they ought to be willing to pay 160 or 170 yen for her 5 per-cent. Consols.

SCHOOL AGE IN HOKKAIDO.

Marquis Saionji, Minister for Education, lately issued the following instruction to the Chief of the Hokkaido Administrative Office and Prefectural Governors regarding the admittance of boys and girls into Common Schools:—The presence of children below school-age in Common Schools is productive of many difficulties. Moreover, it is the opinion of medical advisers that the admittance of children before school-age tends to arrest development, both mental and physical, and I have been counselled to forbid it. Therefore I instruct you to see that no children under school-age are admitted into Common Schools.

THE NEW YORK BANKERS ON FREE COINAGE.

The resolutions adopted by the New York State Bankers' Association with reference to the free coinage of silver are very emphatic. After pointing out that the chartered banking institutions of the state of New York were indebted to the public at large, in the form of deposits, to the extent of 1,853 millions of dollars, while the public was indebted to the banks in the sum of only 1,261 millions, and urging that it was the part of wisdom and honour to discharge the debt in money of the same standard as that in which the obligation was contracted, the resolutions went on to say that "the best definition of coin money had been furnished by the ablest bimetalist of the age, Henri Cernuschi, who said that it was by the ordeal of fire that money must be tried, and that the coins which, being melted down, retain the entire value for which they were a legal tender before they were melted down, were good money, while those which did not retain it were not good money.

Gold coins, the resolutions went on, were the only ones that sustain that test. Currency, which was the basis of all business transactions, should be based upon the standard that was least variable and had the widest recognition among the nations of the world, in order that transactions, both national and international, might be settled with the least embarrassment from fluctuations in exchange. The \$16,000,000,000 of international trade balances were annually settled in gold. The domestic commerce of the United States, amounting annually to \$35,000,000,000, was contracted for and settled upon the gold basis; 83 per cent. of the commerce of the world was upon the gold basis. In view of this fact, the convention declared that it would be criminal folly to break away from the most advanced and civilized nations to join China and Mexico upon the silver basis. Gold had been the standard of value in the United States as a matter of fact since 1834, and as a matter of law since 1873, and in all countries where the gold standard prevailed, both gold and silver circulated as money. In all countries where the silver standard prevailed there was no gold in circulation as money. There was in circulation and in the United States Treasury on July 1, \$636,204,102 coined silver and Treasury notes, issued against silver bullion purchased, \$610,750,012 gold, and \$604,671,563 paper money.

In conclusion, the resolutions declared that free coinage of silver at the ratio of 16 to 1 means a dollar commercially worth 52 cents, but by fiat of the government made to pass for 100 cents, and the repudiation of 50 per cent. of indebtedness. The sagacious instinct of trade would, the resolutions declared, correct this wrong as to future contracts by doubling the price of commodities, and hence the free coinage of silver at the ratio of 16 to 1 means a great inflation of prices without any increase of values. Just in proportion to this inflation would the purchasing power of a dollar be decreased, and in the same measure and to the same degree would pensions, annuities, salaries, life insurance, saving funds, and all fixed incomes be impaired in their power to provide maintenance and support. Furthermore, the resolutions declared that free silver coinage at the ratio of 16 to 1 meant that the \$600,000,000 of gold now in circulation would go to a premium, would cease to circulate as money and become a simple commodity, coined or uncoined, would produce a violent contraction of the currency to the extent which gold now in circulation ceased to circulate as money, and would not only unsettle but thoroughly demoralize business. Under the infliction all classes would suffer, but those would suffer most who are least able to take care of themselves, to wit, the labouring classes, and the crushing effect upon business would be equalled only by the demoralizing effect upon public morals and the public sense of honour lowered and humiliated, as they would be by such an act of repudiation.

THE FORMOSAN INSURRECTION.

On the 2nd instant, the garrisons of Kelung, Ting-shwang-chi, Teu-wei, and I-lan, which are under the command Major Samoto, sent a company each against the rebels lying hid in the Neishan hills, and the garrison of Hsiuchwang sent out a detachment on the 6th. A number of insurgents are said to be in that district, and news had been received that they had captured the interpreter employed by the gendarmes.

On the 2nd instant, the rebels remaining in the vicinity of Yuen-lin assembled and attacked that place, but were easily driven back. The Japanese casualties were 3 privates wounded, 2 of them being soldiers of the first class.

At 11 a.m. on the 4th instant, 8 gendarmes from Tong-chiang, while engaged reconnoitering Chu-tsz chue, were attacked by over 80 insurgents. The gendarmes held the enemy at bay for over an hour, but the disparity of numbers being so great, the 8 men had finally to retire to Shih-kwang-chien. A detachment of gendarmes was subsequently sent from Fang-liao. Surrounding Chu-tsz chue, they succeeded in capturing Chin Po, the leader of the insurgents. The enemy, however, sprang a mine and wounded 11 Japanese gendarmes. The insurgents retreated to Nan-wong-an (7½ miles from Tong-chiang, and their number is increasing. On the evening of the 9th instant, a company of troops was sent against them from Feng-shan.

The above facts are contained in a telegram sent from Taipeh on the 10th instant, and published by the *Nichi Nichi Shimbun*.

CHINESE NOTES.

The city of Peking can not boast a very effective system of police control. The Police Censor reports a turbulent state of affairs: rowdies and desperadoes declaring war against each other and fighting with guns and swords in the streets; or capturing peaceful folk and holding them for ransom; or making armed attacks for plunder or revenge; or resisting the police to the death; bands of palace eunuchs arming themselves with swords, going to the theatre to wreak vengeance on some one, and ending by murdering a police-sergeant—altogether a condition of things that must render the city a perilous place of residence.

The *Peking and Tientsin Times* publishes the following translation of the German version of Earl Li's address to the German Emperor—the address was, of course, delivered in Chinese, and rendered into German by Mr. Detring:—

With veneration I step before Your Majesty, full of admiration for the great German Empire, the inheritance from Your august ancestors whose moral force, grandeur, and fame since long ago has attracted the attention of the world, near and far. China and the Empire which Your Majesty represents have long been connected by friendship, and these friendly relations have excelled those with all other treaty powers. At the negotiation relating to the retrocession of South Liao-tung it was by the powerful help of Your Majesty that this affair through its various stages was brought to a favorable conclusion for China. China keeps in a grateful remembrance, deeply engraved on the tablet of memory. During the time that I occupied the post as Governor-General of Pechili, I instituted a Military School, knowing that the German Army was first in the world, Your Majesty was gracious enough to depute officers as instructors for China.

The activity of those gentlemen has been very advantageous to the army under my command. For many years China has, when purchasing warships and war materials of all descriptions, applied to the German industry, and Germany has met us without reservation and in full measure. With veneration and gratitude I mention this, and I assure your Majesty that it shall never be forgotten.

In spite of my advanced age, I have not shunned to undertake the long journey over the vast world ocean in order to hand Your Majesty in person the Imperial letter from my most gracious ruler, and to accentuate on his behalf the most friendly feelings which he entertains for Your Majesty, and in order to accomplish my long felt desire to express with the greatest veneration my personal admiration for Your Majesty. I hope that Your Majesty will consider the motives of the Emperor of China in sending me as Extraordinary Ambassador, and give them your most gracious support in order to consolidate an eternal friendship between Germany and China for the sake of a mutual

participation in the blessings of peace. This is my dearest wish.

It is stated that the Viceroy Chang Chih-tung expects to be able to supply, from the Hupeh Iron and Steel Works, all the material required for the building of the Hankow-Pekin Railway, and that he has officially intimated the competence of the works for that purpose.

It is said that the temple hitherto occupied by the British Legation folks every summer, when the usual exit to the Hills takes place from Peking, has been rented over their heads by the Russian Legation. Such an act of discourtesy is quite incredible: it must be very emphatically confirmed before we can believe it.

Mr. Zee Ji-san, a well known Chinese silk merchant of Shanghai, recently afforded to his own countrymen and to the foreign residents an exceptional treat by bringing together, in his villa, a number of rare bronzes and porcelains, some his own property; some from the collections of his friends. Among the bronzes was a large censer, dating from the Shang dynasty, that is to say, 3,000 years old, and many of the porcelain vases are said to have been valued at 1,200 Tls. each.

A phenomenal young thief was arrested a few days ago in Shanghai. He is only 15 years old, and without any experience of foreign houses, he managed to enter five of them, within the space of eight or nine days, getting away with eight watches and many other valuables. When apprehended he was on the premises of another intended victim, but suspicion was well nigh diverted by his magnificent dress and lofty manner.

The Provincial Judge at Soochow has issued a proclamation, in which the following exhortation occurs:—

People must know that the Protestant and Roman Catholic religions are all meant to exhort people to do good, and are similar in purpose to the Buddhist and Taoist religions of China. No one is compelled to join them and Western countries are filled with their churches. They send missionaries at great expense over the seas, several thousands of li, to China for the purpose of increasing the number of their believers. If then these religions, as they have been accused of being [by mischief-makers], are really wicked and infamous, how could it be possible for the missionaries to hide their wickedness from the eyes and ears of the whole universe? How could these religions stand so long? How could they expand to such a great distance [as China]? Let me, therefore, ask all of you to consider the matter soberly. What riot has there been in this country against these missionaries which did not arise from the dissemination of rumours? And, again, which amongst all these rumours did eventually prove to have any truth in it? In former times when foreigners were few in number and seldom seen in the interior there may have been some excuse for the strangeness of their appearance to cause a commotion. But now, when the country is being opened to international commerce everywhere, and a new régime is in existence, even the remotest parts of the country have often seen foreigners on their travels, and every one must have got accustomed to their appearance. What reason can there then be for some of the people to allow their little ones to gather round foreigners whenever they see them, to make noisy jokes and to laugh, whereby a chance is given to the desperado and mischief-maker to raise baseless rumours and create riots for their own benefit, but to the detriment of their dupes? The mischief-maker has absconded, but his dupe lives in the place. The law must be vindicated and who then suffers?"

Mr. P. A. Dmitrevsky has been appointed Russian Consul-General at Shanghai, the Consulate-General being established at No. 22, Bund.

Concerning the new Central-Chinese Sanitarium, recently established at Kuling, a correspondent of the *North China Daily News* says:—

When the estate is reached we discover a valley of 4,500 feet above sea level, running N.W. and S.E. between the mountain ranges, of about a mile long and irregular breadth, but averaging about a half-a-mile broad. This valley of Kuling is abundantly watered with numerous cool sparkling springs rising in the mountain sides, and with streams running through the whole length of it. The water at all seasons of the year is plentiful. The valley is already studded with huts, cot-

tages, and more pretentious-looking residences, the favourite topics of conversation among the occupants of which are the clear and bracing atmosphere, the grandeur and beauty of the surrounding mountain ridges, the clear, cool water springs, the delightful walks and views, and the cool even character of the temperature. The summer here is like an English one, less the frequent showers of rain. Instead of sweltering in the torrid heat of the valley, with the thermometer remaining persistently at between 95° and 105°, tormented by day and night by the swish of punkahs and the laziness of punkah coolies, we are able to walk about all day dressed in thick clothing and without umbrellas, and to sleep at night beneath blankets. The highest temperature recorded here is 79° in the shade; the thermometer usually registers between 74° and 78° during the day, and between 72° and 76° at night. Yesterday it was 102° at Kinkiang and 79° here.

An average temperature of from 74° to 78° during the day, and 72° to 76° at night, does not remind us very forcibly of an English summer, it must be confessed. Any Japanese hill resort, even Nikko, can show at least as good a record for the day, and a much better one for the night.

A sad fatality occurred on board the P. & O. *Revenna* at Shanghai on Monday night, Aug. 17th. The fourth engineer, Mr. Inglis, was lying asleep on the starboard gangway, when shortly after 11 o'clock he was seen by the quartermaster on watch to fall overboard. The quartermaster immediately gave the alarm, and four boats were sent away, but returned after a prolonged search without success. The body has not been recovered up to the present.

The Soochow correspondent of the *North-China Daily News* says:—

If any one supposes that Soochow is an open treaty port, let him at once know that this is a mistake. The Japanese had Soochow placed upon the list of treaty ports. At first they made a vigorous effort to have their concession placed outside of the Chang gate. They were foiled in this. Their object was to secure a position favourable for trade. The largest banks, the steam-tug landings, the letter-companies and express offices, the telegraph office, are all near that gate. Instead of that position, the place assigned them was selected with a view to putting them at a disadvantage in all matters relating to business. Their concession was placed outside of the walls and on the south of the city. A broad street, which cost the Chinese about forty thousand dollars, was surveyed and built up along the front of the new city that is to be. But there are no houses there—nothing but the bare ground. The Chinese with exasperating coolness have delayed the settlement of the new rules by which the relations between the natives and the Japanese intruders are to be governed. The Japanese who come to Soochow, with a view to settling in the new treaty port, are not disposed to begin business. At the same time they are willing to have the rules exclude all but Japanese from the place assigned to them. The Chinese insist upon the Japanese confining themselves to that spot. In two or three instances Japanese citizens have succeeded in renting houses in the city and outside of the Chang gate. The magistrates have promptly arrested the landlords and put the Japanese out into the streets. And any attempts by Americans to buy land or rent places for business are met by the most obstinate obstructiveness. The new rules with regard to Catholic missionaries purchasing land in the interior, agreed upon last year between the French Minister and the Peking government, which "criticises rather than controls" the Government of the provinces, are utterly and contemptuously disregarded. In all this we see that the obstructive anti-foreign feeling of the literary class in China is still unchanged. They who live in or visit the treaty ports, and talk about new China, do not understand the real state of affairs. The great mass of the nation has learned next to nothing from the late war. It has simply intensified the national jealousy of foreigners and hatred of them all, especially the Japanese.

In view of the strange stories circulated about the relations between the Empress Dowager of China and the mother of the Emperor, who recently died, considerable interest attaches to the following announcement of the death by the Empress Dowager, officially designated, "Tze-hsi yü-k'ang-yi-chao-yü-chuang-chêng-shou-kung-ching-hsien-ch'ung-hsi":—

On a former occasion, upon the death of His Imperial Highness Prince Ch'ün, it was decided, when deliberating upon the funeral ceremonies to

be observed, to obey the sacred dictates of our ancestors and acknowledge Your Majesty's father in the said Prince. Hence we bestowed upon the deceased Prince the appellation of "Father of the Emperor." Now, upon the death of H.I.H. Princess Ch'ün, Lady of the Yeh-hö-na-la clan, it is but right that a similar distinction should be given Her Highness, and I call upon Your Majesty to bestow upon the late Princess the appellation of "The Emperor's Mother." Your Majesty is also requested to command the Board of Rites to deliberate upon the ceremonies necessary to be observed in this connection and report the same to the Throne for approval.

(2) We further reverentially promulgate another edict of H.I.M. the Empress-Dowager, Tze-hsi, etc., etc., to the following effect:—"H.I.H. the late Princess Ch'ün, a Lady of the Yeh-hö-na-la Clan and Mother of the Emperor, was by nature a lady of mild, earnest, harmonious, and chaste character, and beloved and respected by all her relatives and family connections. She was a decided help to H.I.H. the late Prince Ch'ün, Father of the Emperor, in her administration of the domestic economy of his Palace Household, doing everything in accordance with the rules of propriety. And she always maintained while in life close and intimate relation with the inmates of the Inner Palace and myself. The extraordinary distinction and brilliant treatment accorded to the late Princess in the Palaces was invariably received by her in a modest and unaffected manner, and instead of showing elation Her Imperial Highness invariably tried to be more careful in her bearing and conduct. Of late, however, H.I.H.'s liver complaint had increased, in consequence of which she lost sleep and appetite. I, accompanied by H.I.M. the Emperor, paid frequent visits to the Palace of the late Princess to enquire after her health and comfort in her illness, and, moreover, expended every effort in trying to fight her complaints with the best of medicines, but unfortunately without success, and I am extremely grieved to have to record the fact that the Emperor's Mother died at about eight o'clock on the morning of the 18th of the present month (June).

Translations of Mr. A. Bain's appeal on behalf of the Formosan sufferers were sent to the three vernacular papers in Shanghai. One of them took up the matter vigorously "and published leading articles and paragraphs calling upon all Chinese to subscribe." The result up to August 21st was that "nearly a hundred dollars had been subscribed."

A mad dog in Shanghai on the 21st of August succeeded in biting some four or five people before it was killed. The first victim was a foreigner—"unfortunately a foreigner," as the newspaper describing the incident puts it—and the remaining three or four, whom the animal, in a "half-killed" state, attacked, were "mostly natives."

An extraordinary series of charges preferred by the Rev. Dr. Ross in the pages of *The United Presbyterian Missionary Record* against the Roman Catholic Bishop of Mukden, is attracting public attention. We have not seen the essay in *The United Presbyterian Missionary Record*, but from a letter of protest appearing in the columns of the *China Gazette*, it would appear that Monseigneur Guillon, or Père Emonet, who represents His Grace during the latter's frequent absences from the Manchurian capital, has been in the habit of tying backsliding Chinese to a pillar in the garden of the Bishopric, causing their queues to be torn out by the roots, and subjecting them to other brutal tortures. This wild and utterly incredible accusation seems to have been gravely advanced, its absurdity being enhanced by the pretence that the Bishop's inhuman practices have been going on for years. A divine of Dr. Ross' standing and reputation can not for a moment be suspected of deliberate deceit; doubtless he is the victim of Chinese misrepresentations. But from no one acquainted with the lives and methods of Roman Catholic propagandists in the East will the charges receive the smallest credence, and the sooner they are publicly withdrawn the less will be the disgrace of their formulator.

A species of free fight took place between a number of semi-intoxicated Russian sailors at the P. & O. Company's jetty in Shanghai on the 19th of August. Among the spectators of the combat were two Chinese constables who, with more discretion than sense of duty, care-

fully refrained from interfering. When the fighters had lost blood enough, they decamped, some in jinrikisha, and some on foot, belabouring the jinrikisha coolies.

THE "SHANGHAI DAILY PRESS."

Some enterprises appear to be contagious. For a long time Shanghai possessed only two local English newspapers, one issued in the morning, the other in the evening. It seemed to us that the number was sufficient. At all events, the two papers received support that enabled them to furnish the community with abundant news and good reading matter. Three years ago, there certainly existed a feeling of dissatisfaction among the foreign residents, and possibly its outcome was the appearance of a third journal, the *China Gazette*, but, speaking as outsiders, we venture to think that Shanghai might have been content with the old state of affairs. Now, however, following fast on the footsteps of an announcement that a fourth newspaper, the *Shanghai Times*, was about to make its *début*, a fifth, the *Shanghai Daily Press*, has suddenly stepped into the field, under the editorship of Mr. Alfred Cunningham. Our new contemporary's hand has evidently been forced: a not unnatural desire to anticipate the *Shanghai Times* induced Mr. Cunningham to go to press before his staff was fully organized and before many of his preparations had been completed. Hence it would not be fair to infer the ultimate quality of his journal from its opening numbers, and indeed he explicitly deprecates any such inference. We have nothing to do, therefore, but to greet the *Shanghai Daily Press* with all cordiality, and to express a hope that it may discover ample justification for its editor's enterprise. To one point, however, we beg to draw our contemporary's attention. Referring to what we recently wrote about the forthcoming *début* of the *Shanghai Times*, the following appears in the first issue of the *Shanghai Daily Press*:—

There recently appeared in the *Japan Mail* a paragraph referring to a contemplated newspaper—the *Shanghai Times*,—which praised in the highest degree the exceptional abilities and accomplishments of its staff; a graceful compliment, the charm of which was however somewhat lost on those who happened to know that the par was modestly written by one of those whose abilities it praised.

It is not easy to understand the estimate of journalistic responsibilities that prompts a charge like the above—a charge that a newspaper opens its columns to panegyrics penned by their own objects. However, since our new contemporary's assertion is made with so much assurance, and since it reflects not less seriously upon Mr. and Mrs. Smith than upon ourselves, we deem it right to say that the paragraph in question was written by the editor of the *Japan Mail*, and to add that this statement is made absolutely without reservation.

BICYCLES.

Nothing conveys a more vivid idea of the dimensions that cycling has attained in Great Britain than the fact that the capital of various cycle-manufacturing enterprises offered for public coöperation during the three months, April, May and June, aggregated nearly eleven millions sterling. The Pneumatic Tyre Company's business was sold for five millions—such a success has the clever Dublin physician's invention attained—and the remainder of the eleven millions went to convert various enterprises into joint stock companies. It is predicted that a good deal of money will be dropped over these ventures, but they show, at all events, what an immense institution cycling has become. In connection with this subject we may refer to a statement recently made by an American artisan who professed to be thoroughly versed in the details of cycle building. He said that the actual cost of manufacturing a bicycle, now sold for \$80 or \$100, does not exceed \$15.

IN A CHINESE POLICE COURT.

On the 12th July, Lai Mit, a theatre-attendant, shot a Chinese detective in Hongkong, and then escaped to the mainland. The detective died and a warrant for the arrest of the murderer was issued. Meanwhile, the man had been apprehended near Nam-tau by the Chinese authorities, and the District Magistrate held a trial, or Court of Inquiry, into the case. Inspectors Stanton and Quincey, of Hongkong, attended the examination on behalf of the Hongkong authorities, while representatives of the local newspapers were present. Nam-tau lies about three hours' steaming up the Canton river. The *China Mail* says that the Magistrate's Yamén, where the trial was held, is in a disreputable broken-down condition. The first court-yard was a perfect wilderness of weeds and rubbish. The second court-yard, at the head of which the Magistrate's bench is situated, bore traces of ancient magnificence. Here the party waited until the Mandarin was in readiness to grant the interview. An interview before a trial is not easily obtained from a Chinese magistrate, so that, it is understood, the party were greatly privileged when, after a short wait, the Mandarin directed that they might be admitted to the inner Court. The Mandarin, an intelligent-looking old man, was dressed in his official robes. He cordially greeted each of the officers, and the others who accompanied them, in true Chinese fashion, everyone being provided with a small bowl of tea. He proceeded at once to discuss the case with the officers, speaking in Mandarin, Mr. Thomas W. Quincey acting as interpreter. Slowly and with great caution the mandarin read through the documents sent by the authorities in Hongkong in connection with the trial, including the depositions of the inquiry held at the Magistracy and the dying detective's depositions taken at the Government Civil Hospital. The whole case having been clearly explained, he chatted away pleasantly with the officers for a short time. He then signalled that the audience was at an end by raising his bowl of tea to his mouth and bowing to each of the party, and the salutation having been returned they bowed themselves out of his presence. There is no privacy even in the residence of a Mandarin in China, and the large crowd that had assembled at the Yamén pushed into the audience chamber and stood gazing during the whole of the interview. In the second court-yard arrangements were now being made for the trial which was to take place about twelve o'clock. At the head of the court-yard a raised dais was roofed in, and here the Court was held. The clerks and officials of the Court, dressed in long gowns and feathered caps, busied themselves arranging the Court for the trial. A miserable lot of coolies dressed up in the uniform of the Sun-On district were scattered among the motley crowd which lingered about the Court. The Magistrate's bench was a rude table covered with a red cloth, and his chair was of the same rude character covered with cloth of like colour. On the table were two tin cans containing a number of pieces of bamboo resembling tally sticks. Each of these sticks bore Chinese characters, and it is supposed that when administering punishment the mandarin picks out by chance one of these sticks, and the number on the stick corresponds with the number of strokes with the bamboo the prisoner is to receive. Two dishes, one containing Chinese red ink and the other white, and a pen rack were the only other articles on the table. A photograph was taken of the scene, minus the Mandarin, who refused to be photographed, never having passed the "ordeal by camera" in the whole of his long life. Shortly before twelve o'clock Lai Mit was led into the Court. His hands and legs were shackled, and a rusty old chain was fastened round his neck. The jailor was dressed similarly to the miserable crowd of soldiers. He led in the prisoner by this chain, and when the dais was reached he ordered him to kneel down. Then the Mandarin entered and the trial proceeded, all the questions being put by the magistrate personally.

As a preliminary each witness had to state his age, his parents living, the names of the parents, and the number and names to brothers alive. The prisoner made a stubborn defence, denying his own confession and identity, flatly contradicting all the statements of the witnesses, and then driven into a corner, alleging that the detective was shot by his (the detective's) own revolver. The threat of flogging and application of torture soon made him abandon this attitude, and finding all means of escape cut-off, he owned up and asked that his execution be hurried along so that the period of suspense be shortened as much as possible. With a prayer that his parents should be looked after, the man was hurried away, and the proceedings closed. It is expected that the murderer will be decapitated at Chinese Kowloon.

TONGKING COAL v. JAPANESE.

From time to time we come across evidences of strenuous efforts on the part of the owners of Tongking coal mines to bring their product into favour. A recent note in the *North-China Daily News* furnishes an example. After adroitly alluding to the terribly inconvenient results that must ensue for Shanghai when the numerous factory chimneys—many of them of quite insufficient height—begin to contaminate the air with filthy smoke, our contemporary proceeds to say that the nuisance can be altogether avoided by following the lead of the Shanghai Filature Company on the Soochow Creek and in Hongkew, namely, burning Tongking anthracite coal. We read that, orders having been received from Paris to make trial of the coal, a quantity was obtained from the Kebao Mine, and the colliery company was sufficiently solicitous about the result to send up an engineer and an Annamite fireman to assist in the trial. At first, forced draught had to be used—the old trouble about this coal—but ultimately by getting larger coal, forced draught could be dispensed with. It seems to be claimed that the Tongking coal is virtually smokeless, and that it requires less attention on the part of the stokers than the Japanese coal. As to cost, we read that the Tongking mineral can be laid down in Shanghai for about 5 Tls. a ton, whereas the Japanese costs from 3.75 to 4 Tls. Hence the Japanese coal is at least 25 per cent. cheaper than the Kebao. But—and here we encounter a suggestive parity of figures—the Tongking product is said to be 25 per cent. better than the Japanese in heat-producing quality. We doubt whether the public will take so much on trust.

THE UNEXPLORED WORLD.

The *Literary Digest* translates from *Cosmos* a most interesting statement of the true state of the globe to-day, so far as concerns geographical knowledge:—"To-day, outside of the polar regions, we must confess that all the seas have been explored, but this is far from being the case with the land. An immense extent is entirely unknown to us; another, still more considerable, has been only imperfectly explored; travellers have traversed it, commerce has exploited some of its products, but good maps of it do not exist. Finally, only the least part is well known; geodesy has covered it with a net-work of triangles and the maps of it are complete, even from a topographical standpoint. After the Arctic and Antarctic regions, which have remained inaccessible up to the present time, Africa is the part of the world that is least known to us, notwithstanding the admirable explorations made in this century, which are daily clearing up the map. The earliest explorers, however, could not dream of serious efforts, and many years will pass before the country will be free from the general gray tint, even when its black patches have disappeared. After Africa, Australia offers the vastest field to the investigations of explorers; we must remember that even its sea-coast was not fully explored till 1843. Since that time, at the price

of great suffering, it has been crossed from south to north, but no traveller has yet traversed it from east to west.

In the two Americas, except the extreme northern and southern parts, the continent is known; nevertheless the whole central region of South America, though in great part explored for commercial purposes (for mines, wood, caoutchouc, etc.) is not exactly mapped.

To sum up, the yet unexplored parts of the globe cover an area of about 50,000,000 square kilometers [about 20,000,000 square miles], approximately divided thus:

	Square Miles.
Africa	6,500,000
Australia	2,000,000
America.....	2,000,000
Asia	200,000
Islands	400,000
Arctic regions	3,600,000
Antarctic regions.....	5,300,000
	20,000,000

Opportunity will not be wanting here, for a long time, to the explorers who wish to undertake their part of the immense task that must be achieved by humanity before it knows its own domain.

MR. CONSUL JAMIESON ON THE PROSPECTS OF CHINESE REFORM.

Nothing could have less of the colour of the rose about it than Mr. Consul Jamieson's forecast of material progress in China. Writing of the year 1895 and its events, he says:—"The question which will naturally occur to many is this:—What effect is the war likely to have on the trade of China, and particularly on that part of it in which we are most interested? Is there any prospect of China being opened up at last, and of her freely inviting the coöperation of those best able to assist in putting her house in order?"

To the last query I regret to say the only answer is, there is no prospect at all. Nothing that has transpired since the signing of the treaty of Shimonoseki encourages one to think that the responsible statesmen or the local officials are one whit the wiser or better for the experience they have gone through. In small matters as in great, there is the same *non possimus* returned to all the suggestions and requests that have been made to them, except such as are backed up by a display of physical force. It is true there is a certain talk of railways. A line from Tientsin to the capital has been actually begun, and a sort of survey has been made of a line between Shanghai and Soochow. Various edicts and decrees have also been issued giving countenance to this and the other project. In principle, however, the construction of railways has been accepted years ago, but subject to this condition, that no foreigner shall have a hand in it; and nothing that has so far appeared seems to go beyond this. Various offers and propositions have been made by foreign firms and syndicates to treat for the construction of a railway, either as constructors or concessionaires, but in no case, so far as I know, have the plans been even considered. The only idea that suggests itself to the native mind seems to be to appoint some official, an ex-Taotai, or some one of that sort, to collect subscriptions from the merchants, and build the line as a Government affair, the capital to be eked out by subscriptions from some of the provincial treasuries. But, as the merchants know very well that that simply means that they subscribe the money and others will pocket the profits, they are in no haste to join. There is not, in fact, any better prospect now than there was ten years ago, perhaps not so good, of any general introduction of railways, or of the inauguration of any reform whatsoever so far as these depend on the initiative of the Chinese Government."

SOLID ASSEVERATIONS ABOUT SILVER.

Through the agency of the First National Bank of Chicago, considerable prominence has been given to a letter written by Mr. George Boulton in condemnation of the re-monetization of silver. Mr. Boulton advances many arguments, none of which are novel or striking. One assertion, however, he does make that deserves to be quoted. "The following," he says, "can almost be taken as axioms:—

No silver country is prosperous.

No silver country has a stable and firm government.

No silver country is general labour well paid.

No silver country has its government securities at par.

No silver country has good public school facilities.

How far are these "axioms" applicable to Japan's case, we wonder.

POINTS OF GRAMMAR.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In addressing you a recent leading article on Points of Grammar, I am aware that this is the "off" season for newspapers, a time to raise questions of general, if mild interest, of no great depth, and upon subjects about which people agree to differ and like to argue. Small, however, as is the subject of the article, it has a serious aspect for many of your readers, as being a claim by you to use language in the *Japan Mail* not be found in classical English writings. Modify the language for your private use in what way you are pleased to think an improvement, I would say to you, but your readers have a right to expect that you will put in the columns of your paper only the standard language of the great English weeklies and dailies. No one can do that better than yourself, when you resist the longing to reform the language by the new light you can throw upon its construction. You think it no presumption in you to change the English language for the use of your readers. I do, permit me to say, for I am not personal; I should consider it such on the part of any man, be he Editor of *The Times* or a lesser or a greater star, to attempt to do so. But the language is perpetually changing, you say, which is a true and trite remark, but then it changes with the times—of itself, as it were—and year by year its changes are imperceptible. No man succeeds, or will succeed, in changing it, who asserts that standard writers, past and present, are offenders against the rules of grammar, and then proceeds to set them right. Yet that is the position you have, surely unwittingly, taken, while your practice only serves to set your readers' teeth on edge. It is not only the making light of the usage of just so many men as may be ranked as eminent writers, though that is presumption enough; it is that you are standing up against the authority of the whole cultivated world of those who use the language. For what makes a man's writings classical, but the appreciation of their style by his readers? No matter what the subject may be, who is there that does not delight in the rhythmic flow of well ordered and thoughtful words from a John Henry Newman, say, or a Robert Louis Stevenson? Imagine you or me having ventured to tell either to spell "valleys," "vallies," and to omit the "s" from "as follows!" You could no more have done it than I could.

Few of your readers will want to be assured as to the soundness of the standard usage in the cases you bring forward, but many may be content to see you answered as a protest against your vagaries in spelling. I am nobody of the least authority in etymology or syntax, am not one of the army of teachers of English in this country, among whom there are not a few good grammarians, I am sure. I am only one who thinks that a little logic is equipment enough for the task; and by logic I do not mean the school logic but only thoughtful common sense. Yet I shall answer you authoritatively; for have I not at my back all the lights of literature against you alone. I take your points in order, which are three:—

1. "The period ending with the death of James II." is the first point you criticize. Why should not "ended" be used also, you ask. I answer because it has the fault of ambiguity. For only by passing on could the reader learn that he had had the perfect participle before him, not the past

tense. To say more, one wants the context of the words quoted. But suppose the 'historical present,' which gives animation to a narrative, to have been in use, that, you will admit, requires the active participle, "ending." Or, the writer may have divided his history into periods and, for purposes of exposition and comparison, have marshalled them all before his readers; then, too, as present, "ending" was the word to use. Suppose, however, that the words which follow are such as "was one that," etc. If then used the word "ending" was allowable, and is pleasant to ear and eye than "which ended," the words strictly required.

It seems to me, you confuse matters a little in what you say about participles expressing time. They are of no "tense" for they do not convey assertion or predication (excuse me, but my school days come back to me, as I write), but in the meaning of the participial form there is necessarily duration, and that is a function of time. As for "ending" itself, its treatment in the direction you lead us is a question for the metaphysician; for, while as an active participle, it conveys a sense of time as duration, its verbal root "end" is a sharp point in time, is the opposite of duration.

2. The second point is whether "as follows" should not sometimes be "as follow;" whether the former is not bad grammar when it precedes enumeration of things or persons. You state and reject the accepted explanation and prefer to believe that all good writers, save yourself and a few others (these others not eminent, I might contend), are ignorant of the first rule of syntax, or so blind as not to apply it in this case. I could not discuss the question from that view of the matter; the probabilities that they are right and you consequently wrong are as a million to one. You do not see that, strange to say. The clause is elliptical, but at least admits of the explanation that it refers to what *does* follow it in utterance, namely, the statement then made. Obviously the form is false, you say. Not to the minds of English writers, I reply. Is it likely? You paraphrase, "the names of the contributors are, as follows:" by "the names of the contributors follow," thereby begging the question. Why is not the paraphrase, "a statement of the names of the contributors follows," to be received? It is, at least, as good as yours, though you do not choose to accept it, preferring to assume, with an easy conscience, that all writers, but a select few, are without knowledge or thought of what they are saying. Before leaving you, in this matter, I would ask you just to parse "the names are as follows:" not forgetting the "as," and the colon, and the subject of "follows," since "names" belongs to "are," and the purpose of the redundant "as follows," for redundant these two words become, according to your view of the matter.

3. Little need be said on the third point you raise. You say that it is the rule of plural formations to write "vallies," etc. Where is that rule to be found? It is enunciated, against your practice, in every grammar, that the first rule of plural formations, and 3rd pers. present tense formations is to add "s" to the singular noun and infinitive verb. Then comes the subordinate rule that, though words ending in "ey" come under the first rule only, those in "y" not immediately preceded by "e" change "y" into "ies." The same distinction holds good as to past tenses and perfect participles in "ed," as, "hurried," "conveyed." Usage perhaps condones, but certainly does not show approval of two exceptions; "honied" in some poetry, and "monies" in some business articles (hardly to be deemed classical authority). The instance you give is wrong, for "storeys" is the plural of "storey" and "stories" that of "story."

With much respect, I choose the hackneyed (not "hacknied") signature,

A CONSTANT READER.

RAILWAY MISMANAGEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am most reluctant to trouble you with a further communication in reference to Dr. Eldridge's complaint of mismanagement at the Yokohama Station on the 28th ultimo, but as he has now accused the officials there with adding falsehood to the discourtesy and want of attention originally charged against them, I cannot permit the statement to pass unrefuted.

At some pains, I personally investigated the circumstances, and I have again thoroughly and carefully inquired of all those through whose hands the luggage in question passed at the Yokohama Station, and I am convinced there has been no untruthfulness or misrepresentation of the facts on their part. I may further add in disproof of Dr. Eldridge's statement that his people's luggage

was delivered at the Luggage Office shortly after 12 o'clock, that it was certainly not there earlier than when luggage was removed from the Office to be loaded in the through Kobe train a few minutes before its departure at 12.35; but it was seen to be there on the return of the Porters from performing that duty at 12.40 p.m. There was, however, no person there in attendance with the requisite fare tickets to book it, or deliver it to the official, as required by the regulations, as has been before stated. Luggage belonging to certain passengers who came from the Club Hotel, brought subsequently, was duly booked, checked, and forwarded by the 12.55 train, simply because the owners conformed to the requirements of the Railway by producing their tickets with the luggage.

I must also beg to reiterate that I am satisfied there was no rudeness or discourtesy shown by the Station Master, or by any of his subordinates, to the members of Dr. Eldridge's family, but that every effort was made by all the officials concerned to carry out their duties strictly in conformity with the regulations.

I am, Sir, your obedient servant,

MITSUGU SENGOKU,
Traffic Manager.

Imperial Government Railways,
Traffic Department,
Shimbashi, August 24th, 1896.

SURGEON MURATA IN CUBA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read, with sentiments that you may well imagine, the extract made in the *Mail* of the 29th July from what some Tokyo papers had published as alleged reports of Surgeon Murata, with reference to the medical service in the Spanish army in Cuba. Although these reports were declared totally false in a communication signed by the Chief Surgeon of the 4th Division and published by the said journals on the 12th August, I have had the patience to await the arrival of Dr. Murata, before addressing to you this communication, confident that his experience in Cuba would not endorse the sweeping and adverse remarks that had been attributed to him. So it is, in fact. He declares that when his report is completed and known, the public will acquire the conviction that he could not have authorized the severe and hostile criticisms published by the newspapers. Moreover, he declares himself deeply obliged to the Spanish Authorities for the courtesy shown and the facilities afforded to him in carrying out his mission. As no mention has been made in the *Japan Mail* of the correction of the said adverse reports, I beg of you to publish this letter.

I am, Sir, yours very faithfully,

J. COLOGAN,
Major of Engineers, Spanish Army.
Yokohama, August 20th, 1896.

THE CONFERENCE AND ITS LESSONS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As a pretty full account of the annual conference at Kanuzawa has already been given ere this, it is only intended here to call attention to a few leading points of the meeting. Monday was given to the consideration of self-support of native churches. All were agreed that this was a thing much desired; but it was about as unanimously agreed that the end had not yet been reached. All seemed to be in the middle of a fix with no very definite idea how to get out. As it is a matter we are all still working at, I may be excused for offering my small contribution to the general expression of opinions. In my judgment, one main obstacle to self-support of native churches grows out of the expensive system upon which they have been taught to operate. It is a mistake, as I believe, to teach a small church of poor people—the average church of Japan—that a salaried pastor is an essential element of their existence, and tax them heavily to this end. Jesus came to give the gospel to the poor. Paul, Silas, and Timothy taught the churches they established to be self-sustaining from the start because they began and continued on a basis attainable by all. From among their own number the pastors, or elders, of any given church were selected. These, together with the church, came together at stated times for mutual instruction, continuing "steadfastly in the apostles' teaching, in the fellowship, in the breaking of bread, and in prayers." They gave according to their ability, beyond which no debt hung over them to supply the pastor's salary. Jesus in his personal ministry said, "The poor have the gospel preached unto them;" but under the system of a hired preacher the poor are largely deprived of its blessings. I fear we who have come

from afar are not altogether without fault here. The native Christian naturally looks to us for an example. When he sees his foreign teacher regularly and well supplied at a stated salary, it is hard for him to feel under obligations to proclaim the unsearchable riches to his fellowmen unless he first be remunerated in the same way. Hence the real ground of the friction between the foreigner and the Japanese in Church matters. With Paul, the first foreign missionary, it was different. The churches he planted began from the first to contribute for his support so that he could say, some ten years after to the Church at Philippi (Phil., 4:16) "Ye sent once and again unto my need." Not many churches in Japan would support the foreign missionary, I fear, even though he were in need of it. Paul went and preached without a salary, and when necessary laboured with his own hands, became one among those whom he laboured, and somehow won their affections so that if possible they would have plucked out their own eyes and given them to him. These are matters worthy our consideration.

Study of colloquial Japanese and Japanese religious literature occupied the second day. Religious literature was brought up again in the question box. Among other things in connection with this department of work was that the Tract Society in its publication of tracts confined itself strictly to the essential facts of the Gospel and carefully avoided all literature of a denominational kind. Conversions were also reported as having been accomplished by the distribution of these tracts. All this is very good. Why not all of us follow the example? If a tract society can avoid all denominational differences and yet publish tracts that save sinners, why may not the missionary preach the gospel along the same line? Again, if the essential facts of the gospel can be set forth without touching on denominations, it follows that denominations are non-essential; none of the gospel is nonessential; hence they form no part of the gospel. Shall we stand divided on things nonessential? Party division is carnal. Paul condemns it (1 Cor., 1:10-13). In his time there were some that centered around Paul, some around Cephas; others Apollos, and still others in a partisan way centred around Christ. And in this age we centre around Calvin, Luther, Wesley, the Pope of Rome, and the like. Or accepting the Japanese comparison of us, we are at this point like the different sects of the Buddhists divided up after different leaders. "Is Christ divided?" I was highly pleased that during these meetings the importance of centring around Christ was made prominent and that the best way to work at Christian union was to seek union with Christ. A way necessary and requisite to this end is to (1) free ourselves from all denominational nonessentials, and (2) cling to the essential facts of the gospel. Not a part of them, but all of them. If the essential facts declare that "We are all the sons of God, through faith, in Christ Jesus," we should accept it without hesitation. And if the next verse proceeds to say, "For as many of you as were baptized into Christ did put on Christ," we should as readily accept this also (Gal., 3:27, 28). And if Paul proceeds to say, "There can be neither Jew nor Greek, there can be neither bond nor free, there can be no male and female; for ye all are one in Christ Jesus," we should not demur at being made one in this way.

One day was given up to the ladies. Some interesting papers were read in regard to India and China; also some facts about the W.C.T.U. That this temperance society has done good is admitted, but that it has done more than the Church, as claimed by the speaker, can hardly be conceded. If the claims of the speaker be true, it would follow that man (woman rather) has outstripped God in organizing an institution that surpasses the church in uplifting and reforming man. Why not then abandon the church altogether and join the W.C.T.U.? I for one shall stand by the Church that Jesus purchased with his own blood.

One day was given to the Unity of the Scriptures. The question turned mostly upon inspiration. Discussion grew warm and was long drawn out. In the course of the discussion the statement was made that if we all saw the Scriptures just as they are there would not be a denomination in the world. Then it must follow that denominationalism is the outgrowth of seeing the scriptures as they are not. Or in other words, denominations, so far as that goes, are founded in error and form no part of the gospel. By all means let us abandon them and try to see the facts of the gospel just as they are. To see them in a false light is but folly.

J. M. McCABLE.

SILVER AND SILK.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—How would the passage of a Free Coinage Act by the United States affect the price of Raw Silk, Copper, and Tea?

The agitation now going on in the United States in regard to the question of the free coinage of silver at the ratio of 16 to 1, should demand the most careful attention from the producers and holders of Raw Silk in Japan. They should watch for every indication upon which a probable settlement of the question may depend. The fortunes of the holders of Raw Silk are in the balance. If the act is passed it means ruin to those who may be loaded up with the commodity at present market rates. Between this time and the month of November the trade in Raw Silk, to the Japanese, is a gamble of gigantic proportions. It is nothing but a gamble; for its future condition depends simply upon the will of the majority of the voters of the United States, as it may find expression in the election to be held in November. If free coinage is defeated, Raw Silk will retain its normal price in yen, perhaps become dearer, as exchange may go still lower than its present rates. But if Bryan, the candidate of the free coinage advocates, should be elected, it would mean the passing of a free coinage law, which would immediately put exchange at par. The yen would be rated at its bullion value as now, but its bullion value would be 100 cents gold, instead of 51½ cents, as it is now valued. So that silk, which is now held at 700 yen per picul, would only command 360 yen; the selling price of Japanese raw silk being determined by the exchange value of the yen. Copper is in the same boat with raw silk.

The merchant in Yokohama who may be the holder of 1,000 piculs of raw silk which he can sell to-day for 650,000 yen, if he holds until next November and the question of free coinage should be decided favourably, will realize only 360,000 yen. The Japanese have need to exercise their best judgment at this time, and in defence of their interests they should, unless they are fully prepared and able to bear the possible loss that may result to the fullest extent, consult with prudence and realize while yet they can upon present rates of exchange. They should not delude themselves with the idea so persistently urged by the enemies of free coinage, that the United States cannot give a gold value, at the ratio of 16 to 1 of the silver of the world, for they will find silver on all fours with gold the day a Free Coinage Act is passed by the United States Congress. Were I in the raw silk trade I should not hold out for profits, being satisfied to realize my capital instead of taking the chance of a loss of one half of it for the sake of the possible profit that might be realized if things went my way. Italy and France establish the gold price of Raw Silk, Japan or China cannot do it.

Tea dealers will not feel the change, unless it may result in restricted sales, which will hardly be. Tea being produced only in silver standard countries has always commanded only a silver price. The lower exchange dropped, that much lower the exporter could make the laid-down price in gold in his shipments to the gold standard countries. The rate of exchange never has affected the yen value of tea in Japan or China. It meets no competition from gold standard countries. No matter if the yen be valued at 51½ cents or less, or 100 cents in gold, the cost of producing tea will remain the same in yen; supply and demand being the only factor affecting its selling price. Tea drinkers, like whisky drinkers and the imbibers of gin and sake, will continue to buy, no matter at what cost. The laid-down cost of tea exported to the United States in gold will be double the purchase price in yen as now valued;—or, more precisely, say a picul of tea now is purchased for 20 yen, the exchange value of the yen being 51½ requires an outlay of \$10.30 gold, if the yen advances to par it would require \$20.00 gold. Freight is now payable in gold. Tea being admitted duty free, no advance would be made except on the purchase cost. The tea producer and the tea merchant would know no difference in their operations. The same number of yen would pass between all the parties interested in the tea trade as at present. The purchaser would merely use more gold, his profits would remain as large as now, if they did not increase. Possibly the number of exporters might be less than now, because it would require nearly double the gold capital to carry on business; the less the number of exporters the better control they would have of their market. The tea industry is the only one in Japan that will escape the effects of a transition of the yen value from the present silver rate to a gold value.

Respectfully,

Yokohama, August 26th, 1896.

X.

THE FIRE TEST.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The resolutions adopted by the New York State Bankers' association, a résumé of which you gave your readers in your issue of the 24th inst. are very disingenuous. One point of them is, "The best definition of coin money had been furnished by the ablest bimetalist of the age, Henri Cernuschi, who said that it was by the ordeal of fire that money must be tried, and that the coins which, being melted down, retain the entire value for which they were a legal tender before they were melted down, were good money, while those which did not retain it were not good money." "Gold coins," the resolutions went on, "were the only ones that sustain that test." The Gold standard advocates are not anything if they are not disingenuous. When the mints of the world were open for the free coinage of both gold and silver, the fire test should have been as effectual as it is now claimed to be. Was it ever used to discredit silver when a legal ratio existed, fixing the money value of gold and silver? In connection with the "fire test" bogie the intrinsic value of gold is artfully coupled, by very many of the gold standard advocates. The intrinsic value of gold remains, they claim, in the bullion form that the coin represents. Whence is derived the "intrinsic" value of gold coins? Was it ordained in nature's laboratory that a certain number of grains of gold should become a sovereign? Has it not been by legislative enactments that the intrinsic value of the sovereign has been given to it? Gold inherently has no intrinsic value as money; it is the fiat of governments that confers upon gold metal its intrinsic value as a money metal: if its coinage was limited by the concerted action of the governments of the world, the intrinsic value of gold bullion would not be what it now is, but would become a variable quantity. Then a sovereign, if subjected to the fire test, would no longer represent the value conferred by law upon the coin, it would simply become merchandise, subject to the intrinsic value the law of supply and demand would assign to it. Prior to 1873, the coinage laws of the United States established the intrinsic value of both gold and silver bullion, ordaining that a certain number of grains of gold should represent, when minted, the measure of a dollar value, and that a certain number of grains of silver should become, when minted, the measure of a dollar value. The constitution of the United States declared that gold and silver should be the money metals of the commonwealth. The constitutional declaration of the nation conferred upon gold and silver metals an intrinsic value without which they could not have had any standing in the United States as money metals. As a certain number of grains of gold assumed an intrinsic value of a dollar when minted, so did a given number of grains of silver acquire the intrinsic value of a dollar. This being so, a fire test was inoperative against either gold or silver coins. The crucible only destroyed the impress of the die put upon it, whether it was gold or silver. Fire does not consume silver: melting it does not affect silver any more than it does gold. The mints being open for the coinage of all or any gold or silver bullion, a thousand silver dollars, if they had undergone the ordeal of fire, becoming a lump sum, of that value, by being taken to the mint, would be again melted and put into shape for mintage and by minting processes be recoined into one thousand dollars at a cost charged by the mint. Gold coins could have no better status than silver coins, both would stand the fire test. Their intrinsic values were not questioned. The law of the land and the stamp of the mint established, maintained, and protected their intrinsic qualities as money and metal. As I have said, the gold standard advocates are not anything if they are not disingenuous. "The New York State Bankers Association," in quoting Henri Cernuschi, in support of their contention take the chances of the general public being misled by assuming that Henri Cernuschi means to convey the idea that gold is the only metal money that will stand a fire test; "Fire test" is now on the lips of the Yokohama goldites; glibly do they talk of the "fire test," which goes to show that the "New York State Bankers Association" confidently expected that the public would gull themselves into believing that only gold money could retain its intrinsic value despite the crucible. Henri Cernuschi asserts that "it was by the ordeal of fire that money must be tried, and that the coins which, being melted down, retain the entire value for which they were a legal tender before they were melted down, were good money, while those which did not retain it were not good money." As it has been shown, the intrinsic value of coined money is a matter of legislation. The legal tender quality of money is determined

by legislation. The base of all intrinsic value gold and silver moneys possess is their legal tender qualities. Henri Cernuschi held that the coins, which being melted down, retain the entire value for which they were *legal tender* (observe the qualification, "legal tender") before they were melted down, were "good money." Under the law of the United States, which was abrogated by the coinage law of 1873, silver was accorded free coinage at the mints of the country at the ratio of 16 to 1—both gold and silver being declared legal tender money. If a Free Coinage Act is again passed, repairing the crime perpetrated in 1873 by the United States, silver will be again legislated into its former intrinsic value as coined money by being declared a legal tender, a thousand dollars (gold or silver dollars) can then be melted and the resultant bullion be recoined as often as a melting process is applied and recoinage is desired. The "New York State Bankers Association" tell us that there was in circulation in the United States and in the Treasury on July 1st, \$636,204,102, coined silver and treasury notes issued against silver bullion purchased, \$610,750,012 gold, and \$604,671,563 paper money. The California Bankers Association have made an earnest appeal to their fellow citizens in behalf of the gold standard—in which they say "The gold standard does not restrict us to the use of gold, our country like every other gold standard country, uses vast amounts of silver concurrently with gold." Just what the actual amount of silver coin there is in circulation in the United States is not stated, but it is sufficient to know that there is a "vast sum." The coins in circulation are used concurrently with gold, the dollar coins being legal tender, without limitation. By the closing of the mints to free carriage for silver, the United States and the other gold standard countries have deliberately, and with malice aforethought, legislated the money of the labouring man, the mechanic and the farmer, who are the principal users of silver money—"three vast amounts that are used concurrently with gold—into possessing an intrinsic value as coined money; but according to all these vast amounts only a commercial bullion value, provided the misfortune occurs that any of these legal tender coins are subjected to the action of fire. The legislation of the gold standard countries protects the holder of gold against loss by fire, his gold may be melted by a fire that destroys his house, but he can have it re-minted, suffering no loss; while the holder of silver, paid to him for his labour, if he has his few dollars melted by a conflagration that destroys his dwelling, finds his small store of silver dollars reduced to one-half their value, by the "fire test." This "fire test" argument should lead the people to demand the free coinage of the white metal, if no other reason existed. The holders and users of silver are the great majority of the people: they should demand and receive the same protection for their silver money that is accorded to the holders of gold. Wherein lies the equity of the government discriminating in favour of gold in case of an unavoidable application of the "fire test." If a thousand dollars of gold coins are subjected to the ordeal of a conflagration the owner of the recovered melted mass suffers no loss. If a thousand dollars of silver coins are subjected to the ordeal of a conflagration, the owner of the recovered mass find his thousand dollars have been reduced in value one-half. The free coinage of gold protects it from loss, while the closing of the mints to the free coinage of silver condemns it to a loss. Free coinage would deliver the possessor of silver from all anxiety from the fire test. The vast sums of silver that are used concurrently with gold are in the hands of the people—the common people, the working people, the people who have to earn their daily bread, the people who toil for the accumulators of gold. They should rise as one man and establish, through their representatives, free coinage for silver that their money shall stand the fire as gold is enabled to stand it, by reason of free coinage. When it is considered that the users of the "vast sums" of silver that are in constant daily use, concurrent with gold in the silver-standard countries, are compelled by the coinage laws to become their own insurers against loss by fire to the extent of one-half of their silver money accumulations, is it not a wonder that these laws are allowed to stand upon the statute books of the nations? Gold wealth sees to it that it is relieved from anxiety from fire. It is full time that the men who handle no other money but silver should see to it that their silver receives the same recognition. Free coinage for gold gives it its money value and insures it against fire. Free coinage for silver would do the same for silver. This fire test proposition may set many a man hitherto indifferent to the silver question, to thinking of what should be done to make the conditions uniform.

Yours,
H. Z. WHEELER.
Yokohama, August 27th, 1896.

THEOLOGICAL THINKING AND DIVINE DOCTRINE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The interesting and no doubt sufficiently correct sketch of present tendencies in theology, which appeared in the *Japan Mail* of Aug. 22, contains this statement in its closing paragraph: "Thus, in these transition times, there is not one whit of yielding in faith in the supreme revelation of God nor one particle of abatement in loyalty to the divine Son of God."

This sounds well to Christian ears, and it is evidently the correct thing for one occupying the place of a Christian teacher to say; but its sequence from the "thinking" that precedes it, to some people, not very plain. Moreover, clear as it seems at first glance, the meaning is not altogether apparent, for while the writer defines "supreme revelation" as meaning "Christianity"—see his paragraph headed "Revelation"—he does not tell us what "Christianity" is.

Taking the sentence, however, as it stands, the writer appears to prove, on the whole, the theological tendencies he describes, and at the same time to profess unyielding "faith in the supreme revelation of God" and thorough loyalty to Christ.

Not only so, but he goes on to remark that the faith now generally prevalent is "even more profound than in the past." Is not this a slip of the pen? Faith like that of those who in the beginning of this Gospel age esteemed the "reproach of Christ" as riches, and were "faithful unto death," may exist in many souls to-day—let us hope that it does; but the assertion just quoted is not quite easy to understand.

Perhaps Dr. DeForest will favour your readers with a few words under the following heads:—

1.—Let him either accept or amend the statement made above as to his own position.

2.—Let him quote in full from the *Scriptures* the authority in the "words which the Holy Ghost teacheth" (1 Cor., ii, 13)—in the "commandments of the Lord" (1 Cor., xiv, 37)—in the writings given in order that "the man of God may be complete, furnished completely unto every good work" (2 Tim., iii, 17)—for the following ways of "thinking" that appear in his article:—

a. That useful and genuine additions to what the *Scriptures* tell concerning God and man and God's purposes with regard to man, are to be looked for through advances in theology.

b. That it is right for a person believing in the Son of God, and believing the *Scriptures*, to speak or to think of "Christian consciousness" as a "source" of knowledge in the things of God.

c. That the new teaching about the "Consciousness of Christ" is such as God approves.

As these propositions (a, b, c) cover a part only of the article referred to, and as nothing but Divine authority for them is here asked for, it is hoped that the request will not be thought too troublesome for attention.

If it is not distinctly so stated in the article, the drift, at least, of this Theological thinking seems to imply that the world in general is now essentially better, as measured by God's holiness, than it was; that professing Christendom is spiritually stronger and healthier; and that true faith in God and in Christ is destined to acquire world-wide dominion—that "the victory is sure"—through the labours of men and the continued operation of tendencies now at work, without the personal return of Christ. As this paragraph contains at least three separate propositions, let us take the last one only, and add to a, b, and c.

d. That the true "faith once delivered to the saints" is destined to acquire world-wide dominion through the continued operation of tendencies now at work, and without the personal return of Christ.

It seems sufficiently plain that all of these questions are important. If, in dealing with matters that are confessedly super-human and mysterious, we assume such propositions as, for instance, a and d, without having unimpeachable authority by which to prove them, are we not assuming a great deal?

The answers here requested (i.e. those under 2) might consist of quotations from the *Scriptures*, with relatively not very much of comment, and with little or no reference to any other authority. Thus they would be simple, clear, not too long, and for present purposes conclusive.

If such replies should not be forthcoming, it seems fair to ask that Dr. DeForest will either (a) say that he does not join in this "theological thinking," at least as to the particular points that are here called into question; or (b) plainly admit that the *Scriptures* are, in his view, insufficient and therefore of uncertain authority for determining in every case what Christians—those who are "risen with Christ," who are "followers of God as dear children"—ought to receive and to teach as spiritual truth.

If, on the other hand, these replies should be fairly given, no one would be more gratified than, Yours, &c.,
INQUIRER.
August 26th, 1896.

H.B.M. COURT FOR JAPAN.

Before ARTHUR HYDE LAY, Esq., Acting-Assistant Judge.—THURSDAY, August 27th.

THE "SAIKYO MARU'S" LOST TREASURE.

Edwin Ryder, late second officer in the Nippon Yusen Kaisha service, was brought up on a warrant alleging that he had in his possession a portion of the contents of a box of treasure containing \$2,000, stolen from the mail-room of the steamer *Saikyo Maru* on July 15th, while the ship was in Yokohama harbour.

Mr. Geo. Kichler, Usher of the Court, deposed to arresting the accused on Wednesday evening, at about 5 o'clock in the Yoshiwara, Yokohama. Continuing, witness said—I went and searched the accused's effects at No. 40, in accordance with the terms of the warrant, and found a certain amount of money. In one portmanteau was quantity of loose 20 *sen* pieces, amounting to about \$30. This portmanteau was in the accused's room, No. 18. In a chest that was in the store-room, I found two belts with money sewn inside; two small cloth-bound packages, and one done up in paper, that would contain about \$10. These monies I brought to the Court, and there sealed. The chest in which I found the money belonged to Mr. Ryder on his own acknowledgement.

Mr. Tamio Hayashi, cautioned, then entered the box and deposed—I am the manager of the N.Y.K. in Yokohama, and am prosecutor in this case. I charge Mr. Ryder with having in his possession part of the money stolen from the mail-room of the steamer *Saikyo Maru*, on or about the 15th August. This money was in 20-*sen* pieces, of this year's make, and was shipped by the Osaka Mint and consigned to be Bank of Japan. There were 50 cases of 10 and 20 *sen* pieces to the amount of 100,000 *yen*. They were put on board the *Saikyo Maru* on the 13th inst., at Kobe. The ship arrived in Yokohama on the afternoon of the 14th August, and when the cases were discharged at noon next day, a shortage of one case, consisting of 20 *sen* pieces, to the amount of 2,000 *yen*, was found. The matter was reported to the police authorities, who proceeded to search for the missing case. Mr. Ryder left the ship at Kobe. He was on the ship at the time the theft was committed and was second officer of the *Saikyo Maru*. All the officers, from the Chief Officer, Second Officer, Purser, Second Purser, Freight Clerk, and Tallyman, were ordered to leave the ship in Yokohama, so that we could investigate the matter, as all had handled the treasure in shipping and unloading it. These men were not ordered to leave the ship on suspicion. Yesterday morning Mr. A. Rehberg, formerly the chief officer of the *Saikyo Maru*, called on me, and three bundles of 20 *sen* pieces, amounting to 30 *yen*, were shown to me. This money had been handed to him by accused the previous evening. That was the reason of my suspecting the accused of stealing the money. The money was done up in paper stamped "Osaka Mint, 20 *sen* pieces, coined June, 29th year *Meiji*." As Ryder could not leave the ship at Yokohama, he left in Kobe and came up overland. Ryder had to attend to the stowing of cargo and other work such as second officers do.

H. W. Rehberg, formerly chief officer of the *Saikyo Maru*, sworn, deposed—I was told the night before last—about half-past ten o'clock—by Mr. Ryder, that he had a third of the money that had been lost on the *Saikyo Maru*, on the 15th August. I asked him where he had obtained it, and he said—"From the freight-clerk that is left in the *Saikyo Maru* now." I don't know this man's name; he is a Japanese. This conversation took place in Whaley's Hotel. I asked him to let me see the money, and he took me to Wright's Hotel, where he said the money was locked up in the store-room. He asked Mr. Wright to take him to the store-room, and came back again with two parcels, one in each hand. He gave me three rolls of money. After I obtained it, Mr. Hunter, a Chief Officer in the N.Y.K., happened to come into the bar-room of the hotel, and I told him about the affair, and asked his advice in the matter. We concluded to wait until next morning and see Capt. Forbes. At six o'clock, I went to Mr. Hunter's room in the Hotel, and Mr. Bagnall, another Chief Officer in the N.Y.K., came into the room at the same time. I told him the story, and then Bagnall and myself went up to Captain Forbes' house on the Bluff, and informed him of the matter. Captain Forbes told me to come down between 9 and 10 o'clock to the N.Y.K. office. When I arrived there Capt.

Forbes took me to the Manager's room, and I produced the three rolls of money that I had received from Ryder, and left the money there. Then Capt. Forbes and Mr. Hayashi told me I could go home, as the matter was now in their hands. I was on board the *Saikyo Maru* at the time the robbery was committed. The money was stored amidships in the mail room. The keys of the place were kept in my room, and I was responsible for them in a certain way; others had access to them. Sometimes the Purser would come and take them for the purpose of putting mail in. I did not see the treasure put into the mail-room. It was Japanese treasure, shipped on a Japanese shipping order and Japanese cargo shipped on a Japanese shipping order on a local line of steamers always goes through the Purser and the Freight Clerk. I do not know if these men had duplicate keys of the room. There were no duplicate keys to my knowledge. The second officer could have access to the room, because he had sometimes to put parcels there. If he asked for the keys I would give them to him. It was not till we were under way from Kobe that I learnt that we had treasure on board. I don't remember Mr. Ryder asking for the keys after we left Kobe. The keys hung in my bunk on a board made for the purpose, anybody could get at them. The room was approached through No. 3 hatch, and persons around could see anyone going there. I remember that on the Friday night (14th) when we arrived in port, Mr. Ryder went ashore twice, first along with Mr. Dawson, third engineer. He came back again about 9 o'clock. I was lying in a long chair when he returned. He went to his room, and then returned to the shore again. I did not see him carry anything ashore, but he had a gun when he came back the first time.

Mr. W. N. Wright, sworn, deposed—The night before last, about 10.30, I was called up from the lower billiard room by one of my boys, who said there was trouble in the bar between some N.Y.K. officers. I went upstairs and tried to quiet them. I could not understand what the trouble was about, as they would not tell me, except that it was something very serious. The officers were, Mr. Hunter, Mr. Ryder, and Mr. Rehberg. Next morning Mr. Rehberg told me the cause of the trouble. He said Mr. Ryder had stolen him money, and that it was part of the stolen money from the *Saikyo Maru*. The evening before this took place, Ryder asked to go to his box in the baggage room. I took him upstairs, remarking that it was rather late to go to the baggage room. He opened his box—a Chinese made article—and took two parcels out, one small and one a little bigger. I asked him if this was the box that he had told me that he had sold to two Europeans. The night before, two Europeans—rough-looking characters, and one the worse for liquor—came with a chit signed by Mr. Ryder asking that I should deliver up his boxes to bearers. I refused to let them have the boxes as the men were so rough in appearance, while I also wrote on the back of the chit to Mr. Ryder saying that I could not give up the box and bag, as he had not yet settled his hotel bill. The night before last, when Mr. Ryder had taken the parcels out of the box, I saw him go out of the room and then I padlocked the door. Next morning I learnt that the parcels taken out of the box contained money. I had no suspicion of it at the time. The box had been in the baggage-room since the *Saikyo Maru* left two trips ago. On the 14th of this month, the day the ship arrived, Ryder came in and asked if he might go to his box that was in the baggage-room. I went upstairs and opened the room, took out the box and then locked the room again, telling Ryder that I would put the box back again after he had finished with it. He said that he had some baggage in Mr. Bagnall's room, and went up there, leaving the box in the passage-way. He came down from Mr. Bagnall's room and went straight to the box. The box was left in the passage all night, not being put back in the room till next morning.

William Henry Forbes, Marine Superintendent of the Nippon Yusen Kaisha, sworn, deposed—Yesterday morning, about 7 o'clock, Mr. Rehberg came to my house, and said that he had received some money the night before from Mr. Ryder, in Wright's Hotel. He produced three rolls of 20 sen pieces, and asked what he should do with them, adding that they had been stolen from the *Saikyo Maru*. I told him to take the money to the manager and explain it to him. He did not say how the money was stolen, but that a portion of it was in Ryder's possession. Rehberg came to my office about 9.30, and I took him to Mr. Hayashi, to whom he gave a similar explanation.

Kamaturo Waki, late Purser on the *Saikyo Maru*, cautioned, said—I took in 50 cases of silver coin at Kobe, on 13th August. When I dis-

charged these cases in Yokohama, I found one of them was stolen. Each case contained 2,000 yen, so that the whole amount was 100,000 yen. The covers of the cases stated the denominations of the coins inside. There were also a Freight Clerk and two tally-men engaged in shipping these cases. The treasure was put in the mail-room, No. 3 hatch. The Freight Clerk shut the door and gave the keys to the Chief Officer. The Freight Clerk is named Miyashida. I did not enter the strong room between the time the ship left Kobe and the time we arrived at Yokohama. To enter the room we have to obtain the keys from the Chief Officer. I saw no one enter the room between Kobe and Yokohama.

His Honour—Edwin Ryder, you are remanded for one week, under arrest, until Thursday the 4th of September.

REPORT ON THE FOREIGN TRADE OF JAPAN FOR THE YEAR 1895.

(CONCLUDED FROM LAST ISSUE.)

MANUFACTURING INDUSTRIES.

In 1883 there were, in the whole empire, 84 factories with machinery aggregating 1,383 steam and 365 water horse-power. In 1893 their number had increased to 1,163, the steam horse-power to 31,165, and the water to 4,142. In 1888 there were in all 24 Cotton Spinning factories with 113,856 spindles, producing in the year 13,143,099 lbs. of yarn, and consuming about 16,000 tons of coal. In 1893 the same figures were 40 factories, with 381,781 spindles, producing 88,000,885 lbs. of yarn, and consuming about 85,000 tons of coal; and in 1894, 47 factories, with 513,936 spindles, producing 99,630,600 lbs. of yarn, consuming 109,007 tons of coal, and giving employment to 8,444 male and 29,455 female operatives. At the close of 1895 there were 58 factories, with 883,474 spindles actually in work, and 6 newly-projected factories with 101,083 spindles not yet erected, but already enrolled in the United Guild of Spinners. There were also some other newly-projected factories not yet so enrolled, and the total number of spindles, either actually in work or in course of erection in Japan at the close of the year, approached 1,120,000, while the quantity of yarn produced during the year by 55 factories belonging to the guild exceeded 150,000,000 lb.

This industry has during the past year been conducted in Japan under extraordinarily favourable circumstances. Coal has been cheap, and notwithstanding a sharp rise in the price of labour towards the close of the year, the cost of the latter for the whole year was low. The price of raw material was also below the average, while, on the other hand, a greatly increasing demand produced a most substantial rise in the market price of yarns, the bale which in July was sold for \$81 fetching over \$93 in December. A table shows the aggregate profits realised by the principal companies during the last half of the year. The average profit per spindle in 29 principal factories amounted to \$3.56. The corresponding profit during the first half of the year was nearly \$3 per spindle, making in sterling for the whole year a profit of about 14s. 3d. per spindle. All the companies have declared large dividends. The Settsu and Hirano Companies, both in Osaka, which 34,944 and 26,880 spindles respectively, are paying 25 per cent. for the whole year; the Osaka Company, with 52,892 spindles, 20 per cent.; and the Tokyo Company, with 18,064 spindles, 15 per cent.; and few of the others lower than 10 per cent., all in addition adding considerable sums to their reserves.

In view of these results, it is only natural that such sanguine hopes should be entertained as to this industry. But it is more than doubtful whether such a high degree of prosperity can be maintained. Labour difficulties are already arising, and the rates of wages threaten to increase considerably, even on their present scale, which is higher than that which prevailed twelve months ago. Skilled labour has become so scarce that in several instances spindles are lying idle from want of operatives, and in one case police interference was found necessary to prevent one of the largest companies in Osaka enticing into its service the operatives trained by and in the employ of a rival company. The increased prosperity of the working classes in general has rendered them less desirous to bind their daughters to the factories, and a system of recruiting both of male and female operatives, has had to be instituted in the more remote country districts.

The growth of the Weaving Industry is only less remarkable than that of the spinning, through up to the present practically hand looms only are employed in the former. In 1883 the quantity of fabrics of every kind, silk and cotton, produced in

Japan was 25,067,496 yards. In 1893 it had increased to over 605,000,000 yards. In the first-mentioned year the export of either silk or cotton fabrics was practically non-existent. In 1895 it reached the value of \$19,386,632.

One other industry may be here referred to—that of matches. This appears to have originated in the prisons, and it was in operation in the gaol at Yokohama so early as the year 1873. The first record of any export appears in the Customs returns for the year 1878, when they were exported to a value of \$20,400. From the latter amount the value of the export has grown to \$4,672,811 in 1895, while the increase in the production in 1889 10,165,615 gross boxes, valued at \$1,840,259; 1892, 26,106,305 gross boxes, valued at \$4,956,196.

MISCELLANEOUS INDUSTRIES.—Besides yarns, textile fabrics, and matches, the only Japanese manufacture which may be said to have been assimilated from Europe, and were exported to a sufficient extent in 1895 to merit special mention are glassware and umbrellas. That of straw plaits competes, of course, with European productions, but it is carried on in Japan entirely according to the original Japanese methods, and owes nothing either to foreign instruction or machinery. Nor do the Customs returns detail, in their much more extended lists of exports, any large number of other imitations of foreign manufactures that find their way abroad in any quantity from Japan, and the majority appear as yet to be made only for consumption by her own people. One of the previous reports for the past year contained a list of these articles shown at the Domestic Industrial Exhibition held early in the year at Kioto.

Looking at the prices at which these exhibits were marked for sale, or even those at which they are actually retailed in considerable quantities in the principal thoroughfares of Tokyo, a superficial observer might well be pardoned for concluding that Japan must in time, and in no long time, become a formidable if not a successful competitor with Europe in the supply of miscellaneous goods throughout the world. And observers to whom the term superficial should not be hastily applied have not been backward in expressing opinions to that effect. An Australian statesman, who recently visited Japan with the special purpose of inquiring into her commercial and industrial prospects, did not hesitate to declare in conversation that England's day as a manufacturer for the Far East, if not even for Australia, was over, and that she must be prepared to give way all along the line to her rising rival. If English manufacturers are influenced by these statements to take too gloomy a view of the future, it would be easy to have their fears at once confirmed or set at rest. The Association of Chambers of Commerce could at no very great cost procure a complete set of samples of all foreign articles made and sold in Japan for exhibition in the principal manufacturing centres in England, and it would then soon be apparent to them whether greater cheapness in Japan is not obtained by a much greater sacrifice of quality. But pending the adoption of this step, if it is ever taken—at the risk of repeating what has been said before—it may be stated most unequivocally that at present cheapness and appearance are the sole recommendation of the vast majority of these articles. In cotton fabrics the Japanese people are most exacting on the question of durability. Their hand-woven productions for their own use are expected to and do last for years, and it may therefore be fairly supposed that Japanese spun cotton yarns are, at least, of as good quality as those of Bombay, which they have supplanted. But, even in cotton fabrics, quality is not always characteristic of their own make, and it is certainly not so in those which are admittedly imitations of England goods.

Cheap but shoddy Turkey-reds are now being made in Tokyo, and sold in country districts at a price which would scarcely pay for the original undyed cloth in Glasgow. There is, however, no durability in either their colour or material, people in the cities will not look twice at them, and it is only on rustics that they can be imposed. Their competition with the Scotch make is impossible, but unfortunately, at the same time, they indirectly exercise a deleterious effect on the import of the latter. People who have once tasted the sweetness of excessive cheapness are apt, forgetting how much they have paid for it in the sacrifice of quality, to look for it again and will be loth to revert to the higher price which they are obliged to pay for better articles.

Blankets, also made near Tokyo, are sold at 3s. each, in appearance, perhaps, just as good as the imported article, which cost double or treble that price, but they are shoddy throughout, and stand neither weight, pressure, nor damp.

Glass ware is coarse; lamps flimsy and unsafe; chimneys break when subjected to a far less degree of heat than imported ones can stand with entire

impunity; towels go to pieces with little friction after a very few washings; door mats do much the same after a few beatings; and a tooth brush quickly becomes a positive torture. A harmonium with fair tone can be brought in Tokyo for a few pounds. But the case is of unseasoned wood, which warps or splits on being subjected to very moderate alternations of heat and cold, and the keys are covered with paper in lieu of ivory. A solid leather portmanteau, equal in every sense in appearance to one which cost £5 5s. in London, can be obtained in Tokyo for less than half that amount. The latter will, however, last a lifetime; one voyage to England and back will finish the career of the former. Boots, perfectly fitting, entirely hand sewn, and in every sense equal in appearance to the result of the best workmanship of London West-end bootmakers, are made to order in Tokyo from 12s. to 15s. per pair, but again their wearing capacity is less than one-half. And while it may seem absurd, in view of the great export of Japanese matches, to say one word in their dispraise, it is impossible to say one in their favour beyond that their cheapness is such that no European could dream of emulating it. Not one-third of the contents of a box can, under the most favourable circumstances, be induced to flame at all, and the slightest draught at once extinguishes those which do flame. The least subjection to damp renders the whole box entirely useless, and the sulphur often, when struck and flaming, flying off the wood, becomes a source of positive danger. Though those of the best quality are retailed in Tokyo at one-fifth of the price that must be paid for imported English matches, none but the latter would be admitted into many foreign households in which stringent economy is a very necessary consideration. These remarks are made from practical tests of matches purchased from about twenty different firms, most of whom export largely; and retailed in Tokyo at an average price of 4d. per packet of 10 boxes.

RAILWAYS.

[The report then proceeds to deal with railways, but the subject has been so exhaustively treated in a report by Mr. Gerard Lowther, issued only a few days ago, that it would be only repetition to again give the same set of facts.—*Edt. L. & C. Kw.*]

THE SANYO RAILWAY COMPANY.—The Government has found a strong competitor in regard to the doubling of the existing Tokyo-Hyogo Railway, in the Sanyo Railway Company, which possesses a nominal capital of \$18,000,000, and owns the line now open between Hyogo and Hiroshima, and ultimately to be extended to Shimonoeki, a total distance of 307 miles. This company has offered to raise a further capital of \$100,000,000, to purchase from Government the existing line between Tokyo and Hyogo at its original cost, \$30,000,000, to lay a new line of 4 feet 8½ inches gauge beside the existing single line of 3 feet 6 inches gauge, to convert the latter, on the completion of the first throughout its entire length, into the wide gauge, to replace all 60 lb. rails now in use by 100 lb. rails to reconstruct all bridges, stations, rolling stock, &c., so as to adapt them to new conditions of traffic; the whole involving an estimated additional outlay of \$57,000,000, and to be completed within a period of five years. If this great scheme be ever carried to completion, it must exercise the very greatest influence upon the entire railway system throughout the Empire, and ultimately bring about the adoption of the broad gauge and the construction of double tracks on, at least all the great trunk lines, extending say from Aomori, in the extreme north, to Shimonoeki, in the extreme south-west of the main island. In fact, the Sanyo Railway had embodied in their proposal a further undertaking to convert their own present line also into the wide gauge subsequent to the completion of their undertaking in regard to the Tokyo-Hyogo line. The company obtained the strongest financial and popular support, but the application has been rejected by the Government, and the original proposal of the latter therefore still holds good. The attention of the country has, however, now been strongly directed to the advantages which are to be gained from a broad in preference to a narrow gauge, and it is considered not improbable that public opinion will ultimately bring such pressure upon the Government as to force it to adopt the former when doubling the Tokyo-Hyogo line, even if it does not succeed in procuring a reconsideration of the rejection of the Sanyo Railway Company's proposal.

MERCHANT SHIPPING.

In 1872 Japan possessed 96 merchant steamers of an aggregate tonnage of 23,364 tons. They were, without exception, vessels which had been condemned by their former foreign owners as unfit for further profitable use, were ill-managed and neglected, and never ventured beyond the coasts of Japan; and even their coasting voyages were so insignificant that their entries and clearance were

not deemed worthy of the slightest mention in the customs returns.

In 1895 Japan possessed 517 merchant steamers of an aggregate tonnage of 321,522 tons, and the principal shipping company, the Nippon Yusen Kaisha, or National Mail Steamship Company, alone possessed a fleet of 57 ocean-going steamers with a tonnage of 101,342 tons. The vessels of the latter company make frequent voyages to China, India, and Australia, and their lines will very shortly be extended to England and across the Pacific to the United States; their service is splendidly organised and managed, and the majority of their ships are in every way fit to rank with those of any nationality in the world. The further development of the Japanese mercantile marine is now being very actively promoted, and among the measures advocated as essential to the increase of her commerce few find greater favour or are more frequently discussed than the extension of the existing steam routes and the acquisition of a much larger share in the carrying trade to and from her own territories.

Very practical measures have been recently taken by the Government to encourage the shipping industry, and two measures submitted to the Diet during the current session (1) a Navigation Bill, and (2) a Shipbuilding Bill, have passed both Houses without a single voice being raised against either. Both are measures of great prospective importance.

The first provides that, under certain conditions as to right of requisition by Government, carriage of mails, training of apprentices, &c., a subsidy shall be given for the space of 5 years from the date of construction, to every iron steamship of over 700 tons burthen at the following rates:—25 *sen* (6½d.) per ton for every 1,000 miles run at a maximum speed of 10 knots; an addition of 10 per cent. to be made for each 500 tons increased displacement over 1,000 tons and up to 6,000 tons; and a further addition of 20 per cent. for each additional knot in speed up to 17 knots; after the lapse of 5 years a continuing annual reduction of 5 per cent. in these amounts to be made.

The second provides that a subsidy of \$12 (£1 6s.) per ton shall be granted to every Japanese subject building in Japan an iron or steel steamship of and over 700 but under 1,000 tons, and of \$20 (£2 3s. 4d.) per ton for one of and over 1,000 tons, with an additional \$5 for each unit of horse power. Both hull and engines must be built under the supervision of the Department of Communications, and no foreign material is to be employed unless specified by that Department.

Both these measures are to come into operation on Oct. 1, 1896, and are to continue in force for 15 years. To be enabled to take immediate advantage of the first, the National Mail Steamship Company already despatched, so far back as December, a commission to England to order six steamers, each of 6,000 tons capacity and steaming 17 knots, and it is intended to employ these steamers in a monthly passenger and cargo service between Yokohama and London, one steamer starting from each end every month. Four other routes are mentioned in the Japanese papers as having been selected by the Government as "special navigation routes," on which the National Mail Steamship Company are also to place steamers which will receive subsidies under the new law. These are to Australia and Bombay, between Japan and both of which there will be 12 round voyages annually; to Vladivostok, 18 round voyages annually; and Korsakoff, 8 round voyages annually. It is proposed to devote 30 steamers of an aggregate displacement of 50,000 tons to these four services, the first two of which will form a very serious element of competition with the British companies by whose steamers they are at present mainly conducted.

As to the second Bill, it is estimated that eight steamers which will be entitled to benefit by the subsidies will be annually constructed in Japan, and that the yearly amount, which the terms of the Bill will require to be provided, will be \$200,000 (£21,666). At present there is only one private dockyard in Japan of sufficient capacity for the construction of a steamer of over 1,000 tons displacement, and only one steamer of that size has as yet been built.

BUSINESS METHODS AND PROSPECTS.

The while import business of Japan may be said to divide itself very sharply into two distinct classes. The first is that in ordinary staples trade, raw cotton, cotton yarn, and piece-goods, woollen yarn and piece-goods, sugar, miscellaneous metals, clocks and watches, kerosene oil, drugs, both manufacturing and medicinal, dyes, provisions, clothing, wines, stationery, &c. The second is that in the supply of the requirements (a) of the Government, and (b) of the great railway, shipping, and manufacturing joint stock companies, vessels of war,

merchant steamers, war material of every kind, railway iron, metals, locomotives, machinery, &c.

Import business of the first class is in the hands of foreign merchants resident in Japan, and looking from the point of view of the interests of the manufacturer in England, it may most safely be left there. At both the great ports of Japan, Yokohama and Hyogo, there are large and eminently representative bodies of British merchants of the best class, including many men who have passed their whole adult lives in Japan, and to whose long experience are added the keenest business instincts. They maintain close connection with the Japanese middlemen, and both importer and middleman are, in their own interests, constantly on the watch for all possible openings, both for entirely new classes of goods which the changing tastes of the people at large may require, and for any prospect of an increased demand for those which are already in popular use. Whatever openings do occur are seized with the utmost promptitude, and the manufacturer in England or elsewhere, with whom orders are placed, dispose of his goods without a particle of pecuniary risk to himself, while he may at the same time feel assured that every bale of yarn or piece-goods and every pound of nail iron which the Japanese can be induced to purchase is already and will continue to be brought here. Competition has reduced all commissions and other business charges in Japan to a very low standard, and by no direct agency whatsoever, whether on the part of the English manufacturer in Japan or of the Japanese wholesale purchaser in England, can the ordinary staples of the general import business be placed in the hands of the ultimate Japanese retailer or consumer more cheaply than they are at the present day. Nor would even the forming of direct relations, say by post, between a manufacturer in England and a wholesale dealer in Japan, bring about such a result. The mass of Japanese traders have, as has been stated in previous reports, very low ideas of commercial morality. They repudiate a contract entailing even a small loss without a particle of compunction. No public opinion reproves them for so doing, and the English manufacturer, entirely ignorant of the standing of those with whom he might be dealing, and forced, if he dealt at all, to give at least some credit, would no doubt suffer at the hands of dishonest dealers losses which he must endeavour to recoup in some degree by higher charges to those who proved more faithful in their engagements.

Statements have appeared in London journals that an endeavour is being made following an example which has been set in France, to induce Chambers of Commerce in England to combine in sending out a joint commission of their members to investigate for themselves the conditions and prospects of business in the Far East. There are sixteen English importing firms members of the Yokohama Chamber, and fifteen of the Hyogo Chamber, and it is difficult to see what information in regard to general trade can be obtained by mercantile experts, entirely new to the country, coming here but for a short stay, with no experience or knowledge of the people, no capacity for appreciating or understanding their ever-varying tastes or requirements, which cannot be and is no doubt already obtained and communicated in full to England by experts, equally qualified in general experience and with the additional qualification of long and intimate knowledge of the country.

The gentlemen composing the proposed English commission will have no reason to regret their visit. They will see under the most favourable conditions what has always been to tourists one of the most fascinating countries in the world, and will be liberally fed; every opportunity will be afforded to them of observing and examining the principal industries in the country, and they will be charmed by the grace, courtesy, and attention of both officials and merchants with whom they are likely to be brought into direct relations. But to hope that any great improvement in the volume of English imports into Japan will be attained by their visit is at least rash. There is no royal road to success in trade in Japan. The Japanese dealer will continue, as he has done, to buy only what he can sell again to his own countrymen, and it is upon their tastes, means, and necessities that its future increase entirely depends. Fashion and requirements here change, and demand rises and falls, just as they do in other countries. The safe conduct and development of import business can only be ensured by attentively watching its course from day to day and month to month, and not even the foundations of any large general trade can be laid in any other way, no matter how able or earnest those attempting it may be.

The trade of Japan and its prospects, so far as British industries are concerned, have now reached a degree which might perhaps warrant some public

expenditure in regard to them. But the qualifications primarily necessary in an official, whose special and exclusive duty would be to deal with commercial matters and to furnish full information to manufacturers in England of all trade affairs and of the course of business, are knowledge of the language, experience of the people, and acquaintance with their most prominent commercial representatives.

The second class of import business above referred to is of an entirely different character to the first, and in it, it must be admitted, resident British merchants in Japan take very little share. In fact, of all the principal firms in Yokohama, two only are well-known to be seriously endeavouring to cultivate it, and of those in Hyogo only three, the remainder in both ports finding its risks and trouble so deterrent that they prefer to cater only for the general requirements of the people at large. It is, however, a most promising field, even when the fullest allowance is made for all its attendant difficulties, and its immediate possibilities should be most tempting to the British manufacturers of machinery, metals, and war material, perhaps also to the shipbuilder. In regard to the two latter items, it is not perhaps necessary now to say much. The principal English builders of vessels of war are already fully represented in Japan, and their direct agents are fully qualified to hold their own against those also on the spot from other countries.

SHIPS.—Merchant steamship builders are not so well represented, but so far nothing has been lost in consequence, as the Japanese know that the best, cheapest, and most speedily executed work can be obtained in England. Mention has already been made of the despatch of representatives of the National Steamship Company to England to place orders. Another large steamship company—the Osaka Shosen Kaisha—has decided to despatch representatives, who, it is said, will leave Japan about the middle of March, to England, to order three steamships, each of 2,000 tons, which will be employed on the Japan-Formosa trade.

GUNS, ARMOUR, AND MACHINERY.—English makers of projectiles, guns, armour-plates, shafting, engine forgings, steel castings, and tool steel are also now fully represented here by competent agents, and no further opening exists for makers who are not already in the field. But in regard to machinery and metals there is still plenty of room. Metal manufactures are required in railway industry. In all kinds of electric machinery there is also a fair prospect of a very extensive requirement on the part of Japanese during the next few years. Plans for the utilisation of the immense water power existing in the lakes at high elevations, in the very rapid rivers, and in the waterfalls that are so numerous throughout the whole Empire, are now claiming great attention on the part of Japanese engineers. During the past six years an aggregate amount of \$1,473,971 has been spent by the Japanese on the purchase of dynamo-electric machinery. Many of the components of the latter are made in Japan, but it would, at the same time, not be in the least degree surprising if the annual expenditure in Europe or the United States should very soon reach an amount equal to that of the whole aggregate during the past six years.

SUGAR MACHINERY.—The prospect of the occurrence of large demands for all kinds of machinery connected with the sugar industry has already been referred to in previous reports. The productive capacity of the Island of Formosa for sugar, already very large, will, when Japanese labour, capital, and science are devoted to it, no doubt admit of immense development; and apart from Japan's own requirements, which are steadily increasing, China, which in 1894, while Formosa was still part of her dominions, imported from foreign countries nearly \$15,000,000 worth of sugar, may always be relied upon to afford a market for whatever Japan can supply her with. The area of such part of the Island of Formosa as is capable of sugar cultivation is quite equal to that of the Sandwich Islands; and there more than £8,000,000 have, during the last twenty years, been permanently invested in machinery and railway plant solely for the service of the sugar plantations. The future of Formosa in this industry, with its great prospective market not separated from it by an ocean, but at its very doors, now promises as brilliantly as did that of the Sandwich Islands twenty years ago, and England can and should supply all machinery directly or indirectly necessary for its proper and successful cultivation.

Some of the liberal grants which have been voted during the current session of the Diet, and which are of interest to foreign manufacturers, have already been mentioned in previous sections of this report. As the Budget stands, it provides for an expenditure in, at the outside, 7 years, of nearly \$152,000,000 on railways, telegraphs and

telephone lines, iron foundry, and war material. Many other provisions are made in it, such as for the construction of lighthouses, Admiralty docks and arsenals, forts, workshops, chemical laboratories, &c., which need not be here specified, though all of them should influence to a greater or less extent imports from abroad.

Under the headings railways and factories, some indication has been already given in this report as to what the demands on the part of the public, as distinct from the Government, are likely to be. In addition to cotton-spinning factories and sugar refineries, public joint-stock companies are now in process of promotion or expansion for construction of docks, weaving, rope, paper, and silk-spinning factories, more than \$12,000,000 having, according to published statistics, been invested during the past year in commercial enterprises, apart from banks and railways.

EXPERTS.—How can they best take advantage of those opportunities? While few British firms in Japan lay themselves out for this business, there are still some who do, and there are several great Japanese firms in Tokyo of the very highest standing which almost exclusively concern themselves with it. It is working in association with these firms, whether British or Japanese, that British manufacturers can best hope to obtain extensive orders from either the Government or the great joint-stock companies. Should manufacturers in England send out their own purely commercial representatives to Japan they would find the hand of every merchant already resident here against them, but what English manufacturers can and most emphatically should do, what they have on previous occasions been repeatedly advised to do, is to keep on the spot experts in the principal classes of machinery whose technical knowledge is sufficient to enable them at any time to furnish merchants with the fullest specifications for all kinds of machinery that may be in demand from time to time. That is so will be evident from the methods in which this class of business is conducted in Japan, which is usually by tender.

The periods specified as those within which tenders will be received are usually limited to one fortnight from the date of publication of the notice inviting them, though in some special cases, where the requirements are of an exceptionally novel or intricate nature, they are extended to six weeks. It is here that the service and advice of qualified experts on the spot would be invaluable to the tendering merchants. At present, where the period allowed is only the usual fortnight, the latter is obliged to telegraph the full specifications to England at great expense and no inconsiderable risk of misunderstanding and to obtain prices in the same way. Even when the longer period is allowed and full specifications can be sent by post to England, prices must still be obtained only by telegraph. Most of this would be avoided if an expert in Japan could give the prices at once. By being present he might also be able to acquire a much more exact idea of what is required than can be gained by study of the formal specifications, and if attentive and watchful, he would also in many instances be able even to anticipate the issue of the public notices.

In the two respects of observance of time and adherence of mathematical strictness to the precise terms of the contract, all Japanese Government departments are exacting to the utmost degree. No excuses for delay are admitted, except strikes at the seat of manufacture and *force majeure*—in either case attested by incontrovertible evidence—and fines varying from one-fifth to one-tenth per cent. per diem are rigorously enforced for any delay in the execution of the contract. And as to adherence to the precise terms of the contracts, every clause of the latter is read by the Government examining experts in its most literal sense. No discretion is exercised by them in the interpretation of their instructions, and a standard of excellence and exactness is insisted upon such as is neither expected nor demanded in any other country of the world. The smallest deviation in measurement or quality the slightest injury, though it be such as could in no way possibly impair the efficiency of the article, though only detected by a very searching examination, is at once made the grounds either for a total rejection or for a substantial abatement on the contract price.

Strong illustrations have very recently been afforded of the excessive strictness of the examining experts on behalf of its purchasers in the case of a large import of cast-iron pipes, both from Belgium and Scotland, which is no taking place for the municipal waterworks for the city of Tokyo. Every individual pipe is carefully examined both inside and outside, and on the observance of the slightest surface hole, even though of no greater size than a large pin head, the pipe is at once marked as unfit for acceptance, unless at reduced

price. So searching is this examination that it is scarcely an exaggeration to say that the exactitude properly expected in a watch case is demanded in the surface of a large iron casting. "The result," said a suffering Japanese contractor, "of our long training in high art. We have been accustomed for 300 years past to absolute flawlessness in artistic works, and our young tyros, fresh from theoretical training in the University, with little or no practical experience, cannot be made to understand that the perfection naturally looked for in a work of art is impossible in mere utilitarian work." Each pipe is then weighed and measured, lengthwise, both internally and externally, its thickness tested at four places, and finally tested by hydraulic pressure. All this is proper and fair enough if the results were construed with any approach to reason. But the ultimate object of the pipes is entirely overlooked, and infinitesimal deviations from the strictest term of the specification, to which not a moment's consideration would be given by examiners with more practical experience, are at once fatal. Out of 2,500 tons of these pipes recently imported from Belgium, over 1,000 tons have been set apart either for entire rejection or for acceptance only at a reduction, and out of 600 tons from the most celebrated manufacturers in Scotland, imported by and at the risk of the principal Japanese importing merchant in Tokyo, over 150 tons have been similarly dealt with on grounds so trifling, considering the ultimate object of the pipes, as to be absolutely frivolous. In the face of the decision of the examiners, the importer is entirely without remedy or resource. Their terms must be accepted, and pipes finally rejected are left on the importer's hands, perhaps to be sold by him only as old iron. In another instance, 450 tons out of 700 tons of galvanised iron telegraph wire, imported from Germany, were rejected because they had become very slightly oxidised in places when on board ship, and in another again a further quantity of telegraph wire was rejected because its diameter was found to be 3-1,000th of an inch too large.

COMPARATIVE TABLE OF IMPORTS TO JAPAN—1895-94.

	1895.	1894.
Tons.	Tons.	
Cotton, raw.....	92,352	2,585,635
Cotton manu- factures	—	1,447,368

1894	11,301,342	
Increase	£3,323,583	

NOTE.—Sterling values in the above table have been converted from Japanese silver currency at the rate of 2s. 2d. to the \$1 for 1895, the rate of 1894 being 2s. 1½d.—London & China Express.

CONSULAR TRADE REPORT FOR NAGASAKI.

Mr. Quin, in his Report on the Trade and Navigation of Nagasaki for the year 1895, writes as follows:—

The foreign trade of Nagasaki for the year 1895

amounted to a total of £1,140,639, which is an increase over the year 1894 of £187,163, thus far carrying out the opinion expressed in last year's report that a permanent improvement in trade might be looked forward to.

The improvement is in both imports and exports, the former having increased by £101,788, and the latter by £85,381. The increase in imports, though general, is mainly due to heavier importations of metals, coals, kerosene oil, cotton, and the cost of three steamers sold; and in exports, to coals, flour, drugs, cotton, and tobacco.

COTTON MANUFACTURES show an increase of £3,221 over the import of 1894, but, as in former years, hardly deserve mention.

The trade in COTTON PIECE-GOODS between Nagasaki and Korea, which started during the war, and which promised to be a large and steady business, has almost entirely ceased shortly after the war finished, the trade reverting to the Chinese merchants, and Japanese are reported to hold very heavy stocks which they are unable to sell; in several cases these have been shipped back to Shanghai for re-sale at considerable loss to owners. It seems very doubtful if Japanese merchants will ever be able to do much in Korea, the native seemingly preferring to deal with their old friends the Chinese.

Owing to the death of the Queen of Korea, many orders which the Japanese merchants expected to do well in had to be cancelled, as white, the colour of mourning, is now the only colour that can be worn. Considerable indents had been placed for coloured cambrics, balzarines, &c., but these are also thrown back on the hands of the Japanese merchants, who have held them in bond for a long time. Doubtless, if the country became quiet an increased demand would take place.

METALS.—There has been a good demand through the year for steel and iron plates and bars, tin-plates, wire nails, pig-iron, wire-rope, bamboo steel, light steel rails, &c., and these articles continue to be imported direct from Europe, instead of from Shanghai and Osaka as formerly. Native dealers will now order well ahead and carry stocks, instead of depending on hand-to-mouth supplies. The import in 1895 amounted to £50,522, and in 1894 to £30,882, showing an increase for 1895 of £19,640.

SUGAR.—The trade in sugars for the year under review is rather in excess of that of the previous year, although prices ruled lower. White sugar opened at \$8.50 per picul (133½ lbs.) to \$8.60, and advanced steadily to \$9.15, which was touched in September. Yellow grades ranged from \$5.90 to \$7.30, and Manila brown from \$3.75 up to \$4.70. Owing to the high rates of exchange ruling between this port and Shanghai, very considerable quantities of sugar were imported from the latter place, which tended to keep prices below what they ought to have been.

The figures for white sugar in 1895 were 14,003,192 lbs., valued at £76,130, against 11,379,701 lbs. valued at £68,998 in 1894, being an increase of 2,623,491 lbs., and £7,132 in 1895. In brown sugars the import was 9,058,084 lbs., valued at £30,921, against 5,314,365 lbs., valued at £21,069, in 1894.

Imports of KEROSENE OIL are in excess of 1894, being about 470,000 cases, of 10 gallons each, of American oil in four sailing ships and two steamers, and 10,000 cases of Russian oil by steamer from Hongkong, in addition to about 1,116,000 gallons of bulk oil from Batoum in three tank steamers. Deliveries for consumption during the year amounted to 379,172 cases of American oil, and about 1,350,000 gallons of Russian oil, being about 12 per cent. more of the former, and 50 per cent. more of the latter than in 1894. These figures include a quantity of both kinds re-exported to Korea in bond, and do not therefore correspond with the figures in the tables.

The large increase of deliveries of Russian oil is partly due to the very short supply of American oil held here in the spring of 1895, as during April and May this market was almost bare of stocks and prices which had opened at the beginning of the year at \$1.92 per case of 10 gallons for American, and about \$1.83 for Russian, rose to \$2.75 for American, and \$2.68 for Russian. Fresh arrivals came in June and prices dropped immediately, quotations being at the lowest in October, \$2.26 per case for American, and \$2.2 to \$1.94 for Russian. Prices rose again at the end of the year, being \$2.55 for American, and \$2.40 for Russian. The reported breaking down of the railway and pipes at Batoum kept prices up for some time, but increasing supplies of American oil brought them back to their usual level.

The import of CARDIFF COAL for naval use has increased to a considerable extent. A few years ago the British Navy was the only one to use Cardiff coal in any quantity, but now it is largely used by the American, French, German, Japanese,

and Russian navies. Considerable shipments arrived from Singapore, Hongkong, and Shanghai, as well as from Cardiff direct, 54,779 tons, valued at £77,354, were imported, as against 27,765 tons, valued at £39,851 in 1894.

DYES and PAINTS were imported to a value of £11,280, an increase of £8,388 over that of the previous year. One item, cobalt, was imported to a value of about £3,500.

PROVISIONS, &c., were imported to a value of £13,503. This item is a considerable one in Nagasaki, owing to the constant presence of a number of foreign men-of-war which visit this harbour. It is very likely that a great many articles consumed do not appear in the customs returns, as they would come under the heading of "Goods in Bond," no customs duty being collected upon stores, &c., for the use of navies.

The import of RAW COTTON for 1895 shows an increase of over 2,500,000 lbs. compared with 1894, and the value was £169,782, as against £128,454 in the previous year. Cotton was imported in the following proportions:—

	1895. Lbs.	1894. Lbs.
China	9,897,733...	7,464,027
India	2,280,092...	1,954,872
America	360,708...	401,912

RICE.—There was a considerable falling-off in imported rice during 1895. Owing to the low prices ruling, and ample supplies of the Japanese article, 3,633 tons, valued at £21,465, were imported, as against 20,957 tons, valued at £103,304, in 1894.

The trade in OIL-CAKE, BONES, &c., was greatly interfered with by the war, as owing to the unsettled state of affairs in the vicinity of Tientsin and Newchwang it was almost impossible to get supplies down to the shipping ports. Moderate quantities came from Chefoo, Shanghai, and Vladivostok, but not sufficient for the requirements, consequently prices advanced considerably.

MACHINERY to the value of £28,928 was imported, comprising large orders from the local ironworks.

Three STEAMERS and two sailing vessels were sold during the year.

EXPORTS.

The export of RICE has decreased in the year 1895; 3,199 tons, valued at £23,431, were exported, in the previous year, 3,993 tons, valued at £28,544.

COALS.—During the year 1895 the export of coal from this port has increased by 50,101 tons, valued at £42,021, the total export being 374,862 tons, valued at £174,809. During several previous years the export of this article has undergone a steady decline.

The prospects of the coal mine at Takashima are improving, a fresh seam having been discovered. There is no fear, therefore, at present of it having to stop work. Further, the new shafts at Hashima (an outlying islet close to Takashima) have reached a good seam of coal at a depth of 525 feet, which enables the owners to look forward to good prospects in the future.

The total output for Takashima last year was—Large coal, 80,787 tons; small coal, 63,966 tons. Total, 144,753 tons; and the sales amounted to 166,078 tons, the difference being taken from accumulated stock.

The figures for the special ports during 1895 were as follows:—Shimonoseki, 390,419 tons; Moji, 376,871 tons; Karatsu, 74,550 tons; Kuchinotsu, 448,747 tons. Total, 1,290,587 tons, being an increase over the export of 1894 of 103,847 tons. The total value of the coals is put at £551,386, and the business during the year was considered fairly remunerative.

The export of FLOUR again shows an increase over the preceding year, but probably figures include much of the re-exported American flour, mentioned in the import tables. The total value exported amounted to £20,415, against £14,777, being an increase in favour of 1895 of £5,638 over the preceding year. The Nagasaki Roller Flour Mill Company exported largely, and most of the produce went to Vladivostok.

TOBACCO appears as an export for the first time for several years 1,589,874 lbs., valued at £12,756, were exported. The leaf was mostly of a low grade, and was not well cured.

RAW COTTON appears as an export to the value of £13,513. This was mostly Chinese cotton which had undergone some preparation, and was then re-exported to Korea and Vladivostok.

SHIPPING.

The total number of vessels entered in the port of Nagasaki amounted to 827, of 1,261,703 tons, an increase of 114 vessels and 233,896 tons.

The mail steamer lines calling here during 1895 were the Peninsular and Oriental, the Canadian

Pacific Railway Company's steamers, the Messageries Maritimes, the Nord-Deutscher Lloyd Company's steamers, the Pacific Mail Company, and the Occidental and Oriental Company's steamers. In addition to their fortnightly steamers, the Peninsular and Oriental Company have lately placed several cargo boats on the line, which run between England and Yokohama.

British shipping has increased in 1895 by 97 vessels and 194,708 tons. The only other noticeable increase among the foreign shipping is the Norwegian, which is very considerable, having increased from 34 vessels of 22,590 tons to 83 vessels of 67,333 tons.

There is a considerable falling off in Japanese shipping, but that, as was explained in last year's report, was due to the steamers being requisitioned by the Government on account of the war with China.

KUCHINOTSU.—The shipping for the port of Kuchinotsu, shows also an increase both in shipping and tonnage, of 29 vessels and 68,250 tons. Under the British flag there were 80 ships of 149,294 tons; the total of all nationalities being 181 vessels of 273,509 tons.

MOJI AND SHIMONOSEKI.—The returns for Moji and Shimonoseki for 1895 show a decrease of 22 in the number of vessels, but an increase in the total tonnage of 21,134 tons. Altogether 614 vessels entered, of 785,639 tons, of which 299 vessels of 552,082 tons were British.

The total shipping for the three ports in this consular district comes to 1,622 vessels of 2,320,851 tons, being an increase of 121 vessels and 323,251 tons in 1895. British shipping is represented by 722 vessels of 1,389,983 tons, the next in importance being Germany with 289 vessels of 247,251 tons, and Norwegian shipping with 172 vessels of 176,712 tons.

KARATSU.—Shipping entered in the port of Karatsu shows a total of 35 vessels with a tonnage of 47,265 tons, of these 19 were British of 34,575 tons, 8 German of 7,431 tons, 6 Spanish of 3,780 tons, 1 Norwegian, and 1 Russian.

LOCAL INDUSTRIES.

DOCKYARD SLIP AND ENGINE WORKS.—The report of last year gave a general idea of the progress of the works, and a full outline of the projected improvements and additions, since which the new machinery is being gradually fitted. The work on the second dock of 371 feet in length is being vigorously pushed forward, and it will be opened in November of this year, if not earlier, as the stone enfacement is rapidly progressing. The ship-yard section has in hand a vessel of 3,000 tons, which is already in frame, another of 1,800 tons is being got ready, and plates have been ordered for a third vessel of over 7,000 tons. In addition to the above, two pontoons are being built, one for the new dock here, and one for the Yokohama dock. All, or almost all, the materials for these undertakings come from Great Britain.

The supply of workmen is limited, but taking that into consideration, the shipbuilding interests of the port are being fairly well attended to, and go far to justify the remarks of the chairman of the Peninsular and Oriental Steamship Company and of the Mutual line of steamers, who were speaking in connection with the shipbuilders' strike in Belfast—viz., that vessels eventually could and would be built in Japan.

The works were very fully employed during 1895, as the following figures of ships docked or repaired will testify:—

	Tons.
Foreign war-vessels	82 ... 290,476
Foreign merchant vessels ...	80 ... 157,612
Japanese war vessels	89 ... 150,866
Japanese merchant vessels...	118 ... 210,651

COTTON SPINNING MILLS.—The working power of the spinning-mill at Milke, which up to last year had 10,000 spindles, was increased to 20,000 spindles during the latter half of the year. Work was continuous night and day throughout the year, and the capital of \$600,000 is to be raised to \$1,000,000. The cotton-mill outside Nagasaki, as in former years, has been repeatedly closed, and has done very little work.

During 1895 the ELECTRIC LIGHT COMPANY purchased more powerful machinery, and built new premises in the middle of the town. Their former site was too far off, and the lighting power was not strong enough.

PORCELAIN-WORKS which existed in the district of Sonogi, not far from Nagasaki, were closed during the war with China, but on the restoration of peace they were re-opened on a more extended scale, and a good business is done with China in the cheaper kinds of household pottery.

The extension of the Kiushiu Railway has not yet been commenced in the Nagasaki prefecture. Surveys were, however, made during 1895.

GENERAL REMARKS.

The improved condition of foreign trade at this port which began in 1894, has continued during 1895, and there is at present no sign of a relapse.

The return of a large number of Chinese since the restoration of peace, has also resuscitated Japanese trade, and the general result has been satisfactory. In 1895 the rice and other crops were better, owing to less drought, and prices having risen owing to the war, farmers realised a good profit. The fishing industry has also shown a marked improvement over the previous year.

Large sums have been expended on opening up new, and improving former roads, so as to make them available for wheeled traffic.

The reservoir at the Waterworks, only completed a few years ago, is apparently insufficient for the demand, as both in 1894 and again in 1895 the supply of water ran short, owing to a long drought, and for some months was partially and for several weeks was entirely cut off during the autumn.

In November last there was an orange exhibition held which has given an impetus to orange growers. Oranges to the value of nearly \$8,000 were exported, mostly to Vladivostok. Last year, also for the first time, some \$5,000 worth of persimmons were exported to the same place, with, it is said, favourable results.

CENSUS.—The population of Nagasaki on Dec. 31 last was 79,801, but as mentioned in former reports, only 39,974 registered as inhabitants.

A great impetus to Nagasaki trade is likely to be given by the favourable position this port holds in proximity to Formosa. Several Japanese steam lines are already started, and it is possible that the tea, camphor, and sugar of Formosa may soon all be sent here for transhipment, instead of to Amoy as formerly.—*London and China Express.*

HOW THE CREW OF THE "ILTIS" DIED.

The *N.-C. Daily News* says that *Der Ostasiatische Lloyd* publishes, from an official source, the following account of the loss of the *Ilitis* :—

The *Ilitis* left Cheloo at 4 a.m. on the 23rd of July, the barometer rising and the wind being E., of strength 2. The day before there had been a light E. wind and calm, and there was nothing to be feared from the appearance of the barometer, which was normal. The sky was cloudy, and there was slight rain. The *Ilitis* passed Weihaiwei, steaming and sailing, at noon, and at about 5 o'clock in the afternoon the northern point of the Shantung Promontory was rounded. Meanwhile, the wind had freshened and blew from the S.E. with nearly the strength of 7, so that storm-sails were set. From here the gun-boat took a course parallel to the coast, which was kept in sight. At 10 o'clock the watch off-duty were called on deck to assist in furling the sails, and they then went below. The ship laboured heavily, but not more than on former similar occasions. There were heavy rain squalls and the wind increased, but the engines worked well, and had given the ship an average speed of 7 knots an hour since leaving Cheloo. After the sails had been furled the ship went slow, and about half an hour later there was a severe shock. It was then found that the vessel was hard and fast on a rock. Owing to the darkness the closeness of the land had not been detected. She at once began to leak and the engine-room and stoke-hole were quickly flooded. All the members of the crew were aroused and took their stations. As far as could be ascertained, the ship had been carried by an extraordinary current to the N.W. upon a small rock which rose a little to the south of Flat Rocky Point, near the point of Sankao Bay, about 9 nautical miles north of the S.E. Promontory lighthouse. The heavy sea now threw the vessel against the sharp edges of the rock, and her plates were gradually stove in. The majority of the crew gathered aft, where Commander Lieutenant-Captain Braun, and the officer of the watch, Lieutenant Prasse, were standing on the bridge. Rockets were sent up in the hope of attracting assistance, but it soon became evident no human aid was possible. Heavy seas washed over the vessel which began to break up. At the moment of greatest danger the Captain gathered the doomed crew together and called upon them to give three cheers for the Emperor. In this way did the brave sailors take farewell of life, and showed their fidelity to the oath they had taken. The ship then broke in two, forward of the stoke-hole. The masts went overboard, breaking to pieces the officers' bridge and rails. Most of the men and officers were on the after part of the ship, and at this moment Gunner Raehm asked them to join in singing

the *Flagged*. The whole crew did so. The last verse of the hymn is :—

Und treibt des wilden Sturms Gewalt
Uns an ein Felsenriff,
Gleichviel in welcherlei Gestalt
Gefahr droht unserm Schiff;
Wir wanken und wir weichen nicht,
Wir thun nach Seemanns Brauch,
Getreu erfüll'n wir unsre Pflicht
Auch bis zum letzten Hauch,
Und rufen freudig sterbend aus,
Getreu bis in den Tod;
Der Kaiser und die Flagge hoch!
Die Flagge schwarz, weiss, roth!

Which may be freely translated :—

And should the might of wild, wild storms
On to a reef us drive,
And dangers menace—'t matters not
From where—our ship and life;
Our posts we never will desert
And sailor-like and true
Until the last breath goes from us
We will our duty do.
And, joyful dying then we shout
United true in death—
"The Kaiser and our standard Hoch!"
The flag black, white, and red!"

As the men sang, their voices were drowned in the howling of the storm. The after part of the ship then commenced to heel over, and finally carried everything into the depths. Only two men who had been on it managed to reach the shore. The forward portion turned on the side, with the keel towards the shore, and a few men were able to cling to it. Whilst an attempt was being made to construct a raft, the next day, one of the men was washed off, but he managed to reach the shore. The others remained on board for thirty-six hours without any food, when, the sea having abated, a Chinese boat came to their assistance and took them off. The inhabitants of the village, named Chuentao, behaved very kindly to the shipwrecked men, providing them with clothing and food. An English missionary, who happened to be there attended to those men who had been injured, and the keeper of the lighthouse at the S.E. Promontory, named Schilp, came and took back with him his distressed countrymen, at the same time despatching a courier overland to Cheloo with the news of the disaster. The intelligence reached Cheloo on the 28th and caused profound grief.

The *Arcona* and *Cormoran* at once departed for the scene of the wreck, and took the survivors on board. The mortal remains of those who lost their lives in the disaster have been buried close to the lighthouse on the S.E. Promontory. The following is a list of the saved :—

Boatswain's Mate Mostöhrer.
Boatswain's Yeoman Meyfarth.
Sick-bay attendant Olbrück.
Ship's Writer Westbuck.
First Class Seaman Priebe.
First Class Seaman Rabe.
First Class Seaman Kuhl.
First Class Seaman Voigt.
Seaman Haback.
Seaman Keil.
Seaman Zimmerling.
Fireman Langenberg.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, August 25.

South African advices announce that Mr. Cecil Rhodes has arranged terms of surrender with eight of the most important Matabele chiefs in the Matoppos Hills.

The Hon. C. Coventry, who was sentenced to five months imprisonment for the raid into the Transvaal, has been released, owing to ill-health.

General Gossler has been appointed Prussian Minister of War in room of General Broussart von Schellendorf resigned.

("SPECIAL" TELEGRAMS TO THE "JAPAN MAIL.")

Hakodate, August 22.

Her Majesty's ships *Grafton* and *Pique* arrived here yesterday, and H.I.J.M.S. *Musashi Kan* has left this for Nemuro.

Hakodate, August 24.

Her Majesty's ship *Humber* arrived here yesterday.

The German war-vessels *Kaiser*, *Irene*, and *Princess Wilhelm* arrived here yesterday.

Her Majesty's ships *Centurion*, *Grafton*, *Undaunted*, *Immortalité*, *Narcissus*, *Spartan*, *Pique*, *Rainbow*, *Eolus*, and *Alacrity* will leave here to-day for a northern cruise.

Hakodate, August 26.

Fire broke out at the western end of this town last night, and as a gale of wind was blowing at the time the flames rapidly involved street after street until between two and three thousand houses and their contents were entirely destroyed.

Her Majesty's ships *Humber* and *Pique* left this yesterday for Otaru.

Hakodate, August 27.

It has been ascertained that the destruction by yesterday's fire included 2,265 houses, the Chinese Consulate, four temples, and one theatre. Two men were burnt to death.

Kobe, August 27.

Mr. A. Brock, of Messrs. Popp & Co., shot himself to-day. Death took place at 10.30.

(Reuter's Service of Telegrams, supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, August 22.

Lord Russell of Killowen, Lord Chief Justice of England, addressing a meeting of the Law Congress now assembled at Saratoga, N.Y., warmly advocated arbitration of a large majority of international questions. The address of the Lord Chief Justice was undoubtedly prompted by a desire to promote amity between Great Britain and the United States.

(Tel. trans.)

London, August 24.

Reuter's Agency learns that Li Hung-chang has made Russia no concession. The ex-Viceroy has favoured the junction of railways between the Amur and Manchuria, but no convention has been signed and no port has been ceded to Russia. It has been further ascertained that Russia is favourable to a revision of the tariff in China, and that Germany awaits Great Britain's action thereon, whilst France awaits the opinion of her Minister at Peking.

The *Times* states that Lord Salisbury has informed Li Hung-chang that he favoured the principle of an increase of the tariff but must consult with the Chambers of Commerce at Shanghai and elsewhere before consenting.

London, August 26.

The Sultan of Zanzibar is dead. Said Kalid has proclaimed himself Sultan and has seized and barricaded the Palace, having with him seven hundred armed men. H.M.S.'s *Philomel*, *Thrush*, and *Sparrow* have landed men and are awaiting orders. Trouble is feared.

(FROM THE "N.-C. DAILY NEWS.")

London, Aug. 21.

The Porte has informed the various Embassies that unless the landing of Greek volunteers and munitions of war in Crete is stopped, the relations between Turkey and Greece will be severely strained.

The Athens papers state that Bashi-Bazouks in uniform have massacred sixty Christians, most of whom were women and children, at Kozani in Macedonia.

Pekin, August 21.

There is no truth in the report that Wu Ting-fang (Ng Choy) has been appointed Chinese Minister to the United States, etc.

(FROM THE "CHINA GAZETTE.")

Cheloo, August 17.

The Russians are now engaged in building on Fergusson's foreshore (the disputed piece of ground), and the British Consul threatens Fergusson's representative if he takes any steps to prevent this gross infringement on British rights.

(FROM THE "COURRIER D'HAI PHONG.")

Paris, July 30.

The Russian loan was covered twenty-five times in France.

An explosion has taken place at the Town Hall of Fuenkirchen in Hungary, in a store-room of explosives; there were several persons killed and a hundred wounded.

August 1.

It is well accredited that the Czar will come to France in September.

August 2.
Li Hung-chang has been to visit M. Faure, and then left for England.
Admiral Tyrtoff has been appointed Russian Minister of Marine.

August 3.
M. Faure has left Havre on a visit to Brittany.

August 4.
Prince d'Arenberg has been elected President of the Suez Canal Company.

The Tongking Commission has adjourned its meetings until October; only four subjects are left for examination.

M. Faure has arrived at St. Malo, and been heartily received.

M. Faure has arrived at Brest with the squadron, and has been heartily received.

Revolutionary troubles have broken out near Valentia, in Spain.

(FROM THE "COMERCIO.")

Madrid, August 7.
The German Emperor, William II., is suffering from a disease of the throat of the same character as that which proved fatal to his father, the Emperor Frederic.

(FROM JAPANESE PAPERS.)

Otsu, August 26.
H.I.H. Prince Komatsu has arrived at the Hakkei-kwan. T.I.H. Prince Yamashina, Princess-Dowager Arisugawa, and Princess Murakumo are expected to arrive shortly.

Kyoto, August 26.
Marquis Yamagata has made a second call upon Count Matsukata.

Akita, August 26.
Governor Hirayama has gone to Tokyo to report upon the conditions prevailing in the Prefectural Assembly.

Niigata, August 26.
At an extraordinary meeting of the Prefectural Assembly it was unanimously resolved to ask assistance of the Treasury towards providing funds to repair the damages occasioned by the late floods. It was also resolved that a committee should proceed to Tokyo with the plans and designs of the proposed restoration work, and submit them to the Home Minister. The Assembly also resolved that the land tax should be remitted on devastated lands, but as this was beyond the competence of the Assembly to decide the sitting was adjourned at the instance of the Secretary.

Kagoshima, August 26.
The *Tenryu Kan* arrived from Formosa yesterday.

Mayebashi, August 26.
Dysentery is increasing more and more. A strict quarantine cordon will be maintained from to-morrow.

Otsu, Aug. 27.
T.I.H. Prince Yamashina and Prince Murakumoni left for Kyoto last night by the 8 o'clock train. H.I.H. Prince Komatsu left here by the 6.47 a.m. train for Nagoya to-day.

Hiroshima, Aug. 27.
Governor Orita has gone up to Tokyo. Dysentery is spreading, and an epidemic hospital will be opened.

Bakan, Aug. 27.
The *Pamiat Azova*, the Russian cruiser, is reported to have grounded on a sunken rock near the entrance to Vladivostock.

Söul, Aug. 27.
More arrests have been made in the capital, the latest of importance being that of Gen Yöng-un.

Nagasaki, Aug. 27.
The French Consul for Tientsin left here by the French cruiser *Alger* to-day.

Kagawa, Ken, August 27.
The following is a report of the damage done in this Ken by the storm of the 18th inst.:—Houses entirely wrecked 1,198; embankments ruined (length) 57,218 yards; fatalities 71; boats wrecked 111; damage to arable land, 121 *cho*.

Tsu, August 27.
The national meeting of tea merchants will take place here on and from the 5th of Oct. Viscount Enomoto, the Minister of Agriculture and Commerce, and Mr. Maeya Masana are expected here.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday-season; it will reopen on Friday, the 2nd of Oct.

28—R takes Q
29—K to R 2
30—Resigns.

(a) 4..... R to K 5 is a better move. The pinning of White's Q Kt is no disadvantage to White in this opening.
(b) Loss of time. P to Q B 4 should be played in close games.
(c) Premature. The Kt has subsequently to retreat with loss of time.
(d) White boldly lays himself open to the attack which his opponent is preparing for him. The move is hazardous, but enlivens the game.
(e) We prefer 16..... Kt takes P, though even then White has a good enough game.
(f) If 22..... K takes P; 23—Kt to Q 4 ch., Kt takes Kt; 24—B takes Kt, and White's position would be very superior.
(g) 24..... Q to Q 4 was best. If 24..... Kt takes B or R; 25—Q takes Kt P.

CORRESPONDENCE CHESS.

Mr. G. B. Fraser, Dundee, has been compiling for private circulation a collection of fine games played by correspondence. The selection and annotation of the games has occupied much of his time for several years. We give two samples.

38—R to Q 6
39—Kt to Kt 5
40—R to Q 5 (h)
41—K P takes B
42—K takes R P

43—K to Kt 4
44—P to B 5
45—B to Q B 4
46—P to Q R 4
47—P to R 5
48—P to Q B 6
49—P to Q R 6
50—K takes Kt
51—P to Q R 7

(a) Black gets into trouble by addition of this somewhat bizarre defence.

(b) N to K K t is better worthy of consideration here.

(c) White's attack now seems irresistible.

(d) Threatening to win a piece by R takes K t followed by K K t takes P .

(e) Black instead of the text move could apparently take off K t with R and then capture Q P , trusting to his strong centre.

(f) The game is uncommonly lively at this juncture, and will well repay study.

(g) A capital prelude to what follows.

(h) Played with due deliberation. If captured, the united Pawns will carry the day. The whole of the ending is very fine.

STBINITZ GAMBIT.

BLACK.
T. G. Hart.
1-P to K 4
2-P takes P
3-Q to Q 5 ch.
4-P to R 4
5-B to Kt 5 ch.
6-Kt to Q R 3
7-Kt takes Q 3 (h)
8-Kt to Q 5 (c)
9-Kt to Q sq.
10-Kt takes QBP ch.
11-K takes R
12-P to K Kt 4
13-Kt to K 2

30-K to Q 2
31-K to K 3
32-K takes R
33-K to Q 3
34-P to Q R 3
King resigns (g).

(a) Nearly all the examples of this opening throughout the volume give rise to instructive and lively play.

(b) Black might, perhaps, more advantageously retreat Q to R 3, the reply to which would be K to Q sq.

(c) This does not turn out so well as it promises.

(d) Preserving the central Pawn, and unpinning the Kt K at same time.

(e) An excellent continuation, by which he rescues the imprisoned Kt at expense of a Pawn.

(f) Making the most of the compulsory sacrifice.

(g) The whole of this game has been conducted with considerable ingenuity and accuracy on both sides.

GAME No. 556.

BLACK.
 C. Schlechter.
 —P to K 3
 —Kt to K B 3
 —P to B 4
 —P to Q 4
 —Q to R 4 ch.
 —Kt to K 5

 —B to B 4
 —B takes P ch.
 —P to Q 5
 —K to K 2
 —P takes Kt
 —Kt to Q 2
 —Q takes Kt P
 —O to Q 4 ch.
 —B to K 6 ch.
 —Kt to B 7

(a) Herr English's opening—quite sound but as this game shows, it leaves a weak point at Q R 5 if the Kt P be abandoned.
(b) ♞-P to Q B 5 would have been infinitely preferable.
(c) ♞e4 and worse. White might have threatened immed. ately after this move.
(d) In vain hope to save the pawn.
(e) Nothing would have been gained by refusing the offer, for if ♞-Q to B 4, R to Q sq, threatening to win the Queen by Kt to R 4 ch.
(f) Black mates in three moves.

Mr. Steinitz recently, in New York, played

42—K to B sq.
43—K to Q sq.
44—R takes R P
45—K to K 2
46—R to R 2
47—P to B 4

(a) Up to and inclusive of Black's ninth move, this game, with a slight variation in the colors, is identical to the game in the 1957-58 season.

(b) Black's primary aim being clearly seen to be the attacking advance of the K P two squares at once instead of one, the efforts of the White allies are directed to baffle that object. The text move is more restrictive than 3—Kt to Q B 3, which might, after Q P takes P, admit of the advance to the fourth square.

(d) 4....., Q takes P; 5—Kt to R 3, Q to K R 4, followed by

(e) Doubtless more advantageous than the follows: 5—K takes Kt, B takes B P; 6—Kt to B 3, Kt to B 3; P to B 3, P to K 3; 8—P to K 4, Q to Q a.

(f) Playing the Pawn two squares would now only leave it in the way, or else, by exchanging it off, give White still a better centre.

(k) The Lasker-Tschigorin game diverges here as follows: 10—R to Kt sq., Q to K R 4; 11—Q to Kt 3, Kt to Q sq.; 12—Q to Kt 5 ch. The move of the present game is seemingly an improvement, leading to the occupation of Q Kt file with the Rook. In any case, White's game with

(h) This must evidently force a weakness in the enemy's ram. parts, as it would never do to allow the K to cross over to K Kt s.

(k) They afterward lose this Pawn at an awkward moment. The move, however, is not a careless one; the design seeming

(1) As indicated above, $\text{Kt} \rightarrow \text{Q} 4$ to $\text{B} \text{sq}$ would be met by $\text{P} \rightarrow \text{Q} 4$.

Kt 4. White is quite willing to exchange the doubled BP for K P f7..... Kt takes K B P; 18-B takes Kt, Q takes B; 19-B takes P ch, K to R sq; 20-B to Q 5, Kt to K 2; 21-B to Kt 2 and should win).

(n) Playing with good analysis and confidence. White now wins a Pawn prettily enough.

REPORTS.

The British steamer *Belgie*, Captain Rinder, reports:—Left San Francisco the 8th August and Honolulu the 15th. Arrived at Yokohama the 27th August at 2.52 p.m. Passage from San Francisco, 18 days, 4 hours, 4 minutes; from Honolulu, 11 days and 45 minutes.

The Japanese steamer *Yokohama Maru*, Captain Swain, reports:—Left Shanghai the 22nd August at 10.30 a.m.; had light to moderate south-easterly winds and fine, clear weather up to arrival at Nagasaki the 24th at 1.50 a.m., after half-hour's delay at Quarantine Station. Left Nagasaki the same day at 5.10 p.m.; had fresh to moderate N.W. and N.E. winds and continued clear weather up to arrival at Moji the 25th at 5.30 a.m. Left Moji at 11.40 a.m.; had light variable airs and calms with clear weather though whole of Inland sea. After 20 minutes' delay at Wada-misaki Quarantine Station, arrived at Kobe the 26th at

7 a.m. Left Kobe the 27th at 12 to 3 p.m.; had light south-westerly winds and clear weather; on passing Oshima at 8.10 p.m., experienced very strong south-easterly swell, which continued until approaching Omiasaki with wind veering to north-westward accompanied with clear weather; passed Rock Island the 28th at 9.35 a.m.; thence to arrival at Yokohama at 3.20 p.m., after the usual Quarantine delay, had moderate to light north-easterly winds and fine, clear weather. Saw nothing of importance during the passage.

LATEST COMMERCIAL.

IMPORTS.

There is a better tone in the market, but not much business done as yet. Buyers are on the *qui vive*, but holders are wary, higher prices at home and a low exchange here being the causes which produce these effects.

COTTON PIECE GOODS.

EXPORTS.

RAW SILK.

More doing at quotations, but yet the trade is anything but large. Most of the purchases made are for Europe, the New York market remaining demoralised. Latest news from Shanghai reports current market there, the Chinese merchants selling freely at old rates, and not strangling their market by absurd pretensions. Stock here is over 13,000 piculs, and arrivals plentiful.

BISSET & URE'S SHARE REPORT.

Yokohama, August 26th.
Hongkong wires the following quotations:—
Hongkong Banks 185 per cent. Sellers; Hongkong Lands \$75 Sales; China Fires \$95 Sellers; H. & W. Docks 183 per cent. premium ex dividend Buyers; H. & K. Wharfs \$55.50 Sellers; Douglas \$66.50 Buyers; H. C. & M. Steamboats \$35

Sales; Panjom Mines \$15 Sales; Raub Mines \$5.40 Steady; Balmoral Mines \$2.50 Sellers; National Banks \$28 Sellers; Indo-Chinas \$53 Sales; Straits \$27 Sellers; Unions \$232.50 Sellers, and China Traders \$80.50 Sales.

Brett & Co. Shares have changed hands to-day at \$7.50 and \$7.75. We quote these at \$7.75 Steady. Grand Hotels and Club Hotels continue on offer at \$170 and \$75 respectively. Iron Works can be had at \$105 and Oriental Hotels at \$140. Club Hotel and Japan Brewery debentures are wanted at \$110.

August 27th.

Telegraphic advices from Hongkong report that the market for stocks generally is somewhat excited, and that rates are rising and falling as shares are being wanted or offering. Indo-Chinas and H. & K. Wharfs have both suffered a decline, the former being quoted at \$40, at which rate shares were secured for local investors and the latter at \$54. Wharfs, however, have buyers at \$53.50.

No change in local stocks. Japan Breweries are enquired for. Club Hotel and Brewery Debentures are wanted at \$110.

EXCHANGE.

Fluctuations have been the principal feature in exchange rates during the week, but these have not been of a violent character.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tribu-
taries in Abyssinia," says—"I ordered the druggist to
inform the Fakir that I was a Doctor, and I had the best
medicines at the service of the sick, with advice gratis. In a
short time I had many applicants, to whom I served out a
quantity of Holloway's Pills. These are most useful to an ex-
plorer, as, possessing unmistakable purgative properties, they
create an undeniable effect upon the patient, which satisfies
them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is certain remedy for bad legs, bad breasts, and ulcerations
of all kinds. It acts miraculously in healing ulcerations, curing
skin diseases, and in arresting and subduing all inflammations.
Mr. J. T. COOPER, in his account of his extraordinary travels
in China, published in 1891, says—"I had with me a quantity of
Holloway's Ointment. I gave some to the people, and nothing
could exceed their gratitude; and, in consequence, milk, fowls,
butter, and horse feed poured in upon us, until at last a tea-
spoonful of Ointment was worth a fowl and any quantity of peas,
and the demand became so great that I was obliged to lock up
the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout
World. May 1st, 1896.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 5TH, 1896.

BIRTH.

On Sunday, 30th August, at Nagasaki, the wife of Mr. W. K. WILSON, of a daughter.

SUMMARY OF NEWS.

SOME amusing water-sports were held in Yokohama on Thursday.

DYSENTERY is spreading in Mayebashi and many towns of central Japan.

THE United States has recognised the annexation of Madagascar by France.

COUNT MUTSU, on the advice of Dr. Baelz, will take a voyage to Singapore.

H.E. LI HUNG-CHANG has arrived at New York where he was given a splendid reception.

THE opening of the regularly monthly line of steamships between Japan and Australia by the

Nippon Yusen Kaisha will take place on the 3rd proximo by the departure hence of the *Yamashiro Maru*.

GENERAL SIR F. CARRINGTON reports that owing to their recent reverses the Matabele are inclining to peace.

DURING the storm of the 31st August several railway accidents occurred through trains being blown off the lines.

THE amount of unpaid taxes in Kyoto-fu during 1895 was yen 12,846,323, the number of delinquents being 354.

PRINCE LOBANOFF, Russian Minister of Foreign Affairs, died suddenly whilst returning to Kieff from Vienna with the Czar and Czarina.

LI HUNG CHANG decorated General Gordon's statue in Trafalgar Square and the cenotaph in St. Paul's Cathedral, London, each with a superb wreath.

THE railway bridge connecting Mombasa, East Africa, with the mainland has been opened, and the line progresses at the rate of a half a mile per day.

T.I.M. THE EMPEROR and Empress have graciously contributed yen 2,300 for the relief of sufferers by the conflagration in Hakodate on the 26th ult.

SHIPBUILDING Regulations have been compiled by the Department of Communications. They have been approved by the Cabinet and will shortly be promulgated.

THE exorbitant rise in house and ground rents in Osaka of late has caused much misery to indigent tenants. The increase in rents is some fifteen to twenty per cent.

THE Russian *Chargé d'Affaires* in Tokyo has written, under date the 28th ult., informing the War Office that Colonel N. de Yanjour has been appointed military *attaché* to the Legation in Tokyo.

THE Palace at Zanzibar has been bombarded and reduced to ruins, and Said Kalid has fled. Hamoud, a cousin of the late Sultan, has been placed on the throne.

A MR. WEBB, second engineer in the Nippon Yusen Kaisha service, committed suicide from Yokohama pier on the Saturday last during a fit of temporary insanity.

THE Russian Press condemns German attacks on Lord Salisbury for declining to blockade Crete, which would prove futile, unless applied equally against Turks and Christians.

THE amount of cotton yarn produced in the month of May was 1,747,294 *kwamme*; yarn sold amounted to 1,928,845 *kwamme*; the average price realised was yen 92.47 per bale.

Kobe and Hyogo suffered severely by the storm of Sunday last, the Minatogawa bursting its banks and flooding the town. Many women and children were drowned as they lay asleep.

A DESTRUCTIVE earthquake that occurred shortly after five o'clock on Monday afternoon has done a great deal of damage in Akita Prefecture, many places being ruined and several lives lost.

STORMS and floods have again devastated various parts of Japan this week. The Tokaido railway has been damaged in many parts, and for three days nearly all the telegraph lines to the south and west were down.

TWELVE banks in Tokyo and Yokohama have started a credit investigation agency similar to

institutions of the same kind in London. The business of the agency is to furnish information as to the financial position of intending clients to the various banks.

CAPTAIN MCEURN, R.N., for many years Capt.-Superintendent of Police in Shanghai, and formerly in the Colonial Service at Hongkong, died at the Royal Naval Hospital on Sunday last and was buried in Yokohama Cemetery on Monday evening.

In the village of Sugawara-mura Nasugori, Tochigi Prefecture, an extensive deposit of iron ore, extending over an area of 60,000,000 *tsubo*, has been discovered. The land has been rented to Mr. Okawachi of the Tadzuna Coal Mining Company.

ALL the Ministers of State, with the exception of Viscount Enomoto, sent in their resignations last Sunday, but only Marquis Ito's, Count Itagaki's, and Viscount Watanabe's were accepted. His Majesty asking the other Ministers to remain in office.

PRESIDENT CLEVELAND is sending several cruisers to Turkey. The Embassies at Constantinople are drafting a Note to the Porte pointing to the recent massacre of five thousand Armenians as being organized with the connivance of the authorities. The excitement is subsiding.

It is said that owing to the Hakodate fire the Tokyo Fire Insurance Company has had to pay yen 35,000 on policies, the Meiji Insurance Co., yen 10,890, the Meikyo Fire Insurance Company, yen 10,100, and the Central Fire Insurance Company, yen 8,450.

A BAND of Armenians, numbering about forty, have seized the Ottoman Bank at Constantinople, killing the guards. Simultaneously with the seizure of the Bank, rioting broke out in other quarters of the city, many persons being killed and the shops sacked. H.M.S. *Dryad* has left Therapia for the city and the French and Italian guardships are to follow.

THE Import trade is much about the same as last reported. Buyers of Yarns and Shirtings shy at the price demanded by holders, and consequently but little has been done. Fancy Cottons are well held, the principal business being in Turkey Reds and Victoria Lawns. In the Woollen trade fair quantities of Italian Cloth have been moved, and a small demand has been made for Blankets. The Metal market remains dull, and what business has been put through was retail in extent. The Sugar trade continues fairly brisk. A dash at Browns has been made, and better prices paid for Takao sorts, but the demand was soon satisfied. White sorts have improved in value, and Refined has been taken in large parcels at late rates. There has been business done in Silk, and buyers, with orders on hand, were prepared to go on, but, directly a demand showed up, holders clapped on the price, and that stopped further transactions. Stock continues to arrive, and the Silk on this market totals 14,000 piculs, while the export to date is 2,000 piculs against 15,000 last year. Holders may be right, but the 31st of December next will decide this point. Similar conditions exist in the Waste Silk trade, the business being insufficient to make trustworthy quotations. There is a moderate business in Tea, and prices are fairly firm. Third crop leaf is now expected, but the second crop was poor enough in quality to satisfy all requirements for the low grade article. From July 1st to date present export is 30,000 piculs behind that of last year. Exchange has remained without alteration, partly due to lack of communications in consequence of the wires being down.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

As might be expected, the attention of the press has been absorbed by the question of the Cabinet crisis. Leader after leader has appeared in almost every paper of importance, producing a sense of satiety. The numerous articles published by the vernacular press may for convenience be divided into three kinds, namely, those dealing with the causes that have brought about the present crisis, those referring to the pertinence or otherwise of the resignation of Marquis Ito and Count Itagaki, and those prognosticating the nature of the coming Cabinet.

The *Nichi Nichi* avers that the cause of Marquis Ito's resignation was due to a want of unanimity among his colleagues, with no immediate prospect of reconciliation, and that his resignation was attributable to various circumstances that operated from within and not from without. The *Nichi Nichi* is entirely opposed to those who hold that failure to successfully manage the diplomatic and financial affairs of the Empire is the trouble at the bottom of the present ministerial changes, and writes at length to prove that the Empire's diplomatic and financial affairs were being dealt with as they ought to be. In regard to diplomacy and finance, the Ito Cabinet may not improperly be considered as having far excelled any of its predecessors.

The *Tokyo Shimbun* is more outspoken on this point. "The Ito Cabinet," it says, "has undoubtedly been overthrown by the so-called statesmen of meritorious services. It is also a fact that the *Genkun* are the personification of clan principles. It follows, therefore, that the Cabinet has been overthrown by clan influence." Whether Counts Matsukata and Okuma, now almost universally supposed to be about to enter the new Cabinet, will satisfy a certain section of the public, is merely conjectural. But what the *Tokyo Shimbun* can not regard without deep regret is the probability that the last Cabinet, which had advanced a step towards the consummation of party Government, may be succeeded by one professing to ignore party influence. This would be a retrogression in the matter of constitutional government.

The *Mainichi* attributes the fall of the Ito Cabinet to failure in post-bellum measures, and declares that inability to successfully deal with the national finance in the sequel of the war and unpopularity incidental to sudden additions to the burdens of the people without attaining any success in the various post-bellum measures, are contributory causes. Loud voices were suddenly heard at this embarrassing juncture urging the Cabinet to admit Counts Matsukata and Okuma into its circle, and this afforded a good opportunity to Marquis Ito and Count Itagaki to escape from the difficult situation in which they found themselves.

The *Kokumin* observes that, though the present fall of Marquis Ito was in part due to a blow which the clique of Satsuma statesmen dealt to his Cabinet from within, the real causes should be sought in the general tendency of affairs in the Far East, the derangement of finance, the force of public opinion, and the necessity to have statesmen of real power and ability in the Cabinet. The Satsuma clique merely utilised these four causes to serve their purposes.

The *Nippon* gives what it considers a home-thrust to Marquis Ito in connection with his resignation. It criticises it as a womanish resignation. The question, it says, whether or not to admit Counts Matsukata and Okuma into the Cabinet lay in a nutshell. It was simply this: either admit Count Okuma or retain Count Itagaki; yet Marquis Ito had neither the courage nor the sense of responsibility to determine upon either course. Moreover, the question had no direct bearing upon great affairs of State. A resignation resulting from such a trivial cause

can not avoid being called womanish. Nor is this journal satisfied with the method of Marquis Ito's resignation. His leaving Tokyo while a new Cabinet had not yet been formed is considered by it an act entirely opposed to precedents observed in a constitutional country.

The *Chuo* says that the resignation of the ex-Premier was due to the want of stability of his Cabinet, while that defect was traceable to his want of resolute determination. The resignation of Count Itagaki and of Baron Ito is regarded in a different light by the *Nippon*, which observes that if, as it is generally believed, the Count and the Baron tendered their resignations in consequence of their opposition to the entry of Count Okuma having been overruled, their present proceedings are more or less rational.

The *Fiji* also speaks in favourable terms of the action of the Liberals and their leader, Count Itagaki, in connection with the present affair. After predicting that the time will come sooner or later when the Liberals will be enabled to direct the affairs of State and to carry out more satisfactorily their long-chenshed ideas and principles, the *Fiji* observes that the present failure of the Liberals was not their fault. They have simply stumbled in their eager advance on the route marked out by them. Viewed from the standpoint of the characteristic features of political parties, the present fall of the Liberals is rather a honourable fall, and one they need not be ashamed of.

As to the composition of the future Cabinet and the policy to be adopted by it, the *Kokumin* makes very copious observations. It hopes that all the other *Genkun*, with the exception of Counts Inouye, Matsukata, and Okuma, will retire from active political life with honour and glory. The trio retain their ambitious aspirations and possess capacity to contribute something to the welfare of the country. All other posts should be filled by new statesmen of acknowledged ability. At present the public are more inclined to repose credit in the real worth of men than in their prestige. Consequently a Cabinet composed of younger statesmen with more intrinsic ability will command greater confidence from the people.

The *Nippon* points to Korea and its ceaseless Cabinet changes and trouble, as an object lesson in organizing the future Cabinet of Japan. The cause of the notorious instability of the Korean Cabinet is too apparent to require elucidation. In a similar way there is a standing trouble for the Japanese Government, namely, the presence of senior statesmen, called *Genkun*. So long as room is left for non-political influence in Japan's politics, and so long as there remains a corner where the authority and power of the Constitution does not extend, it is futile to expect any great things from the Japanese Cabinet, though it may undergo changes ever so many times. The labour of a Hercules is needed to cleanse the Augean stable of Japanese politics.

The resignation of Marquis Ito and Count Itagaki, observes the *Mainichi*, must have been actuated by the desire to allow unrestrained freedom to their successors; therefore if Counts Matsukata and Okuma are to assume seats in the coming Cabinet, they must do so with a firm resolution to carry out their programme thoroughly. Moreover, what the succeeding Ministry must keep uppermost in their mind is the absolute necessity of cordial union among themselves. They must not be merely concerned to collect together the so-called statesmen of meritorious service. The time for that is past.

The *Nichi Nichi* also is desirous of seeing the coming Cabinet organized from among men holding similarity of views and policy; otherwise its stability will be defective. In this context, the same paper and the *Tokyo Shimbun*, especially the latter, entertain doubts whether

Counts Matsukata and Okuma can run in harness together. The avowal of Count Matsukata that he does not take into consideration political parties in directing the affairs of State, will come into collision with the views of the other, who is the acknowledged leader of the *Kaishin-to*. The *Tokyo Shimbun* strongly doubts where Count Matsukata can shake himself free from private considerations and previous connections, as he told the representative of the *Fiji* at Kyoto, and whether Count Okuma too, can succeed in effecting a radical change in the Japanese Cabinet. The ex-Finance Minister (Matsukata) seems to have forgotten that it is by the aid of the ladders of private consideration and previous connections—ladders furnished by Marquises Saigo and Oyama and Count Kuroda and Viscount Takashima—that he is now enjoying such an eminent position in Japanese politics. By "radical change" Count Okuma must mean the extinction of clannism and the establishment of responsible cabinets. If the Count really means to effect such changes, he is sure to quarrel with Count Matsukata, with whom his name is now always associated. The Count of Waseda must remember how the *Genkun* statesmen are still wielding powerful influence over the Government and how any change that comes over a Cabinet is generally the result of compromise among those statesmen. The fact must be still fresh in his memory, for it is through the instrumentality of the *Genkun* that the Ito Cabinet has been overthrown, which event has opened to him a path leading to the Cabinet. And yet he is audacious enough to declare that clannism and private considerations must be abolished.

The *Nichi Nichi*, commenting on the future, of the Liberals and the *Shimpo-to*, observes that, judging from the recent actions of the former they appear to have passed the stage of sanguine views and impracticable ideas, and may now be considered as approaching the stage of prudence and discretion. Consequently, though they have once more resumed their former position of opposition, they will not indulge in any irresponsible talk or obstructive action. Now, supposing that Count Okuma enters the Cabinet with the full support—though this is hardly possible—of the *Shimpo-to*, can they carry into practice the policy they have announced throughout the country? Nothing is more impossible. The result will be that the *Shimpo-to* will incur the odium of being a party without any sense of responsibility. The present resignation of Marquis Ito will therefore serve as an occasion to test the true worth of political parties. As to the question what attitude the Marquis will assume in future, the same paper says that the Marquis will never attack or obstruct the Cabinet. He will for a while lead a quiet life. When, however, any emergency of State creates a necessity for his reappearance upon the political stage, he will not hesitate, according to the belief of the *Nichi Nichi*, to resume public life.

EDITORIAL NOTES.

CLEARING UP A BURGLARY.

THE mystery that has so long enshrouded the burglary that took place at Messrs. Dodwell, Carill's office at No. 50, when the safe was broken into and \$1,000 abstracted, has at last been cleared up. From what we can gather from the police, a man named Eddey, who has since cleared out of Japan as a stowaway on the British ship *Henriette*, broke into the office and stole part of the contents of the safe. He had previously arranged with Allen—the man who was sentenced to two years' hard labour in the U.S. gaol, for breaking into Mr. A. H. Dare's house on the Bluff—that he (Allen) should get away with the "swag." To this Allen agreed, and on the night in question, having received the money, he took train for Tokyo. A Japanese pickpocket was in the same train, and, awaiting an opportunity, relieved Allen of his ill-gotten wealth. Allen then returned to Yokohama, and on arriving gave notice of the pocket-picking, and the police arrested the

culprit in Shidzuoka, with the thousand dollars still in his possession, so quickly had retribution followed on his steps. Meanwhile, Allen had come back to Yokohama, broken into Mr. Dare's house, been arrested, tried, and sentenced. The police were all this time endeavouring to find the man who had complained of the loss of \$1,000 on the Kobe train, but for a while their efforts met with baffling disappointment. But slowly the issues were narrowed, the man who broke into Messrs. Dodwell, Carlill's safe was traced up to the time he cleared out on the *Henriette*, while his companions were singled out one by one. Narrower and narrower became the trail, and at last Allen's complicity in the affair—as receiver, or “fence”—was beyond doubt. By a voluntary confession he cleared up matters on Friday, but no prosecution will follow, as he has two years' hard labour to serve, and will then have to remain in gaol for a further term, that is until he has paid the fine of \$200 that was a part of his sentence.

ELECTRIC TRAMWAY TO MIYANOSHITA.

THE promoters of the electric tramway to Miyanoshta are, we hear, meeting with considerable difficulty, as the labouring population thereabouts—the coolies, *jinrikisha*-pullers, and *kago*-bearers—see in the tram a menace to their already more than scanty income. Arrangements will, however, be concluded by which the road will be brought in order. It is now announced that work will be begun and completed before May of next year. The trolleys are to run from Kozu, following the older horse tramway, to Odawara and Yumoto: thence to Miyanoshta. As there could hardly be a more unpleasant road, in places, than that between Miyanoshta and Yumoto, the Company should make a success out of their undertaking. For two pullers, the charge to foreigners from Yumoto to Miyanoshta is now a minimum of one *yen*, or 50 *sen* per man. The promoters of the new road, however, are confident that a maximum of 25 *sen* for first-class fares will amply repay them, 10 *sen* being the lowest charge for third-class passengers. With the great amount of passenger-traffic between the two termini, it is quite possible that this idea is justified.

WINTER AND SPRING.

THE Japanese are not fond of overgreat disparity in the ages of newly-wedded couples. Ten to eleven years is the limit of decency, in popular opinion, and it is the groom who should be the elder of the two. A provincial contemporary, however, with a good deal of sarcastic humour, cites a recent instance where the husband was 63 and the wife barely 17—younger than her *fiancé's* youngest daughter. The bridegroom recently lost his first wife. The bride, O Kuni, described as being very attractive, was led to give a reluctant consent by means of golden argument.

MAJOR WAUGH.

THE *China Gazette* of August 28th, contains the following paragraph, that will be read with pleasure by many of our readers:—It may interest the Kobe and Yokohama papers, which have been writing touching obituary notices apropos of his supposed death, to learn that Major Waugh is alive and flourishing in Shanghai, and has no notion of giving occasion for the shedding of editorial tears over his lonely bier.

THE GALE AT KOBE.

KOBE suffered very severely from the gale of Sunday. The *Kobe Chronicle* says:—The town looks in a sorry condition this morning after yesterday's gale. The settlement is strewn with foliage, there being scarcely a single tree which has escaped injury. On the Hill some very fine trees have been blown down, as well as innumerable fences. Many of the Hill roads have the appearance of river basins, covered with a thick layer of sand, with erratic channels made by the torrent. Ikuta-maye is a good specimen of these roads. Houses have been flooded, drains have burst, and the foundations of many houses have been rendered very insecure. Last night about half-past ten, we are informed, the water was about eight inches deep in the vic-

nity of the Settlement Park. No sea had come over the Bund, as the wind was not blowing in that direction, the water covering the Settlement being rain water from the Hills. An old resident describes yesterday's rainfall as unprecedented. The most serious damage done in Kobe is in the vicinity of the Minatogawa. The river's banks burst this morning about three o'clock, a little north of Fukuwara, and a considerable area is still under water. Several houses were washed down and the people were naturally greatly alarmed as the torrent came upon them. Many people have been drowned and others injured. We learn also that houses have been either washed or blown down at Ono, and near the Waterfall Road. In the latter neighbourhood a match-factory suffered considerable damage, and a report states that one or two persons occupying continuous dwellings were killed by falling *débris* from the match factory.

THE DEVELOPMENT OF FORMOSA.

MR. HURST, the British Consul at Tainan, in Southern Formosa, concludes his latest Trade Report by saying that the Japanese are showing great energy in the development of the internal communications of the island, and during the five months that had passed at the date of the report in March, since they have landed left more marks of their presence on the face of the country than their predecessors effected in as many decades. One of their undertakings was the construction of a Decauville tramway of 20 in. gauge; they were prompted to make it, doubtless, by military considerations; and it has proved very useful for the purpose of forwarding supplies and war materials from the ports to the inland districts. One line of this miniature railway runs from Anping southward, *via* Tainan-fu to Takow, a distance of 35 miles; another runs from Tainan-fu north to Kagee, 50 miles distant, whilst a branch line connects Takow with the prefectural city of Hosan (Pithan), five miles distant. Surveys have been made for a line of rail between Takow and Anping. Scores of miles of good road have been constructed, so that the discomforts of travelling in Formosa bid fair soon to be things of the past.—*Times*.

NIKKO.

THE month of August has been a lovely one at Nikko, which has appeared truly “Kekko.” There have been only a very few really rainy days, of which one or two were Sundays; but all night on the 30th August there was a terrific wind and rain storm, which did some little damage. This was presumably the annual storm of the 20th day (O.C.) of the year. But, in the main, the weather has been delightful—if anything, a little too cool at times. The hotels have been full nearly all the time; but not so many houses have been rented to summer sojourners as in former years. The visitors, whether in hotels or in rented houses, have made the most of the pleasant weather for frequent excursions to beautiful scenes round about Nikko. The people of Nikko have felt especially delighted and honoured this year on account of the presence among them of H.I.H. Prince Haru, for whose entertainment in a suitable manner they made careful preparation in every way. The Crown Prince himself looks much better than when he came.

A STRANGE PROCEEDING.

A FASHIONABLE wedding took place at Singapore the other day at which a remarkable incident occurred, described by the *Straits Times* as follows:—The Governor, with Lady Mitchell, and accompanied by the Aide-de-Camp and Private Secretary, was among the guests present, occupying his usual seat well forward in the church, near the lectern. The service was fully choral, and the bride was received at the entrance to the Cathedral by the clergy and choir. Then, as the organ played “The Voice that breathed o'er Eden,” the procession advanced up the nave, preceded by the cross-bearer carrying the cross. As the cross came level with the Governor's seat, His Excellency started, seized his hat, and rushed out of the

church, resisting Lady Mitchell's efforts to detain him. He was followed by Captain Herbert, A.D.C. Having made his escape, the Governor drove away, and was not again seen at those wedding proceedings. One of the congregation (but, we fear, an irreverent person) says that the manner in which the Governor gazed at the cross, and then fled, recalled the effect produced upon Mr. Irving as *Mephistopheles* when the cross was exhibited on the stage. On Monday the Governor wrote to the Rev. W. H. Dunkerley explaining that there was no personal feeling in the matter, but that he had, individually, a strong objection to the use of the cross in such fashion. He had had an arrangement with Archdeacon Perham, by which he (the Governor) was informed when such ceremonies was to take place, so that he might have the opportunity to stay away. The letter was by no means a letter of apology for withdrawal, but simply an explanation to Mr. Dunkerley of the why and wherefore of His Excellency's leaving the church in such a manner.

THE “GAELIC” DAMAGES.

A VERY brief inspection of the hull of the O. & O. steamer *Gaelic* as she now lies in the dock at Tategami, says the Nagasaki paper, would conclusively show, even those with absolutely no knowledge of ship construction, that the damages done to the vessel are far more serious than previously reported. Upon the starboard side, from her bows to a spot under the stokehold the plates are more or less bent and damaged, while in several places they have been smashed in. Upon the port side there is little damage visible with the exception of a few started rivets and an ugly looking dent just beneath the boiler space. Roughly speaking, about 40 plates, 9 frames, and 3 bulkheads will require renewal or repairs, and it may be accepted as settled that the vessel will have to go to Hongkong for these to be executed, after being temporarily patched up here. Altogether, the damage extends from the vessel's bow for about 250 feet aft, and the huge indentations in the plates, on the starboard side especially bear witness to the splendid riveting work done by the builders, Messrs. Harland and Woolf. It appears that at the point at which the impact with the rocks was most severe a number of bags of coffee with heavy general cargo stowed on the top of them acted as a species of buffer, and took off a considerable amount of strain from the frames, otherwise the damage would have probably been much greater. When the vessel first struck, the main-stay, a heavy wire rope, was carried away. The reason for this was not apparent at the time, as the heel of the main-mast was not shifted in any way. It now appears probable that when the keel of the vessel near the boiler space was struck, the jar caused the mast to jerk violently and thus carry away the stay. Just as the *Gaelic* was going into the dock on Friday last she touched the ground towards the south side of the entrance. What caused this we do not know, but we understand that the ship was in the hands of the Captain at the time. Mr. Crowe, Dock-master, had just seen the *Kokura Maru* out and was going on board the *Gaelic* as she grounded. Of course she was soon off again, but had she stuck upon the sill of the dock the probability is that she would have broken her back. The repairs to be executed here are not expected to occupy more than a few days, or a week at most.

A WIFE'S DESPERATE ACT.

WHEN a Japanese reporter, or other journalistic scribe, gets hold of a good, sensational suicide, he is apt to make the most of it; to gloat over details, and impart a touch of pathos that is peculiarly Japanese. As an instance in point, we translate the following from a Tokyo contemporary. The suicide was committed on August 25th:—“Hisako was the wife of Tsuneya Seifuku, now in the employ of the Korean Government. Her husband went to Korea the year before last and was immediately engaged by the local Government. Hisako continued to live in their former dwelling in Azabu. But being young and having no children, she

found this solitary existence most distasteful, and so went to reside with her father, Mr. Tsuneyo Seiyō, the chief factor of Viscount Abe Seiko. In his official capacity the father is a very busy man, his time being taken up with visitors and his employer's business. Here Hisa-ko was of great assistance, waiting on the guests and fulfilling all sorts of domestic duties. But the news reached her of her husband's extravagant life in Seoul, his numerous amours and dissipated conduct. Instead of remitting to his wife, he spent his rather large income in purchasing mistresses and running after every pretty face he met. All memory of his sweet, forsaken wife seemed to have fled; he stayed beyond his time; and reports reached the sorrowing wife that her husband had declared he would never return to Japan. She did not credit all she heard, yet soon drooped into a settled melancholy. Her woman's heart was often startled by the dripping of the rain, as she sat alone in her vacant room at midnight; and she would tremble as a flock of wild geese, flitting across the autumn moon at dead of night, emitted their strangely mournful cry. Ever were her thoughts with the faithless husband, whose inconstancy gave her such bitter regret. This accelerated the progress of her disease, and, from the middle of July, she often wandered in her mind. Greatly anxious about her mental condition, her parents consulted several well-known physicians, but without success. How could they minister to a mind diseased? So her gloom deepened, which her disordered intellect grew daily more pitifully apparent. The end was not far off. At 3 a.m. of August 25th she suddenly awoke, while all the family slept. Creeping noisily through the house and out into the garden, she reached the well—and threw herself in without a word or cry. The next morning every one was disturbed on finding that Hisa-ko had not yet come down. They knocked at her door and searched everywhere for the lost lady. Finally some one suggested the well. A stout rope and hook were let down, and the body was soon discovered and brought up. The grief of the bereaved parents was terrible to behold. Every means of resuscitation was tried; but Hisa-ko's soul had gone to the Elysian fields long hours before. Ah, when the dead lady's husband reads these lines, what will be his grief!

A YOUTHFUL KLEPTOMANIAC.

THE recent performances of a youthful kleptomaniac—as recorded in the columns of the *Miyako Shimbun*—deserve mention as an instance of truly precocious depravity. Young Watanobu Shigeru, now in his thirteenth year, is the son of samurai parents, his father having been until last year, engaged in teaching in Miyagi Prefecture. On the death of his father, Shigeru came up to Tokyo and was taken into the house of a gentleman residing in Kojimachi District. Already while at home he had exhibited thievish propensities, and had often been scolded and argued with, but to no effect. After coming to the Capital, the habit grew on him, and he constantly stayed away from school, wandering through the streets and consorting with questionable youths. He robbed his benefactor and one of his street comrades, and then, having exhausted his funds, broke into one of the factories of the Kōbu Railway Company, where he made off with everything he could carry. This theft was promptly detected, and the culprit summoned before the court. His local guardian and benefactor promised to do what he could with the boy, yet with small hope of his becoming any better. On July 29th, Shigeru took 76 *sen* from his patron's purse, and with this sum went to Oji. Here he stole a workman's lunch-box. Taking the cars he went on to Mayebashi, where he entered a public bath-house and stole several minor sums. With the proceeds he visited a high-class restaurant, and there ate an excellent meal. Going on to Utsunomiya the next day, he soon spent all he had, and sold his clothes in order to beg in the streets. Many charitable people gave him help, and at last a timber-merchant took him to his home, promising him food and clothing. That same night the young rascal stole 2 *yen* from his kind

friend and went to Shiogama by rail, then on to Ishinomaki, his birthplace. On the night of the 8th August, he broke into the dwelling of a judge near his own house and stole 1 *yen* 80 *sen*. The next day, he went to the Ishinomaki Primary School, from which he had formerly graduated, and took 3 *yen* from a drawer in a teacher's desk. He was detected and taken to the police court, where, his other crimes being unknown, he was—in consideration of his age—let off after a severe reprimand and caution. His mother now heard of what had happened, and, in great grief, brought him back to Tokyo on August 14th, where she succeeded in getting his former patron to receive him once more. But the boy was irreclaimable, for the very next night he decamped with the sum of 4 *yen* 60 *sen*. It is now said that despite his extreme youth, he will be given a long term of imprisonment when captured. So far he has succeeded in eluding pursuit.

A PROFITABLE GHOST.

TOKYO has a real ghost at last; so a metropolitan contemporary informs us. For the last week or so the "fox-fire"—as the Japanese called the *ignis fatuus*—has been seen after night-fall on the Tatekawa bank of the Sumida, between Ichome and Nichome of Matsuchō, Honjo District. As the night wears on plaintive cries are heard, and finally, with a low moan, a ghost rises from the dim marge of the river. Rumour has it that this is the disembodied spirit of a lad recently in the employ of a neighbouring silversmith, the boy having fallen in the river and been drowned some time early in August. At all events, true or not, the story has awakened more than local interest, and crowds assemble nightly near the haunted spot, so that it looks as if some festival were going on in the vicinity. This fact, again, has been taken due advantage of by sellers of *tempura* and other edibles, who, by reason of the hunger which ghost-seeing always excites, often clear as much as 3 or 4 *yen* in a single night. These good people declare themselves perfectly happy if the ghost will only continue his, or its, manifestations for another month. Three police-constables have now taken the matter in hand and are endeavouring to trace the origin of the "ghosts," their hard constabulary sense rendering them incredulous of such superhuman displays. But, so far, nothing definite has been discovered, and the ghost walks nightly.

THE SEAL CATCH.

THE *Empress of India* which tied up at the outer wharf, Victoria, recently, had on board the entire catch of the Victoria sealing vessels landed during the season in Japan. The skins, totalling 18,019 are in transit to London, England. The following are the catches reported:—*Allie I. Alger*, 602; *Aurora*, 325; *Annie E. Paint*, 814; *Arletes*, 1,032; *Borealis*, 325; *C. G. Cox*, 1,222; *Director*, 871; *E. B. Marvin*, 836; *Elsie*, 663; *Fortuna*, 477; *F. M. Smith*, 602; *Geneva*, 499; *Ida Elia*, 651; *Mary Taylor*, 261; *Mermaid*, 940; *Otto*, 719; *Ocean Belle*, 561; *Pioneer*, 849; *Sadie Turpel*, 560; *Triumph*, 461; *Teresa*, 231; *Umbria*, 742; *Viva*, 607; *Vera*, 559; *Agnes McDonald*, kept skins on board, spoken June 2nd by *E. B. Marvin*, 430; *Mascot*, did not call at Hakodate, spoken June 12 by *Otto*, 250; *Katharine*, lost June 11 with 208 skins on board. Losses on the Victoria fleet were heavy, including loss of a hunter named N. Morrison and two boat pullers from the *Annie E. Paint* on the 19th; loss of a boat's crew of two men from the *Agnes McDonald* in May. The sealers are now heading for Behring Sea.—*The Province*.

COLLISIONS AT SHANGHAI.

THE steamer *Tientsin* in swinging before going alongside the China Navigation wharf at Pootung, Shanghai, on Thursday afternoon, August 27th, dragged her anchor and fell across the bows of the Siamese barque *Aurora*, carrying away the barque's bowsprit and severely damaging her bows. The *Aurora* made water at the rate of about six inches an hour, and her damages are expected to be over \$1,000, which the *Tientsin*'s owners have offered to pay.

On the evening of the same day a collision occurred off the Point between the *Whangpoo*, which was returning from Woosung with 95 passengers and the mails from the *Saghalien* and the *Samson*. The *Whangpoo*'s engines were going astern when the collision happened and neither vessel had much headway, or the result would, in all probability, have been much more serious. The *Samson* struck the *Whangpoo* on the port bow, breaking the guard, and driving a part of it through the plate. The *Samson* sustained almost similar damage. Considerable alarm was caused among the *Whangpoo*'s passengers, but fortunately no one was hurt.

ACCIDENT IN THE BROOKLYN NAVY YARD.

THE following appears in the *San Francisco Chronicle*:—By the breaking away of the caisson of the dry dock on the night of August 8th, one of the most destructive accidents which ever occurred at the Brooklyn Navy Yard was precipitated. The great gate of the dock was lifted from its place and sent whirling over a flood of water that was sweeping into the empty dock. The *Ericsson*, the swiftest and most powerful of torpedo boats, torn from its moorings, was drifting helplessly about, with its broken bow turned deep into the water. The Commandant's barge was already sunk beneath a lumber float; the water was literally a maelstrom of broken timber and bits of wreckage. Without the scene was one of expectant danger. The new monitor *Puritan* had broken three mooring chains in the tremendous suction of water, and was straining at the fourth. The newly commissioned monitor *Terror*, on the opposite side of the basin, had nearly broken away, and the *Atlanta*, in course of extensive repair, was struggling at her dock. The force of the waters was even felt by the *Raleigh*, 400 yards distant. High above the shouts of the officers and men was the terrible roar of the waters. It was like the rumble of an earthquake or the breaking of a dam. The *Ericsson* was badly damaged, and it will cost \$20,000 to put her in trim again.

THE STRIKE OF ENGLISH CRICKETERS.

THE following telegram appears in the Canadian papers relative to the recent strike of English professional cricketers, for higher pay:—London, August 8.—In sporting circles, and to certain degree among the general public, the conflict in the House of Lords almost sinks into insignificance beside the strike of the professional cricketers for higher pay for next Monday's match between the English and Australian players. Lohmann, Abel, Richardson, Gunn, and Hayward asked for £20 instead of the usual £10, and the Surrey Cricket Club, as organizers of the match, took the bull by the horns and engaged other professional players to replace the strikers. The public has been doubly excited by the hurt inflicted upon the national pride in haggling over a question of lucre in connection with the national sport.

DEATH OF MR. C. P. FALCK.

THE *Kobe Chronicle* reports that another of the early settlers in Japan passed away on Thursday in the person of Mr. C. P. Falck, who for the last twelve years or more had been a godown keeper in the employ of Messrs. Otto Reimers & Co. Mr. Falck, who was 57 years of age, had been in Japan about 35 years, residing first at Nagasaki. Latterly he had been suffering from serious lung trouble, and he expired on Thursday afternoon. His funeral took place in Kobe on Friday.

THE PRESIDENTIAL CANDIDATES.

THE American newspapers are now teeming with a thousand and one details of the lives, homes, attire, manners, disposition, and what not of the two rival Candidates for the Presidency of the United States. We find that the *St. Louis Post-Dispatch* has taken pains to give the exact height, weight, and measurements of the two Presidential candidates. These figures show that Mr. Bryan, who is regarded by many people as very boyish in appearance and size, is in reality a powerful man, larger and taller than Mr. McKinley. He exceeds the Republican candidate in everything except girth of waist, Mr. Bryan we are told wears a hat two sizes

larger than Mr. McKinley's, and when brought into comparison with the Major he is shown to be much more stalwart than the Ohioan. The figures are:—William J. Bryan: Height, 5 feet 10½ inches; weight, 200 pounds; chest, 44 inches; waist, 39 inches; hat, 7½; shoes, 9; glove, 8; collar, 17. William McKinley: Height, 5 feet 8½ inches; weight, 185 pounds; chest, 42½ inches; waist, 44 inches; hat, 7½; shoes, 7; glove, 8; collar, 16½.

NEW PRESIDENT OF THE NORTHERN PACIFIC.

MR. EDWIN W. WINTER, the new President of recently reorganized Northern Pacific Company, is one of the best-known railroad men in the United States. For sixteen years he was one of the leading officials of the Chicago, St. Paul, Minneapolis, and Omaha road, which is operated in connection with the Chicago and Northwestern. He went to it in 1879 to become general superintendent of what was then the Chicago, St. Paul, and Minneapolis. In 1881 he was made Assistant President of the road, which position he held until the close of 1885, when he was made general manager, the position he resigned to become President of the Northern Pacific. In 1888 he was made a director of the company, an office he resigned with the general management.

TROUBLE ON THE "J. B. WALKER."

ON Wednesday afternoon Patrick Coonan, boatswain of the ship *J. B. Walker*, went aboard his ship in an intoxicated condition and began to pick quarrels with the men. The Chief Officer after a time ordered the man to be put in irons, and while proceeding to do so another sailor made a rush at him. The Second Mate seeing the position of affairs, rushed up and knocked the sailor down with a belaying pin, inflicting a scalp wound on the fellow's head. Dr. Munro was then called in to patch up the wounded man, who next day appeared little the worse for the adventure.

GENDARMES.

THE new gendarmes are to be taken from the conscript soldiers whose term of service expires in the current year. The Authorities are contemplating the enrolment of 165 men from the Imperial Guards, 165 from the First Division, 160 from the Second, 112 from the Third, 160 from the Fourth, 109 from the Fifth, and 178 from the Sixth; 1,060 in all. The candidates for the gendarmerie may sent in their applications up till the last day of the present month, and they will be examined in the middle of September. These new recruits are not to be sent beyond sea, but are all to be distributed among several stations in Japan proper.

QUEEN WILHELMINA.

THE birthday of Queen Wilhelmina, of the Netherlands, was celebrated in Yokohama on Monday, a good deal of bunting flying from the houses of her subjects now living in this Far Eastern land. In the afternoon Mrs. H. Klengen presented the prizes given by the Dutch residents for competition among the yachts of the Y.S.C., to the winners, the owners of the *Eclair* and *Bonito*. In the evening the Dutch residents of the port sat down to a banquet together at the Club Hotel.

RENAMED SHIPS.

THE *Nagasaki Shipping List* says that the steamer *Bonington*, which has been purchased by Mr. Matsuy, has been renamed the *Kobe Maru*; the *Wing Hong* has been given the name of *Feiko Maru*; while the *Porro* is now known as the *Hatsune Maru* and is, we understand, to be used by the Mitsui Bishi Company for carrying bunker coal to ships.

ONE OF THE PIONEERS.

THE late Mrs. Mackrill Smith, whose death is recorded by the *Daily Press*, was a resident in Hongkong, Shanghai, and Japan for many years, and has often been heard to tell how, when Consul-General Balfour (afterwards Sir George Balfour) was marking off the streets in the foreign settlement at Shanghai, she urged him to abandon his idea of making them wide

enough only for two coolies carrying their burdens to pass each other, and to give width enough for carriages. Her husband was the founder of the *North China Herald*, in August, 1850, and previous to that, we believe, he had been connected with one of the early journalistic ventures in Hongkong. One of her daughters, Mrs. Arthur Anderson, is now resident in Hongkong.

MONTHLY CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for July, showing the foreign trade of the Empire for the month:—

	1895. SILVER YEN.	1896. SILVER YEN.
Exports	10,564,333.980	7,347,198.520
Imports	9,396,601.750	14,653,927.710
Total exports and imports	22,001,126.230	
Excess of imports		7,306,729.190

A NAVAL SPORTSMAN.

LIEUT. R. E. R. BENSON, of H.M.S. *Porpoise*, who during the visit of the ship at Sarawak, backed himself to walk a mile, run a mile, and ride a mile, inside twenty minutes, without preliminary training, brought the event off successfully on the 27th ult. The walking and running were done on the road inside the Kuching race course, and the riding on the course, Sulphide being the steed used. Time, 18 minutes 15 seconds.—*Free Press*.

OSAKA MONEY MARKET.

THE want of a sufficient quantity of subsidiary coins is keenly felt in Osaka. The Nippon Ginko,

says a correspondent of the *Yiji*, should see that an increased quantity of this kind of money is issued to the great commercial city. Transactions in shares and bonds are very brisk and carried on on a great scale just at present. There is a lack of notes of a higher value than one hundred yen. Osaka merchants are speaking of the desirability of the issue of notes of a face-value of one thousand yen. Money is now in great demand in Osaka, and rates of discount have risen to 3 sen 1 rin 5 mo per diem.

IMPORTS OF SILK TO THE UNITED STATES.

THE following were the imports of Raw Silk at New York and San Francisco during July, 1896:—

	Bls.	Lbs.	\$ Value.
New York	204	44,240	167,326
San Francisco	250	31,016	83,625
.....	454	75,256	250,951

Imports of Waste in the same period were:—

New York	102	32,000	15,806
----------------	-----	--------	--------

Imports of Japanese piece-goods and handkerchiefs from January 1st, to June 30th, 1896 were:—

Silk Piece Goods	98,124 pcs.
Silk Handkerchiefs	543,371 pcs.

ACCIDENT TO THE YOKOHAMA WATER-WORKS.

OWING to an accident to a tunnel on the system of the Yokohama Water-works, the town's supply through the mains was cut off on Wednesday from 8.30 a.m. to 5 p.m. It appears that the main pipe running through No. 3 tunnel in Miimura was damaged through the tunnel caving in. The repairs' staff at once proceeded to the spot and by dint of hard work restored the water service before evening.

THE SHOOTING CASE AT KOBE.

MR. A. BROCK, of Messrs. Popp and Co., No. 70 Settlement, Kobe, shot himself in his room on Thursday morning. No motive has been found for the rash act. He was a native of Hamburg, where his family are said to be wealthy, and was very popular in Kobe.

THE LEGION OF HONOUR.

A BILL has been introduced in the French Parliament with a view to restricting the number of Knights of the Legion of Honour. The maximum has been fixed at 12,000 knights, 2,000 officers, 300 commanders, and 50 grand commanders. Upon the death of a member of the order, a new appointment is to be made.

NAVAL APPOINTMENTS.

WE learn from a Hongkong exchange that Lieut. Frank C. Grover has been gazetted to H.M.S. *Pique*, and Lieut. Carlyon W. Bellairs to the *Tamar*, additional, for torpedo duties at Hongkong.

THE RECENT ECLIPSE.

ACCORDING to a London telegram that appears in the *Times of Ceylon*, the astronomical expeditions to Norway fared as badly as those sent to Japan, clouds obscuring the sky all day.

RESIGNATION OF MARQUIS ITO, COUNT ITAGAKI, AND BARON ITO.

The *Nichi Nichi* issued the following extra last evening:—The Cabinet meeting held at the residence of Marquis Ito, at Isarago, on Thursday, sat for 7 hours. The subjects of discussion were the proposed entry of Count Okuma and Matsukata into the Ministry rather than the filling of the vacant portfolios of Foreign Affairs and Finance, and the debate was singularly warm and interminable. In particular, Count Itagaki, as at the meeting held on the 17th inst., strongly opposed Count Okuma's entry into the Administration, and the Minister President seeing that his colleagues could come to no decision, declared his willingness to resign. Then the meeting became the reverse of peaceable. We now learn that the Premier on Friday personally asked H.M. the Emperor to relieve him of office. We further hear that Count Itagaki, the Home Minister, and Baron Ito, Chief Secretary of the Cabinet, have also sent in their resignations.

THE CABINET CRISIS.

Monday, August 31.

Viscount Enomoto, Minister of Agriculture and Commerce, is now the only Cabinet Minister in office, Marquis Oyama, Minister for War, Marquis Saionji, Minister of Education, and Viscount Yoshikawa, Minister of Justice, having tendered their resignations late in the evening of the 28th instant, while Marquis Saigo, Minister of the Navy, Viscount Takashima, Minister of the Department of Colonization, and Mr. Shirane, Minister of Communications, sent in theirs on the forenoon of Saturday. In the absence of a Premier, these Ministers entrusted their resignations to Marquis Tokudaiji, the Lord Chamberlain, for him to submit to the Emperor. The resignation of the last three Ministers was the result of a conference at Marquis Saigo's official residence on Saturday morning. As soon as Marquis Ito obtained an audience with the Emperor on Friday he tendered his resignation along with that of Count Itagaki. Count Hijikata, Minister of the Imperial Household, intended to recommend Count Kuroda, President of the Privy Council, to the approval of the Emperor for nomination as Premier *ad interim*, and the President was ready to temporarily assume the post. Count Hijikata therefore called on Marquis Saigo, the senior of the remaining Ministers, to ask him to countersign the document recommending the President of the Privy Council, for the approval of the Emperor, as Acting Premier. Marquis Saigo did not comply at once with the request of the Minister of the Household, but promised to give a definite answer next morning. The same day the Marquis sent an urgent message to his colleagues, requesting them to meet early next morning at his official residence. Marquises Oyama and Saionji and Viscount Yoshikawa declined to attend the meeting, as they had already tendered their resignation the previous evening. Viscounts Takashima, Enomoto, and Watanabe, and Mr. Shirane obeyed the summons and repaired to Sannencho at about 7 a.m. As soon as the nature of the meeting was known, Viscount Watanabe declared that as he had already tendered his resignation he ought not to take part in the proceedings, and therefore left the house. While the remaining four were conferring, Count Hijikata called on Marquis Saigo and asked for his promised reply. Marquis Saigo then told the Count that the affair being of grave importance he could not readily concur with the latter's proposal, and he then advised the Count to summon Marquis Yamagata and Counts Inouye and Matsukata, to settle the pressing question. For himself he had resolved to resign. This declaration was endorsed by Viscount Takashima and Mr. Shirane. Viscount Enomoto alone differed. He contended that such a wholesale resignation of the Cabinet would not only cause much inconvenience in the nomination of their successors, but that the countersignature of a Cabinet Minister was necessary in recommending a statesman to the approval of the Emperor for Ministerial nomination; the resignation of the whole Cabinet would also subject the Emperor to great anxiety. But the three Ministers remained firm.

The Ministers in tendering their resignations are not unanimous as to the reasons for the step. According to the *Nichi Nichi*, Marquis Ito declares that he resigns upon discovering his lack of ability, which has led to the policy of the Cabinet being marred by want of uniformity. Count Itagaki says that he resigns as a result of the Cabinet Council of the 27th inst. The other Ministers attribute ill-health as the reason for asking permission to be relieved of their portfolios. This allegation of ill-health is understood by the Tokyo papers to apply only to Marquis Oyama, who is suffering from an over-accumulation of adipose tissue. He expressed his desire some time ago to be relieved from the arduous labours incumbent on the post of Minister of War.

The *Asahi's* explanation in this context is worthy of notice. "Marquises Oyama and Saionji and Viscount Yoshikawa tendered their resignation with the sole idea of supporting

Marquis Ito. Marquis Saigo, Viscount Takashima, and Mr. Shirane, on the other hand, were dissatisfied with the measures that the Court wished to take in appointing an acting premier. They thought that the occasion required the immediate nomination of a Premier, but as the Court arranged to place the President of the Privy Council as temporary head of the Cabinet, they could not but tender their resignations."

Marquis Ito, upon his return from Court, left the official residence and removed to his private residence at Isarago. He went to Oiso by the 4.18 p.m. train on Saturday, taking with him some necessary effects and books. Count Itagaki, Viscount Watanabe, and Mr. Shirane have also removed to their private residences. The Court is now busy in summoning a meeting of the senior statesmen both in and out of the Government, messages being sent to Marquis Yamagata and Count Matsukata in Kyoto and Count Okuma in Hakone. They are expected to arrive in Tokyo to-day, although the *Nichi Nichi* says that the two statesmen in Kyoto asked for an extension of a few days. When they arrive in Tokyo, a council will be held in the presence of the Emperor, and among the statesmen who will attend, according to the *Yiji*, are Marquises Ito and Yamagata and Count Inouye (Choshu), and Marquises Oyama and Saigo and Counts Kuroda and Matsukata (Satsuma). Various conjectural Cabinets are sketched by the press. The *Yiji's* forecast is that the choice will be between Count Kuroda and Count Matsukata for the Premiership; that the portfolio of Foreign Affairs will be given to Count Okuma, while the other portfolios will probably be distributed as follows:—Home Office: Count Inouye, Marquis Saigo, or Viscount Shinagawa. War Office: A number of junior statesmen are well qualified to assume this portfolio, and the most prominent are Viscount Kawakami, Vice-Chief of the Central Staff; Viscount Katsura, Governor-General of Formosa; and Baron Kodama, Vice-Minister of War. There are besides, Marquis Saigo and Marshal Nozu, but the former is an Admiral, while the latter has not much experience in directing executive affairs. Viscount Takashima, Minister of the Colonization Department, may perhaps be given the post. Navy: Count Kabayama. Justice: Viscount Kawase, ex-Minister to England, has long been spoken of as a most suitable person for this office; there are also Count Ogi and Viscount Tanaka (Fujimaro) who are more or less connected with the Department. It is not improbable that Mr. Kojima Iken, ex-President of the Supreme Court, who distinguished himself in the Otsu affair, may be singled out to assume this portfolio. Department of Education: This may fall to Count Ogi, who filled it some years ago. Department of Agriculture and Commerce: Marquis Saigo may be appointed to this Department. Department of Communications: There are plenty of candidates for this post. Viscount Nomura, ex-Home Minister, Mr. Mayejima, ex-Vice-Minister of the Department, Counts Goto and Inouye, besides other more frequently mentioned names. The *Yiji* leaves out of this calculation the Department of Finance, but probably it believes that Count Matsukata will undertake the office in conjunction with those of Minister President.

The *Chuo* and the *Hochi* are inclined to believe that Marshal Marquis Yamagata will be nominated Premier, and that Mr. Shirane will be appointed Home Minister. Indeed the re-entry of Mr. Shirane into the Cabinet, whatever be the nature of his portfolio, is extremely probable. It is scarcely possible that Count Inouye will enter the reconstructed Cabinet.

Tuesday, September 1.

The *Hochi* issued an extra on Monday afternoon, giving further particulars of the Cabinet Crisis. That paper is usually an uncertain authority on political affairs, but as the *Nippon* and the *Yomiuri*, the only dailies that are issued every day the year round, do not publish so much as does the *Hochi* on this absorbing topic, we are constrained to quote from it to-day. Marquises Saigo, Oyama, and Saionji, Vis-

counts Takashima and Yoshikawa, and Mr. Shirane, it says, were summoned to the Palace about 4 p.m. on Sunday. The Emperor handed back to them their written resignations, graciously asking the six Ministers to remain in office. The *Hochi* adds that they respectfully declared their obedience to the Imperial demand, and received back the documents they had sent in the previous day. As no such step has been taken with regard to the resignations tendered by Marquis Ito, Count Itagaki, and Viscount Watanabe, it is presumed that the Emperor has given them permission to vacate their respective offices.

Marquises Saigo and Oyama and the other four statesmen having obeyed the behest of the Sovereign to remain in office, the ceremony of installing Count Kuroda as acting Premier took place at the Palace at 11 a.m. on Monday, Marquis Saigo, the senior of the remaining Ministers, and Count Hijikata attending the ceremony. At the same time Marquis Ito was relieved of the post of Minister President, in compliance with his request. The Emperor has graciously granted to Marquis Ito the official privileges and treatment accorded him while chief of the Cabinet.

Mr. Tsujiki, Chief of the Imperial Archives, was despatched as special messenger to Marquis Yamagata and Count Matsukata. On account of ill-health, the Marquis first asked for a few extra days in which to perform the journey, but he afterwards decided to start at once for Tokyo, where His Excellency is expected by the 5 p.m. to-day. Count Matsukata, who had retired to his villa at Mikage, after frequent colloquies with the Marquis at Kyoto, is also expected in the capital about the same time.

The above details are taken from the *Hochi's* extra, and appear to possess sufficient authenticity to warrant their reproduction.

Wednesday, September 2.

The *Nichi Nichi* and the Opposition papers are diametrically opposed in the versions they give as to the attitude of Marquis Ito to the proposed admission of Count Okuma into the Cabinet. The former alleges that the Marquis, especially on the occasion of the Cabinet Council held at His Excellency's private residence at Isarago on the 28th ult., returned a flat negative to the proposal to admit Counts Matsukata and Okuma into the Cabinet unconditionally. The *Yomiuri*, on the other hand, alleges that the ex-Premier was desirous of offering a seat to Count Okuma, while his wishes regarding Count Matsukata's re-entry admit of no contradiction.

Under the circumstances, the following account of the Cabinet crisis taken from the *Yiji*, the most impartial observer of the present political changes, may be of interest. The present crisis is attributable to the desire on the part of leading *Genku* statesmen to have the foreign and financial affairs of the country conducted in a more satisfactory manner, and they therefore desire to install statesmen of proved ability in the respective chairs. In regard to prestige, position, and experience there are only two statesmen who can satisfactorily fill these posts, namely, Counts Matsukata and Okuma. The ideas of Marquis Ito, Marquis Yamagata, and Count Inouye on the subject being almost coincident, the project gradually began to assume practical shape, and a definite conclusion on the matter was arrived at among the three leading statesmen of Choshu after the return of Marshal Yamagata from Russia. It is also confidently believed that the notion must have entered Marquis Ito's mind on the even of his departure for Formosa, when his overtures to induce Count Inouye to undertake the direction of foreign affairs had been positively declined. Such being the case, the allegation that the ex-Premier opposed the proposal of some of the Ministers to admit Counts Matsukata and Okuma into the Cabinet when the discussion arose at the extraordinary Cabinet Council held at Isarago, is entirely without foundation. On the contrary, the ex-Premier earnestly maintained the necessity of admitting the two statesmen into the Cabinet. It was owing to Count Itagaki's opposition to the measure that prevented the Cabinet's opinions from being brought into line, and then Marquis Ito decided to resign. The

question of Count Okuma's entry was actually broached by Marquis Ito when the members of the Cabinet assembled at his private residence on the 17th ultimo, but the step could not be resolved upon, owing to the irreconcilable attitude assumed by Count Itagaki and the Liberals. When the attempt to induce Count Matsukata to enter the Cabinet alone had failed, the matter again veered back to the original point, and the question of admitting the two Counts was once again brought to the front. Marquis Ito then went to Oiso, leaving the task of reconciling the different opinions within the Cabinet to Count Kuroda and Viscount Takashima. These statesmen approached Count Itagaki and endeavoured to remove his prejudices against Count Okuma, even going so far as to call in Mr. Oye Taku, President of the Tokyo Stock Exchange, who is on terms of intimate acquaintance with Count Itagaki. On the 25th, the Count proceeded to Oiso, with the intention of ascertaining the views of the ex-Premier upon the whole subject. The ex-Premier said that it was absolutely necessary that the two Counts should enter the Cabinet, and Count Itagaki returned to Tokyo the same day. He called on Count Kuroda, to whom he communicated Marquis Ito's views, but said nothing regarding his own position. Count Kuroda went to Oiso on the next day, and advised the ex-Premier to conclude the arrangement as quickly as possible. Marquis Ito promised to follow the advice, returned to Tokyo that same night, and instantly despatched express messages to the Cabinet Ministers, asking them to assemble at his private residence at Isarago next morning. An extraordinary council was then held. At the outset of the proceedings, the Marquis urged the necessity of admitting the two Counts into the Cabinet. This proposal was firmly opposed by Count Itagaki, whose views on the subject were not yet clear, and therefore was, so to say, the pivot on which the question turned. Marquis Ito saw that it was impossible to reconcile the conflicting opinions of the Cabinet, and thinking it against the dictates of courtesy and delicacy to allow Count Itagaki alone to resign, decided to go out of office himself. The *Yiji* adds that had the Marquis resolutely admitted the two Counts into the Cabinet as soon as the necessity for the step was seen, then the affair might have eventuated without engendering the present trouble. His excessive caution has proved the direct cause of his fall.

THE SITUATION OF POLITICAL PARTIES.

The Ministerial changes will considerably affect the leading political parties. The Liberals have announced hostility to the coming Cabinet, though some persons say that the party is in danger of being split into two, one section to be led by the Tosa politicians and the other by the leaders of the Kwantō Liberals. The two sections are not cordial in their relations, we are told, the project Count Itagaki's entering the Cabinet as representative of the Party being regarded with disfavour by the Kwantō Liberals. The arrangement was in fact carried through solely by their rivals, the Tosa men. We are further told that it was to reconcile the Kwantō politicians that Mr. Ishisaka Shoko, M.P., one of their influential leaders, was appointed Governor of Gumma. This want of cordial union is said to have manifested itself in the present case, for while the Tosa men tried to dissuade Count Itagaki from resignation, the others advised him to go out of office. The idea of the former was to make the Count continue in the Cabinet till the general elections of 1898, as his presence there would materially contribute towards obtaining a clear majority of the Party in Parliament. Now, however, that the Liberals are obliged to resume their attitude of opposition, the implacable enmity with which the two sections regard the *Shimpo-to*, should for the moment, perhaps, cause the murmurs of internal discontent to cease.

The Tokyo papers devote much space to discussing the future relations between Marquis

Ito and Baron Ito on the one hand and the Liberals on the other. The Opposition papers, are of opinion that the present joint resignation of Marquis Ito and Count Itagaki has repaid the obligation which the Liberals, by their strenuous support of his Cabinet, placed him under. The relations between him and the Party will therefore revert to those that existed previous to their *rapprochement*. Baron Ito, however, is supposed to maintain a close connection with the Party, over whom he is believed to wield a great influence, perhaps not much less than that of the acknowledged leader, Count Itagaki. It is even conjectured that the Baron may be enrolled on the list of the Party, in which event, should any rupture occur, the Baron will lead one section of the Party and the Count another. The Baron may succeed in attracting more followers than the Count.

It is well-known that a portion of the *Shimpo-to* are not favourably inclined to Count Okuma, while it is not certain whether the Party, as a whole, are ready to support Count Matsukata. The *Yiji* wishes us to believe that Count Okuma does not care for a majority in the House of Representatives, his idea being merely to keep in touch with the people while directing the affairs of State. He is ready to appeal to the conscience, or to the prudence, of the people whenever he has any measure of importance to carry out but would not care what the House might think of it. Whether such a position is feasible, remains to be seen. The *Yomiuri* gives as the opinion of a certain M.P. identified with the *Shimpo-to* "that the numerical strength of the Matsukata-Okuma Party within the House in the coming session will be 110, which may be reinforced by 30 members belonging to the so-called business section." There are besides some dozen independent members who would not scruple to support any Government. The National Unionists of Kagoshima and Fukuoka would also lend their support to the *Shimpo-to*, and the party may therefore hope to command the situation in the House. Should the coming Cabinet fail to command the support of the House, then it ought to advise the Emperor to dissolve the Diet. But when, after the general election, the support of the House is still refused to the Cabinet, the latter ought to resign. This anonymous opinion must of course be greatly discounted, still, when it is remembered that the Liberals do not number more than 105 in the House of Representatives and that it was owing to the support of some 30 National Unionists that they were enabled to defeat the Opposition in the last session, the notion that the *Shimpo-to* may hope to command a majority in the coming session may not be so very chimerical. The Unionists may work with them this time.

MARINE AFFAIRS.

The lighterage service between Tokyo and Yokohama, we read in the *Shogyo*, is entirely out of proportion to the increasing demands that the recent activity in business has occasioned. The *Shogyo* enumerates several causes for this state of things. (1) The unusual increase in the volume of material transported for building dock-yards, railways, and houses. (2) Increases in the volume of the lumber trade, (3) coals, (4) of general imports and exports, and (5) the insufficient storage accommodation at Yokohama. Now within the jurisdiction of Tokyo there are only 500 lighters or so, 200 of which are owned by the Nippon Yusen Kaisha, and the rest by the Tokyo Lighter Company and others. These companies are well aware of the increasing demands for lighters, yet they make no effort to increase their fleets. On the contrary, the number of lighters is decreasing. The root of the trouble, of course, lies in the sudden increase in the cost of construction, as the result of the appreciation of the market price of commodities. At present a lighter which formerly cost 1,500 yen or so to build can not be constructed for less than 2,500 to 3,000 yen, so that while worn out boats are disappearing from the service, new ones do not appear to take their place. This want of balance between supply and demand has con-

siderably affected the lighterage charges, the rates rising from yen 2.30 or so per day to about yen 3.50 and more, for lighter-owners are determined to avail themselves of every advantage presented by the present defective service, and frequently compel shippers to pay as much as yen 5 to 6.50 for the use of their boats. Charges are far more exorbitant in Yokohama than in Tokyo, for the last quoted rate has become the common charge, while 10 yen per day was recently paid.

The continued fall in the rates of freight is the cause of much anxiety to small owners engaged in the coasting trade. At present the freight on fish guano between Tokyo and Otaru is only 35 yen per 100 *hoku*; on rice between Tokyo and Hyogo 15 yen for the same quantity; while the freight on coal between Tokyo and Moji is 85 sen per ton. The keen competition prevailing among ship-owners also leads to discounts on these rates. It is evident that ship-owners must be experiencing considerable difficulty in making both ends meet. The sudden increase in the merchant marine of Japan has caused so much competition among ship-owners, that a Japanese captain who drew at most 40 yen per month before the war, will not accept less than 100 to 150 yen now. For similar reasons an increase has been made in wages of sailors and stokers, rates rising from 5 or 6 to 10 or 15 yen. A story is told of a small ship-owner who, after vainly seeking to dispose of a worn-out vessel, having the good luck to have his steamer strike an uncharted rock. The vessel sank and the owner drew his insurance money, three times the amount that the vessel would have fetched in the open market. Of course the *Shogyo* does not vouch for the authenticity of this yarn. None the less, it feels that ship-owners who are at a loss what to do with their ships may be tempted to such practices. It is high time for marine insurance companies to be on the alert in securing protection for their interests.

With regard to the present condition of Japanese marine insurance companies, the *Shogyo* prints a short note. The Tokyo Marine Insurance, the Imperial Marine Insurance, and the Nippon Land and Marine Insurance companies, it says, were started several years ago. At first keen competition was maintained among them, and each vied to cut the others' rates. At last, growing tired of this suicidal policy, a sort of agreement was established, the result being a raising of their rates by 10 per cent. Vessels going to the South Seas, that formerly insured at 75 sen per ton, will now have to pay 1.10 yen per ton, and so on. At this juncture a new insurance company, the Nippon Marine Insurance, has appeared on the scene, offering to undertake insurance to the South Seas at 60 sen, or about one-half the rate of the older companies. It is feared that the programme of the allied companies will be upset by the action of the intruder, while there is also talk of a fifth company starting before long.

THE CAUSE OF THE SEISMIC WAVE.

Dr. Kochibe Chusho, Rigaku Hakushi, is accredited by the *Asahi* with the following explanation of the recent Seismic Wave in the north-east:—It appears, after full consideration of all the facts, that the wave was caused by an earthquake. There are two kinds of earthquakes, however. If the cause of this earthquake was volcanic, the place of eruption would seem to have been somewhere in the Pacific Ocean, about 400 miles distant from the inundated coast and about 4,000 fathoms below the surface, that is, a little to the east of the Tuscarora Deep. Otherwise the vibrating shock would not have been felt simultaneously, and almost equally strongly, along some 70 *ri* of the coast-line, as was the case. The shock was felt at 7h. 33m. 30s. p.m., and the wave appeared at 7h. 53m. 30s., an interval of only 21 minutes: the wave must have travelled 400 miles in the interval. In the earthquake of the Ansei era, that shook the greater half of Japan, the wave caused thereby, travelled, it is said, across the

Pacific until it struck San Francisco. It progressed at the rate of 370 miles an hour. Another wave, that travelled from the southern coast of Southern America to Hawaii in 1868, progressed at the rate of 454 miles an hour. But in both these cases the seismic shocks were far stronger than in the recent disaster, in which they were only of a feeble character. An earthquake of volcanic origin is incapable of producing a disturbance in the ocean-bed sufficient to raise a wave of such proportions as was raised in the case under consideration. It must have been accompanied by another agency causing big changes in the ocean-bed. Besides, in the neighbourhood of the inundated districts there are no volcanoes, except to the northward of Hachinohe. Also no volcanic stratum has been discovered in the ocean east of these localities. It may be safely affirmed that we cannot attribute the great wave to an earthquake caused by volcanic action only. One other kind of earthquake is possible, that caused by a landslide. This must have been the origin of the recent catastrophe. From the inundated coast one must go out some 10 *ri* to reach a depth of 100 fathoms, but from that point depths of 1,000, 2,000, 3,000, and 4,000 fathoms, are found at short intervals until the Tuscarora Deep is reached, one of the deepest channels in the ocean yet discovered. These geological features must have been produced by a great land slip in prehistoric times through the contraction of the earth's crust. At the time of that tremendous landslide, numerous clefts must have been formed, running from N.E. to S.W., parallel to the coast of Sanriku. These clefts, it is easy to see, cause the ocean-bed in their vicinity to be very liable to disturbance. The wave must have been caused by a land-slip produced by the subsidence of one or more of these clefts.

THE PRESENT SITUATION.

There is joy in the camps of the various political parties. They believe, or have persuaded themselves into the belief, that the ministerial crisis is of their making. The *Shimpo-to* organs assert this in so many words. So powerful had the Opposition grown that the Cabinet was forced to yield, is their repeated statement. Probably nothing could be farther from the truth. The Cabinet changes originated in that body itself, and were in no wise influenced by the vapourings of any anti-Government demagogues. Yet, be this as it may, there is no doubt that the various parties are severally and distinctly on the rampage, and expect nothing less than that many ministerial posts will fall to the lot of certain of their leaders. It may be doubted whether things would fare well with this Empire if the Cabinet were formed wholly of *Shimpo-to* partisans. The great mistake made by these undoubtedly well-meaning if biased men, is that they believe themselves or their partisans capable of ruling the nation without experience. Many are facile writers or fluent speakers; but these two qualities are by no means indicative of sound statesmanship. Diplomacy is a game where silence and finesse are in greater demand than in whist; where tact and energy are of infinitely greater value than mere oratorical eloquence or literary skill. The late Cabinet was composed of men who had passed through the school of adversity and had mainly contributed towards bringing Japan so far on the road she is now seeking to follow. The nation as it is to-day was undoubtedly the result of their labour. Imagine a Tanaka Shozo at the Council table instead of Marquis Ito or Viscount Enomoto! The shoemaker must, after all is said and done, stick to his last; he can thus manufacture it may be a very decent pair of boots, while he would cut a very poor figure as a painter or a sculptor. It takes longer than half a decade to turn out a competent statesman; and no acquaintance with "primaries," political debates, or even the cudgels of rampant *soshi* can possibly make up for the lack of long years of experience in actual governing. The nearest approach to what one would expect of a statesman may be found in Mr. Hoshi, or perhaps

Mr. Kusumoto. But with these (and possibly one or two other) exceptions, we look through the Opposition in vain for some one adept enough to assume and support the dignity and responsibility of a ministerial post.

GOLD AND SILVER EXPORTS.

The export and import of gold and silver, writes the *Fiji Shimpo*, has a considerable bearing on trade in general, and we give below the imports and exports of the precious metals for the first seven months of the present year:—

Exported to	January.	February.	March.
Gold.	Silver.	Gold.	Silver.
India	4,869,000	710,000	300,000
China	9,368	12,505	7,123
Korea	59,000	682	10,000
Hongkong	35,000	30,000	—
Siberia	—	—	—
England	20,273	61,338	74,778
Germany	993,749	43,030	55,070
Exported to	April.	May.	June.
Gold.	Silver.	Gold.	Silver.
India	—	935,000	—
China	—	933	—
Korea	—	30,000	—
Hongkong	54,733	30,000	—
Siberia	—	60,000	—
England	—	71,943	143,955
Germany	—	144,884	—
Exported to	July.	August.	September.
Gold.	Silver.	Gold.	Silver.
India	—	—	—
China	—	21,687	—
Korea	—	20,000	—
Hongkong	—	300	—
Siberia	—	—	12,100
England	—	162,740	134,327
Germany	—	—	—

The aggregate amount of gold exported from January to July inclusive was 151,948 *yen* and of silver, 6,494,178 *yen*. England received the largest amount of gold, and Germany comes next, the amounts exported to these two countries being over 70 per cent. of the total export. This in all probability was due to the importation of large quantities of war-material and industrial machinery. India stands first among the silver countries, the amount it received constituting over 90 per cent. of the whole export. This must be owing to the increased importation of raw cotton and cotton yarns:—

Imported from	January.	February.	March.
Gold.	Silver.	Gold.	Silver.
India	—	—	—
China	—	11	546,705
Korea	59,688	2,515	3,437
Hongkong	—	69,300	34,796
Siberia	—	—	—
England	—	—	485,679
United States	—	702	755,021
Imported from	April.	May.	June.
Gold.	Silver.	Gold.	Silver.
India	—	—	—
China	128	5,000	—
Korea	—	1,112,002	394,705
Hongkong	79,550	1,784	2,343
Siberia	—	28,800	263,800
England	2,777,268	2,227,984	2,000,167
United States	—	245,914	918,312
Imported from	July.	August.	September.
Gold.	Silver.	Gold.	Silver.
India	—	—	—
China	—	5,000	—
Korea	—	2,002,828	99,152
Hongkong	84,064	30,377	1,369
Siberia	—	937,000	397,500
England	4,367	2,055,975	2,789,739
United States	—	792,922	870,754

The total amount of gold imported from January to July inclusive, of the current year, was 7,080,787 *yen*, and that of silver 18,190,192 *yen*. The greatest amount of gold was received from England owing to a portion of the Chinese indemnity being imported from London. Formerly no great quantity of gold was imported from any other country beside Korea, whence some 400 or 500 thousand *yen* of gold dust used to be imported per year.

ALTERED RELATIONSHIPS AND ALTERED FEELINGS.

A writer in the *Waseda Bungaku*, in a thoughtful article, reviews the changes that social feelings have undergone in Japan under the influence of modern institutions, employment, and modes of life and thought. In feudal times the feelings of all classes towards their superiors or inferiors were dictated by the strict social and domestic distinctions observed in those days. These distinctions have been to a large extent replaced by relationships based on Western modes of life and thought. Instead of the master and servant, or the retainer and his lord, and all the loyal feelings that this relationship im-

plied, we have the employer and the employé, which resolves itself into a mere matter of dollars and cents. In this relationship the employed simply aim at giving their employers their money's worth in the way of service and nothing more. The deficiencies and general unsatisfactoriness of this arrangement as regards feeling are well expressed in the term *hōkōnin kōjō*, which is always a term of reproach, and implies an utter absence of regard for a master's interests. But it is not the feeling of subordinates alone that has changed. Masters are not what they used to be. Instead of the kindness and consideration that formerly characterised the dealings of employers with those beneath them, the exercise of authority and the desire to make as much profit as possible out of their servants are conspicuous traits. That is one of the results of the egoism now prevailing. But it is only fair to note that in one respect the new order of things is superior to the old. Masters can no longer practise the despotism to which they were accustomed, and both male and female servants have lost the servility of spirit by which they used to be characterised. But the spirit of devotion which led men to die with, or for, their masters has well nigh been lost, and the modern employé thinks of nothing so much as his own ease and convenience, and at the slightest provocation throws up his place and tries his luck elsewhere. There are a few old shops that recognise the evil tendencies of modern notions on this subject, and are doing their best to maintain traditional relationships between the employers and employed, but the tide will prove too strong for them; they cannot hold out against the force of altered circumstances. Although we do not desire to see a return to the old state of things, yet we cannot but feel concerned when we see ourselves drifting into a condition in which the worst elements of American and Chinese life are combined—excessive independence and unqualified love of gain.

What is true of the relationship we have been considering is equally true of other relationships. That existing between teachers and pupils too often resolves itself into the mere paying and receiving of fees. Modern students, in too many instances, have no such feeling towards their teachers as existed in days gone by. Hence, during the past few years, school "strikes" have been common. The wave of insubordination is assuming alarming proportions, and if not checked will damage the whole country.

The relationship of parent and child cannot but be greatly affected by the new law codes. How to bring traditional moral notions into harmony with these codes is one of the most urgent questions of modern times. The *Fiji Shimpo* is in favour of the old ethical system being modified wherever it collides with new laws. It insists on the necessity of harmonising law and moral teaching. Mr. Fukuzawa argues that it is unreasonable for parents to expect their children to treat them with the deference to which their ancestors were accustomed. His observations are timely as regards parents, but what is to be regretted is that he has no word of reproof for the children who are deficient in filial virtue.

A radical change has taken place in conjugal relations and feelings. It is acknowledged on all sides that women ought to be raised from the subordinate position which they have hitherto occupied. They are treated with greater politeness and deference than they used to be. Men may be heard affixing the word *san* after their wives' names, and using such words as *irrasshai* and *doso* when speaking to them. In our opinion that is not to be attributed to foreign influence as much as to a desire to restore women to the plane she occupied in the days of the *Bakufu*. With a mere imitation of the outward behaviour of foreigners to their wives, we have no sympathy. That Japanese should walk about the city arm in arm with their wives or carry into practice other foreign customs, is not necessary. What is required is that husbands and wives should love and respect each other: forms and ceremonies may be left

to adjust themselves. The modern fashion of boasting of a wife's powers before others, or of seeking to make her outwardly attractive to the world, is not to be commended.

Coming to the subject of social relations and social pleasures, the changes that have taken place are less marked than in other spheres. Among the upper and middle classes the club is an institution that finds favour with men who are socially inclined. But with the lower orders things remain as they used to be prior to the Meiji era. Something more than the ordinary *sakamori* or *shimbokukai* is needed to enable men to know and respect each other. Compared with foreigners, Japanese may be said to have few social pleasures. It is said by some that the great popularity of the Tenrikyo sect is to be attributed to the way in which it has devised means for facilitating social intercourse. The *Fiji Shimpō* has frequently pointed out that Japanese modern life is ill-supplied with suitable opportunities for friendly interchange of thought. Many attempts have been made to supply this defect, but from one cause or another they have hitherto failed. The *Kokumin Shimbun* earnestly advocates the formation of international clubs and even goes so far as to say that closer intercourse between Japanese and foreigners is essential to the safety of the empire. When the student has finished his college course and goes out into the world, he needs facilities for perpetuating the friendships he has formed and for deepening the impressions he has received from men whose characters he admires. There are various schemes for providing a greater variety of social pleasures. There is a talk about improving the stage and shortening the time occupied by the acts. Musical societies have been organised, and Mr. Nakajima Chikuba has founded the 明治風教會, the Meiji-fukyo-kai, a kind of Operatic Company. But much still remains to be done. Among certain students of Ushigome and Yotsuya practices prevail which make it less safe for a boy than a girl to be out at night in those districts. We would rather not have to notice this abomination, but there is no use in shutting one's eyes to facts. The practice to which we refer prevailed among certain warriors in feudal days at a time when the use of prostitutes was condemned by the military authorities and by Buddhist teachers, and is a proof that in endeavouring to prevent what they think to be an evil, people are often instrumental in producing a still greater evil.

DR. HASEGAWA ON INDUSTRIALISM.

Dr. Hasegawa Tai, Director and Founder of the Saiseigakusha, the largest private medical institution in Tokyo, and a member of the Industrial Hygiene Investigation Committee, was interviewed the other day by a representative of the *Oriental Economist*, on the subject of the hygiene of Japanese workmen. The Doctor, not having yet undertaken the inspection of manufactories adjoining Osaka and Kyoto, could not furnish the representative with any particularly interesting details on the subject, but he elaborated certain opinions connected with industrial hygiene and the labouring classes. He is opposed to the theory that the working hours of factory girls and men, as well as the limit of age, should be regulated by law. The doctor adduced two reasons for taking up this position; one is that to restrict the number of working hours would affect the amount of wages that male and female mechanics are now receiving. This reduction in wages would drive them to more profitable employment, and the prosperity of the first industry would be crippled in consequence. It is owing to Japanese manufacturers being able to obtain cheap labour that they can maintain competition with the manufacturers of Europe and America; to restrict the number of working-hours and to limit the age of the employes would deprive Japan of the only great advantage she now enjoys in the industrial world. In the second place, Doctor Hasegawa did not believe in the practicability of enforcing such restrictions. It is true that such laws might be enforced in factories

and large establishments, but it must be remembered that quite a considerable proportion of male and female artisans in Japan do not work in factories, but at home. Over such a class, restriction as to the number of working hours and age would be found entirely out of the question. As to food, clothing, and shelter, the Japanese labouring classes are far better situated than are those of the West. This is no mere hypothesis, but a fact attested by those who have travelled abroad. The Japanese workman, for example, takes a bath at least once a day, and when he returns home he cheers his tired mind and exhausted body with cups of *sake*, tended by his wife and surrounded by his children. His dwelling may measure only $2 \times 1\frac{1}{2}$ yards, and may be divided from his neighbour's by only a partition wall, but this tends to promote his comfort of life by cementing good-fellowship. Compared with the dwellings of Western working people, who live in badly ventilated rooms where the light of the sun can barely enter, the superiority is all on the side of the Japanese. Yet what a vast difference exists between Japan and the West in respect of wages! The average wage of male and female silk-reelers in the 14 sericultural districts of Japan is only 14.1 *sen*, while the average wage of spinning hands in Osaka is only 13.3 *sen*. Is there any other place in the world where similarly skilled labour can be engaged so cheaply? The advantages now enjoyed by the Japanese cannot, however, last long, and the time must come, sooner or later, when the evils always attendant upon industry must break out. The question that ought to be investigated at present is, how best to provide against these evils? In doing this, the precedents and examples of the West must not be too blindly followed; peculiarities only to be found in Japan must always be borne in mind.

OSAKA HARBOUR RECONSTRUCTION LOAN.

The City Assembly has consented to the raising of a Public Loan for the purpose of carrying out the reconstruction of Osaka harbour. The regulations governing the loan, and the manner of its redemption are as follow:—

Art. 1.—An Osaka City Loan of the face value of 13,450,000 *yen* shall be floated for the purpose of providing funds for the reconstruction of Osaka Harbour.

Art. 2.—This Loan shall be raised publicly, if possible at a premium, and the rate of interest paid on it shall be fixed by the City Council within the limit of 6 per cent. per annum.

Art. 3.—Interest on this Loan shall be paid twice yearly, in the months of June and December.

Art. 4.—This public Loan shall be floated in several installments spread over eight years, from 1896 to 1904, until it has reached the amount of 13,450,000 *yen*.

Art. 5.—None of the principal of this Loan shall be repaid until the full amount has been raised: it will be redeemed in installments in December of each year from 1904 to 1937 inclusive. The funds to be devoted towards repayment of the loan will be drawn from the proceeds accruing from rents, pier charges, sales of reclaimed land, and miscellaneous sources, the City taxes, etc., after interest has been paid for the year, and the various expenditures required for keeping up the harbour works have been provided for.

Art. 6.—The interest on this loan will be paid from 1897 to 1903 inclusive, from the City taxes and other revenues, and from 1904 forward from the proceeds derived from rents, pier charges, sales of reclaimed land, and miscellaneous sources.

Art. 7.—An estimated revenue of 8,045,000 *yen* is expected to be obtained by the sale of reclaimed land; 76,000 *yen* by miscellaneous sales; 120,000 *yen* by annual income from 1904 to 1913 inclusive; 180,000 *yen* per year from 1914 onwards from rents of reclaimed land; 109,500 *yen* annually from 1904 to 1913 inclusive; and 164,250 *yen* per year from 1914 onwards, from pier charges.

Art. 8.—The estimated expenditures to be defrayed out of the City taxes are 200,000 *yen* per year for seven fiscal years from 1897 to 1903; 158,000 *yen* for 1904; 200,000 *yen* per year from 1905 to 1936; and 146,646 *yen* for 1937. In case the actual proceeds exceed these estimates this last sum is to be proportionately reduced.

EXPIRING NATIONAL BANKS.

The almost immediate expiration of the charters of many National Banks is the most serious economical problem now confronting Japan. The charter of the 1st National Bank, of Tokyo, expires on the 25th of September next, while the charter of the 152nd Bank has to run till the 9th of December, 1899. Below is a list of dates of expiring charters for the next two years:—

		1896.
1st National Bank (Tokyo) ...	Sept.	25
2nd do (Yokohama) ...	Nov.	27
3rd do (Tokyo) ...	Nov.	30
4th do (Niigata) ...	Dec.	18
5th do (Tokyo) ...	Oct.	4
6th do (Tokyo) ...	Feb.	12
7th do (Kochi) ...	Feb.	19
10th do (Yamanashi) ...	March	21
13th do (Osaka) ...	May	14
15th do (Tokyo) ...	May	20
11th do (Nagoya) ...	May	25
12th do (Toyama) ...	July	1
20th do (Tokyo) ...	July	10
14th do (Matsumoto) ...	July	16
16th do (Gifu) ...	Aug.	7
17th do (Shizuoka) ...	Sept.	21
19th do (Uyeda) ...	Oct.	9
22nd do (Okayama) ...	Oct.	9
23rd do (Oita) ...	Oct.	11
18th do (Nagasaki) ...	Nov.	1
19th do (Kumamoto) ...	Nov.	21
21st do (Nagahama) ...	Nov.	29
27th do (Tokyo) ...	Dec.	6
30th do (Tokyo) ...	Dec.	14
25th do (Obama) ...	Dec.	16

SPINNING INDUSTRY.

Most of the Japanese capitalists, says the *Fiji*, are just now too much bent upon railroad and banking enterprises. The cotton spinning industry, which, during the first half of this year, proved far more profitable than banks or railroads, is at a discount with them. The companies engaged in this industry have declared, for the same period, dividends varying from 10 to 20 per cent., the average being 16 per cent. The reason why this profitable industry is less favoured by speculators than banks and railroads is, according to the explanations of some persons, the precariousness of the business. But to us it appears that the prosperity now enjoyed will continue for a long time to come. In the first half of this year the export of yarns amounted to 20,000 bales, valued at 2 million *yen*. This might be looked upon as an abnormal output due to temporary causes, but such is not the case. Until last year Japanese yarns, though long ago acknowledged as superior in quality, competed disadvantageously with Indian thread in the Shanghai market, because they paid a greater import than the former. This handicap was removed last year, hence the development mentioned above. For the second half of this year it may be reasonably expected that the value of exported yarns will amount to at least 4 million *yen*. The home consumption of yarns is also increasing. Indeed, it is stated that this will be more fully shown in the current half-year. On the other hand, the supply of cheap cotton from foreign countries is favourable, especially now that the Nippon Yusen Kaisha have opened an American line. The *Fiji* says that, while England has 40,000,000 and India 4,000,000 spindles at work, Japan may profitably increase her total to 1,000,000, and when this is brought about, the present mania for banks and railways will subside and the spinning industry will again come into favour.

FORMOSA.

There were only twelve gendarmes at Shushu kai when it was attacked by the rebels. Of this number only one escaped death. The rebels not only killed the gendarmes but slaughtered their horses, and the eleven human and twelve equine heads were afterwards left to bleach in the street. When Nanto was besieged, a scout was caught by the enemy and burned to death. One Li U-mo of So-ai-ton, who had often acted as scout to the enemy, was afterwards captured by the Japanese and decapitated. His wife then set a price of 400 *yen* a piece on Japanese heads, and by this means obtained a couple.

AMERICA AND ENGLAND.

WHENEVER one digs deep enough into the proximate causes of the dislike entertained by so many Americans for the British, one inevitably reaches the War of the Secession. It was England's conduct at that time that thoroughly alienated American good-will, and thirty years have not sufficed to remove the feeling of resentment. The fact has received fresh confirmation from a controversy now on the *tapis*. Some months ago, *Blackwood's Magazine* published an essay in which American antipathy towards England was attributed chiefly to the teachings of American school histories with reference to the Revolution and the war of 1812. That idea seemed to some people so important that Mr. PLIMSOLL, son of the celebrated philanthropist, acted upon it at once. He commenced by collecting the whole of the 34 histories used in the Board Schools of England, and after examining them carefully, he failed to find "the slightest unkind allusion to the United States." "I marked and indexed," he says, "every allusion to America in them, and you can not find a hint of ill-feeling or envy. Being thus assured that England had put her own house in good order, so far as concerned this particular question, Mr. PLIMSOLL then proceeded to the United States to conduct a similar inquiry into the histories used in the schools there, his hope being that if, as was generally believed, their language fostered a wrong feeling towards the mother country, the educational authorities of the Great Republic would be persuaded to eliminate the objectionable passages. The result of his investigation is not yet published, but, in the meanwhile, his act and the fine motive prompting it, have brought the whole subject into prominence, and evoked some very emphatic expressions of kindly feeling in England. The London *Spectator*, for example, expounds its views with great earnestness, saying, among other things:—

It is not too much to say that no class here, rich or poor, is without the warmest feeling of sympathy for America. An English public man who showed hatred of America or insulted her in his speeches or writings would at once lose his place in the national respect—would be drummed out of public life. No poet could direct his verse against America; no man of letters attack our kinsfolk as a nation or express a desire for the downfall of the Union. The satirist might make fun of the American as he makes fun of the Yorkshireman or the Cockney, but anything like desire to insult the national honour or to rejoice at the difficulties or misfortunes of America would most certainly be treated with indignation. The notion of an English minister or ex-minister, or even of an English M.P., prophesying the downfall of the American Union and dwelling on it as a source of gratification for his country, is simply unthinkable. The man who gloated over the notion of America's ruin would be hissed as a traitor to the race. But though the knowledge of this friendly feeling is such a commonplace with us, it seems to be undreamt of in America. There, not only is a great deal of hatred and contempt expressed for the old country, but the people at large seem genuinely ignorant of the good-feeling for America which is so general and so genuine here.

Many of us will be disposed to think that the *Spectator* rather exaggerates the facts. It ought to know what it speaks about, but to say that no class in England, rich

or poor, is without the warmest feeling of sympathy for America, seems too rosy an estimate. Englishmen are unfortunately conspicuous for a trait that militates more strongly than any other against easy friendship: they are essentially supercilious. It is hard, terribly hard, to be on terms of genial intimacy with a supercilious man. He may be perfectly imperturbable, quite free from quarrelsome tendencies and uniformly courteous, but if he is supercilious, those fine traits render him all the more exasperating. There is immense strength in the confidence of superiority, but every display of such confidence provokes among outsiders a longing to undermine it. We do not think that the average American has inherited the superciliousness characteristic of his British ancestors. At all events, it is not yet apparent in his conduct. Extreme sensitiveness and strong self-assertion seem to be the dominant attributes of his mental attitude towards other nations, and they are precisely the attributes that clash most bitterly with British superciliousness. Let us hope, however, that the *Spectator* is right. At all events without following it to the extreme range of its enthusiasm, we may confidently assert that a sentiment of genuine goodwill towards her over-sea cousins has long been establishing itself in England's heart, and that America's magnificent development has totally ceased to be a cause of jealousy to Great Britain, and become, on the contrary, a source of genuine pride. To revert, however, to what we have called the proximate reasons of the dislike of England entertained by so many Americans, we find a striking illustration in an article written by Mr. F. S. DICKSON, by way of answer to the *Spectator* and *Blackwood's*. Mr. DICKSON can not, apparently, find a single justification of that dislike in anything said or done by Englishmen during the past quarter of a century. He is obliged to go back to the time of passion and perverted judgment, the time of the War of the Secession, and from the writings of that era he can of course quote excerpts intensely galling to Americans to-day. How long, we wonder, is that kind of retrospective animosity to be kept up? Is it impossible for Americans to appreciate that, whatever may have been the effective motives of British statesmen at that great crisis, the bulk of the British nation acknowledged one sentiment only, the sentiment of kinship? The average Englishman had got it into his head that the people of the South were much closer to him in consanguinity, and in friendship, and in community of feeling, than the people of the North, and his sympathies went with his belief. There is nothing stranger in history than the spectacle of a nation that had constituted itself the implacable foe to slavery and made immense sacrifices to abolish that hideous abuse, giving its moral support to States banded together for the maintenance of slavery. But

the gravest folks have their moments of vertigo. It was simply a vertigo, thirty years ought surely to have healed the scars that it produced. Mr. DICKSON does ill to resuscitate such memories. Still there is consolation in the fact that he has to go back thirty-odd years to find demonstrable grounds for umbrage against the mother country.

THE IMPERIAL GARDENS AT SHINJUKU.

THE Botanical Garden in Koishikawa District, Tokyo, is known to most foreigners, and very favourably at that: for while there are not many hot-houses and no lavish outlay of funds visible, the grounds are excellently laid out, and when the plum-trees, of which there are a dozen different varieties, each more beautiful than the other, are in bloom, the scene is indescribably picturesque. The Fukiage Gardens are perhaps quite as well known, permission to inspect them being always courteously granted by the Imperial Household authorities, on application. But the Shinjuku Garden, with its wonderful hot-houses and aviaries, its groves of cherry-trees and splendid assortment of vegetables, is very little visited, permission not being so readily obtained in this instance. Covering about thirty acres of ground, this garden yields the fruits and vegetables used for the Imperial table. Formerly the suburban residence of a wealthy *daimyo* was on this site, and it was not until several years after the Restoration that garden work of a systematic kind was begun. Now there is a staff of trained horticulturists and floriculturists on the spot, and everything goes with methodic regularity and scientific precision, the heads of the various sub-sections being University graduates or botanists of approved skill and broad practical knowledge. And as the result, fruits and vegetables of delicate flavour and often giant size are produced at all seasons of the year.

One of the first things that catch the eye of a foreign visitor are some half-a-dozen strange-looking plum and peach trees. Indeed, "tree" is hardly the right word; for the fruit-bearers have been made to grow something after the fashion of a vine, are trained as espaliers against the hothouse walls, and, at regular intervals, have two branches, bent at exactly right angles. These dwarf and forced specimens of the peach and plum produce enormous and most delicious fruits, albeit few in number. The peach is an importation from China, and is known as the *Suyemitsu momo*. The first to bring this strange variety over to Japan, was Mr. KAGESHIMA YONEMON. Entering the first hothouse to the right, there are several large and wonderfully trained vines of Black Hamburg grapes, the pendent bunches being of extraordinary size. On a long,

low shelf are forty picked pine-apple trees, which are made to produce their luscious fruit twice a year. To the left again are several flourishing plantains and bananas, said to yield most delicately-flavoured fruit. Some of these came from South China, others from Formosa. In glass-covered beds to the left of this fruit-house are two acres, approximately, of strawberries—the seed coming from America and three favourite varieties being represented—cucumbers, egg-plants, asparagus, radishes, cauliflower, Jerusalem artichokes, "Brussels sprouts," and a host of other vegetables. The management take care that these different vegetables may be served at the Imperial table throughout the year. And everything is regarded as almost sacred; no one would dare touch a single strawberry or a stalk of asparagus, though it must be confessed that the mouth of the present scribe watered at the seductive sight. Under other and happier circumstances he might have sampled a few of the strawberries in particular from motives of sheer scientific zeal; but under the Argus gaze of half-a-dozen vigilant gardeners, the experiment had to be postponed *sine die*.

In the long and beautifully-kept hot-houses, the sight is one of great beauty, the air being redolent with the perfumed breath of strange tropical plants, rare orchids, and a single gorgeous specimen of the *Victoria Regia*. Maidenhair ferns are everywhere, and in great variety; *Streptocarpus* and *Vanda batterni*, the latter from the Philippines, are in wondrous bloom and perfection. The perfect, minute, yet carnivorous "Venus fly-trap," of which one species is peculiar to Japan, is represented by several fine specimens. Very remarkable, too, is *Cleisostoma ionosmum*, a native of the Riukiu Islands. The collection of *Cattleya* is quite unique, over a dozen species being represented. Finest of all is the quaint *C. skinneri* from Mexico. A dozen different *Dendrobia*; *Phalaenopsis grandiflora* from Java; *Cancellaria*, *Begonia*, *Primula*, *Iris* and *Calamul* in every colour; the wonderful *Anthurium scheraerianum*, with its enormous petals and pistils—the eyes wearies at length with excess of floral beauty. Leaving the hot-houses—of which there are more than ten—a broad avenue lined with cherry-trees of a rare variety brings the visitor to the gate of the zoological and ornithological section. Close by the entrance is a large boarded enclosure, wherein two huge camels of the Manchurian persuasion disport themselves in uncouth gambols. But the aviaries! One large roomy house is given up to singing birds: songsters having been collected from all over the world. Here a free concert is kept up from dawn till nightfall. Two large cockatoos with a well-trained lory keep watch at the entrances. One of these cockatoos is inclined to be sociable and

talkative, greeting all comers, irrespective of sex, with an affable "Otottsan"! Fastened to a tall pole at the western entrance is an unusually large Hokkaido monkey, prolific of caresses and with a propensity for jumping on unsuspecting persons' necks. The scene to the right is most attractive: a triumph of Japanese landscape gardening, with miniature bridges, temples, waterfalls, and rustic groves. Here swan and all kinds of aquatic fowl breed on the sedge-grown banks. Several cranes raise broods every year on a little island knoll to the west. A little further on one comes to a perfect gem of a summer-house in Japanese style, only three small rooms, but of unsurpassed elegance and taste. Fronting this are a few pens of sheep and goats, and one or two smaller carnivores. To the left of the bird-house are several single aviaries, each containing a bird of historic or other interest. There is the fine, wild-eyed falcon that lighted on the main yard-arm of the *Taka-chiho* after the fight of the Yellow Sea; another hawk lineally descended from a famous bird of the early TOKUGAWA Shoguns; two sea-eagles, and others of interest. This part of the Garden is particularly attractive, not only for its beauty but also for the excellent, healthy condition in which the bipeds and quadrupeds are kept. The Ueno Park Zoological Garden is nowhere by comparison. On the whole, the Imperial Household Department may well boast of the beauty and excellent management of the Shinjuku Gardens. There may be finer places elsewhere, but surely none of such grace, elegance, and good order.

HEAVEN-SENT WEALTH.

"The good Lord gave me money, and how could I withhold it from the University of Chicago." That is what Mr. J. D. Rockefeller, President of the Standard Oil Company, said to the graduating students and friends of the Chicago University at the graduating ceremony on July 1st. The statement has elicited sundry and diverse expressions of opinion. The *Chicago Chronicle*, for example, writes (we quote from the *Literary Digest*):—

Some sincere Christians do, of course, believe that the Almighty directs their most trifling affairs. They rely upon Providence with a faith that is as firm as it is admirable. But for a hide-bound monopolist, a wrecker of other men's business, an oppressor and a commercial pirate to profess such a belief is as blasphemous as it is disgusting.

The man may deceive himself. He may really believe that his iniquitous methods of money-getting are sanctioned by Infinity, or he may believe that he has made his peace with the Almighty by bestowing a tithe of his ill-gotten gains upon institutions of learning. But if he deceives himself he deceives no one else. The story of John D. Rockefeller's rise to wealth is too well known to be glozed over by eleventh-hour benefactions.

The good Lord gave me my money! Let the ruined refiners, the impoverished producers, the corrupted legislatures of the oil belt, stand as an answer to the blasphemy.

On the other hand, the *York New Sun* writes:—

It is a very striking circumstance that at this time of decaying faith a man who ranks with the three or four richest men of modern time should be impelled by religious convictions to a course of life and of conduct which is so unusual in its austerity. Many Baptists have risen to wealth from very humble circumstances during the last generation, but most of them, or at least the most of their families, have drifted away from their early associations under the influence of fashionable ambitions. Mr. Rockefeller remains staunch and immovable. Magnificent as his many gifts for charitable, religious, and educational purposes have been, the sum of them has gone almost wholly for the furthering of Baptist interest. He has built up in the Chicago University an institution which will glorify the Baptist name, and in that way, according to Mr. Rockefeller's unquestioning belief, will glorify God.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In looking over the religious periodicals that have appeared since our last Summary, we are impressed with the fact that for the most part each sect is intent on pushing forward its own work. Though, as will be seen by the following record, there are not wanting writers who deal with questions that affect all religious bodies, the majority of the literary contributions which call for notice confine themselves to the discussion of topics of limited interest and importance. Though now and again advocates of union between the sects make their voices heard amid the din of theological controversy, the general feeling among leading religious sects seems to be that united efforts, while from some points of view desirable, are not at present practicable; no union is possible without serious compromises; and these compromises leaders of religious thought are not disposed to make. According to their view, union without thorough agreement as to fundamental principles and doctrines could effect no good object, and hence they prefer to keep aloof from fellow-workers with whose methods and ideas they have no sympathy. With these few introductory remarks we now proceed to give the results of our perusal of religious publications during the month.

The *Shūkyō*, No. 58, contains a speech delivered at the 元通學院, Senshingaku-in, a Unitarian school, on the occasion of the third annual graduation ceremony of the school, by Mr. Shimada Saburō, Vice-President of the House of Representatives. The following is the gist of Mr. Shimada's address:—I purpose considering what is the present state of Japanese society and showing the influence which an institution like this may exercise over the thoughts and actions of the rising generation. It is important to observe that the adoption of Western civilization by Japan was a matter of necessity. When, prior to the revolution of 1868, our rulers first came into direct contact with the representatives of Western powers, they were impressed with their immense superiority in respect of the physical forces at their disposal. While desiring to close the country against foreigners, they felt that they lacked the power to carry it into execution. They were convinced that the only course to be adopted was to take steps for placing this country in possession of those formidable physical agencies on which Occidentals place so much reliance. Men-of-war were built; new weapons of war were imported; our army and navy were transformed and placed under foreign guidance. Every effort was made to develop the resources of the country to the utmost limit; and, with this in view, the rapidity with which roads and railways were constructed astonished the world. The zeal with which the material elements of Western civilisation were appropriated in the first two decades of the *Meiji* era has no parallel in history. In 1888 I took a trip to Europe and America. It was the year when there was great excitement throughout the Western world about the electric light. You will remember that so earnestly was this subject studied that Mr. William Thompson, whom I met at the time to which I allude, was knighted as a reward for his researches in this line. What was my surprise when five or six months later I returned to Japan to find night turned into day in the streets of Tōkyō by the presence of the electric light. This is only one among many illustrations that might be cited. But the progress we have made is confined to the external world. The enlightenment we have received has not extended to mental states and feelings. Instead of deriving a new impetus from the numerous improvements of a material kind which we have witnessed, our minds have been oppressed and weakened thereby. From ancient times Japanese minds have been supplied with thought from two well known sources, Buddhism and Confucianism. Shintō exists only in the pages of history. For a long time past its life has been extinct, and in enumerating the various influences which sway the

thoughts of men in modern times Shintō need not be included. Neither Buddhism nor Confucianism wield the power they once had. In the Tokugawa age they both received a large amount of government patronage. In recent times Confucianism is only studied as a learned subject that cannot be separated from a thorough knowledge of Chinese ideographs; while the regard in which Buddhism is held rests on the fact that the observance of its rites ranks as a national custom, and not on a conviction of its intrinsic merits as a religion. It is owing to the realised waning influence of ancient creeds that such sects as the Tenrikyō, among Buddhists, have originated forms of worship of the most objectionable kind, known as 淫祀, *Inshi*. Buddhism has of late years departed from its original standard in the matter of allowing its priests to eat flesh and to marry, being content with the sanction of the civil powers to these practices, a state of mind that in itself is a proof of degeneracy. There is no denying that the founders of the leading Buddhist sects were remarkable men, whether as regards knowledge or character. Conspicuous among these was Shinran, the founder of the Shin sect. No other sect has aimed at reaching the masses, at popularising its doctrines and methods in the way that this body has done. The teaching of other sects, regarded as philosophy, no doubt has a certain value attached to it, but its influence on society as a whole has been almost nil. There are sects, like the Sōdōshū, whose petty squabbles create a scandal. The disputes of this sect, accounts of which have been published from time to time, wholly concern property, but have been carried on with a bitterness altogether unworthy of men professing brotherhood. The quarrel has been settled by a petty official of the Home Department. Mr. Shimada's criticism here is misleading. Some of our readers may be aware that there is a Bureau in the Home Department called the 社寺局, *Shajikyoku*, or Temple Bureaux. The dispute in question was referred to the head of this Bureau. The acceptance of a title by the head of the Shin Sect, continues Mr. Shimada, is a proof that the unworldly spirit which actuated the great founder of this body is no longer held in high esteem, and in consideration of the significance of such an event those are not far wrong who say that the career of this sect has practically closed. We find then that, alongside of the material progress that so astonished the Western world, Japan in religious and mental affairs is in a state of darkness that is equally remarkable, and for the dispersion of which special measures are required. The whole tendency of the age is to extol material advantages and possessions at the expense of mental enlightenment. Moreover, current ideas bearing on marriage and family relationship all tend to give additional power to selfishly inclined people. Educational establishments like this are needed as a corrective to the abuses to which I have referred. Dr. Kaiō Hiroyuki is asking what harm there is in prostitution, and argues as though there were no great objection to a practice that society has been in the habit of condemning. It seems to me that if once one allows oneself to doubt the correctness of prevailing ideas on the great social and sexual questions of the day, there is no limit to which scepticism may not be carried, and we may find ourselves advocating free marriages and the like. It does not require much foresight to perceive that if loose principles in reference to sexual intercourse are held and propounded by educational magnates, the gravest moral consequences will follow. It will prove to be quite impossible to teach virtue to persons who are so well furnished with excuses for license. It is bad enough for pupils to be able to point to the immoral lives of many of their teachers, but still worse that they should be able to quote their opinions in the defence of vice. Among the great wants of the day are the instilling of approved moral principles into the hearts of students by precept and example, the use of ethical text-books which deal with modern subjects and do something more than quote the sayings of men in whom the world no longer takes an interest, and, above

all, the establishment of a kind of filial relationship between teachers and taught. The practical and most urgent questions of modern times are connected with the relation of the sexes and that of the rich to the poor—questions of social and domestic life. I take it that the managers of this school are fully aware of this fact, that they aim at providing an antidote for many of the evils to which I have referred and therefore I find pleasure in offering my congratulations on the occasion which has called us together to-day.

We read in the *Shūkyō* that at a meeting of the Unitarians held in Boston on the 26th of May it was decided to reduce the grant hitherto made for mission work in Japan by one half. The opinions expressed on this occasion worthy of note were three in number. (1) There were members of the Committee who held that the proper principle for the churches to follow was to withdraw from all fields where the results of previous labours are not satisfactory, and who maintained that Japan was to be included in this category. (2) There were members who contended that in the present condition of Unitarian finances no money could be spared for missionary work in foreign lands. (3) There were others who maintained that under any circumstances, that is, irrespective altogether of the financial condition of the churches, money should not be expended on foreign missionary work. The main reason for the action in reference to Japan is said to be the interest taken by the American Unitarians in their Indian missions and the consequent increased expenditure on these missions, and the decision of the English and other Unitarians to subscribe no more money towards the Japan Mission. The organ quoted above informs us that the Unitarians have decided to introduce changes in the management of the Senshingaku-in. Mr. Onishi Shuku is to be Director, and Mr. Kishimoto Nobuta, Manager, while Messrs. Droppers and MacCauley will lend valuable aid. The connection of Messrs. Kikuchi, Omori, and Matsumoto with the school has been severed.

A book of considerable importance, says the *Shūkyō*, is in course of publication. It bears the title of *Bukkyō Kakushū Kyō* (綱要) "An Account of the Leading Features of the various Buddhist Sects." This work has been in hand since 1890. Messrs. Ashitsu Jitsuzen, Shimaji Mokurai and Shaku Sōyen being the compilers. The collection of materials from the representatives of the various bodies has occupied some time, but the first part of the work has already appeared. The history is to be divided into 12 books and to be bound together in 5 volumes. Book I. contains the history of the 法相, Hossō, and 華嚴, Kegon Sects; Book II., the 天台, Tendai, and 真言, Shingon; Book III., the 融通念佛, Yūzū Nembutsu, the 臨濟, Rinzaï and the 黃檗 Ōbaku Sects. These books have already been issued.

In the pages of the 禪宗, *Zenshū*, Mr. Otori Keisuke, a member of the Privy Council, gives some interesting information about Buddhism in China. Chinese Buddhist priests, says Mr. Otori, do not believe in a future life. All their hopes are centred on this world. Many practices common in Japan, such as the employment of a priest to say prayers on the anniversary of the death of relatives, are unknown in China. Worldly prosperity, freedom from severe afflictions, and long life are the chief things prayed for. The priests are expected to cast out devils and to deliver physiognomical predictions. There is nothing more popular in China than the fortune-telling of the priests. The fact that the things of this life form the chief centre of interest in the minds of Buddhist devotees is shown by the magnificence of their temples, by the number of halls attached to them and the gates by which they are approached. There is nothing so poor as the ordinary run of Japanese temples to be seen in China. Chinese Buddhist priests differ widely from their Japanese brethren in several particulars. In knowledge they are very deficient, but they practice greater austerities than the Japanese priests. They abstain

from eating flesh, do not marry, shave their heads and wear hempen clothes, either brown or some other quiet colour. No silk or gold brocade such as is worn by priests here is to be seen even on the persons of the highest ecclesiastical dignitaries. There are no priests in China, Singapore, Siam, or Korea who dress as gaily as the Japanese fraternity. The source of the Japanese practice of donning fine clothes is to be found in the patronage which Buddhism received from Emperors and Shoguns in ancient times. In the Ashikaga days numbers of Princes joined the priesthood and bequeathed an amount of worldly splendour to holy orders unknown in other countries and out of keeping with the life and teaching of the great founder of the Buddhist religion. Mr. Otori is of opinion that Japanese Buddhist priests, in view of the new openings for religious propagation resulting from the late war, should abandon the habit of dressing differently from their *confères* in other countries.

We read in the *Yui-itsu*, a Shintō organ, that the Kyōto police authorities have called the attention of the "Buddhist and Shintō Clerical Association" to certain existing abuses of priestly power. Last year during the prevalence of the cholera in various places, priests made money by selling what they called holy water, which it was said would effect a cure. This water had been standing in many cases for weeks in front of Buddhist idols or on Shintō Shrines and was absolutely unwholesome. There are certain sects whose methods of influencing converts in not a few cases calls for police interference. Among these may be mentioned the Tenrikyō, the Tsukiyomi-kyō, the Kinkōkyō, the Ontakekyō, and the Kurozumikyō. The heads of these sects have been summoned before the Clerical Association and warned against the continuance of injurious practices such as the one now referred to.

The same organ informs us that three Japanese Buddhist priests have lately been despatched to Russia for the purpose of inquiring into the methods employed by the Greek Church for maintaining its hold on the minds of the soldiers of the Russian army; it being considered that it would be a great gain to Buddhism could these methods be applied to the Japanese Army, which stands in need of more religious teaching than it now has.

The *Tōkai Zasshi* (Statistics) publishes the following statistics bearing on that peculiar custom known as *Yōshi* (情死), for which there is no exact equivalent in English, as some of the deaths of lovers are not suicides. Perhaps love-deaths is the nearest approach to the original that can be obtained. The table refers to the period extending from Jan., 1895, to May, 1896:—

Age.	Deaths by Mutual consent of the parties.		Deaths by violence on the part of one of the parties, without the other's consent.	
	Men.	Women.	Men.	Women.
Below 20 years ...	2	11	—	3
From 21 to 25 ...	18	21	6	4
From 26 to 30 ...	10	2	2	—
Over 30 ...	4	1	—	—
Unknown ...	2	1	—	1
Total	36	36	8	8

This table was drawn up by the well known statistician Kure Bunzō, who, after informing us that of the above number of cases those in which self-destruction was suggested by men were 17, and those in which it was suggested by women 8, while in five cases the decision to die together was the result of simultaneous feeling, proceeds to trace the causes of these tragedies. According to Mr. Kure they originate in (1) A belief in the Buddhist doctrine of transmigration, according to which a union that, owing to obstructions created in a past existence, can not be effected in this world, may be consummated in the next; the idea being that the sufferings of this life alone for the sins of a previous life and thus render happiness in a future existence possible; or (2) in the traditional notion that while the relationship of

masters and servants and parents and children are confined to this life, that of husbands and wives extends over two worlds—the present and the future. (3) Another source of these dire acts is to be found in the character of the *jōruri* and *kyōgen* which are represented on the stage, in which love tragedies occupy a high rank.

The *Tōyō-tetsugaku Zasshi* contains a report of a lecture delivered by Dr. Katō Hiroyuki at the Tetsugaku-kan a short time ago entitled "Obstacles to Truth," in which Dr. Katō contends that religion is one of the great obstacles to the discovery of truth. History records, says Dr. Katō, that in numerous instances the investigations of scientists and philosophers were impeded by religious bigots and that in many cases earnest inquirers were not able to publish the results of their inquiry. This religious oppression was less in China than in Europe, and less in Japan than in China, yet it existed to a greater or less extent in both the East and the West. Religious belief and scientific belief have always been antagonistic to each other. In the case of science it is only after the most full and searching inquiry, after all the methods of investigation possible have been utilised, that belief is attained; but in the case of religion doctrines are accepted as true without proper investigation, and in many instances the mind, whose function it is to institute this inquiry, is no longer free to act as it pleases. Christianity being an absolute religion, claiming perfection, inquiry as to its truth would be considered out of place, but with Buddhism, many of whose doctrines have a philosophical basis, the case is different. Yet in the case of all religions that originated several thousand years ago it is not for a moment to be supposed that inquiry will be satisfied. But the great thing to be desired is that, without becoming the slave of Confucius, Christ or Shaka, men should be free to examine their teaching, to adopt what they please and reject the rest, but nothing can be more fatal to the attainment of true knowledge than implicit faith in either of the existing religions.

The *Seikyō Shimpō*, a Greek Church organ, publishes an account of the Annual Meeting of the Japanese Greek Churches held in Tōkyō on July 13th. No less than 191 representatives of various churches assembled on this occasion. The report for the year (Aug., 1895 to July, 1896) stated that 954 persons had received baptism during the year, an increase of 143 on last year's numbers. In the years 1889 and 1890, says the *Seikyō Shimpō*, 100 baptisms a year were considered to be an evidence of prosperity. We are accustomed to be told nowadays that religion is not flourishing. What is meant is that compared to the results of 1887 and 1888 the present record appears to be a poor one. But, regarded without reference to abnormal years, 954 baptisms are no mean results of Christian work. Nevertheless, it is important to bear in mind that the baptismal register is in no sense the sole criterion of Missionary success; statistics are not altogether reliable.

A writer in the *Aoyama Hyōron* observes that religious believers are in danger of succumbing to the spirit of the age in which we live. The present era is remarkable, says this writer, for the manner in which the sacred precincts of religion have been invaded by persons who have no religious feeling. Marquises and Counts, learned Doctors and literary magnates, all have something to say on the subject of religion, and men's minds are swayed to and fro according to the bent of the criticisms they hear or read. All this is shallow-brained and foolish. In some quarters there is a great outcry in favour of making religion a State affair. To those who object to personal religion the device of insisting on the importance of those elements and characteristics of religion which may be utilised by the State has always recommended itself. To infer from the opposition of a few scholars that there is no such thing as religious power seems to us the height of absurdity.

In that portion of the *Waseda Bungaku* de-

voted to religious topics, reference is made to the prevalence of religious doubt among young men of both the Buddhist and Christian persuasions. Young religious believers belong to one of two classes, says the *Waseda Bungaku*. They are either of the class that is satisfied with the religion professed because it knows no other, or of the class which is engaged in the study of other creeds along with their own and in the investigation of philosophic and scientific truths. It is among this latter class that wide-spread scepticism and dissatisfaction prevail. The investigations made by these young men have led them to perceive that no one creed embodies the whole of religious truth; that creeds, like men, excel in some things and are deficient in others. Hence the only course open to a discerning and a sincere inquirer is to make a suitable selection from available material. But there is one serious drawback to playing the rôle of an eclectic, and that is the powerlessness of doctrines chosen from various sources to renovate the heart in the way that it needs renovating. The imperfections of all existing creeds, their unsuitability to the age in which they live creates a longing for a new religious leader in the hearts of many earnest young men. They are wearied of mere logic chopping and of the repetition of dry formularies that have no interest to the present generation. According to the saying, law only begins to exist when there are men to obey it or enforce its observance. So is it with all religious precepts and rules, their excellence can only be known when there are men whose lives are their ever present embodiment. The religious men whose careers made a stir in the world have passed away without leaving mantles behind them. There is a great gap in religion between the new and the old, which shows no signs of being filled.

The Shinto organ, the *Yū Itsu*, writes in the same strain. Religion, says this magazine, in its present degenerate state can prove of little use to society. Another Shintō Jeremiah records his lamentations in the following words:—"So low is the quality of the men who represent religion among us that it is as though Christianity were to be preached by Ishikawa Goemon or Buddhism by Dōkyō. With such preachers who could be induced to listen?"

There is nothing new in the answers to the six questions propounded by the *Nihon Shūkyō*, noticed in the two last Summaries, but the comments of various organs on the answers given are worth epitomising. The *Fukuin Shimpō* bitterly resents the action of the *Nihon Shūkyō* and ridicules the answers published by that organ. Dr. Katō, says this preacher of the gospel of peace, is unable to comprehend the meaning of religion and hence has no right to express an opinion thereon. The answer of Shaku Sōyen astonished us beyond measure, continues the *Fukuin Shimpō*. The dogmatic manner in which most of the writers state their beliefs, says the *Mitsugon Kyōhō*, is surprising. The most foolish of all the opinions expressed is that of Shaku Sōyen, in which he proposes a meeting of the sects to discuss differences and decide on the course to be followed. But the *Zenshū* maintains that this reply of Shaku Sōyen is preferable to the majority of those published, which remind one of the proverb, *Waga ta ye misu wo hiku*, as every one is for recommending his own creed, and thus rendering the discussion useless. The *Bungaku Kai* is of opinion that such controversies as that started by the *Nihon Shūkyō* can effect little good. Though objecting strongly to Dr. Katō's method of treating religion, and while maintaining that religion is a natural product of the human mind, this organ is opposed to the methods of discussion adopted by numerous religion publications, and thinks that the efforts of the *Nihon Shūkyō* to advance the interests of religion are misdirected and only calculated to excite merriment among the enlightened.

Although no direct answers to Dr. Katō's question respecting the depth of the religious sense in the Japanese mind have as yet been published, several articles bearing on this sub-

ject have appeared, which we now reproduce in an abbreviated form. The *Fukuin Shimpō*, under the title of "The Japanese religious sense and the difficulty of Christian propagandism," contends that the progress which religion makes in Japan at the present time depends entirely on its character. If it is materialistic it will prosper. If it is spiritual it will make little impression. It does not seem to us that the reforms and changes which have been effected in the present era have in any way altered the religious life and feeling of the Japanese. In religious matters we are still children, attracted by material objects.

It cannot be said, remarks the *Taiyō*, that the *Turanians* are religiously inclined. Religious ideas in China are of the shallowest kind. Although such terms as 天, *Ten* and 上帝, *Jōtei* are in constant use, no such deep sense is to be attached to them as to the God of the religions of the West. Religious longings of the more fervent kind are unknown in China. Such expressions as 從天 (*Ten ni shitagau*) refer to obedience or subjection to natural laws, rather than to following the will of God in a Western sense. Their 頌, *shō* celebrate the splendour of their Emperor, rather than set forth the glory of God. That both the Chinese and Japanese are deficient in respect of the religious sense seems to us to need no further proof. They know of no spirit apart from matter; they have no belief that has not profit as its ultimate object. What we call our religious literature has only one title to be thus classified. It abounds in religious terms, it alludes to divinities and the like, but for the signs of real religious devotion you look in vain through these literary productions. The *Sōtō Kyōhō* re-echoes these sentiments. Japanese prayers, says this Buddhist organ, are concerned with the things of this world. The various offerings made to gods and divinities all show how materialistic are the notions of devotees and their instructors, the priests. The custom of transcribing the names of donors near the temples in order that others may know of their religious zeal shows how thoroughly worldly are prevalent ideas on this subject. The popularity of local gods, the belief in the fox's connection with Inari-sama, the importance attached to pictures and images and the like, all show how the Japanese religious sense clings to the material and is unable to get beyond.

Commenting on the prevalence of those corrupt forms of worship known as *Inshi*, the *Shinri* contends that the attitude of scholars to religion is indirectly responsible for the existence of the abuses practised by such sects as the Tenrikyō and the Renmonkyō. The desire for religion exists, and if the genuine article is not forthcoming even corrupt forms will be welcomed. The government are doing their best to put an end to the evils which have attracted public attention, but the real remedy for such a state of affairs lies in the possession of Christians and with them lies the responsibility of applying it.

The *Kiristokyō Shimbun* quotes from an address delivered at the Hartford Divinity School by Mr. Richard, a Presbyterian Minister of Plainfield, New Jersey, to the effect that there is no greater impediment to efficient and well organised Christian work than want of union among Christian Sects. The increasing demands for evangelistic work in large cities can only be met says Mr. Richard, by Christian bodies combining in their efforts. The *Kiristokyō Shimbun* thinks this suggestion to be much needed in Japan, where, with the exception of the Episcopalians, there is a total lack of union and mutual consultation in evangelistic work. The Kumi-ai Churches are great defaulters in this respect, where the tendency is for each church to try and push its own interests, instead of considering what is best for the Christian Church as a whole. It is very plain that the success of Christianity must largely depend on the skill with which the forces at the disposal of the Church are handled and applied, and

there is an immense deal to be gained by placing all the evangelists available under definite management and thus avoiding the weakness attendant on the sporadic efforts made by many Japanese Churches.

Only a few replies to Dr. Katō's questions respecting prostitution have been published. The *Awoyama Hyōron* states the reasons which induce it to condemn prostitution *in toto*. The *Hakkō* considers the topic unworthy of the pen of a man like Dr. Katō. The *Kyōiku Hōchi* regards Dr. Katō's new departure as an unwarrantable attempt to defend immodesty, and accuses the ex-President of the University of assuming the character of a special pleader on behalf of fallen women. To this criticism the *Nihon Shūkyō* replies that the *Kyōiku Hōchi* is evidently incompetent to understand the sentiments of scholars like Dr. Katō. It is as necessary that learned men should discuss prostitution as that medical men should deal with a number of unseemly subjects. Social reforms would be impossible were such subjects habitually shirked by leaders of thought. We postpone a fuller notice of this subject till next month, when we hope to be in possession of articles which will deal with it in a more thorough manner than those to which reference has now been made.

The *Nihon Shūkyō* contains a notice of a new Christian Sect designating itself "The Society of Friends." Its origin, as stated by the *Nihon Shūkyō*, is to be traced to a difference of opinion between foreign and Japanese Christians, which, some time last autumn, resulted in the Japanese severing their connection with their foreign fellow-believers and starting a new church, if church it may be called. One of the chief characteristics of the new society is its determination to receive no foreign aid of any kind. The members of the body pursue their ordinary avocations, only meeting once a month at the house of one of their number. Connection with adherents in the provinces is kept up by correspondence.

The organ from which we have just quoted informs us that among the 50 literary students who recently graduated at the Imperial University, no less than 23 have determined to compete for the degree of *hakase*, and that three out of this number have chosen religion for special study. Mr. Anezaki Masaharu is to devote himself to the study of "Religious development;" Mr. Shimidzu Tomojirō to that of "Comparative Divine Revelation," that is the Revelations of different creeds; and Mr. Hirota Ichijō will investigate the "Connection of Buddhism and Brahmanism."

The *Pui-itsu* condemns the action of the Doshisha *vis-à-vis* the American Board as unfilial and unchristian. The relation of the institution to the Board, says this *Shinto* organ, was evidently that of a child to its parent and this being so, the appeal to legal rights and the like was altogether out of place. The feelings of the members of the Doshisha are not what they ought to be. Regarded apart from Christianity altogether, the conduct of the Doshisha is unseemly. How much worse does it appear when it is remembered that the chief actors in the scene just witnessed profess the gospel of love, peace, and charity. The same organ is of opinion that there is a large amount of hypocrisy and corruption among Christian converts, and that to this is to be attributed the waning influence of Christianity in this country. A close scrutiny of the motives of Christian converts reveals that with a very large number one of two considerations induced them to profess the Christian faith, says the *Pui-itsu*. (1) They became Christians in order to attain some other ulterior object; (2) or they join the church as a means of obtaining a living. Numbers of young men are discerning enough to perceive that connection with a foreign missionary enables them to become acquainted with foreign languages and Western thought in a more thorough manner than they could possibly do

without such aid. Having attained their object, they abandon Christianity. Among the men who are paid to preach there are a large number who have no deep religious convictions. Of a vast number of Christian converts superficiality is the most conspicuous trait. The moral notions of Christian believers are in many instances of a very low class, and in money matters there is not infrequently a great want of confidence between foreign and Japanese believers. Even in the Doshisha, which once was a great power in the country, mutual confidence between the native and foreign members of the institution exists no longer. We cannot say, concludes the *Pui-itsu*, that the moral effects of the adoption of Western civilization and the introduction of Christianity have been good. Western science has been taught, men's minds have been enamoured with the new learning, but have drifted into materialism. Morality has vanished like so much smoke, and the great object in life with the majority seems to be to amuse themselves, with literature, with politics, with religion, each in turn.

MR. WAEBER.

A person signing himself "Tekken-sei" writes from Sōul to the *Yiji Shimpō* that a Korean has furnished him with this character sketch of Mr. Waeber, Russian *Chargé d'Affaires* in the Korean capital:—Mr. Waeber is not a great man, but an experienced political strategist; he has a consummate knowledge of accurately gauging the tide of times and things, both in the East and the West, and is excelled by no member of the *Corps Diplomatique* in Sōul in making tools of Korean statesmen. He has built his power and influence upon the foundation of the King's Court, therefore his political stability will not be affected by any Ministerial changes. His brain is cool and clear; he never allows any Korean statesman to become too familiar with him; never shows himself too warm a friend to anybody so long as the latter is useful to him, yet as soon as his purpose is achieved, he does not hesitate to give his tool a cold shoulder. His keen vision has penetrated deep into the coil of Korean politics, and at present he does not turn any very attractive ears to the appeals of Korean Ministers. Nor does he mean to allow his country to lend Korean any large sums, nor permit many Russians to become advisers to the Korean Government, while he is opposed to stationing a Russian garrison in Sōul.

HONEST MONEY.

It is a pity that the extravagant proposals of the silver men in America should have imparted so much force to their adversaries' plea for "honest money." There is not a single dishonest plank in the genuine bimetallic platform, which contemplates an international agreement to fix the ratio between the precious metals at a figure in close proximity to that actually ruling in the market, or, at any rate, differing so little from the latter as not to put an immense and unearned profit into the pocket of every large holder of silver. But when it is proposed that a dollar intrinsically worth only 53 gold cents shall be suddenly raised to a value of 100 cents, much force is given to the statement of the *New York Times*:—"The time has come when men must array themselves on one side or the other of this supreme issue. Those who are not for honest money are against it, and honest money means the gold standard and nothing less. It is an issue high above candidates or party, for it is an issue between national honour and national dishonour. There is no middle ground, no basis of compromise, no halting-place between public and private credit on the one side and discredit and anarchy on the other. It is an issue between patriotism and agrarianism; between courage and cowardice; between national prosperity and national bankruptcy, and it must be decided in the battle of 1896."

TERRIBLE EARTHQUAKE IN AKITA.

The *Yiji* issued an extra on Tuesday afternoon reporting the occurrence of a terrible earthquake in Akita about 5 p.m. on the 31st. The report of the disaster reached the Department in Tokyo from the Akita Meteorological Observatory. It says that Rokugo, in Senhoku District, has been entirely destroyed, that Omagari and other places have also suffered terrible damage. A message has also reached the *Yiji* from Morioka, saying a terrible shock was felt there on the evening of the 31st ult. At Hanamaki more than 30 buildings were destroyed, and Higashi Hei and the Kisen Districts that suffered so severely from the last seismic disaster, have received considerable damage.

The following telegrams appear in the vernacular papers this morning, in reference to the affair:—

Akita, Aug. 31, 5:30 p.m.

A most terrible earthquake shock has just occurred: many houses are levelled to the earth, and the bazaar, in course of construction, is destroyed.

Sakata, August 31.

At about 5 o'clock this afternoon a violent earthquake occurred. It stopped clocks, threw down fences, and demolished stone-walls.

Iwate, Sept. 1.

In the two towns of Hanamaki and Kawaguchi about 30 houses were wrecked; many godowns were demolished. Many breaches have been made in the roads, and from some of these water gushed out. The extent of the damage cannot yet be stated as investigations are still proceeding.

Sendai, Sept. 1.

The earthquake on Monday afternoon wrecked many houses at Sawamura, in the Toyomachi District; 12 houses were completely ruined. Much havoc was occasioned at Kurihara, Shida, and Motoyoshi. Many feeble earthquakes are still being recorded.

Tsu, September 1.

The floods have done much damage in the district of Kuwana (Miye Ken). A train on the Sangu Railway was capsized, and 11 persons were injured.

RUSSIANS AS VIEWED BY JAPANESE.

An anonymous writer in the *Yomiuri* says that a Russian is tall and stoutly built. He has a broad face and an elevated forehead; is fond of wearing a long beard; has large and sparkling eyes; is full of fire and fervour, but his expression is not fierce, it is mingled with gentleness and serenity. The most striking features of a Russian's character are boldness and courage, amounting almost to a fault. An educated Russian is, however, both gentle and intelligent. The Russian is remarkably eloquent, his language being suited to the expression of delicate ideas and sentiments, being highly inflectional, while he is also considerably gifted in the use of gestures. A Russian has a large amount of patience, and does not give up in the face of difficulty or hardship; he would rather die than abandon an object. Peter the Great, as a wise man once said, was no chance production of Russia. He was simply the *soul ensemble* of all the excellent qualities of all Russians. He was, as a boy, not educated by courtiers and bishops, like most princes of his day, but was brought up by a German tutor who succeeded in instilling into Peter's mind European knowledge and thoughts quite foreign to Russia in the great Czar's time. Thus was he freed from the greatest drawback in Russian character—conservatism. The Russian has no nice powers of discrimination. In reasoning he is more inclined to be synthetic than analytical. His philosophy is not materialism, but transcendentalism, therefore he is incapable, unlike the German, of excelling in scientific studies and discoveries. He is not a thinker, but a practical man. In civilization, he lags far behind other Europeans, but as a conqueror he is *par excellence*. He conquers not merely by sheer strength, but by artfully securing the sympathy of his intended victim.

HARBOUR RECONSTRUCTION.

Just at present, writes the *Nichi Nichi*, in view of the necessity for developing shipping facilities, projects have sprung up in many places for reconstructing the harbours of the Empire. The principal among them are Hakodate, Otaru, Osaka, Nagao, Hakata, Atsuda, Kobe, Minatogawa, Kelung, and Shimonoseki. The plans for Hakodate and Otaru have advanced so far as to fairly promise successful consummation. The Osaka works are being discussed by the City Assembly, while the Nagoya Prefectural Assembly are now endeavouring to come to a decision regarding Atsuta harbour. A private company of Fukuoka has applied to the Authorities for permission to reconstruct the harbour at Hakodate, and Dr. Furuchi, Chief of the Civil Engineering Bureau in the Home Office, has been despatched to Fukuoka Ken to report upon the Company's designs. The reconstruction of Kobe harbour and alterations at the mouth of the Minatogawa have become problems of great importance to Kobe. The reconstruction work at Kelung is being investigated by Rear-Admiral Tsunoda, Professor Burton, etc. The Authorities as well as the general public are said to look upon Nanao as an important military harbour of the future. The projected work at Shimonoseki will be very extensive, and the Authorities are paying all attention to it. It is said that business relating to this scheme has brought Mr. Oura, Governor of Yamaguchi Ken, to the capital.

WORK AT THE TOKYO TECHNICAL SCHOOL.

From the Report of the Minister of Education for 1894, we take the following interesting extract with reference to the work done at the Tokyo Technical School during that year:—

As regards the actual state of manufactured goods and the practical results achieved by pupils in the various workshops, it may be mentioned that in the dyeing and weaving section, experiments were made with silk obtained from various kinds of silk-worms, both native and foreign. The results obtained by this experiment were quite remarkable, for it was discovered that in silk fabrics in which diverse sorts of silk are woven together, the whole surface of the cloth thus manufactured is so conspicuously lined that the best sorts of silk fabrics could never be produced by the intertexture of different sorts of silk. This being a most important question connected with the sericulture, reeling, and weaving, attracted the special attention of all practically engaged in such industries. The experiments in dyeing and weaving which had been prosecuted in the previous year on fabrics for the use of umbrella manufacture have been followed up the present year, and good results were also obtained. In order to save the needless labour and expense of dyeing crape and cotton satin black, an experimental process with aniline black was tried on the fabrics and was attended with very fine results. Satisfactory results were obtained from experiments made in dyeing and weaving, chiefly with gauze silk, velvet, carpet, *habutay* (a kind of fine silk), etc. As regards the furnace work, experiments were made with the materials used for earthenwares in Aizu in the Ken of Fukushima, and investigations on the subject advanced so far that when the teachers in the main course officially visited the said locality during the summer vacation, they were ordered to put the experiments to the test of practical application. Various facts were also discovered on investigations being made into the chemical properties of earthenwares, which will also be attended with satisfactory results when put to practical tests. As to the glass manufacture, the construction of furnaces is now in the course of investigation. An experiment of burning gas as a substitute for coal to be used in furnaces, and another experiment of using coal as fuel for glazing porcelain and earthenwares, are now in the course of prosecution. Among the various substances manufactured and put to practical tests in the section of applied chemistry may be mentioned bone gelatine, bone fat, fatty acid, grossuline, fish gelatine, petroleum, petroleum naphtha, oil for machinery, starch, grape sugar, acetic acid, creosote, collodionized cotton, gun cotton, gallic acid, pyrogallie acid, Borneo camphor, India rubber liquid sulphurous acid, acetone, iodiform, parchments, blue print, black print, etc. Among these manufactures, fatty acid, grossuline, and pyrogallie acid need further investigation, but with regard to others, good results were nearly always obtained. Among the matters investigated in the section of electrical engineering may be mentioned the experiments relating to the strength of various iron materials, together with oil burner, gas engine, Bandy's radiator, pumps, etc.

All of these instruments are of recent invention, and no attempt has ever been made in this country of constructing them, but as they are most indispensable for carrying out our industrial projects, many efforts were put forth both in investigation and construction, and they were rewarded with good success. As to the present condition of the practical work done by the pupils in the various workshops, the results were satisfactory and considerable progress has been made by them. Though the arrangements in the various workshops were so far completed as the school finances would permit, there yet remain many urgent questions connected with the future works of the institution. In the dyeing and weaving section, a steam engine must be introduced, for giving instruction in the arts of dyeing and weaving silk and calico fabrics, as well as cotton cloths, which are generally manufactured by the aid of steam-engines. In the section of furnace work, complete arrangements must be provided for the practice of pupils, as well as for investigations to be made on porcelain, earthenware, and glass manufacture. In the section of applied chemistry, various apparatus connected with the manufacture of sugar, and the brewing of fatty acid, grossuline, and *sake* are required, for the purpose of facilitating the manufacture of sugar, soap, European candles, or the preparation of chemicals on the one hand, on the other for assisting investigations to be made into the method of *sake* brewing. In the section of mechanics, a collection of various machines is required to meet the necessity of promoting such arts as are connected with the casting of steel and the manufacture of lead pipes, etc.

"NO. 1 TALKEE-TALKEE."

Mr. E. H. Parker, writing in the *New Review* for July, gives a translation of the Emperor of China's refusal to George the Third's request for permission to send an Ambassador to Peking. The Emperor's reply contains the following paragraph, very suggestive of the height of the pedestal upon which China believed herself to be placed in the year 1793:—"The requests now submitted by thine envoys not only seriously concern the statutory rules of the Celestial Court, but are all quite futile and impracticable in own interests. We now once more set forth our meaning for thine instruction, O King, who shouldst enter into our views and for ever render obedience, thus enjoying thy due share of the blessings of peace. If, after this clear declaration, thou, King, shouldst peradventure lend misguided ear to the words of the men under thee, and allow barbarian merchants to go with their trading ships to Chêh Kiang, Tientsin, &c., and seek to land there for purposes of trade, know thou that the statutory rules of the Celestial Court are very strict, and that the civil and military officers in charge of each place will do their duty faithfully, and will not allow any ships of thy kingdom proceeding thither to remain there, but will positively have to drive them away at once to sea, so that the barbarian merchants of thy kingdom will have all their trouble in vain. Say not thou wast not warned! Tremble and obey, without negligence, this further command!"

KOREAN NEWS.

The Sôul correspondents of the Tokyo papers send particulars of the arrest of a number of Korean politicians holding progressive views; while all have something to say of the progress of the negotiations with regard to the grant of a charter to certain Japanese capitalists for the construction of the Sôul-Fusan Railway. But first to the political arrests. The ringleaders in the affair are Li Tai-sun, Minister of the Imperial Household; Sin Ki-sôn, Minister of Education; and Li Chong-kôn, chief of the Police Board, and a few others of less repute, all of whom are either notorious bigots of the old school, or are greedy of power and are not afflicted with dainty scruples about the means they employ in attaining their purpose. Conspicuous among the lesser agitators are Hong Chong-u, the assassin of the late Kim Ok-kyun; and Li Il-sik, who attempted the life of Pak Yong-ho, and was arrested by the Tokyo Police, and then shipped home. Hong is now a Court official, while Li has an appointment in the Judicial Department. These bigotted and unprincipled men elaborated an absurd charge against the leading Koreans holding progressive views, declaring that Kim Chhun-hwi, ex-Vice-

Minister of Education and a nephew of the lamented Kim Hoing-su, with some 43 others, had a secret understanding with local insurgents with the purpose of assaulting the Russian Legation, and then carrying off the King. Later the charge grew into one of more serious import, a design to dethrone His Majesty. On the 13th ult., a chamberlain reported to the Minister of the Household—in accordance with the original programme—the alarming news that the Progressive faction had arranged to enter the capital at the head of a large number of local insurgents, with a view to carrying off the King. An order was thereupon conveyed to the Police to arrest forty Koreans suspected of holding progressive views. The Police were of course prepared beforehand, and with malicious promptitude at once arrested Yu Se-nam, ex-Vice Minister of the Home Department, the nephew of the late Premier, and a number of others all reputed as belonging to the pro-Japanese faction. At first, a rumour ran to the effect that the object of the arrest was to exterminate the pro-Japanese faction, but the rumours gradually assumed another shape when it was seen that all Koreans on good terms with one foreign country or another, whether Russia or America, were becoming alarmed for their safety. The all-powerful Minister of Justice, who is a leading pro-Russian statesman, the Minister of Foreign Affairs, and his brother, the Minister of War, both of whom are identified with the so-called English Language Faction, or pro-American faction, were all obliged to put themselves upon their guard.

On the afternoon of the day on which the arrests commenced, the Japanese Minister sent in a strong protest against the proceeding, laying particular stress on the point that the arrest of Koreans merely because they were identified with the pro-Japanese party, as public rumour had it, could not be suffered to pass unheeded. This protest was followed by remonstrances of similar import from the English, American, and Russian Representatives. The result was that the Court and Cabinet were obliged to stop the proceeding on the 15th ult. The number of Koreans arrested is not definitely known, but it is generally thought to be between 10 and 20.

It is suspected that the unfortunate Koreans recently arrested have suffered torture, for the Police and jailers of the capital are notorious for their brutality. Fortunately, the Foreign Representatives in Sôul are resolved, since the shocking assassination of the late Premier and the Minister of Agriculture, Commerce, and Industry, not to allow the Korean Government to judge or punish their political opponents as they please. Mr. Steerbrink (?), an English gentleman in the employ of the Korean Government, and Philip Jaison, the Korean Editor of the *Independent* and leader of the English Language faction, have been appointed councillors to the Police Board in connection with the present case. It is confidently hoped that the presence of these two gentlemen upon the Board will deter the Korean Police from indulging in their favourite practice of extorting false confession from prisoners by means of torture; and that the accused in the present case will be liberated as soon as possible.

The negotiations to obtain a charter for the construction of the Sôul-Fusan railway by Japanese are at a standstill. After repeated applications by the Japanese Minister on the subject, the Korean Foreign Office sent him a note on the 15th ult., to the effect that the granting of such a concession as the construction of the Sôul-Fusan Railway while the localities are still in a state of disturbance, would ultimately involve the Japanese in danger, and therefore the time has not yet arrived for the Government to accede to the request of the projectors. This note brought the affair to a definite conclusion, at least for the present, but the Japanese projectors do not despair of their scheme. A special covenant was arranged between Japan and Korea in 1894 in connection with the laying of a railway between Sôul and Fusan, the agreement being that the concession of the right to build the Sôul-Fusan

railway should be given to a company approved by the Japanese and Korean Government. It was in virtue of this covenant that the Japanese Minister pressed the Korean Government to grant a charter to Baron Ozaki and Mr. Omiwa, now in Seoul agitating on behalf of their fellow projectors of Tokyo and Osaka. So long as this covenant exists the privilege of constructing the Sôul-Fusan Railway must be considered as monopolized by Japan alone; and Japan, therefore, is entitled to bring forward a claim for the construction of this line at any moment. Some journals suspect that the two committees of the Fusan-Sôul Railway Construction Company, now in Sôul, may be placing too much importance upon the necessarily formal negotiations of the Japanese Minister. They must remember that the Americans obtained the concession for the construction of the Sôul-Ninsen line and the French of the Wiju-Sôul line, in virtue of their having freely spent money among influential Koreans both in the Court and the Cabinet. The Japanese are advised by the Sôul correspondent to be similarly liberal if they wish to obtain similar concessions.

THE GERMAN CIVIL CODE.

Telegraphic news that the German Civil Code had at length been passed, was received in this part of the world without any special comment. Yet it is certainly a very great event. The *Manchester Gazette*, referring to it, says:—

The German nation are to be congratulated upon the passing of their Civil Code, which after thirty years' preparation, has at length been finally adopted as the law of the empire, although it will not come into force until the beginning of the year 1900. For such a nation as Germany, nothing more essential to its well-ordered progress can be imagined than a code of civil law. This cluster of countries, which is now known as the German Empire, is under one government and one head, with one army and one navy. But, as long as its people lived and worked and died under such a number of different and conflicting legal systems, the very basis of true national unity, as distinguished from imperial power, was wanting. In regard to its laws, Germany is still in many places quite medieval, and although parts of Prussia have a provincial system, there are as yet numerous local codes and customs still extant, while the Rhine provinces continue to be under the French code. The work has been enormous, and it has been practically done three times over, the third commission having been composed of German judges and lawyers skilled in the actual administration of the law. Much of it is, of course, really based upon that great body of jurisprudence called the Roman Law, a work so massive and enduring in its character that it still forms the greatest monument of this wonderful race, which built and legislated as it were for all time, and left succeeding generations to use its materials of every kind in erecting a new order of civilization upon the ruins of the old.

When, we wonder, will Great Britain have a civil and a criminal code. The general conclusion is that she can never have one until she possesses a more practical form of legislature than the House of Commons. She has conferred upon India the boon of codes complete and satisfactory, but she can not, apparently, do as much for herself. Lying in some capacious pigeon-hole there is a draft of a British Criminal Code, elaborated by some of the country's greatest jurists after years of labour. The greater part of this Code was endorsed several times by the Legislature, but Parliament has never found time to dispose of the debated clauses. The business-like, common-sense faculties of the English people, as has been well observed, do not display themselves conspicuously in the work of legislation.

THE ANTI-CYCLE MOVEMENT.

A number of American ladies have formed themselves into an association called the "Women's Rescue League." Their object is to stop the use of the bicycle by females. They have scattered circulars broadcast, inviting all clergymen and "true women" to join in discountenancing a practice "as indecent as it is vulgar," which, they affirm, is in great part to blame for an alarming increase of immorality among young women. They formulate the following charges:—

A great curse has been inflicted upon the people of this country because of the present bicycle craze, and if a halt is not called soon 75 per cent. of the cyclists will be an army of invalids within the next ten years.

Bicycling by young women has helped more than any other medium to swell the ranks of reckless girls, who finally drift into the army of outcast women of the United States.

"Bicycle run for Christ," by so-called Christians should be properly termed "Bicycle run for Satan," for the bicycle is the devil's advance agent, morally and physically, in thousands of instances.

We presume that these good ladies know what they are about, but it seems to us that the bicycle has come to stay. As to its immodesty, that can be a question of costume only. If cycling helps to abolish the unpractical and ridiculous dress worn by ladies in Europe and America to-day, it will go down to posterity as one of the greatest blessings of the century. Why, again, should it promote immorality? The exercise itself is healthy and invigorating. It promotes muscular development, acts as a tonic to the nerves, and teaches self-reliance. Of course it presents opportunities to escape beyond the ordinary limits of restraint and supervision, but morality that can not stand that increase of latitude seems scarcely worth safeguarding. Certainly cycling can not be mentioned in the same breath with dancing, and that women should band themselves together for the purpose of checking the former while they treat the latter with indifference and freely indulge in it, is another flagrant example of the biblical beam and mote.

THE SEISMIC WAVE DISASTER.

The papers print an interview with Mr. Kume Kinya, a Councillor in the Home Department, who lately returned from an official tour in the districts inundated by the great seismic wave. The survivors, he says, have mostly lost one or more near relations, and now ten and sometimes as many as twenty persons—the individual survivors of once large families—are found living together in a house. They earn a livelihood by fishing, as in the days previous to the direful catastrophe, the fishing boats and tackle being rented out to them by capitalists. Most of the inhabitants of the Kisen and Motoyoshi Districts are at present engaged in catching cuttle-fish, and the more fortunate among them are taking 4 to 5 yen worth per day. The current price of cuttle-fish is 2 rin 5 mo per head: the fishery is therefore very prosperous. Shoals of *katsu* are also being obtained in these districts. The people in Kamaishi and vicinity are also doing well by the capture of cuttle-fish. Quite contrary to expectation, I have found the schools already resuming work in most of the towns and villages, principally in Buddhist or Shinto temples, as the old school-houses have been either wrecked or swept away. The people of Totsugawa, in Yamato Province, emigrated to Hokkaido or elsewhere after the great inundations that took place many years ago, and some persons thought that on the present occasion, the survivors might be willing to leave their old homes for safer places. But such is not the case. The people prefer to remain in their old villages, completely resigning themselves to the chances of fate. Those who have commenced to rebuild their houses have shown no inclination to select sites in higher places. Nothing beyond the relief of the destitute, wounded, or sick, has yet been attempted by the civil administration in the devastated towns and villages. This cannot be helped, for most of the old official documents are lost. The relief funds that have come in from various sources promise to produce very good results, though the young and improvident appear incapable of turning their gifts to the best advantage. A portion of the relief funds is still held by the Prefectural Offices, but enough has already been given to the unfortunates to pay for the reconstruction of their houses and the purchase of immediate necessities, agricultural implements, and seeds.

THE ANGLO-AMERICAN ARBITRATION TREATY.

We are now in possession of the details relating to the proposed treaty for referring to arbitration all questions that may hereafter arise between Great Britain and the United States of America. The question is probably the most important that has occupied public attention since the beginning of the century, and its interest for the civilized world can scarcely be exaggerated. We take from *Bradstreet's* an excellent digest of the negotiations and the position reached up to July 25th:—

The original draft of a treaty for this purpose came from Lord Salisbury, who proposed that the two Governments each appoint two or more permanent judicial officers for the purposes of the treaty; that on the appearance of any difference between the two powers, which, in the judgment of either of them, cannot be settled by negotiation, each of them shall designate one of the said officers as arbitrator, and the two arbitrators shall hear and determine any matter referred to them in accordance with this treaty; that before entering on such arbitration, the two arbitrators shall select an umpire, by whom any question upon which they disagree, whether interlocutory or final, shall be decided; that the decision of such umpire upon any interlocutory question shall be binding upon the arbitrators, and that the determination of the arbitrators, or, if they disagree, the decision of the umpire shall be the award upon the matters referred. Among the subjects for arbitration are included complaints made by the nationals of one power against the officers of the other; all pecuniary claims or groups of claims, amounting to not more than £100,000, made on either power by the nationals of the other, whether based on an alleged right by treaty or agreement or otherwise; all claims for damages or indemnity under the said amount; all questions affecting diplomatic or consular privileges; all alleged rights of fishery, access, navigation, or commercial privileges, and all questions referred by special agreement between the two parties.

Differences in respect to questions of fact or of international law involving the territorial rights, sovereignty, or jurisdiction of either power, or any pecuniary claim or group of claims of any kind, involving a sum larger than £100,000, are to be referred to arbitration under the treaty, but if in any such case, within three months after the award has been reported, either power protests that such award is erroneous in respect to issue of fact, or some issue of international law, the award is to be reviewed by a court composed of three judges of the Supreme Court of Great Britain and three of the judges of the Supreme Court of the United States, and if the said court shall determine, after hearing the case, by a majority of not less than five to one, that the said issue has been rightly determined, the award shall stand and be final, but in default of such determination it shall not be valid; and if no protest is entered by either power against the award within the time limited it shall be final. Differences which, in the judgment of either power, materially affect its honour or the integrity of its territory are not to be referred to arbitration under the treaty, except by special agreement. Any difference whatever, by agreement between the two powers, may be referred for decision by arbitration with the stipulation that, unless accepted by both powers, the decision shall not be valid. The time and place of their meeting and all arrangements for hearing, and all question of procedure, are to be decided by the arbitrators, or by the umpire, if need be.

Mr. Olney, while welcoming the proposals of Lord Salisbury on general grounds, took exception to some of them and suggested substitutes. He proposed, for example, that arbitration under the treaty should also be obligatory in respect of all questions now pending or hereafter arising involving territorial rights, boundaries, sovereignty, or jurisdiction, or any pecuniary claim or group of claims aggregating a sum larger than £100,000, and in respect of all controversies not specially described in the treaty; provided, however, that either the Congress of the United States on the one hand, or the Parliament of Great Britain on the other, at any time before the arbitral tribunal shall have convened for the consideration of any particular subject matter, may by act or resolution declaring such particular subject matter to involve the national honour or integrity, withdraw the same from the operation of the treaty; and provided, further, that if a controversy shall arise when either the Congress of the United States or the Parliament of Great Britain shall not be in session, and such controversy shall be deemed

ed by her Britannic Majesty's government or by that of the United States, acting through the President, to be of such nature that the international honour or integrity may be involved, such difference or controversy shall not be submitted to arbitration under this treaty until the Congress and the Parliament shall have had opportunity to take action thereon.

Secretary Olney further proposed that in the case of controversies of the kind referred to the award shall be final if concurred in by all the arbitrators, and that if assented to by a majority only the award shall be final, unless one of the parties within three months from its promulgation, shall protest in writing to the other that the award is erroneous in respect of some issue of fact or of law. In every such case the award is to be reviewed by a court composed of three of the judges of the Supreme Court of Great Britain and three of the judges of the Supreme Court of the United States, who, before entering upon their duties, shall agree upon three learned and impartial jurists to be added to said court in case they shall be equally divided upon the award to be made. To the court there shall be submitted a record full of all the proceedings of original arbitral tribunal which record, as part thereof, shall include the evidence adduced to such tribunal. Thereupon the court shall proceed to consider said award upon the record, and may either affirm the same or make such other award as the principles of law applicable to the facts appearing by said record shall warrant and require, and the award so affirmed or so rendered by the court, whether unanimously or by a majority vote, shall be final. If, however, the court shall be equally divided upon the subject of the award to be made, the three jurists agreed upon as hereinbefore provided shall be added to the said court, and the award of the court so constituted, whether rendered unanimously or by majority vote, shall be final.

In support of these substitutes, Secretary Olney declared that they make all disputes *prima facie* arbitrable, and places where it belongs, in Congress and Parliament, the right and power to decide whether they are arbitrable or demand assertion by force of arms. The administration in authority, he said, when a serious international controversy arises, is often exposed to influences not wholly favourable to its impartial consideration. It is liable to view the honour of the country as not distinguishable from the good of the party. And if war and not arbitration is to be evoked the direct representatives of the people, at whose cost and suffering war must be carried on, should be properly charged with the responsibility of making it. By the scheme as amended, on the other hand, the controversy is finally ended, whereas under the original proposition there would be award only in rare cases in which the six appellate arbiters favoured it either unanimously or by a majority of five to one. Mr. Olney suggested that such an arrangement would be dangerous. In all cases where the arbitrators were equally divided or stood four to two, public feeling in each country would be aroused by the protracted proceedings, and the chances of a peaceful outcome would be rather prejudiced than promoted; and Mr. Olney pointed out that the United States, having no European alliances, has more to fear than Great Britain from the bias of foreign judges.

Secretary Olney suggested that if the amendments proposed by him should prove acceptable, there would be no reason against bringing the pending Venezuelan boundary dispute within the terms of the treaty by express words of inclusion while in case no general treaty of arbitration could be expected at present, the dispute would offer a good opportunity for a tentative experiment at arbitration. Lord Salisbury, in reply, disclaimed any intention to exclude the Venezuelan dispute, but held that the system of arbitration ought to be application to all civilized countries. Somewhat later Lord Salisbury proposed the establishment of a commission consisting of four members, two to be British subjects and two citizens of the United States, to report upon the facts which affect the right of Spain and Holland at the gate of Great Britain's acquisition of British Guiana, and suggested upon the report of such commission Great Britain and Venezuela should endeavour to agree upon a boundary, and that, failing in this, a tribunal should be appointed, to consist of one British and one Venezuelan member, and they to select a third, who should fix the line of boundary, but with a proviso that it should not include as Venezuelan territory any territory which was occupied by British colonists on or before January 1, 1887, or as territory of Great Britain any occupied by Venezuelans at the same time. Secretary Olney declared that the United States government was unable to treat

the proposals as well adapted to bring the Venezuelan dispute to a speedy conclusion.

Whether any steps beyond those outlined above have been taken since the date of the last installments of the correspondence, nearly a month and a half ago, is not known. Something has, however, been gained in bringing the question of arbitration, both general and particular, under discussion in a temperate spirit, and it seems not too much to hope that further advances will be made before the incident can be regarded as definitely closed.

CHINESE NEWS.

It is well sometimes to know what the natives of a country think of us, says the *N.C. Daily News*. Some time ago a steamer belonging to the Nippon Yusen Kaisha, named the *Fushima Maru*, while leaving Vladivostok, ran into and sank a Chinese junk manned by Shantung men. The case was brought into the Russian courts by the survivors against the steamship company, resulting, it is reported, in a verdict of damages against the latter, which was ordered to pay the sum of 20,000 roubles for each life lost by the collision. This judgment of the Russian court has made Russians more than ever popular amongst the Chinese, wherever the news has travelled, especially in the Treaty ports of this country, where it is claimed that the indemnities—whenever given—to Chinese by foreigners appear ridiculously small and insignificant in comparison with that recently ordered by the Russian court. It has even been remarked that "when a foreigner happens to lose his life, whether accidentally or otherwise in China, the native culprit is beheaded whenever turned over to the Mandarins for trial. But if, as sometimes happens, a Chinese is killed by a foreigner, the foreigner gets off with the payment of a paltry couple of hundred dollars."

A telegram dated the 10th inst. received from Peking by the *Hupao* states that Têng Hua-hsi, the Provincial Treasurer at Soochow, has been promoted to the Governorship of Anhui vacated by Fu Jun, resigned on account of ill-health.

The *Peking and Tientsin Times* of the 15th ult. mentions that Colonel and Mrs. Denby arrived at Peking on the 10th, and that their house-boat capsize on the 8th, on their way up the Peiho. It fortunately only turned on its side, and Colonel and Mrs. Denby were dragged out of the windows, after having been submerged.

The Chinese native papers at Shanghai give currency to a rumour, says the *N.C. Daily News*, that certain Japanese have employed a native to appear on their behalf for the purchase of some 130 *mow* of land on the Pootung side. There it is said will be built a number of steamer wharves for river and ocean going steamers to run between Shanghai and Yangtze ports, and Shanghai and the coast ports. Also on the Soochow Creek will be built a pontoon for a Japanese Steam Launch Company, with twelve launches to run between Shanghai, Soochow, and Hangchow.

The Mukden correspondent of the leading Shanghai journal writes:—The visions of heaps of gold to be taken up by scraping the ground have not as yet been realized. The tale is that most of the gold-diggers find it hard enough to make ends meet and that some of them have thrown up the business in disgust. Knowledge will, however, produce gold in quantities throughout the province in the future. Coal is doing better. There is a town, Yilu, half-way between this city and Tiehing, around which coal, cropping out of the ground in many localities, has been long begging to be picked up; but *Angshui* forbade. Now licenses have been granted and a good many pits are opened, producing meantime heaps of the coal dust so much used by smiths. It is confidently anticipated that at no great depth coal of a more tenacious kind and of excellent quality will soon be reached. The coal fields are of great extent and lie on or close to the surface. The main Liao river is not more than 20 miles away, and the country level. There should be no difficulty therefore ere long in sending down to the port of Newchwang great quantities of good coal. The quality of the coal usually produced in Manchuria excels that of Kaiping.

The following letter from the Hon. Secretary and Treasurer of the Whasong Memorial fund has been published:—

Foochow, 7th August.

I am now able to inform you that the Monument, which has been placed over the graves of the victims of the Whasong Massacre, was unveiled by the British Consul on Saturday last, the 1st instant, a large number of the Missionary and Mercantile community being present.

With this I beg to hand you a statement of account which you will observe shows a credit balance of \$546.84. In accordance with the original plan, I have offered to hand over this sum to the English Mission, but Archdeacon Wolfe and other members of the Mission have expressed a wish that it should be devoted to the purpose of placing a Memorial Window in the British Episcopal Church of this place. Therefore, unless I find within one month from the date of this letter that the new proposal is not generally approved of, I shall adopt it.

The balance in hand will probably be insufficient to pay the cost of a suitable stained-glass window, but I have the assurance of a few members of the Community that any debit balance will be willingly made good.

News from Peking is to the effect that the Chinese-American National Bank scheme, which H.E. Chang Yin-huan and Dr. Yang Wing were supporting, has fallen to the ground by reason of want of funds. The necessary capital was to have been raised in the United States; the parties were confident of success, but it is reported that no success has attended their efforts. There are such advantageous openings, we presume, for the use of money within the Union itself, that there appears to be no great anxiety to invest in foreign stocks, railways, banks, and such like. China has yet to wait, it would seem, for her National Bank.

In a letter to the *N. C. Daily News* from its correspondent in Peking occurs the following paragraph:—

It was reported some time ago that Mr. Hsü of Canton was dead. It appears that this information was not well founded. We are now given to believe that he is still alive and that he has proceeded to the West—England it is said, to raise the necessary capital for the construction of this long-talked-of Hankow railway. Shortly after the appearance of the edict regarding the said railway in which Mr. Hsü's name appears first on the list of the four petitioners—their number has since become greatly augmented—he wired to the Military Board that he had already raised three-quarters of the amount required, viz., ten millions, and that by the fifth moon he would have collected the remainder and come to Peking. He was told to proceed to Hankow to see the Viceroy there so as to prevent delay. A certain person with whom he had entered into a preliminary agreement at Shanghai having failed to raise the necessary funds either in California among Hsü's compatriots, and being equally unsuccessful further East, there was apparently nothing for it but for Hsü to become defunct. We are glad to learn, however, that he is still to the fore and still lives and breathes the vital air. We learned lately that Shêng Taotai had been appointed Director of the Railway by the Hukuang Viceroy. This seemed to follow as a matter of course from his purchase of the Hanyang Iron Works—otherwise if the railway did not utilise his output, he would have a white elephant on his hands, and the Viceroy would have no hope of receiving the second million taels which was conditional upon the works proving a success. The appointment was, however, authoritatively denied, but since then we have learned on unimpeachable authority that it is really so. He is a good man for the post so far as his abilities go. As far as offices are concerned, he is a great pluralist. The Hankow railway, is not yet settled—as far as its construction is concerned. Speaking of railways, it is worth mentioning that the Peking station of the line to Tientsin is not to be at the so-called Marco Polo's Bridge (Lukouch'-iao), nor as later determined upon at Kantai, still a few miles distant from the capital, but is actually to come up close to one of the south-western gates of the southern city. For this change we must all feel devoutly thankful. The late rains have carried away some of the newly formed earthworks of the line, but a representation will be made to the Throne by Judge Hu so that the deficiency caused by repairs, say Tls. 20,000, will be refunded. The works have passed out of the hands of the contractors. We are always having rumours of the stopping of this railway or of the death of some foreigners concerned in its construction. Fortunately the late eclipse of the sun passed over quietly without any indication of heaven's displeasure at the iron road.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

WANTON DESTRUCTION OF WILD BIRDS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A great and mighty wrong is being done in this country—one that the Government should at once stop and thus prevent a dire disaster that must eventually come upon this land,—in the stupid, cruel, and unnecessary slaughter of the wild birds of Japan. Thousands of these useful assistants of the farmers are being wantonly destroyed for the sake of a few *sen*. When the farmers find their crops destroyed by swarms of insects owing to the absence of their natural enemies, the birds, great will be the outcry, but the mischief will then be beyond redemption.

I am, Sir, yours truly, F. M. JONAS.
August 27th, 1896.

RAILWAY MISMANAGEMENT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In response to the letter of Mr. Mitsugu Sengoku, in your issue of the 26th inst., in which he reiterates his denial of the truth of my charges against his employes, a denial which he dignifies as a refutation, it is, I think sufficient to state that, in the prolonged and careful personal investigation which he claims to have made, he has neither called for nor given me any opportunity to present the evidence in support of my statements which has been at his disposal from the first and which was specifically offered him in my letter of the 28th ult. published in your columns.

Mr. Sengoku's so-called investigation has been a farce, but whether any evidence whatever could shake that gentleman's sublime confidence in the perfection of his own administration and the impeccability of his employes, seems exceedingly doubtful.

To my charges against the minor servants of the Tokyo-Yokohama Railway it would now be very easy to add some of far greater importance against their superior; but, as I am disinclined to farther become a target for abuse for doing what any public-spirited citizen should do, and for which he would receive, from any properly managed corporation, thanks rather than contumely, I refrain.

I am, Sir, very respectfully,

STUART ELDRIDGE.

August 27th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the recent discussion on "Railway Mismanagement" in your columns, the experience of an unbiased spectator may possibly interest Mr. Mitsugu Sengoku. He may be glad to learn from an unprejudiced party that Dr. Eldridge's case is by no means a rare one, and that the "check system," as worked at present in Japan, is anything but satisfactory. It may interest—and possibly be of use to—him to learn that in one week three cases have come to my personal knowledge (one case was my own) where baggage, duly checked and seen into the train at Yokohama, has failed to reach Nikko till a day after its owner. In one instance a trunk was lost altogether.

Most travellers, however, are either too easy-going, or not public-spirited enough, to complain as Dr. Eldridge has very rightly done: they prefer rather to accept such *contretemps* as an inevitable result of Government *à la Japonaise*. They usually swear at first, but matters having come right by lapse of time, they live in hope that some day the young idea may learn to shoot straighter, and go their ways in silence.

But as regards the discourtesy of which Dr. Eldridge complains I fear that where Japan's officials are concerned, most of us would use a stronger term; the studied incivility being as strongly marked as the deplorable rowdiness of the sailor and student classes. These traits in themselves are not so likely to injure Japan in the eyes of the world as the disgraceful impunity with which they flourish.

Enclosing my card, I beg to remain, dear Sir, yours truly, VIATOR.

Nikko, August 28th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your correspondent "Viator" describes three cases in which luggage checked at Yokohama for Nikko failed to reach in proper course; I can add to this record two cases within a week,

in which luggage checked in good time at Yokohama by the same person, for Kodzu, was not to be found on arrival at the latter station. I beg to commend these cases also to the notice of Mr. Mitsugu Sengoku.

I am, Sir, yours respectfully, HAKONE.
Yokohama, 31st August, 1896.

A CENSUS OF CHRISTIAN CHARITIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Philanthropic work under the auspices of Christian Missions is associated with so many sects that it is almost impossible to gain any correct idea of the work as a whole or even of particular enterprises or the charities in any given locality, unless such happen to be connected with one's own denomination. It has long seemed to me that for many reasons a tabulated list of all institutions in Japan under Christian auspices was a desideratum. I have already made two partial attempts to prepare such a Census, and am hoping to publish shortly a new Revised List which shall include all schools of every sort, asylums, hospitals, institutional Churches, and other enterprises under Christian auspices. May I ask those of your readers who are willing to aid in the preparation of such a statistical survey to send me *at once* the data for any schools or other institutions in which they or their Missions may be labouring?

The Census when completed will be on sale at a merely nominal price—probably ten *sen*—and should prove of some interest and practical benefit.

DATA WANTED.

- 1—Name, both in English and Japanese.
- 2—Class (nature of the institution).
- 3—Location.
- 4—Date of first opening.
- 5—By whom organized.
- 6—Present director.
- 7—Number of students (or patients).
- 8—Denomination.
- 9—How supported.
- 10—Value of plant.
- 11—Annual income.
- 12—Expense per pupil.
- 13—General remarks.

Thanking you and any of your readers who may respond to this request.

I remain, yours very truly,

J. H. PETTEE.

Okayama, August 27th, 1896.

FORMOSA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Referring to your leading article of 10th of August, as a foreign merchant in Formosa, I should like to correct a few statements made therein regarding foreign trade in this island.

Whilst acknowledging that the treaties of foreign powers with China referred equally to Formosa, it must be admitted that in certain articles of production foreigners were to some extent pioneers of trade; they were allowed a certain amount of freedom in this island, which, as results have already shown, has been for the benefit of Formosa and of its rulers, whose revenues to a considerable extent were dependent on these very articles.

As to your remark "the Japanese have prudently suffered the *status quo* to be in great part re-established," I should like to point out that foreign powers agreed that the treaties of Japan should be applied to Formosa but that at the same time the acquired rights of the foreigners there should be confirmed.

As to your statement about "developed methods, which, though not reconcilable with Treaty stipulations, are essential for preserving the monopoly that these foreigners have acquired over the principal staples of production, camphor, sugar, and tea," I should thank you to inform your readers what these developed methods consisted of. I beg to state that these foreigners, unhappily for them, have never been able to establish a monopoly over any of these three articles. Tea, although you put it last, is the principal article, is handled on exactly the same principles as in China and Japan, with the exception that an extremely large proportion of tea is fired and packed here by Chinese, who themselves ship a considerable quantity of the same to Amoy for sale there. This proves that the Chinese merchant here is not more, but rather less, dependent on the influence which you choose to style a monopoly of the foreigners, than the Japanese tea merchant in Japan, where the packing is done by foreign firms. Secondly, sugar is by no means a monopoly of foreigners. In Takao, Chinese export quite as much sugar as foreign merchants, and in

Amoy the Chinese have by far the lion's share of the export. Thirdly, camphor. This article was at one time a government monopoly and the authorities sold at various times to either foreigners or Chinese. For years, however, the trade has been opened to everybody, and Chinese have during the last 4 or 5 years exported more than foreigners.

Your remark, "Japan's early attempt to bring the trade of the island within purview of Treaty provisions, or, at any rate to introduce a system of orderly control, at once aroused the alarm and opposition of these foreigners," is more unjust to foreigners here, than those straightforward lies of certain low class papers about foreigners in Formosa, as for instance the accusation of foreigners supplying arms to rebels, of foreigners, not Chinese or savages, being the troublesome element here, and other statements speaking for themselves. A considerable amount of friction was caused by the sudden application of a law regarding the taxation of camphor, which law being rather complicated caused at first difficulties to both officials and traders. The position of foreigners was ignored in that law, and disturbance of trade and complaints naturally followed; secondly, a great deal of dispute has been caused by Government not recognizing distillers who were unable to show permits for the production from the late Chinese government. Merchants interested made remonstrance, and after careful study of the question the Japanese Government has acknowledged those rights by Ordinance No. 14 of 20th June, 1896.

Now I trust to have convinced you that foreigners have not by any means any monopolies in Formosa (neither by law nor in practice), nor have they opposed any attempt of the Government to introduce orderly control, which is earnestly desired by every foreigner here, if done in an able and fair way.

I am, Sir, yours faithfully, R. W. OHLY.

Twantutia, 23rd August, 1896.

POINTS OF SPELLING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—*Appropos* of certain recent leading articles, I send you the enclosed.

A CONSTANT SUBSCRIBER.

August 27th, 1896.

SPELLING REFORM.

We are asked to be one of a kumpany of 300 editors, authors, prominent teachers, and other dignitaries who will agree to adopt simpler forms of spelling under the following rules:—

- 1.—To change final "ed" to "t" when it has that sound, when the preceding vowel sound is long and express by a single letter, except when it is expressed by two or more letters, and excepting, also, when a preceding "c" has the sound of "s"; for example, "whist" instead of "wished," but not "bait" instead of "baked" nor "crouch" instead of "crouched," nor "chance" instead of "chanced."
- 2.—To drop final "ue" when the preceding vowel is short or a diphthong, so as to write "catalog," "epilog," "synagog."
- 3.—To drop "e" from words ending in "ite" when the "i" is short: thus, "hypocrite," "requisite."
- 4.—To drop "te" in words like "cigarette" and "quartette."
- 5.—To drop final "me" in words like "programme."
- 6.—To drop final "e" in words ending in "ile" when the "i" is short, so as to write "fragil," "ductil."
- 7.—To drop final "e" from words ending in "ine" when the "i" is short: thus "disciplin," "doctrin."
- 8.—To drop final "e" from words ending in "ise" when the "i" is short: thus, "practic," "promis."
- 9.—To drop "a" from "ea" when it has the sound of short "e" as "fether" instead of "feather."
- 10.—To drop final "e" from words ending "ve" when the preceding vowel has its common short sound or is expressed by two letters, as, for example "repulsiv" for "repulsive" and "griev" for "grieve."
- 11.—To change "ph" to "f" when so sounded, as, "fantom" and not "phantom," "telegraf" and not "telegraph."

The principle underlying these proposed changes is, as the reader will see, fonetic. The plan has been much talked about, and a number of our editorial colleagues have expressed their approval and their readiness to enter into the Combination—the Great Spelling Trust shall we call it?—among them Mr. Higginson, Thomas W. Knox, Mrs. Daiz, Editor Ward of the *Independent*, Henry Holt & Co. President Andrews of Brown University, and Richmond Burton of the *Hartford Courant*. What do our readers think of the plan? Is it what they have wisht? Altho' few should adopt the new orthography, and some find it hard to decipher it, and others heap upon it their invectives, and pronounce it dreadful, and declare the movers in the reform overzealous, or regard it only as pleasantry, would they still like to know that it had triumf over all abusiv opposition? It calls for no new alphabet. It makes no new fraseology requisit. It may be better adapted to mercantile uses than to literature proper. But it can be easily practisid and without indulging in any harang about it, we would simply ask you to imagin how it would look to forgiv this experiment, and to help us by a negativ or affirmativ to solv the problem.—*Montreal Weekly Gazette*.

CRICKET.

MR. WHITE'S TEAM VERSUS MR. EDWARDS' TEAM.

A match was played on Saturday afternoon between teams captained by Mr. F. E. White and Mr. E. B. S. Edwards respectively, in fairly cool weather. Edwards' Eleven went in first, knocking up 92, though had the fielding been a bit smarter the score would have been somewhat smaller. Tennant secured one hit for six off White, the ball being full pitched. Goddard's bowling analysis reads very well, 7 wickets, 33 runs, 80 balls. White's Eleven made 81 in their essay, and then the other side went in again. This time runs came very freely, Morris sending the leather all over the field. He carried out his bat for 77, time then being called. Scores:—

LETTER FROM HAKONE.

(FROM A CORRESPONDENT.)

Kiga, August 27th.

The mornings and evenings are growing perceptibly cooler and the deciduous trees lining the hillsides hereabouts are already assuming their autumn hues, while the exodus of guests and visitors has begun; inns that were overfull a few days ago are now not more than half-occupied. It has been, on the whole, a hot summer and this is undoubtedly the reason for the great crush of guests everywhere since July 25th. Never have the *yadoyas* done a better trade, and never have prices ruled so high. Why, for one day at an inn on Enoshima I was charged \$2.50 for the mere renting of an eight-mat room, Japanese style, and \$2.00 for good Japanese food; this with *chadai* and extras brought the charge up to nearly \$6 a day: a tremendous price anywhere, and one to which I strongly, if vainly, objected.

Ever since the early part of the month the Fujiya and Naraya at Miyunoshita have been turning away guests by scores. I met several parties who had come all the way from Shanghai for a breath of the cool Hakone breezes; but on reaching Miyunoshita they found no room obtainable in either of the larger hotels, and were forced to put up with third-rate accommodation at Sokokura or Dogashima. Quite the same may be said of the Fukuzumi in Yumoto and the Senshuo in Tonosawa. In the latter place on several occasions the crush has been so great that visitors have perforce had to be content to pass a night or so in the *futon-beya*, or room where the mattresses are kept during the day: a dark and rather ill-smelling apartment at the best of times. Even the Shintama inn at Tonosawa, the Suzuki, Fukuzumi, and Fujiya (the two last-named being branches of the larger hotels at Yumoto and Miyunoshita), have been so crowded as to refuse guests on several occasions—something quite out of the ordinary, I am told, for these inns are not so extensively patronised. The little "Gold-fish Inn," where I am now writing, has had its full show of patronage, and done a most profitable business. But I have, on most occasions, tried to keep out of the beaten track, and have conscientiously chosen such places as are not well-known to foreigners: and this for

two reasons. In the first place, a *yadoya* which is favourably known to foreigners is as unfavourably known to Japanese for higher prices and general lack of courtesy; and, secondly—it is hard to say but true none the less—I find the attendance in such inns simply horrible. The girls are all coarse, rude, loud-voiced, and flagrantly immoral. Now I do not mean to say that foreigners have directly brought about this state of affairs, but there is no doubt that they have largely contributed to it. For there always is—and always will be, I suppose—a certain portion of the Western visitors who encourage rather than discourage the tendency to immorality. It is unpleasant to see, as I have done on several occasions this month, foreigners coming to Yumoto, or Hakone, or Miyunoshita, with two or three notorious women from Odawara in their wake. There are, I learn, one hundred and eighty *geisha* in Odawara—a very large number for so small a place—and nearly every one of these is nothing less than a travelling prostitute. The physician resident at Yumoto has told me several pertinent stories in this connection, that deserve publicity if for the sole purpose of discouraging foreign patronage in this direction. *Verb sap*; I don't propose to say any more on this repellent theme, though I could and would write much more strongly. Let me add, in conclusion, that the Japanese *jeunesse dorée*, seeing the force of example, have commenced to do the same thing, to the demoralisation of several of the better and quieter inns, and direct physical injury to themselves. But, as I was saying, my idea is to avoid much frequented places. And, with this in view, I have spent five most enjoyable days at a lonely hillside farm-house about half a *ri* from Dogashima. One must cross brawling Hayakawa and climb the opposite rather steep hillside, then follow a broad and easy track to the house in question. It certainly has the finest view of any place in the Hakone mountains. Visitors cannot fail to see it nestled amidst a grove of dines, half-way up the hill on their right, as they go from Ohiradai to Miyunoshita. I have, moreover, had two very enjoyable days at Kawabata, midway between Yumoto and Hata, on the old Tokkaido. Most foreigners know this pretty place, having to pass through it on the way to Hakone; but I doubt if any one has ever exploited its resources. There is no inn, but one has a choice of three large, cleanly peasant-houses, and the food is wholesome, if not of the best class. Here the botanist and malaco-zoologist have rich fields awaiting them. Among the thickly grown trees in moist spots I have found splendid specimens of *Clansilia Yokohamensis*—what a misnomer by the by!—and *C. duclalis*, these being mere varieties of the self-same species. I propose the name *C. Hakonea*, which should cover both *Streptaxis sinensis* and three minute and beautiful *Diplommatina* are frequent everywhere. Overhead or among the flowering trees sail the elegant *Papilio bianor*, *P. agenor*, and *P. agamemnon*: all of a much darker coloring and smaller size than those found on the plains. Two of these five insects breed here. *Cettia cantans*, the Japanese nightingale, with two wrens, and a sweet-voiced thrush, sing here all the day long; while now and then the shriek, *Lanius shah* or *bicolor*, sets up his rather discordant contralto pipe. And speaking of bathing, there is a pool just below the village, in a bend of the river, which is deep, sequestered, and altogether attractive. The water is a trifle chilly, especially at present, but a dip here is invariably invigorating and refreshing, while the water is pure, clean, and eminently potable. Then, by way of Hata—to which the years seem to bring no appreciable change—to Hakone. Here I missed at once the Shimizuaya, a pretty little restaurant that, until two years ago, used to be at the entrance to the village. The proprietor had gone on to Mishima, five *ri* away, I was told, on account of the general dullness in Hakone. And, truly, in winter it is, I fancy, a very slow, disinteresting place. At the time of my three days' visit—rendered memorable by the absurdly high charges the Hafuaya made—two of the young Princesses of the Imperial Family, T.I.H. Kane and Tsune, were staying at the detached palace overlooking the lake. Nothing could be more beautiful than the situation and surroundings of this fine building. In attendance on these youthful scions of royalty were over fifty members of the Imperial Household Department, a posse of constabulary, but none of the Imperial Guards. On the day of my arrival the solar eclipse occurred and was most distinctly seen from first to last, a very small portion still retaining its light at the moment of greatest obscuration. The whole village turned out to watch the strange spectacle, and I was not a little amused to hear the remarks of some of the village children. "But what makes the sun look so queer?" asked a wee maiden of some eight or nine summers. "Why," answered

a lad beside her, better instructed and evidently proud of his knowledge, "the sun is hidden behind the moon." At this the little woman gave a sniff of incredulity; "That's not so," she said with positiveness, "why, I know better than that! My teacher, who is much, much, wiser than you, told me that the moon only shone at night, the sun in the day; so how could the moon, in broad daylight, get in front of the sun?" The position was evidently unanswerable, for the elder lad vouchsafed no reply. With regard to the eclipse, finally, I learned that an enterprising Japanese photographer had succeeded in obtaining a dozen good negatives of the obscured orb. At the moment of greatest darkness, the scene was indescribably impressive, the grand cone of Fuji looming up behind the hills beyond the lake, the hush over all, the sudden disappearance of shadow—all being buried in a dull light like that just before the break of day. It grew appreciably cooler, and I felt quite chilly, though dressed in no less than three Japanese cotton garments. With regard to Lake Ashi—so-called from the unpleasant water-weed, a kind of fresh-water polgy, growing therein—it appears that the fish caught are each year decreasing in numbers. One sees very few of those delicious *aka hara*, or the giant perch and trout of four or five years ago. They have taken to the greater depths of the lake, and grown exceedingly wary. Speaking of the lake's depth, by the way, it is frequently exaggerated. The very deepest point is just a few rods beyond Nishimura's picturesque inn, near Moto Hakone. Here it is forty fathoms by actual measurement, at the greatest depth: thus proving indubitably that the lake was once the crater of a volcano or chain of two or three volcanoes. The foreshore is gradually changing by the village, the weeds receding and the news and efts—once found in hundreds and thousands—nearly all gone elsewhere.

Coming back to Yumoto; one of the prettiest excursions one can make in the vicinity is to the Tama-dare-taki, or "A Dropping Gems Fall." This is, perhaps without exception, the prettiest place in the hills, though not very well-known to foreigners. The Japanese are fond of emulating the ascetic Mongaku—once Morito Musha Endo, the hero of Sir Edwin Arnold's play—and stand for five or ten minutes under the ice-cold fall. I made a like attempt, to my sorrow; for a false step brought me down with unnecessary and wholly uncalled-for violence on a large, slippery boulder just beneath the strongest part of the falls, and causing me to used objectionable language besides swallowing more water than my thirst warranted at the moment. The stream here runs on to the Yumoto Seishijo, a new silk-reeling factory with a most promising future. The works are very interesting and visitors are most courteously received and shown over the place. About one hundred hands are employed at present, and three *tsunamu*, or 25 pounds, of cocoons, can be reeled off in one day. The proprietors proposed to treble this amount by next summer. At Ashinoyu I have made only two brief visits. The Kinokuniya I found full to overflowing, Viscount Nakamura—a great man some years ago—there trying to get rid of rheumatic gout. Kowakidani, pleasantly situated and breezy though it be, has never been an attraction to your correspondent.

With regard to the tramway between Kodzu, Odawara, and Yumoto, there is every necessity for a thorough amelioration. The cars are getting very rickety and the rails are so carelessly laid that the journey either way is singularly unpleasant. Besides, the horses—albeit over 80 in number—are overworked, so that, on several occasions, it has been very difficult to get the jaded, stumbling beasts into Yumoto. Twice to my knowledge the horses could do no more than pull the overlaid cars at a slow walk from Odawara to Yumoto, and the passengers were compelled to alight whenever an incline made the work harder. The Tramway Company have been, on the whole, very fortunate from the outset. Yet they are responsible for the death of two children (last year) run over in the dark by reckless drivers. And of a truth nearly all these drivers are veritable Jehus, whipping the reeking horses with such cruel severity that it makes the trip most unpleasant. The horses are often kept at a mad gallop the whole way. In order to catch the train leaving Kodzu at 1.10 p.m., I was, the other day, carried from Odawara to Kodzu in less than 20 minutes, and this through blinding rain. It was a wild race the whole way.

At Oiso I have found many improvements. Dr. Yoshimatsu has now taken over the old Oiso Hospital and made it into one for the treatment of consumptives: his method being attended with marvelous success. It has, from the outset, been crowded to its utmost capacity. The Toyukwan has added a new wing to its already spacious premises. But Oiso has been very hot this summer, and it is

anything but pleasant to attempt to bathe or swim among the nasty, sharp rocks on the beach. Kugenuma, Enoshima, or even Katase are a thousand times better. Mr. Ezawa Kingoro, proprietor of the well-known Tenshodo, Tokyo, was the best-known victim of the surf this year. He had swum just a little beyond the outer rocks when a large wave submerged him and he was seen no more. It is supposed that the water had thrown him with violence against the rocks. I note, in passing, that the Shorindo and Kokiro have also been well-patronized this summer. At the latter, foreigners are sure of good treatment and excellent Japanese food. In Fujisawa I can recommend the Inazeya, with its recently-built and airy annexe, in preference to the older—and much dirtier—Kokubuya. The Inazeya, which charges 60 *sen* a day for first-class guests, is close by the station: good, clean, cheap. Yesterday being the last day of the local annual seven-days' festival of Suwa Myōjin, I went to Fujisawa, to see the busy little town at its best. There were eight or nine *dashi* (quite a large number, comparatively), representing among others Yoritomo, Susano-o-no-Mikoto, and the mythical Momotaro. I expressed my surprise at seeing Yoritomo—no better than a *chōkeki*—thus honoured; but was told, with quaint logic that the people adored his personal virtues, not his anti-imperialist policy. Suwa Myōjin, it is to be noted, is a deified *fā* or serpent, the cult coming from Shinshu. How strange to find such a cult in modern Japan! In all Fujisawa there is only one *geisha*, for here the *enfants perdus* are taught how to play the samisen and other musical instruments, so that *geisha* are *de trop*. On the other hand, there is a disproportionately large community of ill-fame. Fujisawa is growing steadily, and does a good export business, the staples being silk, rice, sweet potatoes, and ground-nuts: the two last named being the local *meibutsu* or "famous products."

But this letter is assuming preposterous dimensions and as "brief is the soul of wit"—as I once heard an unfortunate after-dinner speaker say—let me thus come to an abrupt close. It has been a pleasant summer on the whole.

LETTER FROM AMERICA.

(FROM OUR OWN CORRESPONDENT.)

Ithaca, July 30, 1896.

This is the age of wheels and wires. These do not only reign but they govern. We cannot do without them, and sometimes it seems as though we had become their slaves. Nearly all kinds of business at present suffers more or less from the fads generated by the trolley and the bicycle. The horse would weep tears of grief did he but know that his species is threatened with extinction; that horseless vehicles are so multiplying, and that the idea of future roads calls for steel planks on which tires will move, but between which hoofs will not be necessary.

It is not only the livery-stable men, the hotel keepers, the sellers of alcoholic liquors, the book publishers, the librarians, and those who minister to human necessities and recreations—according to the old ideas—who find fault. Even the butcher, the grocer, and the vendors of hats, bonnets, and wares for the exterior and the interior of the human body are finding fault. With the wheel on top of the wire and the wire wheels on the earth's surface, they say that everybody seems going in debt for bicycles, while postponing the payment of their grocery bills. Riding on the trolley cars, up hill and down dale, seems less a necessity than a pastime, for coolness as well as for transportation.

Certainly it is very wonderful—this way in which our American cities have been strung in mid air with wires and the motive power changed from horse flesh to an invisible current. The superior cleanliness of the streets, over those of London, for instance, or Amsterdam, is one of the first things that strike the observer who compares Philadelphia or Buffalo with these same cities as they were a decade ago. In both these typical American municipalities, the cobble stone, the Belgian block, the macadamized surface have, from most thoroughfares, disappeared. Instead we have the asphalt, clean, smooth, delightful to the sinner over the wheel and excellent for the longevity of carriage and bicycle. In Philadelphia, the change has been wonderful. It has wrought even the advancement of good morals and what is next to godliness. Down in the purlieus of Bedford and similar streets, where of old the negro was displaced by the Irishman and then the Irishmen by the Italian, the proposal to lay down such clean pavements was quite fiercely resisted. The sons of Sicily, Connaught, and Africa, preferred garbage and bad drainage. It was actually necessary to call out the fire department which, with its hose and plenty

of Skynkill water washed away all opposition and let in the army contractors of black labourers equipped with kettles, rakes, hose, and smoothing irons. These have laid a pavement even in the narrow streets and lanes, that has wonderfully improved the old quarters once noted for their accumulation of filth. Now for a half dime, one can ride from one end of the great city to the other, while noting a vast increase of neatness, cleanliness, and comfort.

It is doubtful whether any new improvements which touches every day life can be made without danger. I see by the last report of the Inter-State Commerce Commission that on all the railways in the United States, during the past year nearly 27,000 people (most of them employes) were injured, and of these 2,000 of them were killed. Yet by means of horses, carts, and carriages I have no doubt the number was even greater, just as in London, the casualties from vehicles are more in number than in the whole of the United Kingdom. The introduction of the trolley so suddenly throughout the whole country, and its use by unskilled men, means almost as a matter of course much loss of life and limb. Brooklyn is a city which covers a vast area, and yet the concentration in the narrow streets around Suspension Bridge and Fulton Ferry means at least a mile space of great danger, and it is between the Ferry and the City Hall that most of the accidents take place. The death record is so far about 150, but with every month the record becomes less. Each car is furnished with a kind of projecting tray or scoop-net set in a frame in front, into which a person struck may fall without necessarily serious injury.

In the smaller towns and cities the trolley has solved the problem of quick and easy transportation over hills and valleys, in a way far more satisfactorily than even the best horses, and plenty of them, possibly could. In many of the hill towns, to see horses struggling up the hills with heavy loads of freight or passengers was one that often moved the pity of the beholder. Long rests were necessary to relieve the animals. Now, the car goes steadily up the steepest incline with remarkable speed and with a very high factor of safety. For, considering the great number of the trolley cars used throughout the country, the number of accidents is really very small.

When one remembers the scepticism which at first hung like a cloud over every suggestion that electricity could be used as a traction power, he wonders at what he sees to-day. In America, Ezra Cornell, the founder of the great University which bears his name, was one of the first business men to see the value of the telegraph and of the applications of electricity. He was the one also who first proposed the use of one wire instead of two, making in the earth a return circuit. He thus gave the idea to the Irish servant girl, who spoke better than she knew, when she described Ezra Cornell as "the man who invented telegraph poles." Yet even Ezra Cornell, on one occasion having gone to witness an experimental exposition of cars moved by electricity, lost all faith that this power could ever be applied to purposes of traction. He went home satisfied that there was "nothing in it." Now in his own city, there is one of the best trolley systems in active use, and power is furnished chiefly by the water-falls that flow down from the plateau on which were situated his own home and farm. In actual experience, though not yet in visible reality, "the mountain has become a plain," for the University hill is as the flats of the town. As a difficulty, the hill is a thing forgotten.

In the immediate vicinity of New York City, that is from Patterson, N.J., eastward to New Rochelle, southward to Coney Island, and eastward to Elizabeth and Newark, there are now probably not fewer than five hundred miles of trolley lines existing and projected. Yet this rough estimate does not include the double lines of rails which many companies operate. On one line built from Ocean Grove and Asbury Park up to Long Branch and Pleasure Bay we have an example of electric-traction provided almost entirely for summer use and for reaching places chosen simply as pleasure resorts. A large percentage of the passengers take the trip simply for pleasure. It is quite common also for two or three cars to be joined together and festooned over the top, down the front, along the sides, and up the trolley-pole with electric lights of many colours. With all the wood-work and wheels covered up with bunting and decorations, dash-board and sloping roof being also decorated with emblems, a band of musicians is taken on board, and then the cars freighted with hilarious young humanity, illustrate finely the pleasures derivable from electric motors.

The bicycle is a great improver of thoroughfares and a daily preacher of the gospel of good roads. Naturally, with so much land to subdue and replenish, forests to open and wildernesses to cultivate, Americans have not been noted for the excellence

of their average road ways. People from the long settled and wealthy, old (but rather small) countries of Europe, in their disgust at our rough roads, have hardly been considerate. As a matter of fact, there are certain portions of our country as in New England and portions of the Middle States, where the country highways will compare favourably with the land-ways of Europe. The matter goes by countries, rather than by states or regions. In general our country roads have been bad enough. Now, that so large a percentage of the population habitually use the wheel, there is steady improvement. In the cities, pavements made of brick or asphalt are taking the place of ruder materials, to the joy of the wheeler. The country roads are being steadily improved.

It is getting to be quite common now to have "cinder paths" or "bicycle roads," six feet wide, between two neighbouring cities. At Asbury Park there is a plank walk along the sea front, a mile long, on which pedestrians may go. A few feet inland is a brick bicycle thoroughfare on which pedestrians are not allowed, or on which they walk at their own risk. This fine path is a mile long. The recent decisions in legislature and court recognizing the bicycle not only as a vehicle but also as baggage—as the equivalent of a trunk—enables the summer pleasure seeker or general tourist to take his wheel with him, either for business or amusement. In the neighbouring lake city of Geneva, recently, at the house of the President of Hobart College at Commencement time, with the dozen or so of guests, were seven bicycles. The ladies attending dinner parties in the college city rode from the President's home in their fine dresses to their hosts' houses.

Every one knows the danger of puncturing a tire, for everybody nowadays uses the properly inflated pneumatic rubber cylinder, set upon a concave wooden or metal tire, the wheel bearing its weight by the suspension of the hub, rather than by resting the hub upon the spokes as in the ancient way. I heard of a lady who met with an accident by collision, and complained of a "punctured attire."

Between Schenectady and Albany is a well made "cinder path," and the shop-keepers of the smaller city complain that ladies now go to the larger municipality to do their shopping. Thus local trade is injured. What a Godsend the advent of Jack Frost will be, when for a few months the chill of ice and snow will paralyze the over activity of the bicycle! It is reserved for Brooklyn to do the handsome thing in roads, for already there is a large wide path, smoothed especially for the rubber tires, and sacred to the bicycle, which runs all the way to Coney Island. Along the sides are drinking fountains and settees at intervals.

On Sundays, so great is the exodus into the open air that the Church people complain bitterly, and some people think the institution of the Sabbath is likely to flatten out, like a punctured tire. One of the last new fads, reported in yesterday's newspaper, is for half a dozen athletic youths to mount a "sextuplet" and actually beat on their wheels set on one frame, along a selected space between the tracks, the Empire State Express which averages 53 miles an hour between New York and Buffalo.

By the way, the region between Manhattan Island and Niagara Falls seems to be the field for speed. In competition with the New York Central Railroad, the Lehigh Valley, which is the chief rival of the Central, has lately put on "the hand-somest train in the world." It is called the Black Diamond Express and covers the distance on steel between New York, New Jersey, Pennsylvania, the New York lake and meadow region to Buffalo, in ten hours. The Delaware, Lackawanna and Western Railroad is preparing to do something of the same sort, and if the Erie can find money enough it will probably do the same thing. Though all these railways run only diagonally across the State, while the Central has to follow two lines of the triangle, they are at a disadvantage. The Central by following the old Indian trails, runs on an almost level grade most of the way. Its only serious ascent and descent is between Albany and Schenectady, this is the only space on the continent where the great Appalachian range, which runs from Labrador to the Gulf of Mexico, can be crossed at a low altitude. On the contrary, the other lines traversing New York, especially the Erie, travel on a series of altitudes and depressions that suggest serrations of an old fashioned saw,—after it has been well used.

Soon prices will fall. Fashion will find new toys, and it will be seen whether the bicycle has come to stay.

W. E. G.

AUSTRALIA AND JAPAN.

BY JOHN PLUMMER, M.J.S.

Sydney, June 27th.

For the present, Japan and things Japanese are exciting little or no attention in Australia, the several colonies having sufficient to do in attending to their own affairs, most of the Australian parliaments being now in full session. All fear of an extensive Japanese immigration has ceased, but in the New South Wales and other parliaments bills are to be introduced dealing with the matter. At the same time there does not exist the slightest hostile feeling towards Japanese residents in Sydney and elsewhere. In fact, wherever they have commenced business they are invariably successful in attracting customers and satisfying their needs. They make excellent colonists and possess the respect of all enjoying their acquaintance. They certainly mingle more readily with Europeans and conform more generally with European manner and customs than do the Chinese, who seem, as a class, wholly unable to adapt themselves to Australian tastes and habits, and prefer living—an isolated class—by themselves. At the same time the old dread of possible industrial competition by Japan is continually making itself manifest. The other day one of the Sydney morning papers published a letter from a member of the New South Wales Legislative Assembly, in which the industrial progress of Japan was described at some length, the writer concluding by stating that from his remarks it would "be seen that the Japanese are now fairly under way with their industrial revolution, and the workmen of Australasia cannot, therefore, afford to treat the possibility of Japanese competition as remote. When the new treaties are in vogue we will have to resort to protective measures, or our skilled workmen will have to go down to the Japanese level in wages. It remains for the workmen of New South Wales to say at the next general election which it shall be."

In reply, a leading Sydney resident said that the letter quoted should have been pleasant reading for the New South Wales people, as it showed them that Japan was going ahead, while their own country was retrograding.

"For instance, we are told that in that favoured country, where there are no coal miners' strikes, manufacturing establishments are rapidly increasing in number; that the Japanese are manufacturing Waltham watches, of course for their own use. Well, that is indeed good news, because the more prosperous the Japanese people become, the greater quantity of Australian produce they will be able to afford to buy. They will also be able to buy and to manufacture our wool, and to wear the woollen goods produced therefrom, to use our preserved meats, and to drink of our wines. So the writer's news is really a message of glad tidings, and we should feel, all of us, greatly indebted to him for the information which he has accorded us. Of course, if Japan purchases our productions, the probability is that our people will receive in exchange the productions of Japan, at such prices as they will bring in our market in competition with similar goods from elsewhere, for so astute a race are not likely to sell anything below its market value. But in his letter the writer resuscitates the old bogey of cheap labour. If Japan becomes prosperous, wages will rise; indeed, they are fast rising now. Their Consul says half a dollar to a dollar a day is the rate in factories. But the cheapness of labour must not be reckoned by its daily pay, but by its effectiveness; and by that standard English labour is unquestionably the cheapest in the world, for though paid daily much more highly than his Continental rival, and working shorter hours, yet from his greater skill and greater stamina the English workman will do far more work. Thus, according to Mr. Redgrave, the proportion of spindles to persons employed in the cotton factories of Europe is—France 14, Germany 40 to 50, and England 74, and in England they work at a greater pace; while in coal-mining, the annual output of the French miner is 152 tons and of the English miner 333 tons. I could readily give other well-authenticated examples. Possibly the Japanese workmen may in time become equal to the English; if, so, they will demand and obtain equal wages, that is if the surrounding conditions become equal also.

Not a few of the Australian papers have reproduced portions of the report of Mr. Gerald Lowther, British Secretary of Legation at Tokyo, on Japanese labour, the most quoted portion being the following, which has attracted general attention:—"Foreigners are too prone to be alarmed by the cry of cheap labour. Cheap labour, or, in other words, the absence of requirements on the part of the labourer or the artisan of this country, will very possibly be corrected to a certain extent

by the successes of the late war, and should an improved state of existence be the result, so infallibly will come an advance in requirements, and the present cheap labour of Japan may not have the terrors to commercial competitors that it now appears to present. That low wages mean a low condition of energy may be taken for granted. In attempting to conclude a bargain, and on my pointing out to the seller that he would have a fair profit if he accepted my offer, I have been more than once met with the answer, "If I give you the article for your price, it will necessitate my doing another day's work this week." Skilled labour is very limited in all branches of trade, and consequently cheap labour hardly applies to this portion of the working community. The price of labour, moreover, is daily increasing. The daily wage of a coolie is now set down at 33 *sen*, or about 8½d; and this is said to be about 100 per cent. higher than it was 10 years ago. The same may be said of many articles of consumption, which are rapidly rising in value."

The political future of Japan continues to be a theme for newspaper comment, the Melbourne *Leader*, in a recent issue, observing that:—"Japan is determined to establish her naval supremacy in the Far East. She is unwilling to relinquish all hope of securing the full fruits of victory over her recent antagonist. Russian diplomacy, with French and German assistance, stepped in to deprive her of the complete reward which the fortune of war seemed to have placed in her hands. Japanese statesmen accepted the rebuff at the time, though the national spirit was sorely chafed, but they are keen in making preparations for the future. They recognise in Russia their greatest enemy and rival, and are willing to make great sacrifices in order to strengthen their position in the more formidable struggle which is regarded as inevitable. The army is being reorganised and increased, but upon the navy the greatest efforts are being concentrated. Geographic position makes Japan, like England, a power dependant on naval strength. The navy did good service during the war and was really the most powerful factor in the Chinese defeat. Now the aim of the Japanese authorities is to raise it to a point which will equal, if not exceed, the combined force of the three leading squadrons in Chinese waters. The millions of indemnity obtained from China are being spent in England on new ironclads and cruisers. Japan is in earnest in her desire to make her navy the strongest in her own waters, and her resolve is not without some influence on the Australian position. At present the relations between Japan and Great Britain are of the most friendly character." This fairly represents the trend of Australian public opinion, which is decidedly on the side of Japan as a naval power. A writer in the *Queenslander*, alluding to the same subject, says:—"The Japanese are making preparations for the erection of a colossal image of Buddha, to commemorate their victories over the Chinese, and we learn at the same time that they have placed orders in Britain for the construction of four ironclad battleship and six cruisers. These two pieces of news must be taken together if we are to realise what a formidable power has arisen on our side of the world. Probable the ordinary British or Australian Philistine who daily thanks the goodness and the grace that made him a happy Christian child will think that the one piece of intelligence to some extent neutralises the other, and will feel less afraid at the enormous growth of the Japanese fleet when he reflects that the owners of this great armament are still in the primitive stage of erecting monstrous idols in celebration of their victories. If he thinks so, I am afraid he is in the wrong. I fear that this synchronous recognition of religion and of the need of more ships is a bad sign for the enemies, present and to come, of the Japanese Empire. It is the Japanese equivalent of 'Put your trust in Providence, and keep your powder dry'—the 'not d'ordre' of the finest body of fighting men the world ever saw. And do not let us lay the flattering unction to our souls that a monotheistic civilisation would never yield grounds before a mere nation of idolaters. Buddhism is a religion, but Buddha is not a god, far less a false one. Buddha is simply 'the ideal of what any man may become,' and his statue is but a symbol of that ideal, and when a Japanese orders the idea represented by the symbol he is actually adoring his own possibilities. And, by Jove, when I think of these plucky little Japanese returning fresh from their prodigious achievements and setting forth with to erect with one hand the wherewithal to adore their own possibilities, and with the other to write out orders for four more ironclad battleships and six additional cruisers, I am great inclined to fear that the happy frame of mind which rests on the double foundation of 'thank the goodness and the grace' and 'Rule Britannia' may one of these days receive a severe shock."

That Japan is destined to become a great commercial power is generally conceded, and Australian thinkers are beginning to discuss its future possibilities in this direction. The Melbourne *Argus*, in the course of a somewhat lengthy article on Sir E. Satow's report on the trade of Japan says:—"So far we have seen that a mighty nation has emerged from the profitless seclusion of centuries; that it has become sea-going, adventurous, militant—the Great Britain of the Pacific; that it has already laid an unmistakable hold upon a peculiarly Eastern trade that is rapidly increasing; that by energy, enterprise, skill, and industry it is achieving a great manufacturing position. If, moreover, Japan is manufacturing to supply the wants of its people, it is yet to be noted with satisfaction that those wants are increasing even at a faster rate than the capabilities of the factories. To imagine that an unalterable standard of wants has been fixed for the people, that the factories will supply all those wants, leaving nothing for foreign countries, and that Japan will thereafter drive British commerce from the East, would be absurd in the extreme. In the long run, the prosperity of one country means the prosperity of other countries, and it is not therefore surprising that, although Japan produced, manufactured, and exported far more merchandise in 1895 than ever, yet she imported more freely. But the increase in exports is represented by agricultural productions, such as silk, rice, tea, and camphor. As an exporter of manufactures, Japan does not yet shine, the principal reason, according to Sir E. Satow, being the inferiority of the articles manufactured. Thus he says that Japanese boots, the *bottes noires* of colonial protectionists, have less than one-half of the wearing capacity of English boots. In short, Japanese imitations of European manufactures may be tersely described as cheap and nasty. But the artistic natives wares remain quite unsurpassable for excellence and beauty. What of the Australian share of the growing commerce of Japan? In 1895 imports from Australia were valued at £107,000, against £59,000 in 1894, and the exports to Australia at £138,000, against £115,000. The imports consisted chiefly of wool, of which some 1,600 bales were imported in 1895. The Consul expresses the opinion, however, as he also did last year, that Japan can ultimately obtain all the wool she may require from China. But in the meantime, Australia will doubtless strengthen its hold upon the Japanese market. Generally, the colonies have to consider whether they will avail themselves of the great commercial benefits to be expected to accrue from their joining in the British-Japanese treaty. The question, from this point of view, is worthy of more attention than it has yet received, especially as it should not be forgotten for a moment that yet some time or other Australia must become one of the principal powers of the eastern hemisphere, and as such must be brought into close international touch with Japan."

The Australian protectionists seems to think that if the free trade policy of New South Wales is followed by the other colonies, there is a possibility of the sugar produce of Australia becoming displaced by that of Formosa. The Melbourne *Age* says:—"At present the Formosan Sugar refineries are of a most primitive character, and the question now under discussion by the Japanese Authorities is whether, with modern appliances and the break up of the Chinese merchants' control, the industry cannot be placed in such a position as to absorb a very considerable proportion of the sugar trade of the Far East. The soil in the two districts mentioned, it seems, is highly suitable for the production of a sugar rich in crystals, but the planters are in the hands of a few Chinese capitalists, and the latter are by no means disposed, it seems, to part with their control; but already the Japanese authorities have shown an intention of making drastic reforms in this direction; and if they are carried out, and new modern refineries are erected, Formosa sugar will doubtless be largely exported to Australia. The cost of production it is asserted, is so small that the raw sugar for refining purpose would beat Java and Manila in the outside markets, whilst the refined could be shipped at prices with which the Hongkong refiners could hardly hold their own. This, however, is a matter of the future, but still the subject is one of interest, both to Queensland and New South Wales, especially the latter, if Mr. Reid's free-trade policy is carried out. If matters progress as it is expected in Formosa, by the time the duty on sugar disappears in the sister colony, Japan's latest acquisition of territory will be in a position to absorb the markets of New South Wales and extinguish her local sugar industry. To Queensland it will also mean a loss of markets in the Australian colonies, which under a federated system of protection would be retained."

SUICIDE FROM YOKOHAMA PIER.

The adjourned inquiry into the death of Herbert William Webb, age 26, late Second Engineer on board the N.Y.K. steamer *Nagoya Maru*, whose body was taken out of the harbour on Friday afternoon, was held in H.B.M. Court on Saturday. Mr. A. H. Lay, acted as Coroner, and the Jury were Messrs. C. K. M. Martin; H. S. Adams, and E. Coutts.

The first witness called was Valentine Kaufman, a German seaman, who deposed—Shortly after eleven o'clock on Thursday morning, I was walking on the Yokohama Pier with another young sailor, when we saw a man, dressed in a white suit of clothes, up to his neck in the water. The man appeared to be swimming, or rather treading the water. I said—"It is a nice day to be swimming." The man in the water said—"I have no money." I took off my clothes to jump into the water, but just then the man sank. We had thrown him a piece of lumber, about as big as this table, but he did not take hold of it. I saw him go down before I could get my clothes off. I believe he had not got his senses when in the water.

To Mr. Coutts—All he said while in the water was, I have no money. He could have put his hand on the piece of wood and pulled himself across it.

To Mr. Martin—The first time I saw him was when he was in the water. I did not see his hat.

Christian Egli, another seaman, sworn, deposed—I was coming along the pier yesterday when I saw a man in the water about a ship's length from a steamer and about two fathoms from the pier. I said to my companion, "It's strange for a man to be swimming with his shoes on." I called to the man, but he gave me no answer. I ran for a boat, but he called out that it was too late; and then I threw two big pieces of rope down to him. I sang out to him again, then I saw him place his two hands together before his face. Then he sank, and that was the last I saw of him.

To Mr. Martin—I first saw him in the water. He was in a white suit, and swimming. I said to my companion, "There is a ship's officer taking a swim." Then I saw he had his boots on.

To Mr. Coutts—He was treading water, and I saw his boots shining through the water.

To the Coroner—The Japanese could see him in the water. A Japanese boat came along after he had sunk, and some boys dived after him.

Marmaduke Willis, Third Engineer of the *Nagoya Maru*, sworn, deposed—I know nothing of the deceased's movements after he went ashore. I was supposed to be relieved at 4 o'clock, but on the morning of the 27th, as the Second Engineer did not appear, I sent a fireman to him. I then went to his room and found his door locked. After talking to the officer of the watch, I went to his room again. This time the door was open. He said to me that it was not safe for him to go below to the engine-room, "as the firemen want to throw me into the furnace." This conversation took place about five minutes to five o'clock. I asked him if he was sick, and he said, no, rats. I offered to keep his watch for him if he felt unwell. I never saw him again.

The Coroner handed witness a letter that was found upon the body, and witness said he had never seen the letter before, nor did he know anything of the matter referred to in it.

To Mr. Martin—When I asked if I could keep his watch for him, he said, "No, rats." I heard that he went to the Chief Officer and said that the firemen were putting straw and feathers through his port—a most improbable thing.

To Mr. Adams—His manner was always eccentric.

To Mr. Martin—The voyage before we had trouble with the firemen, but not while the deceased was on board. I do not think he was afraid of the firemen; he had no reason to be. I do not know if he had been dismissed from the ship.

To the Coroner—He had been one trip with the ship. I was on good terms with him.

Phillip Cottier, Captain of the *Nagoya Maru*, sworn, deposed—The deceased left the ship without intimating his intentions of doing so at all. He left the ship between 9 and 10 o'clock on the 27th inst. He was a very good man, so far as I found him. I never noticed anything strange in his manner.

To Mr. Coutts—There had been no trouble in the ship this voyage. Last voyage, with the other Second Engineer, there was trouble with the engine-room staff.

To Mr. Martin—"On demand," written on the deceased's discharge, is a mistake for "on reserve." I do not know why he left the ship. There was plenty of work to do on the ship, and when the Chief Engineer applied to me, I asked for another engineer to take the place.

To the Coroner—I never noticed anything wrong with him.

To Mr. Martin—I do not know that he drank. I do not think he did.

Mr. Martin—In the letter found on his person, he speaks of "D.T.S.?"

Witness—That is wrong, I should think.

To Mr. Coutts—I do not know whether this letter is in deceased's handwriting.

Dr. Edwin Wheeler, sworn, deposed—I saw the body of deceased about 2.30 p.m. yesterday. The body was lying at the harbour police station. It looked to me as that of a man recently drowned. There were no marks on the body. The only remarkable thing about him was that the thumb and two fore-fingers of the left hand were saturated with nicotine, showing that he was a very heavy cigarette smoker. The body might possibly have been in the water about an hour and a half. I had seen the man before at Mr. Pass's, but did not know his name.

Kyoya Masano, police-constable, deposed—About twelve clock yesterday I heard a man had fallen from the pier. I went out but did not see anybody, so I went back to the station, called out the Japanese Police-boat and went out to search. We dragged the water and eventually the drag caught in the shoulder and we brought the body to the surface.

To Mr. Martin—I did not see the man before he entered the water.

Yamaguchi Shinosuke, a pier coolie, deposed—About twelve o'clock yesterday I saw two foreigners on the Pier, and one in the water. I ran towards the spot and then reported the fact to the Police.

To Mr. Martin—The man was up to his neck in the water; he was not swimming and was fully dressed. The man appeared not to be able to swim; nor could he reach a piece of wood near the side of the pier.

Mr. Martin asked if the witness had seen the man fall into the water.

Witness—I only saw him after he was in the water.

Mr. S. C. Pass, sworn, deposed—The day before yesterday the deceased came to my house about eleven o'clock in the forenoon. He was cleanly dressed, but in a great state of agitation. I asked him to take a chair, and to tell me all about his trouble. He said that the firemen on board the *Nagoya Maru* had badly treated him and shut him up in his cabin four days and nights, and during the time he was in there they were poking straws and feathers through the port, so that that he could get no rest. He said he was feeling very bad, and asked if I would allow him to take a bath and a rest, and then he thought he would be all right. He had a bath, and afterwards took some tiffin. Then he went out: He returned in the evening about 7 o'clock; had dinner, and then went out again, coming back about half-past ten, and going straight to his room. On enquiring next morning, I was told that he went out at 6 o'clock, and the next I heard was that he was drowned.

To the Coroner—Deceased came to my house on the 15th April, on reserve, and stayed until the middle of this month. I never noticed anything strange in his behaviour all this time; he was a very quiet, steady man. I did not know whether he was suffering from any trouble. He never drank.

To Mr. Adams—The night before last he was very nervous, and again said that the firemen had treated him badly and locked him up for four days.

To the Coroner—I thought he ought to be watched. He refused to see a doctor, saying that he was not sick, but that the firemen were after him.

To Mr. Martin—He said nothing about the matter referred to in the paper found upon him.

To the Coroner—While he stayed with us he was on mess-allowance from the Company, about \$30 a month, and he owed me some money for his board and lodging.

Inspector Ihashi Sodonosuke, deposed—I was returning on the Quarantine Launch when I heard that a man was in the water. I looked about but could not see him. I sent a coolie to dive below, and when he came up he said he could see nothing. We then dragged the place with a three-pronged drag. The body was eventually recovered as a previous witness has described. The doctor from the P. & O. *Verona* came out in the boat and tried to resuscitate the corpse, but without success. This was about one o'clock. I then searched the body and found the paper now produced in the left pocket.

To Mr. Martin—I do not know whether the deceased fell or whether he jumped into water.

To Mr. Coutts—The deceased's hat has never been found: the tide runs swiftly.

This concluded the evidence, and the Jury retired. Upon their return

Mr. C. K. M. Martin, the foreman, said that they found that Herbert William Webb had come by his death through drowning, while of unsound mind.

WATER SPORTS AT YOKOHAMA.

The summer water-sports of the Yokohama Amateur Rowing Club took place on Thursday afternoon in gusty weather. The wind acting on the incoming tide caused a nasty current to set right across the course staked out for the polo match and tournament, and thus detracted a good deal from the fun. The verandah of the Boat-house was, as usual, well-filled with ladies clad in the gayest of summer costumes, and between whilst the fair visitors indulged in dancing to the strains of the Town Band.

BATH-TUB RACE.

Five out of the eleven entries started in a choice variety of domestic tubs, ranging from the homely bath to the aristocratic rice-washer: these were propelled by means of wicker-brooms, and naturally their progression was a series of unexpected gyrations with occasional long drifts to leeward. Eric Irwine alone managed to weather the buoy—the others, Austen, Carst, H. Y. Irwine, and F. V. McNair all drifting over to the flagstaff wall, and from thence wading home. Eric Irwine was declared an easy winner. The contest provoked much laughter.

GREASY POLE.

The starters in this event included, F. V. McNair, jun.; J. B. Gibbs, jun.; A. Kingdon, A. Austen, W. Goddard, H. Lee, H. Poole, H. Y. Irwine, W. M. Carst, H. Goldman, H. R. Mair, R. Böhlke, J. Budge, E. J. Libeaud, J. F. Drummond, S. Kuhn, A. L. Manley, H. Goddard, W. B. Mason, and H. S. Goddard. Before half the competitors had essayed the slippery passage of the pole the old brown duck suspended at the end, escaped from its basket. Then ensued a duck hunt of the merriest description until the biped was again secured and placed in durance vile. Herbert Goddard was declared the winner, getting right out to the end of the pole; H. S. Goddard coming second.

WATER POLO.

This game was played by teams representing Tea, Silk, Curios, Insurance, and School-boys, (Red) versus the World (White). The players were (Red): H. R. Mair (Captain), E. H. Irwine, W. Goddard, S. Kuhn, H. S. Goddard, J. F. Drummond, E. T. Bethel, M. Schellenberg, H. Goldman, A. Kingdon, H. Lee, A. Austen, and H. Y. Irwine. (White):—H. Goddard, H. A. Poole, M. Stephens, H. E. Hayward (Captain), G. C. Allcock, R. Böhlke, F. V. McNair, jun., E. J. Libeaud, A. B. Smith, M. Sakamoto, A. L. Manley, and W. B. Mason.

The White team started with the wind in their favour, and soon worked the ball down into the Reds' territory. A wild throw resulted in the ball getting out of bounds, and White had a free throw in. Then Red by excellent play on the right wing worked the leather down the course, the passing being very pretty. Just as things were getting lively for the Whites' goal line the whistle blew half-time. Upon resuming Red had the wind and tide with them, and very quickly the ball was in the enemy's home water. Drummond secured the ball and threw it through, but being off side the point was disallowed. Very soon Red was pressing again and this time H. S. Goddard, after some pretty play in front of goal, secured the point. Within two minutes Irwine made another goal—two for Red; and the whistle blew.

SAMPAK RACE.

As usual this race caused a good deal of amusement, the amateur *sando* in most instances managing to propel their craft anywhere but in the right direction. Still there was a great improvement to be noticed among some of the competitors, the winners, W. M. Carst and J. J. Carst *yulioing* in splendid style.

TOURNAMENT.

The rough water spoiled most of the contests, though some were fought out very vigorously, particularly when McNair or Irwine happened to be in the engagements. The results were:—

1ST HEATS.

H. S. Goddard beat A. Kingdon.
F. V. McNair, jun., beat W. B. Mason.
Harold Irwine beat S. Kuhn.
H. E. Hayward, a bye.
Herbert Goddard, a bye.
A. L. Manley, a bye.

2ND HEATS.

G. C. Allcock beat McNair.
Harold Irwine beat Hayward.
A. L. Manley beat H. Goddard.

SEMI-FINAL.

H. S. Goddard, a bye.
Harold Irwine beat Manley.

FINAL.

Harold Irwine beat H. S. Goddard.

Mr. F. J. Hall acted most zealously as starter, judge, and referee; the Rev. E. C. Irwine was time-keeper; Mr. Schellenberg, Treasurer; and Mr. H. R. Mair, Secretary.

A BI-METALLIC QUESTION IN CHINA.

A very singular bi-metallic question has just been agitating China, though little or nothing of it has appeared in the European Press in those regions, still less in the Press of Europe. As it hardly concerns the European banks (except in so far as their "compradores" are doubtless quietly making fortunes out of it), perhaps this fact is scarcely to be wondered at.

A few years ago the Canton Viceroy Chang Chih-tung (since then at Nanking, now at Hankow) established a series of mints at Canton. Not only were excellent dollars and fractional silver coins struck for local use, but Hongkong itself was flooded with ten-cent and five-cent pieces. So far so good. No great consequences ensued. But, as copper cash were growing scarce in China (owing chiefly to the comparative failure under the four last Emperors to develop the copper industries of Yunnan, disorganised by the Panthay rebellion), Chang Chih-tung decided to start a cash mint at Canton, as well as a dollar mint. The cash were not quite so heavy as, but their workmanship was much finer and more regular than, in the case of the old-fashioned native article. As we all know, the Chinese "cash" is a coin rather larger than a farthing, having a square hole in the middle to facilitate its being strung. The tael, or Chinese ounce of silver, varies in every town; but, roughly speaking, the Mexican dollar is worth a string of a thousand cash, and is in value as 72 to 100 compared with the tael. In 1800 the Spanish dollar was worth 750 cash, and the Spanish Government at home had altered the value of the *quaruple de a ocho* from 15 to 16 Mexican dollars. The first Manchu Emperor, 250 years ago, had fixed the tael at 700 cash; but a century later the opium trade and the tea trade combined gradually had the effect of forcing the tael up from 1,000 to 1,600 cash.

At the beginning of this year strange news suddenly arrived in Shanghai from all the outposts. In Chinkiang, one of the centres of the opium trade, the Spanish dollar suddenly fell from 1,300 to 1,175 cash, and the tael from 1,480 to 1,345. At Hankow the Mexican fell to 920 cash, and the same thing at Ningpo. At both these last places proclamations had appeared announcing that the Viceroy Chang Chih-tung's new dollars (coined at Hankow now in the same way as at Canton) would shortly be placed on the market, and must be received on the footing of Mexican, Japanese, French, and English dollars; that is, they must be taken freely by all good lieges, subject to market fancies. The proclamations announced moreover that the new dollars would be received in payment of taxes and Customs duties. That always sounds uncanny to a Chinaman, who knows by experience that all exchanges go against him when he pays his taxes. The authorities at Chinkiang and Nanking were therefore somewhat staggered to find that, when the troops received their pay in the new dollars instead of in copper cash, as usual, the money changers charged one per cent. discount, and would only give 935 cash for the dollar. From Hangchow came news that, although 1,000 cash were still procurable for a dollar, 20 per cent. of base cash were inserted in each string, so that in effect only 960 really good coins were given. At Yangchow the local tael had gone down to 1,300 cash, and the Mexican dollar to a little over 900. From Wuhu and the towns of the Poyang Lake similar reports arrived. It is the invariable rule for copper cash to advance in price as compared with silver at the Chinese new year (February), for in China it is the custom for everyone, rich and poor, to keep articles not required for daily use in the pawn-shops, and copper cash are required at that festive season, in order to regulate petty domestic transactions. The fall this year, however, was something quite abnormal, and as the holidays were rapidly approaching, great popular excitement and even distress was inevitable.

It never seemed to occur to anyone that the more dollars were coined the easier they were to get; and the easier to get, the less there must be to pay for the accommodation; in short, the dearer copper-cash must be. The export of cash from China has always been forbidden by treaty, but permission to export from port to port has invariably been granted under Customs surveillance. The illicit coinage and the melting down of cash are offences which have always been severely punish-

able. It was suspected that the present dearth in cash was in some undefined way connected with the Japanese indemnity; it was known that "smashers" were apt to coin inferior cash, for mixing with the standard article, whenever the demanded was active; and it was more than suspected that the high price of raw copper in the market made it worth the while of "roguish merchants," not only to export copper cash to Hongkong and Japan, but to melt them down to be fashioned into pots and basins. The Chinese mandarins accordingly everywhere took the same fatuous steps. Cash banks were "ordered" by proclamation not to fix "unreasonable" prices; the export of cash from port to port was either limited to a few stringsworth at a time, or entirely forbidden; dire penalties were threatened against any persons who should clandestinely melt down or coin each under any pretext; and so on.

It was not long before news came from Peking that there had been a similar crisis there too; to make matters worse, the two metropolitan mints were at a standstill for want of copper. Not only did matters not improve, but things went from bad to worse everywhere. The tea season was coming on, advances were required for purchases up country, riots were taking place, and consternation was in every man's eye. Some wiseacre at last discovered that, if all the authorities maintained the rigid prohibition against sending cash away to a port, it was evident that no cash could possibly arrive from a port. It was also discovered that so long as cash were so large and heavy that a string of them weighted eight English pounds, it was absurd to buy raw copper for coining at £30 to £50 a ton sterling, and with the other hand give away eight pounds of finely mixed and carefully stamped copper for a trifle over two shillings—the sterling value of the Mexican dollar.

The authorities at Hankow and several other great centres, especially tea marts, endeavoured to tide over immediate difficulties by issuing official cash-notes, receivable at some date, not special cash-notes, receivable in payment of taxes and Customs dues, but redeemable at some date not specified. However, in order to obviate loss from wear and tear, these notes were to be cancelled and exchanged for new ones immediately they were handed over the official counter. Proclamations were issued authorising the free export of cash from port to port. Enormous orders for cash were sent to the Canton mint, which for some reason had recently stopped working; copper cash were ordered to be struck on a wholesale scale in various provinces where mints existed, but where for years past they had been neglected; and the latest news is, in fine, that a general improvement is shortly hoped for, when the new cash shall have come into free circulation.

Incalculable popular injury has already been worked all over China by this singular monetary crisis, and it ought to be a lesson to all who rashly interfere with the *status quo* of currency, be it gold, silver, or copper. The increased production of silver and the increased demand for gold undoubtedly caused the fall of silver in civilised countries. The recent increased production of gold has not been so great as to overwhelm either the increased demand for it or the ever-concurrent increased production of silver. Things would probably have been much worse than they are, had not the silver mines drawn in their horns a little, and had not the general advance in "civilisation" kept up the demand for gold. Those who possess gold always possess it because they want it, and have paid for it. It is monstrous to try and induce them to part with it on any theoretical grounds. The only criterion is, "What will you give for it?" When it is gone, and inconvenience arises, the seller will raise his price in order to have it back. Hence the infallible result. Only the richer individuals and the richer countries can afford to possess gold. Why is it possessed? Only the richer countries live on such a scale that gold is required in the pocket at all. The chief use for gold is as a counter in the pocket. The next use is as a security, lying in the bank, for paper kept in the pocket; in other words, it is a secondary counter. All other uses of gold are purely mercantile, like the uses of paint, diamonds, or cheese. If these simple facts be kept in mind, "bi-metallics" will find their nerves considerably steadied.—*Economist*.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, August 29.

H.E. Li Hung-chang has arrived at New York where he was given a splendid reception.

("SPECIAL" TELEGRAMS TO "JAPAN MAIL.")

Hakodate, August 29.

Her Majesty's ship *Swift* arrived here yesterday from the Behring Sea.

Hakodate, September 1.

At 5.09 o'clock last evening an earthquake occurred here that lasted two minutes.

A southerly gale is blowing, and the weather is very disagreeable.

Hakodate, Sept. 3.

H.I.J.M.S. *Kongo Kan* arrived here yesterday. Two strong shocks of earthquake shook Hakodate last night at seven o'clock.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, August 28.

A band of Armenians, numbering about forty, have seized the Ottoman Bank at Constantinople, killing the guards. Simultaneously with the seizure of the Bank rioting broke out in other quarters of the city, many persons being killed and the shops sacked.

H.M.S. *Dryad* has left Therapia for the city and the French and Italian guardships are to follow.

London, Sept. 1.

Prince Lobanoff, Russian Minister of Foreign Affairs, died suddenly whilst returning to Kieff from Vienna with the Czar and Czarina.

London, Sept. 2.

President Cleveland is sending several cruisers to Turkey.

The Embassies at Constantinople are drafting a Note to the Porte pointing to the recent massacre of five thousand Armenians as being organized with the connivance of the authorities. The excitement is subsiding.

The prevalent opinion in Europe is that Prince Lobanoff's successful policy will be continued.

(FROM THE "N.C. DAILY NEWS.")

London, August 27.

H.M.S. *St. George* and *Racoon* have arrived at Zanzibar, and landed two hundred and fifty men, and the ships' guns command the Palace. Kalid's force numbers two thousand five hundred men, well armed. An ultimatum has been handed to Kalid that unless he surrenders by the morning the Palace will be bombarded.

London, August 28.

The Palace at Zanzibar has been bombarded and reduced to ruins, and Said Kalid has fled. Hamond, a cousin of the late Sultan, has been placed on the throne.

(FROM THE TONKIN PAPERS.)

Paris, August 12.

The Russian press says that the Powers will take action in Crete without England, who seems to separate herself from the European concert, but that they will not forget the Egyptian question.

Some fireworks exploded at the fête at Rennes last night and seriously injured six persons. The fête was given in honour of M. Faure, who is visiting Rennes.

(FROM THE BAROKOK PAPERS.)

London, August 10.

General Sir F. Carrington reports that owing to their recent reverses the Matabele are inclining to peace.

Li Hung-chang has decorated General Gordon's statue in Trafalgar Square and the cenotaph in St. Paul's each with a superb wreath.

London, August 11.

The railway bridge connecting Mombasa with the mainland has been opened, and the line progresses at the rate of half a mile per day.

London, August 12.

The Russian Press condemns German attacks on Lord Salisbury for declining to blockade Crete, which would prove futile, unless applied equally against Turks and Christians.

(FROM THE SAIGON PAPERS.)

Paris, August 14.
It is officially stated that the Czar and Czarina will arrive at Cherbourg on their way from England at the beginning of October. The Czar will remain eighteen days in Paris.

Paris, August 17.
The Czar will arrive at Cherbourg on the 5th October.

M. Melne, at the Remiremont banquet, said that France united was invincible, as would be seen by the Czar, whose visit would cement the Franco-Russian union.

Paris, August 16.
The United States have recognised the annexation of Madagascar by France.

The inauguration of the monument erected at Grenoble to Doudart Lagree was largely attended. M. Lebon eulogised the work of Doudart.

M. Le Myre de Vilers said that France was indebted to Doudart for an empire which will compensate for the loss of the Indies.

(FROM JAPANESE PAPERS.)

Fukui, August 31st.
A violent gale of wind and rain broke over the town to-day doing much damage. The weather cleared about 5 p.m.

Shidzuoka, Sept. 1.
The *Chi-yen* is expected at Shimidzu on the 3rd inst.

Nagoya, Sept. 1.
The damages done by the storm in this Prefecture are tabulated as follow:—Deaths, 26; houses entirely wrecked, 931; houses partially wrecked 398; houses washed away by water, 100; houses inundated, 2,196; breaches in embankments, 38.

Hakodate, Sept. 1.
Viscount Higashizono, the Imperial Chamberlain, bearing the Emperor and Empress's gifts arrived here at 9.12 a.m. to-day.

Osaka, September 1.
Count Matsukata arrived here at 5 o'clock this afternoon by steamer from Mikage *via* Nara. He will leave Kyoto by the 12.25 a.m. train tomorrow for Tokyo.

Gifu, Sept. 2.
Researches carried up till this morning now show the storm damages to be as follow:—Wrecked houses, 4,300; partially wrecked, 4,800; deaths, 23. The crops throughout this Prefecture are believed to be reduced by one-half.

Toyama, Sept. 2.
At 5 o'clock yesterday afternoon a feeble earthquake was felt. The houses wrecked by the storm in Takaoka number 29; in Fushiki there were only four destroyed.

Kobe, Aug. 31.
The embankment of the Minatogawa in the vicinity of Aratacho was broken at 11 p.m. on the 30th inst. The water covered the whole of Aratacho and Fukuharacho and extended to Tamondori, Arimamichi, and Higashi Kawasaki. About 300 houses were wrecked, and 40 deaths are reported. The police and government officials are doing all they can. The dead bodies of several females and infants have been found below the floors. The Red Cross Association have started a branch hospital at Fukuohara, where 20 wounded have been attended to. The water police boats go down Tainon-dori to reach the bridge.

Tsu, September 3.
The wrecked houses number, up to the present, 2,067; houses swept away 121; deaths by drowning and crushing, 83.

Gifu, September 3.
According to researches carried on till yesterday, the houses wrecked number 4,300; houses partially wrecked, 4,800, deaths, 23.

Aomori, September 3.
Governor Maki left for Tokyo to-day to ask for yen 100,000 from the Treasury towards repairing the damages caused by the recent catastrophe.

Sendai, September 3.
Viscount Sano, Director of the Red Cross Association, arrived the night before last, and went to Morioka yesterday morning. He returned here to-day.

Hakodate, Sept. 3.
The *Kongo* arrived yesterday.

Sōul, Sept. 1.
To-morrow being the official anniversary of the birth of the King, the Tai Wōn-kun and his wife have come to the Min-yé Palace, and will pay homage to-morrow.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday-season; it will reopen on Friday, the 2nd of Oct.

SOLUTION OF PROBLEM NO. 244.

WHITE. BLACK.
1—R to Q Kt 7 1—B takes R
2—Q takes Q P 2—R takes R
3—Kt to Q 5, mate if 2—R takes R
3—Q takes R P, mate.

Other variations obvious.
Correct answers from W. d. H., Shogi, J.D., and Omega.

PROBLEM NO. 246.
By JAN DRITINA.

White to play and mate in three moves.

NUREMBERG TOURNAMENT.

The result has reached us by telegram dated Nuremberg, 11th August, wherein the names of the prize-winners are given as under:—

- 1—Lasker (13½ points).
- 2—Maroczy.
- 3 } Pillsbury and Tarrasch (12 each).
- 4 }
- 5—Janowsky.
- 6—Steinitz.
- 7—Schlechter and Walbrodt (tie).

We publish one of the early games, and hope to follow it up with further specimens as they come to hand.

GAME NO. 559.
AT NUREMBERG, 1896.

RUY LOPEZ.

WHITE. BLACK.
Forbes. Lasker.
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—Kt to Q B 3
3—B to Kt 5 3—Kt to B 3
4—Castles 4—Kt takes P
5—P to Q 4 5—B to K 2
6—Q to R 2 (a) 6—Kt to Q 3
7—B takes Kt 7—Kt P takes B (b)
8—P takes P 8—Kt to Kt 2
9—P to Q Kt 3 (c) 9—Castles
10—B to Kt 2 10—P to Q 4
11—P takes P e.p. 11—P takes P
12—Q Kt to Q 2 12—P to K sq.
13—K R to K sq. 13—B to Q 2
14—Kt to K 4 (d) 14—P to Q 4
15—Q Kt to Q 2 15—B to Q R 6
16—B to K 5 16—P to B 3
17—Q to R 6 (e) 17—P takes B
18—Q takes B 18—P to K 5
19—Kt to Q 4 19—Q to B 3
20—P to Q B 3 20—R to K B sq.
21—P to B 3 (f) 21—Q to Kt 4
22—Q to B sq. 22—Kt to B 4
23—Kt to B sq. 23—Q to Kt 3
24—R to K 3 24—Kt to Q 6
25—Q to Q sq. 25—Kt to B 5
26—Kt to Kt 3 (g) 26—P to K R 4

27—Q Kt to K 2 27—Kt takes P (h)
28—K takes Kt 28—P takes P ch.
29—R takes P 29—B to R 6 ch.
30—K takes B 30—Q to Kt 5 ch.
31—K to Kt 2 31—Q takes R ch.
32—K to Kt sq. 32—P to R 5
33—Kt to R sq. 33—Q to K 6 ch.
Resigns (i).

(a) Two important variations occur here, viz:—
6—R to K sq. Kt to Q 3 6—P to Q 2 Kt to Q 3
7—B takes Kt Q P takes B 7—B to K 4 P to K 4
8—P takes P Kt to B 4 8—P takes Kt P takes Kt
9—B takes P 10—B takes P ch B takes P
10—B takes P Q P takes B Castles

(b) If 7....
8—P takes P Kt to B 4
9—R to Q sq. B to Q 3
10—P to K 6 P takes P
11—Kt to K 5, with a good game.

(c) Probably best. The following lead to even position:—
9—Kt to B 3 Kt to B 4 Castles
10—Kt to Q 4 Castles 10—R to Q sq. Q to K sq
11—R to K sq Kt to K 3 11—Kt to Q B 3 P to B 3
12—Kt to B 5 P to B 3
13—B to Q 3 P takes P
14—Q takes P B to B 3
15—Q to Kt 5 P to Q 2

(d) Prior to this move White appears to have slightly the preferable position. The move is ill-judged, and gives Black a small advantage of which he makes the most.

(e) White is fortunate to be able to save his piece in this manner, but Black retains the advantage.

(f) Hazardous, but White has nothing better. If 22—R to K B sq., P to B 4; 22—Kt to K 2, Q to Kt 4, should win.

(g) White defends himself very ingeniously, but his opponent's next move is bold and efficacious.

(h) This is a master-stroke. There were various ways of winning, but Black selects the shortest.

(i) If 33—K to Kt 2, P to R 6 mates.

LASKERISMS.

"A Pawn without a clearly defined purpose is to be blamed."

"When your position is not inferior to that of your opponent, and he, nevertheless, makes preparations to attack you, disregard them altogether, develop reserve forces, avoid his attack by the slightest defensive movement possible, and institute a quick counter-action."

"Don't attack unless you have some tangible superiority.—From 'Common Sense in Chess.'"

We take the following from Black Bishop's column in the *China Mail*, and specially commend to the notice of our readers the challenge to a "Correspondence Game" from two Hongkong amateurs. Now is the time for Hakodate and Nagasaki to wake up and show what they can do. Kobe and Tokyo also might take a hand. All who love a game of long-bowls have now a chance to distinguish themselves.

GAME NO. 560.

VIENNA GAME.

WHITE. BLACK.
Max Lange. Dryadski.
1—P to K 4 1—P to K 4
2—Kt to Q B 3 2—Kt to Q B 3
3—P to B 4 3—P takes P
4—Kt to B 3 4—P to K Kt 4
5—B to B 4 5—P to K Kt 5
6—P to Q 4 6—P takes Kt
7—Castles 7—P takes P
8—B takes P ch. (a) 8—K takes B
9—Q to R 5 ch. 9—K to Kt 2
10—Q to Kt 4 ch. 10—K to B 2
11—B takes P 11—P takes R (Q) ch.
12—K takes Q (b) 12—Kt to K B 3
13—B to Kt 5 13—B to K 2
14—Kt to Q 5 14—R to K Kt sq.
15—P to K 5 15—P to K R 3
16—Q to R 5 ch. 16—K to K 3
17—Kt to B 4 ch. 17—K to B 4
18—Q to B 7 18—R takes B ch.
19—Kt to Kt 2 ch. 19—K to K 5
20—R to B 4 mate.

(a) A bolt from the blue after the preceding sacrificial play.
(b) White has given up three pieces in order to concentrate his attack and obstruct Black's development. See the diagram.
(c) Instead of resigning, as his position is now hopeless.

Position after White's twelfth move:—

I am requested to announce that two Hongkong amateurs are willing to play, singly or in consultation, correspondence games with residents in Japan or the coast ports. Communications may be sent to the *China Mail* office.

GAME No. 561.

ANOTHER OF MR. WYVILL'S GAMES.

The following is another of Mr. Wyvill's games, played in the 1851 tournament. His opponent, Captain Kennedy, was at one time president of the Edinburgh Chess Club.

SICILIAN DEFENCE.

WHITE. Kennedy.	BLACK. Wyvill.
1—P to K 4.	1—P to Q B 4
2—Kt to K B 3	2—Kt to Q B 3
3—Kt to Q B 3	3—P to K 3
4—P to Q 4	4—P takes P
5—Kt takes P	5—P to Q 3
6—Kt takes Kt	6—P takes Kt
7—B to Q 3	7—P to K Kt 3
8—Castles	8—B to K Kt 2
9—Kt to K 2	9—Kt to K 2
10—P to Q B 3	10—Castles
11—B to R Kt 5	11—P to B 3
12—B to K 3	12—K to R sq.
13—P to K B 4	13—Q to B 2
14—Q to B 2	14—B to K R 3
15—R to B 3	15—P to K 4
16—K to R sq.	16—B to Kt 5
17—P takes P (a)	17—B takes R
18—B takes B	18—B takes Kt
19—B takes B (b)	19—B takes P (c)
20—B takes R	20—R takes B
21—R to K B sq.	21—R takes R ch.
22—B takes R	22—P to Q 4
23—P to K R 3	23—K to Kt 2
24—P to Q Kt 4	24—P takes P
25—Q takes P	25—Kt to B 4
26—K to R 2	26—K to B 3 (d)
27—P to K Kt 4	27—Kt to Q 3
28—P to K Kt 5 ch.	28—K to K 3
29—Q to K R 4 (e)	29—P to K 5
30—R to R sq.	30—Q to K B 2
31—B to K 2	31—K to K 4
32—P to Q B 4	32—Kt to K B 4
33—Q to B 2	33—Q to K 2
34—P to B 5	34—Q takes K Kt P
35—B to K Kt 4	35—Q to Q B 8 ch.
36—K to R 2	36—P to K 6
37—Q to K Kt 2	37—Q to Q 7
38—P to Q Kt 5	38—P takes P
39—B to K 2	39—P to Q Kt 5
40—P to Q B 6	40—K to Q 3
41—Q to K B 3	41—Q takes P
42—Q to K B 4 ch.	42—K takes P
43—Q to K 4 ch.	43—Q to Q 4
44—Q to K 8 ch.	44—K to Q 3
45—Q to K B 8 ch.	45—K to K 4
46—Q takes P	46—Q to Q 3 (f)
47—Q to K Kt 4	47—R to B 3 (dis. ch.)
48—K to Kt 2	48—P to K R 4
49—Q to Q R 4	49—Q to K Kt 6 ch.
50—K to R sq.	50—Q to K 8 ch.
51—K to R 2	51—Q to B 7 ch.
52—K to R sq.	52—Kt to Kt 6 mate.

(a) An ingenious combination, but R to K B 3 would probably have been more profitable in the end.
(b) Taking with the Queen would have been preferable.
(c) If 19..... R to B 3, White would have replied P takes Q P and B to Q B 4. If 19..... K R to Q sq., White would have taken K B P with P, with a good position for attack and two Pawns to compensate for the loss of the exchange.
(d) The termination is ably and ingeniously played by Mr. Wyvill.
(e) B to B 4 ch. appears better.
(f) Decisive. The exchange of Queens or the discovered check forces the game.

THE DOYEN OF CHESS CLUBS.

The Council of the Edinburgh Chess Club, in announcing their removal to new premises at 46, Hanover Street, have issued the following notice:—"The Council have been fortunate enough to secure suitable rooms, now occupied by the club, and they hope that the membership, which at present is over sixty, will be thereby largely augmented. The club rooms, containing an excellent chess library, are open all day and evening. The annual subscription is £1, and no entrance fee will be charged to those joining the club before September 30th, provided that the number of members does not exceed one hundred. The Edinburgh Chess Club is the oldest in the British dominions, and there is every desire on the part of its present Council to further the cause of chess in the city, by giving every facility, not only to those who are accomplished players, but to those who are desirous of learning or becoming more proficient. Strong players may always reckon on meeting suitable opponents, and learners will find it of great advantage to attend the lectures which have been arranged for the coming season."

The claim of the Edinburgh club to the dignity of seniority among the chess clubs in Britain is disputed on behalf of the Manchester Chess Club. In 1888 a pamphlet was discovered in a second-hand book shop in London entitled "Rules of the Manchester Chess Club, established 1817, with Philidor's Laws of Chess annexed." In addition to the rules the pamphlet contains minutes of meetings and list of members. No doubt such a

club was formed in 1817 and probably had a successful career, but it must have become defunct, for the present Manchester Chess Club was founded in 1852 with a set of rules different from those of 1817.

The Edinburgh club was founded in 1822, and has had an uninterrupted existence to the present day. That was (and is) the club which won the great match by correspondence against the London Chess Club in 1824 to 1828. The stake played for was a silver cup of the value of 25 guineas, which is still in the possession of the club. The whole of the letters received from London during the progress of the match are preserved at the club, and are very interesting—embracing the controversy about the disputed moves. The original rules are still in force, and the minute book and treasurer's cash book date back to the inception of the club in 1822.

There was an Edinburgh chess club long before 1822, but the present club claims no succession to it. Twiss, writing in 1789, quotes from a letter from Edinburgh regarding chess—"There was formerly a chess club here, but of late in general every game has given place to cards. The game of chess is of great antiquity in Scotland, and is mentioned in several ancient Gaelic poems." It is believed that a chess club existed in Edinburgh before James VI., who was a chess player, quitted it for London in 1603.

Pin Plates, per box	5.00 to 5.30
Pig Iron, No. 3	1.62 1/2 to 1.65

KEROSENE.

More doing, buyers being at last forced to replenish stocks. Holders are said to be firm, in spite of large arrivals from the Eastern States.

American	\$2.16 to 2.18
Russian	2.14 to 2.16
Langkat	—

SUGAR.

Brown—Market closes quiet after a spurt. Prices generally improved, especially for Takao sorts. White—Ordinary has improved, and Refined is going strong with a good demand and large sales at quotations.

	PER PICUL.
Brown Takao	\$4.00 to 4.10
Brown Manila	5.00 to 5.10
Brown Daileng	3.45 to 3.50
Brown Canton	3.35 to 3.45
White Java and Penang	6.90 to 7.00
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

Business has gradually tailed off till at the close there is practically nothing doing. Holders have

themselves to thank for this; for they have again advanced quotations beyond all reasonable limits. At fair prices there are plenty of orders in town, and meanwhile the stock mounts up, 14,000 piculs now. While the export to date is 2,000 piculs against 15,000 last year!

QUOTATIONS.

BISSET & URE'S SHARE REPORT.

Yokohama, August 31st.

Luzon Sugars have been purchased from Hongkong at \$64.

Iron Works have changed hands locally at \$105 and Hyogo Gas at \$170.

Grand Hotels are offering at \$170, Iron Works at \$105, Club Hotels at \$75, and Oriental Hotels at \$135, whilst there are buyers of Japan Breweries at \$225, Langfeldts at \$185, and of Club Hotels and Japan Brewery Debentures at \$110 respectively.

We notice a paragraph in a local newspaper to the effect that Brett & Co.'s shares have changed hands at \$10, along with a gushing addition thereto. As far as we know there were no more than two shares sold at this price. There were buyers at \$7.75 and not higher, and sellers to any extent at \$10.

Yokohama, September 1st.

With reference to our remarks in our last night's Share Report we observe the *Japan Daily Advertiser* takes exception to what we wrote. We can only say we are sellers of a number of Brett & Co.'s shares at \$10. We believe the Company is doing well and that the shares will appreciate.

Yokohama, September 2nd.

Brett & Co.—With reference to the paragraph in the *Daily Advertiser* of this morning, we beg to state that, with the exception of two shares for which \$10 was paid, we have not sold a single share at a higher price than \$7.75. We have nothing to do with the consideration money stated in a deed of transfer; which is purely a matter between buyer and seller and does not concern the Broker. We many say, however, that where no stamp duty is charged the amount of consideration money named in a transfer is frequently a nominal one, and it would not have made any difference in

the instance referred to by the *Advertiser* whether the sum had been put down at \$1 or \$400.

Yokohama, September 4th.

Telegraphic advices from Hongkong report the following changes in the share market:—H. & S. Banks 185 per cent. Buyers: Hongkong Lands \$74 Sales; China Fires \$95 Sellers; H. & W. Docks 193 per cent. ex dividend Buyers; H. & K. Wharfs \$53.50 Sellers; Douglasses \$65.50 Buyers; H. C. & M. Steamboats \$33.25 Sellers; Punjom Mines \$14 Buyers; Raub Mines \$5.50 Nominal; Balmoral Mines \$2.25 Nominal; National Banks \$27 Sellers; Indo-Chinas \$46 Buyers; Straits \$27 Buyers; Union Insurance \$232.50 Sellers; China Traders \$81.50 Sales; and China Sugars \$123 Buyers.

China Mutual £10 Preference shares have changed hands locally at £8 and Hyogo Gas at \$170. A few China Mutual Ordinary £5 paid-up shares are on offer, also Club and Grand Hotels.

The Secret of a Beautiful Skin

Soft white hands, shapely nails, and luxuriant hair with clean wholesome scalp is found in the perfect action of the PORES produced by CUTICURA SOAP, the most effective skin purifier and beautifier in the world, as well as purest and sweetest for toilet, bath, and nursery.

* Sale greater than the combined sales of all other skin and complexion soaps both foreign and domestic. Sold throughout the world. British depot: F. NUNN & SONS, 1, King Edward-st., London, E.C. FORRELL DUNN AND CO., Sole Proprietors, Boston, U.S.A.

ARTIFICIAL PERFUMES. CAUTION!

Messrs. J. & E. ATKINSON warn their customers against the Artificial Chemical Perfumes at present so extensively offered. Though strong they are nasty, and from a hygienic point of view their use is to be strongly deprecated.

ATKINSON'S "NATURAL" PERFUMES are made from flowers, and possess all their natural fresh sweetness. They cannot be surpassed either in delicacy or strength.

ATKINSON'S "WHITE ROSE."
"A charming Scent."—H.R.H. The Duchess of York.

J. & E. ATKINSON, 24, Old Bond Street, London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"
Sold by all Chemists and Medicine Vendors the throughout World.

THE PROCEEDINGS OF THE IMPERIAL JAPANESE DIET IN BOOK FORM.

THE "Proceedings" include EPITOMISED DEBATES, Translations of the Bills discussed, Budgets, Speeches of the Ministers of State in full, Questions put and the answers of the Government, and the Legislative Work of the Session.

PRICE \$1.

To be obtained at the Office of the *Japan Mail*, No. 51, Main Street.

May 16th, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1895.

DINNEFORD'S

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 12TH, 1896.

DEATHS.

On Saturday, the 5th inst., at Kanagawa, AUGUSTIN STEIN, a native of Hamburg, in his 55th year.

At 119 B. Bluff, Sept. 9th, at 11 p.m., THOMAS SIMPSON KENDERDINE, age 47 years, late Master, Nippon Yusen Kaisha Service.

SUMMARY OF NEWS.

A FRENCH Squadron has been ordered to the Levant.

THE Nippon Ginko raised its rates of interest on the 7th inst.

A SEVERE earthquake has wrought considerable damage in Akita Ken.

THE standard for cavalry in the Japanese army has been lowered two inches.

RAILWAY and telegraphic interruptions are the order of the present summer in Japan.

SIR PHILIP CURRIE, British Ambassador to Turkey, has returned to Constantinople.

THERE has been a rising of natives and half-breeds in Manila, but the real facts of the re-

volt are difficult to obtain. It seems likely that the affair will be easily put down.

THE Nile railway has been reopened. Twenty miles of the line were relaid in ten days.

THE amount of money deposited in Post Office Savings Banks at the end of July is estimated at yen 1,066,500.

THE export of coal from Moji during the month of August totalled 53,178 tons, valued at yen 200,714.80.

MADAME INABUNE, the celebrated lady novelist, took poison the other day, and is now lying in a critical position.

THE Nippon Yusen Kaisha have transferred their iron works and smith's shops to the Yokohama Dock Company.

ANOTHER gale, lasting for nearly four days, has wrought immense damage in Shikoku and the Central districts of Japan.

MARQUIS MARSHAL YAMAGATA's health is very precarious. His physician, Dr. Hashimoto, has ordered him complete quiet.

THE Shinagawa Woollen Company's plant arrived by the *Pera*, on the 3rd instant. The machines weigh about 400 tons.

A MANIFESTO issued by the Mussulman Cretans appeals to the Mahomedans to resist the reforms which the Assembly has accepted.

THE Prince Imperial has left Nikko, and the Imperial Princesses Tsune and Kane have returned to the capital from Hakone.

MESSRS. DEN and MATSUNAGA, who were despatched to attend the International Telegraphic Congress at Buda-Pest, are now visiting Paris.

THE health of Count Mitsu is again causing grave anxiety, His Excellency having suffered though the strain involved by the recent Oiso meetings.

Two silk handkerchief brokers, who made away with \$2,000 worth of handkerchiefs entrusted to their care in Yokohama, have been arrested in Hokkaido.

THE amount of imports during August at Nagasaki, are estimated to have reached over yen 1,680,000, the highest amount since the port was opened.

DURING the absence of Mr. Pereira, the Portuguese Consul in Yokohama, Baron D'Anethan, the Belgian Minister, will take charge of Portuguese Consular Affairs.

MR. MATSUMURA YUNOSHIN has been deprived of rank and position for bringing a false accusation against the conduct of the standing army at Taichiu, Formosa.

MESSRS. BRETT AND Co., Limited, Yokohama, have declared a dividend of 5 per cent. for the year, beside voting \$500 to the Manager, Managing Director, and Advisory Committee.

THE schooner *Iolanthe*, that trades between Yokohama and Guam, Caroline Islands, has been wrecked in the harbours of Saipan. Mr. Shirley Mansfield, her owner, was badly injured.

THE sailing races on Saturday were full of incident, the high wind capsizing some of the smaller boats, splitting sails and spars of the larger ones, and eventually preventing the finish of the races.

T.I.M. THE CZAR AND CZARINA have visited Breslau where they were accorded a splendid

reception. At a banquet in honour of their Majesties' visit the Emperor William toasted the Czar as the bulwark of peace. The Czar's response was of the briefest character.

THE Cabinet crisis still prevails, though the possibility of Count Matsukata being induced to take the positions of Minister President and Minister of Finance, grows more hopeful every day.

DYSENTERY is rapidly spreading in certain districts. The total number of patients during the first half of August was 9,391; the total during the latter half of the month was 15,652; a grand total of 24,943.

M. EDWARD PAPINI and eleven other French residents in Japan were lately rewarded with some *Mokuhai* (lacquered *saké* cups) in recognition of the generous contributions they have given to the Orphan Asylum.

THE trade between Korea and Shimonoseki last month is estimated to have reached yen 126,151.585. Compared with last month, there is an increase of yen 14,288.292; in imports, yen 7,933.948; exports, yen 6,355.349.

FRANK RYDER, late Second Officer, and Ernest Dawson, late Third Engineer of the N.Y.K. steamer *Saikyo Maru*, have been committed to take their trial on the charge of stealing \$2,000 from that the vessel on or about the 15th August.

THE National Convention of Gold Democrats held at Indianapolis has adopted a platform upholding the Gold standard and opposing the free coinage of silver. The convention has nominated General Palmer, of Illinois, for the Presidency.

LATEST researches show that the damages done by the recent earthquake in the Senhoku district, Ugo Province, were as follow:—Houses entirely wrecked, 3,256; other buildings, 951; partially wrecked houses, 1,407; partially wrecked buildings, 568; damaged houses, 3,458; damaged buildings, 1,900; deaths, 190; and injured 512.

It is estimated that about one thousand innocent Armenians have been massacred in the streets of Constantinople, the troops being passive spectators. Marines have been landed for the protection of all the Embassies at Constantinople. The embassies have appealed strongly to the Sultan direct to stop the horrors which are taking place, and refer to the violation and looting of foreign domiciles, and point to possible grave results.

LITTLE can be said of the Import trade of the past week, as the firmness of holders has prevented much business from being put through. In Fancies; perhaps, the demand has been met, but this was, at best, only small. Metals continue depressed, imports being in excess of requirements. Kerosene has been going strong these past few days, with prices tending upward. The market for Brown Sugars is quiet, the only thing passing being a few lots of Manila. Prices are well maintained for White, despite the quiet tone that predominates. In Raw Silk business is very dull, with little prospects of improvement. The total export to date is 2,630 bales against 17,510 bales this time last year: such decrease is more than alarming. Tea has experienced another quiet week only medium grade leaf finding purchasers. Prices remain firm. In this staple the decrease in export is also remarkable, 183,400 piculs against 215,650 piculs at the same date last year. In the absence of news from Europe exchange closes easy.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The forecasts of political wisecracks as to the formation of a new Cabinet are as uncertain and fickle as the weather now prevailing. The "bowl of the Premier" is being handed round from one statesman to another, but there is yet none who will come forward and accept it. The "bowl" (*ohachi*, is colloquially used by Japanese for "a turn") has been handed back and forth this week between Count Matsukata and Marquis Saigo, but it is believed that the former will be obliged to retain possession. In the meanwhile, other actors have appeared upon the scene, and we see Count Kabayama and Viscount Nomura, ex-Home Minister, calling upon one statesman after another, endeavouring by strenuous exertions to shorten the period of suspense. The Emperor, it is needless to say, is considerably perturbed at this state of affairs, and two or three days ago summoned the President of the Privy Council to his presence. He enjoined the President to arrange the difficulty as promptly as possible. The Tokyo papers aver that one of the chief reasons why Count Matsukata hesitates to assume the Premiership is the difficulty of finding a competent successor to Marquis Oyama, whose resolution to resign is said to be firm; while Marquis Saigo is also believed to have the intention of leaving the Cabinet as soon as a new Premier is nominated. Slight hope indeed exists of retaining the services of Marquis Saigo, and the appointment of Count Kabayama as his successor is believed to be difficult to achieve. The two candidates thus far mentioned in connection with the War Office are Viscount Takashima, Minister of the Colonization Department, and Marshal Nodzu, Superintendent of the Tokyo Defences, but neither have satisfactory qualifications for the post. The Viscount, having once held the portfolio of the Department, is credited with possessing experience and ability, but he does not carry sufficient prestige. The Marshal enjoys sufficient prestige to command respect in the Department, but he is essentially a soldier and not suited to the onerous duties involved by the nomination. Be that as it may, the one or the other must be induced to assume the portfolio on the eve of the nomination of a Premier. One thing to be specially noted in connection with the present Cabinet crisis is the entire absence of anxiety among business people: they are apparently quite unconcerned. This is a significant fact. Formerly in Japan, whenever any Cabinet changes occurred, the stock and rice markets were sure to be disturbed to a more or less extent. The present phenomenon must be attributable to the increasing stability of the Government, and to the people's beginning to realise their true position and importance.

The press seems somewhat tired of discussing the Cabinet crisis, and now chiefly bandy words among themselves on side issues raised by various writers. The most marked quarrel is that between the *Mainichi* and the *Nichi Nichi*, on the question of the financial measures of the Ito Cabinet. The former, as we mentioned in our last summary, ascribes the fall of the Cabinet to defective financial arrangements. The *Nichi Nichi* takes pains to upset the position taken by its political rival. The Opposition journal contends that at the recent meeting of the local chiefs of the taxes it was stated that the proceeds from the Business Tax would not exceed one-half of the original estimate of 7½ million yen; that the success of the Tobacco Monopoly is exceedingly problematical; and that similar doubt exist regarding the further calling up of the Public Undertakings Fund Loan, and the success of the Industrial and Agrico-Industrial Banks. The *Nichi Nichi* contradicts these statements and accuses the *Mainichi* of deliberate falsehood, especially as to the first point. The *Nichi Nichi* learns that the chiefs of the taxes represented that the yield of the Business Tax might fall below the original estimate by one million yen or so, but that this need not cause any apprehension, inasmuch as increases from other sources might, in their opinion, be expected with confidence.

What positive proof is there, continues the *Nichi Nichi*, that the sudden increase in the Business Tax tends to depress the rising industry of the people? "Can it be rationally argued that an increase of 50,000 yen to the burdens of the Nippon Ginko, and of 400 yen to that of Daimaru—a wealthy mercer of Tokyo—affects the prosperity of their businesses? The result of the amended *Saké* Tax can not be predicted with certainty. But subsequent to its enforcement in October, the opinion of competent authorities is that the yield will surpass the estimate by more than 2 millions; while the Registration Tax, though so much noise was raised against it at the time by the Opposition, is expected to yield more than one million yen above the estimate. Nor is the enforcement of the Tobacco Monopoly likely to cause any grave difficulty. In fact, even Count Okuma, the acknowledged leader of the *Shimpo-to*, has told a representative of the *Yiji* that the measure would bring a revenue of more than 10 million yen or so into the Treasury. The suspicions that the Opposition papers entertain as to the result of the further issue of the Public Undertakings Loan are not less absurd. They point to the alleged failure that attended the first issue of the loan, as their strongest reason for this contention, not knowing that the issue of 10 million of the loan on that occasion was chiefly dictated by the desire of the Government to adjust the War Expenditures, and not from any necessity for raising the sum. Indeed, as matters stand, can any person with any plausibility pretend that the credit of the Japanese Government has fallen so greatly as to prevent it from raising any sum it wants at home, or even abroad? The doubts entertained about the success of the Industrial and Agrico-Industrial Banks are chiefly based on the scrupulous care that the Authorities are exercising in the appointment of Commissioners, and for no other reason. Moreover, these pessimistic writers seem to have forgotten that the measure originated from their idol, Count Matsukata, who elaborated the scheme about 1880 when the Nippon Ginko was established. Lastly, their contention that the difficulty in compiling the estimates for the next fiscal year accelerated the fall of the Ito Cabinet, cannot be borne out when applied to the test of actual facts. It is true that the opinions of the Minister of Finance and his colleagues were not unanimous as to the amount of expenditures to be appropriated for the respective Departments. The latter demanded an aggregate sum of 245,285,911 yen for next year against an estimated revenue of 220,175,511 yen, thus showing a deficit of about 25 millions. The Treasury was of opinion that more or less retrenchment could be effected, and the Minister had in mind such a financial programme as would satisfactorily balance the Revenues and Expenditures. The Cabinet crisis was precipitated before that programme could be elaborated. Yet the Opposition papers declare that the Cabinet stumbled on the rock of finance, purposely ignoring how ample are the resources that the Government has at its disposal for bringing its financial measures to perfection." The foregoing article, that appeared in three successive issues of the *Nichi Nichi*, elicited a rejoinder from the *Mainichi*, and this of course evoked other replies. But the wordy disputation, which was not unmingled with abusive epithets, need not be reproduced in its entirety.

The *Mainichi* thinks it incumbent to find excuses for the delay in forming a new Cabinet. It finds the present interregnum a cause of congratulation, for it denotes, in its opinion, a distinct development in political ideas. It is a sign that statesmen do not, as in former years, blindly acquiesce in the request of others to enter the Cabinet, not caring much whether the policy to be pursued by it will be consonant with their views.

The *Nippon* displays some shrewdness in forecasting the future of the Japanese Ministry. It dwells at length on the probable character of the Ministry about to be born, and observes that, judging from the men that will compose the Ca-

binet, its nature will be heterogeneous, and therefore any great stability need not be expected. Still, as the coming Ministry is to succeed one whose policy alienated the confidence of the people, and as it will be formed on the principle of party, the people will watch it with more attention than formerly. Tired as they are of the policy of the Ito Cabinet, they will naturally expect something far different from its successor. Therefore the coming Cabinet must execute some bold stroke, for whether it is cautious or bold, it is fated, from the nature of its composition, to have only a short life. Indeed, viewed from the standpoint of personal interests, Counts Matsukata and Okuma must take a very resolute course if they wish to win the confidence of the people and so prolong the existence of their Cabinet. Even should they fail, their failure would win the sympathy of the people. Their chief endeavour should be not to suffer their successors to reap the glory of inaugurating party Cabinets in Japan. For it is plain that when Marquis Ito again comes upon the scene, he will not be so blind to the progress of time as to form a Cabinet pledged to maintain the old traditions. The next Cabinet headed by Marquis Ito will inevitably be based on the principle of party support. Thus the Marquis may stand in a more advantageous position than Counts Matsukata and Okuma in respect of enjoying the distinction of inaugurating party government in Japan. The two Counts must keep this before them and must prepare the way for future eminence. The adoption of a bold and vigorous policy is the best course they can pursue.

The *Osaka Asahi* tries to find an excuse for the disgraceful conduct of Lieut.-Col. Masuda, who abandoned Yun-lin when the insurrection broke out in its vicinity, and who led his troops in retreat before the mob. The officer and his subordinates are now being examined before an extraordinary Court-martial held at Taipei. The *Asahi*, from information gained from acquaintances of this officer, finds it impossible to attribute his retreat to cowardice. The cause must lie elsewhere. It surmises that the hardships to which the troops in Formosa are subjected may be the real cause of the apparent pusillanimity of the officers, for the lot of soldiers in Formosa is indeed very hard and no officer who has a heart can inspect them without feeling deep compassion for their pitiable state. Taipei is the cheapest place wherein to live, yet there everything costs about three times as much as it would in Japan. The charge at a bath-house, for example, is 3 sen. How much allowance does a soldier receive? Only 3.75 sen a day. Any idea of securing comfort or pleasure is out of question. Their happiest day is when, once a month, cigarettes and a few cups of *saké* are doled out to them. Then, as if to aggravate their hardships, they see around them the officials in the civil service amusing themselves at restaurants or collecting valuable curios by unjust processes. Many officials, though now considered as high dignitaries in Formosa, practically fled from Japan to avoid payment of their debts, shameful conduct, and so forth. That officers who disgrace the colours and commit an act calculated to undermine discipline in the army, can not be pardoned, the *Asahi* admits, yet it can but grieve that causes exist that betrayed them into a breach of trust.

The *Kokumin* loudly demands a radical reform in the Imperial Household Department. The points that need amendment at Court, according to this paper, are the necessity of keeping aloof from politics—which great principle is alleged to have been violated by the Court in the excessive favour and protection it extended to the Ito Cabinet—and the development of a greater intimacy between Court and people. Further, the Court should be pure and incorruptible. It therefore should not hold shares in business enterprises and undertakings that enter into competition with the people. That these defects disgrace the dignity and the sanctity of the Court is primarily due to the present incompetent occupant

of the post of Minister of the Imperial Household Department. In other words, the *Kokumin* calls for the dismissal of Count Hijikata.

An article that appeared this week in the *Kokumin* in connection with the rumoured disaffection in the Philippine archipelago, holds that just as the United States of America publicly extends sympathy to the rebels in Cuba, so Japan should extend her sympathy when the Philippine islanders openly declare for independence. In so doing, Japan must be prepared to encounter the interference of Russia and France, and therefore she must strive, on her part, to secure the alliance of England, so that the two countries that are the most intimately connected with the archipelago may take the lead in settling the question.

EDITORIAL NOTES.

GARDENS ON THE ROOF.

IN the centre of the metropolis, says a Tokyo contemporary, where one litre of earth costs about a litre of gold, it is impossible to have a large garden or enjoy the beauty of artificial lakes, groves, and hills. Moreover, there are special regulations affecting landed property in this part of the city; the houses are built touching each other, and so a very narrow plot of open ground is the most even the richest can hope to possess. And even were there a vacant acre, there is too much of that mercenary spirit about to suppose that the owner would forego the golden pleasures of land and house-rent for the simpler, healthier beauties of nature. Yet, no matter how inelegantly one may be compelled to live, there is no person who does not enjoy the sight of verdant grass, opening buds, or lovely blooms. And so we see, even in the windows of the largest and busiest stores, a pot of flowers, a posy, or a nosegay bought overnight at some *ennichi* in the neighbourhood; or else, trained on dainty trellises, we come across the same morning glory "whose tangles fall across the ruined fence of many an humble hut." With all this crowding out of nature, there is yet hope for the dwellers of these densely populated quarters. The problem is solved by a garden on the roof, according to a method lately invented and patented by a Mr. Hattori Choshichi. The idea is to get, in the first instance, available space of say 12 by 24 feet square. On the edge of the roof, facing the street, a small mound is raised, in which dwarf pines, cryptomerias and other perennially verdant trees are planted among the stones. In the centre of the roof is left a space eight feet square, in order to give light to the room immediately below. This aperture is enclosed by a bamboo-fence, and near this enclosure should be several clumps or patches of the scouring rush, giving the appearance of their growing near a well or pond. On either side of the roof there are tea-plants, about 3 feet high, these serving to cut off the view of the immediately adjoining roofs. In the right hand corner is a maple, say 6 feet high, at the base of which is a low paling of the style known as *Korai gaki*, or "Korean fencing." To the left of this again is a large rectangular artificial stone, like those leading to the entrance of a dwelling of the better class. In one corner there must be a small reservoir of water, built to resemble a rustic well. This should be connected by bamboo-tubing with the real well in the courtyard, and water pumped up daily, so that all the plants and trees may have a good drink of water every morning and evening. In this way they will preserve their freshness even in the hottest summer. Such gardens can be easily made on either gable or flat roofs. In the former case the whole roof is graded with artificial stones, terrace-wise, and plants are placed everywhere. In the latter case the side facing or parallel with the street is made into a rockery, miniature mountain, or a hill-surrounded pond, while stone lanterns are put here and there. Artificial stone must be placed over the whole roof as the first step, and this is covered with a layer of earth five inches deep. Each plant should be put in a box filled

with rich mould, and this box sunk into the artificial soil. The stones look very ponderous and immovable; but Mr. Hattori makes these artificial stones by covering wicker-baskets or sawdust with a preparation of his own invention. Their weight is very small and cannot possibly hurt the roof. When larger "stones" are required, Mr. Hattori covers some portions with club-moss, thus giving them a most venerable appearance. Landscape gardening in miniature, concludes our contemporary, has ever been fashionable in Japan; but this is the first time that roof-gardens have been attempted. A number of such pleasaunces have recently been constructed in the Nihombashi District, with most graceful result. Viewed from the street, a veritable garden seems to be springing into life above the embrowned tiles.

THIRTY YEARS AT WORK.

IN 1866 a side-wheel steamer, purchased by the then Shogunate from Holland, was wrecked near the harbour of Choshi in Shimosa. The vessel was known as the *Mikaho Maru*, of small tonnage and clumsy make; about 270 feet long by 60 broad. Yet, when wrecked, there were 30,000 *ryo* of treasure on board, all in old-fashioned gold and silver coins. The steamer was on her way to Yedo from Iwaki, and the bullion on board was being forwarded to the military authorities in the former city. Sinking quickly, the officers and crew had no time to save anything except their bare lives. Now in the town of Choshi dwells an old conservative, Sone Hachiro-zaemon, who skill keeps to the *chonmage* of the pre-*Meiji* days and adheres to the ways of his forebears. Ever since the loss of the *Mikaho Maru*, this sturdy old gentleman has been single-handed at work in trying to raise the sunken treasure. The ship lies broadside on the ocean-bed and at such a depth that she is not easily reached; yet Sone has succeeded in raising a large quantity of miscellaneous articles, sufficient in fact to supply the needs of his simple household. Even now he does not despair of reaching the gold and silver coins some day—worth at present at least ten times their former value—and declares that if he dies before achieving success, the task will be handed on to his eldest son, who is of like mind with himself. But without the aid of modern appliances, to which the Sone family strongly object, the undertaking would seem to be well-nigh hopeless.

NARRATIVE OF A SURVIVOR.

ONE of the Tokyo dailies publishes an interesting account obtained from a survivor of the earthquake in Akita. Of the 1,000 and odd houses in Rokuzo, where the narrator was at the time, only 60 or thereabouts were left standing. "Early in the morning of August 1st," says the man who fortunately escaped, "I set out from Yuzawa, reaching Kokuzo just one hour before the earthquake began. I went to the house of an uncle of mine, removed my travel-stained garment and had a cup of tea. I then entered into conversation with my uncle, and continued chatting for some little time. At 5 p.m. we felt a slight shock, but it was soon over, and we went on talking undisturbed. Then came a great volume of sound, like a huge clap of thunder, following by a terribly strong earthquake. I was greatly frightened and begged my uncle to run outdoors; but he shouted that it would be over in a moment, and stayed where he was. The swinging, heaving motion increasing in severity, I sprang from the verandah. It was impossible to keep my balance, so I crawled to a tree, clasped the trunk and so raised myself erect. Looking back, I saw that the house had been shaken down, and I could see scores of other houses either in ruins or toppling over. The whole thing was so unreal, so unnatural, that for an instant I thought it was a dream and nothing more. The tree which I was clasping was so shaken that I had the utmost difficulty in retaining my hold. This terrific earthquake continued for about three minutes. On the noise subsiding a little, I began calling for my uncle, but received no reply. I did not venture to leave my protecting tree, as the ground

was still quivering; yet soon I had the joy of hearing a faint cry from under the timbers of the fallen house. It was my uncle, telling me to fetch him some water. Running to his rescue, I soon had so much of the *débris* removed that he could crawl out: much bruised, but not dangerously hurt. On examination the lower-part of the flooring was found intact, the upper lintels of the doorway were also standing. The beams and pillars had all fallen, and towards the west. On going into the town a little later, the scene was one of the utmost confusion, desolation, and horror. Not more than 20 houses were intact, including the town-office, one school, and a large temple. Nine-tenths of the godowns had been leveled. Soon after the subsidence of the dreadful tremor, a fire broke out in O-machi, but fortunately was extinguished at once. By dawn the next day, 20 corpses had been recovered, but these did not represent the total number killed. In the roadway were many cracks and crevices, the largest being about a foot broad. One of the most terrifying features of the earthquake was the tremendous roaring sound emitted by Mount Habiro, close to the town. The uproar was deafening for some minutes. Another hill near at hand suffered from a landslip, the loosened earth and rocks doing immense damage to the fields round about. We did not see the peaks of the neighbouring range until the morning of the 2nd, for they were one and all obscured by a strange moist vapour that was neither cloud nor mist."

WHAT THEY READ.

A MAGAZINE of second-rate importance has been giving some interesting articles on the subject of the Tokyo press. It appears that officials read the *Nichi Nichi Shimbun* and *Fiji Shimpō*; merchants take the *Chugai Boyeki* and the *Fiji*, the *Asahi* coming third in their estimation; students and young politicians invariably prefer the *Nippon*, then the *Kokumin*, *Yomhuri*, and *Chuo*; literary and learned people select the *Hochi*, *Nichi Nichi*, and *Asahi*; *getsha*, women in general, and the *jeunesse dorée* subscribe to the *Asahi* and *Yamato*; independent politicians vote for the *Chuo*; lesser merchants, people who have not much time to read, and all houses where many people meet or congregate, are constituents of the *Yorodsu Choko*; novel-readers and those fond of learning the *chronique scandaleuse* of the capital, take the *Asahi*. The above data may or may not be true, but from our own personal experience we fancy the statements are not far out. The list shows, at all events, the preponderant influence of the *Nichi Nichi* and *Fiji*.

FEWER STUDENTS IN TOKYO.

RECENT investigations show that the number of students in the metropolis is far below the average of recent years; and those schools which have already begun their Fall terms complain of an extraordinary small number of matriculants. This is, and with indubitable justice, attributed to the fact that the seismic wave, floods, inundations, etc., have kept many young men at home this year. Instead of being able to go up to Tokyo for study, they have to put their shoulders to the wheel and help towards their own support. It will take, it is stated, fully two years to regain the normal average of students.

DEATH OF A NAVAL OFFICER.

LIEUT. WARREN, of H.M.S. *Hermione* lost his life during the Naval manoeuvres in trying to save one of the Engineers, who had jumped overboard. The officer for whom Lieutenant Warren sacrificed his life, Mr. John P. Good, the assistant engineer of the *Hermione*, was appointed to the ship, as were most of her officers, when she was commissioned in January last as one of the Flying Squadron. He had been in bad health, but had lately much improved until Sunday, July 26th, when he appeared to be depressed. The sentry noticed on the Tuesday morning that he kept looking over into the water. Suddenly he sprang overboard; the sentry gave the alarm and pulled the handle which released the calcium light life-buoy. Good, however, was not seen

to make for the buoy, and he was probably drowned before Lieutenant Warren had time to reach him. The Lieutenant sank from exhaustion before the lifeboat could save him. Lieutenant A. R. C. Warren entered the Royal Navy in 1877 as naval cadet. He served as midshipman on the *Nelson*, the flagship on the Australian Station, and as sub-lieutenant in the *Alacrity*, the admiral's yacht on the China Station, from 1891 to 1895. He was on the *Curacoa* when, under Captain Gibson, that vessel took part in the annexation of the Solomon Islands and the suppression of the rebellion in Samoa. He then served as first lieutenant of the second-class cruiser *Tribune* during the naval manoeuvres of last year, and in January last year was appointed to the *Hermione* when she was commissioned for the Flying Squadron.

A STRANGE PROCEEDING.

THE *N.-C. Daily News* hears of a very high-handed action of the Taotai towards the British firm of H. Bennertz and Co. Some months ago, it says, this firm chartered from the Nanking authorities for three years the steamers *Cass*, *Smith*, *Sin Fokien*, and *Kiangning*. The steamers when taken over were found to be in a very bad condition, everything portable having been taken out of them, and they needed very heavy repairs. Messrs. Bennertz and Co. were asked by the Nanking authorities, we are told, to see the steamers properly repaired and refitted, the latter to be charged with the expense. Messrs. Bennertz and Co. sent in their claim, a pretty large one, and the Chinese proposed to take the steamers back. As the Chinese delayed about payment, and Messrs. Bennertz and Co. did not feel very sure of their position with the steamers under the Chinese flag and in Chinese waters, they sent one of them to Hongkong to be in British waters, their charter-party allowing them to send the steamers anywhere they liked during its currency. On Monday last they proposed to clear the steamer *Kiangning*, fully loaded, for the river ports, but were informed by the Customs that the Shanghai Taotai had ordered the clearance to be stopped, and the steamer was unable to leave.

NAVAL MOVEMENTS.

THE *China Mail* announces that H.M.S. *Pigmy* is expected to arrive at Hongkong from the north shortly, and H.M.S. *Rattler* from the south. On the arrival of the *Pigmy*, the *Redpole* (if she has returned from Manila) will proceed to Nagasaki, and will then winter at Hankow. The *Rattler*, after victualling and storing, will proceed to Newchwang, where she will winter for the second successive year. The residents of Newchwang were sorry to part with "their protectors" this spring and will welcome back the *Rattler*, but it is doubtful if the officers and men of the gunboat will relish their winter quarters, in spite of the hospitality of the foreign residents at that far northern port. The cruisers *Rainbow* and *Pique* will come down to Hongkong for docking and repairs at the completion of the summer cruise with the Admiral. They will then go to Singapore to strengthen the southern squadron. The *Swift*, which has been in the Behring Sea watching over British sealing interests, is now on her way to Nagasaki en route for Hongkong. The *Pigmy* will remain in Hongkong. The cruising squadron, with Vice-Admiral Buller and Rear-Admiral Oxley, will reach Nagasaki in time to meet the English mail which passes through Hongkong on the 6th inst. So far as present arrangements are known, the *Spartan* will winter at Shanghai.

APPRAH between FOREIGNERS and CHINESE.
We take the following from the *Hongkong Daily Press*:—

A party of Hongkong gentlemen had a most unpleasant quarter of an hour's experience on Sunday afternoon. They were, without provocation, attacked in a most shameful manner near Deep Bay by a large body of Chinese villagers and it is to be hoped that the matter will be speedily reported to the Chinese officials in order that due punishment may be awarded the offenders, and

outrages of this kind, which unfortunately are not uncommon, be effectually put an end to. Six Hongkong gentlemen started on Saturday afternoon for Deep Bay for snipe shooting. The party went on shore on Sunday morning in a sampan and engaged three men for the day, one to carry the tiffin basket and the other two to carry the ammunition. In a short time the party separated into pairs and nothing happened to break the pleasure of the outing until the afternoon, when one or two pellets from one of the guns happened to strike the man who was carrying the refreshments, but only one of them caused a scratch, and that a very slight one. The man showed no signs of pain, he was at once attended to, and was then given \$2 as a solatium, that amount being all the gentleman concerned in the accident had with him, but a promise of another dollar upon reaching the launch was given. With this compensation he was perfectly satisfied and apparently he was really none the worse for the slight bruises: indeed for an hour afterwards he continued to carry the basket and showed no signs of fatigue. It was not until he met his two fellow carriers that he shirked his work, so it is probable that he related the circumstances of the accident to his companions and mentioned the amount which had been given to him, and they doubtless reproached him for accepting what they perhaps said was paltry compensation. At any rate he went away, but the Hongkong gentlemen had not the faintest idea that serious trouble was to follow. Towards five o'clock they all returned to the beach for the purpose of setting off for home and, very fortunately as it happened, they met another shooting party, consisting of four gentlemen, who were also returning to their launch. On arriving at the beach the ten gentlemen found a gang of quite sixty villagers waiting to give them a warm reception. Evidently the man who was shot had apprised the whole village of the shooting incident and they had now turned up determined, if possible, to get their share of compensation. It seems to be one of the established ethics amongst natives in cases of this kind to force smart money sufficient to provide the whole village with free board and lodging for six months as a reparation for a trivial personal injury to one of their number. In the present instance, however, the natives' little scheme was shattered by the plucky fighting of the ten men against a howling mob, which increased in numbers every minute. The natives were armed with bamboos, and their threatening attitude soon convinced the shooting parties that they would have a stiff encounter before reaching the launch again. The mob demanded money; the demand was instantly refused. The natives then produced ropes and rushed at the gentleman who had shot the man with the object of binding his legs and arms, and before they were beaten off his gun and hat were wrested from him, but they did not succeed in fixing the ropes on his body. There was now a most exciting scrimmage. Bamboos were freely used guns damaged, and many blows were given and returned. The ten men struggled their hardest and not a few of the natives were hauled with considerable force on to the soft mud and ignominiously rolled in it. The fighting lasted a quarter of an hour altogether, and then the wild mob, seeing that they could not hold their own with all their numbers, scattered themselves in all directions, leaving the gallant little party masters of the situation. But the victors had not escaped scot free. Their clothing was torn and damaged, most of the guns were rendered useless, and they were generally in a sad plight as they reached their launch once more. They arrived in Hongkong about 10.30 on Sunday night. This is certainly a case which the Chinese officials should be compelled to deal effectively with, as at present a shooting party cannot land anywhere on the mainland without feeling that they are risking their lives.

NEW N.Y.K. STEAMERS.

THE four large cargo-carrying steamers, each of about 6,000 tons, now building on the Clyde for the Japan Mail Steamship Company—two at Messrs. D. and W. Henderson's yard at Partick, and two at the work of Messrs. Napier, Shanks, and Bell, of Yoker—are all progressing apace. Surprising activity, it is understood, also characterises the work in connection with the construction of a fifth and somewhat larger steamer which the company are having built in Japan. But this highly important undertaking on the part of the Japanese is not being proceeded with entirely independent of help from this country. The plans and working data, for example, of a vessel of the type in question have been furnished by one of the Clyde firms. Most of the material required for construction

has been purchased from the Steel Company of Scotland and other makers in the Clyde district, and the company named has just finished the casting of a steel stern-frame of massive proportions for this vessel. Orders for castings and material, received from different parts of Japan, are also being executed at the Steel Company's Works. So far, we may congratulate ourselves, but many things point to a time not so far distant when, both as regards ship design and construction, and even the production of structural material, Japan will be largely independent of us, and probably our rival in supplying the needs of other countries. Meantime, the Japanese seem to be content to import material because the extra cost is much more than compensated for by the cheapness of the labour.—*Shipping Gazette*.

METALS.

MESSRS. S. W. BOYES Co. in their report, dated July 25th, say:—Shipments of Pig Iron from Scotland have been fair during this month, and the stocks in public stores at Middlesbrough have been decreasing. There is a very good consumptive demand for Pig Iron, there being considerable activity, and in some cases advanced prices, in the various branches of the Manufactured Iron trade. Under these circumstances, it is strange that Pig Iron should decline in value, but this has latterly been the case, prices having fallen steadily during this month, although only to a total extent of some 6d. per ton. This unsatisfactory state of things is expected to be of short duration, however, and sales at present prices are only for early delivery, considerably higher figures being asked by makers for delivery a few months ahead. Copper has fallen steadily during the month, the total drop being some 25s. per ton. Tin has lost some 10s. per ton, and Spelter is about 12s. 6d. per ton lower. Lead has been ruling quite steady, and remains so at present.

BOWLING.

ONE of the Australian Team has been writing of the difference between the English and Australian styles of bowling. What he has to say may interest Yokohama cricketers:—In Australia, when a coming bowler is mentioned, the question is at once asked, "What break has he got?" most people thinking the break the greatest essential to successful bowling. In England the first question with regard to a new bowler is, "Does he bowl an accurate length?" We have had a practical illustration of the two theories to-day in the first Mary-le-bone match. When the Australians were bowling there were plenty of breaks, but a very uncertain length, and consequently runs at times were coming very freely. Not so with Hearne, Pougher, and Attewell, every delivery being pitched either on or so near the "blind spot," which batsmen so dislike, that runs were almost impossible to get unless very risky strokes were adopted. It is not asserted that these bowlers do not break also, but where the Australians make the ball break a foot and miss the wicket, these professors only break a few inches, just enough to beat the bat, at the same time making the break subordinate to the length, and not *vice-versa*.

COUNT OKUMA AND THE "YORODSU CHOHU."

THE *Yorodsu Chohu* has consistently spoken in high terms of Count Okuma, advocating his admission to the Cabinet. This was clearly set forth in a recent interview between the Count and a member of the *Yorodsu's* staff. On the other hand, the holding of these views has caused several other Tokyo journals to declare that Count Okuma has bought up the *Yorodsu*. To this the latter journal replies as follows:—"It was supremely ridiculous to see that several of our contemporaries declared, on the 4th inst., that we had been bought by Count Okuma to advocate his cause. How could such a thing be? Even supposing that the Count should enter the Cabinet and use money freely to gain adherents, he could not possibly buy the *Yorodsu Chohu*. Ten thousand yen is popularly said to be the *douceur* handed annually to a certain semi-official organ; but such a sum would not cover one week's ex-

penses of our journal. There is, we understand, a distinct office in the Home Department for the revision and supervision of our *Porodsu*, but that does not in any way effect our policy. Our suspicious contemporaries are arguing from their own experience," etc.

THE RECENT BANK RAID AT CONSTANTINOPLE.

The *China Gazette* of Monday, August 31st, contains a telegram, obviously sent by Reuter to its chief morning contemporary, though neither source is acknowledged, which runs:—Speaking from the windows of the Ottoman Bank, the Armenians who seized the institution have informed Sir Edgar Vincent, President of the Bank, that their purpose in taking possession of the Bank was to prove to the Powers their feeling on what they termed the desertion of Armenia in her hour of trial. They promised to leave the Bank on condition that they were allowed to do so unmolested and a guarantee being given for no violence being committed on their persons, and also that they be not compelled to give up their arms. Sir Edgar Vincent consented to these stipulations and the Bank was vacated. While the Armenians were holding the Bank the Mussulmans fell on all their fellow countrymen coming within their range and slaughtered them in the streets.

IMPORTANT ARRESTS.

The police have succeeded in arresting at Mororan, Hokkaido, two men who are wanted in Yokohama to answer a charge of larceny. Okura Tatsukichi and Murakami Zenzaburo are silk handkerchief brokers and live at No. 1,476, Nakamura, Yokohama. During July they made away with some silk handkerchiefs, valued at yen 1,700 odd, the property of Toyoda Senzo and three others employed by Messrs. J. R. Simon, of No. 14, Yokohama. The Ishikawa Police having been informed of the affair, placed the matter in the hands of Police Inspector Bando, and Detectives Kataoka and Sato. Through their efforts the thieves were traced to the railway station, where it was found that they left Yokohama by a Tokaido train. Then by means of letters and subsequently a telegram addressed by Okura to his sweetheart, a young woman who lives at Yamamotocho, Yokohama, the trail was followed to Mororan where the thieves were found. About 800 yen worth of the stolen goods have been found in Yokohama. The prisoners are coming back from Hokkaido escorted by constables of the Ishikawa Police.

BAD-ARREST.

"A SPA-DOCTOR," as Charles Lever puts it, the *Bade-arst* of the Germans, has not hitherto been recognised as one of the necessary impediments of a Japanese mineral-spring resort. The experiment has, however, recently been tried by an energetic Odawara physician, who has located himself at Yamato. Intimately acquainted with the healing properties of every hot or cold spring in the neighbourhood, this practitioner is said to enjoy well-deserved success. At Miyanoishi there are two resident physicians (Japanese), but neither is a Spa-doctor in the strict sense of the word. It would be, we should think, a profitable thing for young aspirants for medical fame to settle down, during the summer months, at some well-known mineral-spring resort; and by dint of personal observation and investigation acquaint themselves with the properties of each large spring. Analyses of the waters do not go far enough, for, to two people out of three, the technical terms fail to convey the desired information as to strength, medicinal qualities, etc.

ROBBING A FOREIGN VISITOR AT KYOTO.

An audacious robbery was perpetrated at the Yaami Hotel, Kyoto, on the night of the 4th inst., the victim being Mr. James E. Pease, an English visitor. The thief appears to have entered a window of the room occupied by Mr. Pease's friend, and although a gold watch and other valuable articles were in the room, the burglar passed through, without annexing them, to the room adjoining, which was occupied by Mr. Pease himself. Here he took three suits of

clothes which were lying on a chair within a foot of where Mr. Pease was sleeping, and a bag, which was on the other side of the bed, was also taken. The bag was found the following morning, cut open, on the roof of an adjacent building, with such of the contents as were worthless to the thief lying on the tiles. A Smith and Wesson revolver, and cartridges, a silver match box, a purse, and an aneroid barometer were lost, in addition to the clothes.—*Chronicle*.

CAPT. RIDDERBJELKE.

CAPT. RIDDERBJELKE, who is essaying a voyage across the Pacific in a small boat, has not gone very far on his travels before meeting with obstacles and detentions. A few days out from Yokohama he had to run for shelter, and now we learn from a letter received by a local resident on Tuesday, that he has again encountered bad weather. This time his damages are severe, the canvas covering of his boat being ripped up and many of the fittings have been carried away. He ran into Miyako for shelter and intends to go up to Hakodate for a thorough refit. He writes that he has received great kindness from all Japanese he has come in contact with so far on his voyage.

A STEAMER FOUNDERED.

The steamer *Toku Maru*, owned by the Kyoritsu Steamship Company, and plying between Osaka and Kiushu via Kobe, foundered off Temposan, Osaka, about 3 p.m. on Tuesday, over 60 passengers being drowned. She was on her way from Kiushu to Osaka and had on board about 90 passengers. On account of the wind, the Captain deemed it advisable to anchor off Temposan, and while this was being attempted, the steamer was carried away by a rapid current and driven aground. She then presumably heeled over. The O.S.K. steamer *Minatogawa Maru*, from Kiushu, was unable to call at Osaka on account of the gale and had to come to Hyogo. According to the *Kwansei Shogyo Nippo*, only seven passengers were saved by the water police.—*Chronicle*.

DEATH OF A SIAMESE PRINCESS.

BANGKOK papers, says the *Free Press*, announce the death, from old age, of H.R.H. Princess Phra Suda Ratna Raj Prayune, who died on the 17th ult. The *Observer* says:—The Princess has been alling for the past three years. She was the daughter of King Phra Nang Klao, and was the same age as Queen Victoria, having been born in the same year. She was as a mother to the present King, whose mother died when he was yet very young, so that the care of the young prince devolved upon this aunt, and all will sympathise with His Majesty in a loss that touches him so nearly.

AN INVOLUNTARY BATH.

A MAN belonging to the *Glenazon* fell from the Pier into the water on Wednesday afternoon. The quarter-master on watch on the P. & O. steamer *Ancona* seeing the accident, at once reported "man overboard," and life-buoys were thrown from that steamer to the struggling man. An American blue-jacket, who happened to be near, seeing the life-buoy thrown into the water sprang down from the pier and in a few moments placed the apparatus over the other man's head. The two were then pulled up on to the Pier by a life line, and the Surgeon of the *Ancona* applied restorative measures. The man appeared little the worse for the adventure after a few minutes.

MR. CONSUL GENERAL HILLIER.

It is reported that Mr. Walter M. Hillier, H.B.M.'s Consul-General in Korea, has sent in his resignation. Mr. Hillier joined the Consular Service in China in 1867, and rose to be Chinese Secretary at the Legation at Peking, whence he was transferred as Acting Consul-General in Korea in 1889, receiving the substantive appointment two years later.

A SMART RECOVERY.

MR. A. H. DARE has recovered the diamond pin that Allen, the convicted burglar, took from his house during his recent raid. Mr. Dare

did not miss the pin until after Allen's conviction, but as soon as the culprit had confessed to the robbery and indicated the place in Tokyo where he had disposed of the pin, the Police took the matter up, and within two hours had recovered the diamond, although in the meantime it had been reset in a ring. The detectives on the staff of the Settlement Police have done some smart work these past four months, but this latest recovery of stolen property must be their record.

THE FRENCH MAIL.

THE M. M. steamer *Natal* came alongside the Pier at Yokohama before 11 o'clock on Wednesday morning, but her mails for this port have yet to arrive. They were taken from the steamer at Kobe and put on the train, notwithstanding that through communication had been broken for many days, and have since been returned to Kobe. They will now come up on the *Empress*, due here to-day. By-the-way, at 9.30 this, Thursday, morning we are still without the Kobe papers published on Monday.

BOTTLED.

A TOKYO journal narrates the curious instance of a woman who, on losing her baby, felt it impossible to part from the tiny body and so put it in a large glass jar filled with alcohol and kept the jar on the *butsu-dan*, or household shrine. On her friends remonstrating with her for so doing, after some weeks had passed, she tried to get a proper certificate of death and permission for burial; but as the proper date had long passed, she was unable to do either: and now has to keep the gruesome object with her at home.

WRECK OF THE "IOLANTHE."

DURING the typhoon of 10th August the little South Seas trading schooner *Iolante*, belonging to Mr. Shirley Mansfield, was totally wrecked in the harbour of Saipan. Mr. Mansfield, in trying to save some of the cargo, was severely injured, so much so that he will be unable to come back on the *Minatogawa Maru* that is bringing back his crew to Yokohama. This vessel is shortly due here.

MISSING PROPERTY.

ON the 4th inst., a Kodak Camera, valued at about 30 yen, was found on the batoba. Yesterday Mr. Y. P. Baldwin, of the U.S.N., claimed the missing property. The police would be materially helped in the work of restoring lost property if persons would make prompt inquiries at the central police or Settlement stations.

A MUCH DARING LADY.

THE *Kobe Chronicle* notes that a Miss Strafford, of Walmer, has accomplished the daring feat of riding her machine across the Goodwin Sands. The lady and her machine were rowed out, and, mounting the circle, she made a circuit of the sands, the principal difficulty being the avoidance of the great amount of wreckage.

THE CHEVALIER DE KONTSKI.

THAT fine old gentleman, the Chevalier de Kontski, seems to have abandoned his intention of journeying home *via* Siberia, for by Australian papers just received we find that he has been delighting huge audiences in the Town-hall at Sydney.

MR. ERNEST DE BUNSEN.

THE *Siam Free Press* says:—It is asserted that Mr. de Bunsen will apply for leave on his return from Java, and that after leaving Bangkok he is likely to receive a home appointment, probably at Vienna. His probable successor is spoken of as Mr. Ralph Paget, of the Tokyo Legation.

DEATH OF CAPT. PRICE.

THE death is reported of Captain Price of the *Shengking*. He died of dysentery at Chefoo. Mrs. Price is one of three sisters, resident in Shanghai, all of whom have been widowed within the last year.

KOBE MUNICIPAL COUNCIL.

MR. REYNELL has been elected to the seat on the Municipal Council vacated by the retirement of Mr. Hellyer.

THE CABINET CRISIS.

Monday, September 7.

The *Mainichi Shimbun*, as most of our readers probably know by this time, is the organ of the former Progressionists; that is to say, of the Party presided over by Count Okuma. It is therefore in a position, or should be in a position, to know a great deal about the political prospects and projects of that statesman. Hence the following article, which we translate from its issue of the 5th instant, provokes some curiosity:—"Various rumours have been circulated about Count Okuma's entry into the Cabinet, the most notably false among them being that he has formulated conditions with respect to his resumption of office, or that he has agreed to resume unconditionally. According to our information, however, not merely has the problem of conditions or no conditions never come upon the *tapis*, but up to the present day even the very question of entering or not entering the Cabinet has not been broached by any one to the Count, nor has the Count, on his side, made the slightest attempt to open the subject. Thus the person primarily concerned has neither essayed any negotiation nor been approached by any negotiators. What has apparently happened seems to be simply that the elder statesmen, apart from the Count, or the Ministers of State, have held some consultations, but the Count himself has not given expression to any desire." We do not suppose that this is to be interpreted as signifying that no conferences have taken place between Count Okuma and Count Matsukata. It is probably intended to be read in the sense that Count Okuma has not been officially approached, and has not himself made any approach to officialdom.

From the 3rd instant to the 5th, rumour indicated Marquis Yamagata as the most probable Minister President in succession to Marquis Ito. But the *Chuo Shimbun* (organ of the National Unionists), writing on the 5th, denied that the rumour had any foundation, and traced its origin to the circumstance that, on the 3rd inst., Counts Inouye, Kuroda, and Matsukata had a meeting at which Marquis Yamagata was not present, his absence indicating that the three Counts were concerting means of inducing him to accept the post, whereas the true explanation is that he was too illing to leave his house. There seems to be no doubt that the Marquis is in a precarious state of health, and that his journey to Russia aggravated his malady.

The *Yomiuri Shimbun*—not, it must be confessed, an infallible authority on such a subject—alleges that although the resistance offered by the Liberals to Count Okuma's entry into the Cabinet has been fruitless, they will not range themselves in radical opposition to the new Ministry, but, on the contrary, will support it in so far as its measures accord with the policy of its predecessors. In the sphere of foreign affairs, however, supposing that Count Okuma is paramount there, the Liberals will not be sparing of hostile attacks.

In direct contradiction of the *Chuo Shimbun's* assertion, as quoted above, the *Yiyu* alleges that it has been virtually decided to organize a Cabinet independent of all political parties; that Marquis Yamagata will be President, and that the new Ministry will probably include Counts Inouye, Matsukata, Kuroda, and Oki. Evidently there is much groping in the dark.

A local English contemporary, we observe, asserts that "the obnoxious and persistent determination manifested to, if possible, bring Count Okuma into the Cabinet, has been one of the principal causes of the Premier's resignation." If that is to be read as indicating opposition on Marquis Ito's part to Count Okuma's inclusion in the Ministry, it is singularly incorrect, for Marquis Ito, as has been emphatically explained by the *Nichi Nichi Shimbun*, raised no objection whatever to Count Okuma's return to office, and would willingly have accepted him as a colleague could an agreement in that sense have been secured among the Cabinet Ministers themselves.

The same English journal says:—"These recurring Ministerial crises, which result from agencies or causes largely enveloped in obscurity,

that bring about no alteration in the lot of the foreigners domiciled in this country, are regarded with apathetic indifference by most persons." We wonder how far that assertion is trustworthy. In every community there are men for whom politics possess no manner of interest. Why should they, indeed? But it is hard to believe that the mood of isolation and unconcern described by our contemporary prevails widely in Yokohama, or that the affairs of the land in which they live have become so uninteresting to the foreign residents in general. We suspect that such a condition of senile indifference is very limited.

The *Nichi Nichi Shimbun*, in its issue of the 6th instant, emphatically denies the assertions quoted above from the *Yomiuri* of the 5th. It declares that the attitude of the Liberals towards the new ministry will not be influenced in any degree by personal considerations, and that they will support the Cabinet if they approve of its measures, or oppose it if they disapprove. Especially strong is our contemporary's repudiation of the notion that the mere fact of Count Okuma's assuming the portfolio of Foreign Affairs would ensure the opposition of the Liberals in that sphere.

The *Yiyu Shimpō* of yesterday inclines to the belief that Marquis Yamagata will be the new Premier, where the *Miyako Shimbun* is confident that Count Matsukata will receive the post. It is unnecessary to re-produce the details of these various conjectures.

Tuesday, September 8.

In criticizing the resignation of Marquis Ito and Count Itagaki, the *Tokyo Economist*, as an organ of the Opposition, travels along the path taken by the *Mainichi* and the *Nippon*. It attributes the fall of the Ito Cabinet to its failure to evolve practical financial measures. "We have often remarked that in the 3rd session of the Diet the Minister of Finance merely made a book balance of the State Revenues and Expenditures. That the Minister is resolved to resign must be due to his inability to carry these temporizing measures any further. It is said that the recent meeting of Local Tax Chiefs made it clear that the proceeds from the Business Tax would not exceed even one-half of the estimated 7½ yen." The *Keisai* then enumerates its doubts, and asks the Authorities whether the tobacco monopoly will really serve the purpose in view; whether the Industrial Bank and Agrico-Industrial Banks can issue shares of 250 million yen; and whether the installment of 8,300,000 yen of the Public Undertaking Fund can be successfully raised this year? After enumerating some other doubts of less importance, the *Keisai* concludes "that the resolution of Viscount Watanabe to resign must be attributable to these troubles, in other words, the Ito Cabinet has stumbled over the rock of financial affairs."

With regard to the resignation of Marquis Ito and Count Itagaki, the same journal observes that the epithet bestowed on Marquis Ito that his is a "smile-all-round" policy has been significantly proved by the present resignation. The Marquis intended to give seats to Counts Matsukata and Okuma; that was objected to by Count Itagaki, and he finally resolved to resign with the latter, being too tender-hearted to suffer Count Itagaki to leave the Cabinet alone. "Is not this a smile-in-all-quarters policy?" As Premier in a constitutional government, such a resignation is very absurd. A Premier of a constitutional government is responsible only to the Sovereign and the people. He is not allowed to regulate his movements at the impulsive dictates of private consideration. When the majority of the Cabinet were desirous of inviting the two Counts into the circle, and when the Premier himself held the same opinion, what necessity was there for the Marquis to resign? Count Itagaki who singly opposed a measure approved by all the other Ministers should alone have left the Cabinet. The Marquis tries to exculpate himself on the pretext of inability to bring about cordial unity of opinion in the Cabinet. If so, the Marquis seems to have overlooked an important principle observed in all constitutional governments, namely, the minority must bow

before the majority. What difficulty would there have been had he acted up to that principle? The resignation of Count Itagaki is entirely pertinent. His declaration that he could not sit at the same table with his political opponents was entirely in accord with the principles of constitutionalism that he and his followers maintained in years past. His resolution to resign when his objection was over-ruled by his colleagues was perfectly natural. The *Keisai* is even magnanimous enough to praise the step he took.

Wednesday, September 9.

The burning question of the hour, who shall be the Premier, still remains unsolved. A remnant of the Ito Cabinet, we read in the *Yiyu*, tried to persuade Marquis Yamagata to take the post of Minister President. But the delicate condition of His Excellency's health not allowing him to undertake any tiring labour, the Marquis positively stated on the 5th instant that he could not assume the cares of office. When the Marquis sent in this final refusal, Marquis Saigo, who was the prime mover in the scheme of the Marshal's taking the Premiership, went to his villa at Numazu, while Marquis Oyama retired the same day to his plantation at Nasuno. Then Count Kuroda and Viscount Takashima were once more obliged to ask Count Matsukata to undertake the task of forming a Ministry. The latter, instead of acquiescing in the proposal, declared that Marquis Saigo should undertake the task. The Marquis was instantly recalled, and on the morning of the 7th instant, a conference was held at Count Matsukata's residence, those present including Marquis Saigo, Counts Kuroda and Inouye, and Mr. Shirane. Count Matsukata and all the others repeatedly pressed Marquis Saigo to place himself at the head of the Cabinet. The Marquis, however, gave a firm refusal; then the negotiations reverted to the original position—the entry of Count Matsukata into office and his forming a Cabinet, Count Kuroda having declared that he was not able to undertake the difficult post of Minister President.

The Cabinet negotiations are still in a stationary condition, writes the *Nichi Nichi*, for while Marquis Yamagata has positively declined to undertake the arduous task of forming a Ministry, Count Matsukata, who has simply to stretch out his hand if he really wishes to succeed Marquis Ito, is still lost in the maze of deep deliberation; while Count Okuma, whose relations with Count Matsukata, the *Nichi Nichi* thinks, are not so intimate as people believe, is watching the progress of affairs from a distance, resolved to assume an attitude of obstruction should matters eventuate to his disadvantage.

The *Nippon* is firmly persuaded that Count Matsukata will be gazetted Premier. The reason why the Count, who so boldly announced his willingness to undertake the arduous task of adjusting the nation's post bellum finances, hesitates to come forward, arises from his characteristic conscientiousness that urges him not to incur any suspicion of his having overthrown the Ito Cabinet. A section of Satsuma statesmen, we read in the *Chuo*, is not much inclined to approve the appointment of Count Matsukata as Premier. For this reason, if the Count becomes Premier, he must be prepared to see Marquises Ito, Saigo, and Oyama ranged on the other side. This will considerably weaken the stability of a Matsukata Cabinet even though it secures the aid of Count Okuma. It is this consideration that precludes Viscount Takashima from urging with his usual warmth the entry of Count Matsukata.

The *Tokyo Shimpō*, organ of the Liberals, assumes a firm attitude. It urges Counts Matsukata and Okuma to enter the Cabinet as quickly as possible and to form a Cabinet of their own choice, irrespective of what ideas the *Genkun* may have on the matter. They must strive to eliminate any element of personal consideration and must, as Count Okuma averred, effect a radical change of policy within the Cabinet. Why is it that, while loudly declaring the necessity of suppressing all personal considerations and the introducing of a radical change of policy in the Cabinet,

Counts Matsukata and Okuma should hesitate when such a splendid opportunity of carrying out those ideas is offered to them? Count Matsukata seems to have been driven into the very vortex of personal considerations. At any rate, as the Liberals prefer a Cabinet composed of junior statesmen to one composed of *Genkun*, and a party Cabinet to one that professes to keep aloof from politics, they are desirous of seeing the two Counts organize their Cabinet from their own followers. In this connection, the *Ponturi* takes up an attitude rather savouring of bragadocio. It alleges that the relations between Counts Matsukata and Okuma are becoming more and more cemented, that either will not enter the Cabinet alone, and that this secret understanding between them is as firm as a rock. Further, if Count Matsukata is installed as Premier he is resolved to furnish a precedent for a responsible Cabinet, and that the resignation of some Ministers and their immediate subordinates, that rumour says will happen on the morrow of the appointment of Count Matsukata as Premier, will facilitate the execution of a radical change in the policy of the Cabinet and purge it of many accumulated abuses.

Thursday, September 10.

Now that Marquis Yamagata and Marquis Saigo have positively declined to undertake the control of the Cabinet, says the *Fiji*, the hopes of the *Genkun* centre round Count Matsukata, who still hesitates to take the position on the ground of the alleged difficulty of satisfactorily adjusting post-bellum finance. For all that, continues this independent observer, the Count can no longer avoid complying with the wishes of the senior statesmen either in the Government or outside, and must come forward and form a Cabinet. Some persons speak of persuading Counts Kuroda or Kabayama to take the post, but this is impracticable, for neither can be counted upon to give a favourable answer. The assumption of the Premiership by Count Matsukata being a foregone conclusion, the most serious trouble which his Cabinet will encounter is the resignation of the six ministers who, in obedience to the gracious wishes of the Sovereign, were obliged to withdraw their resignations the other day. All those posts must be filled by new men. In this context the greatest difficulty will be experienced in finding suitable Ministers for War and the Navy; candidates for the portfolios of the Departments of Communications, Justice, Agriculture and Commerce, Education, and Home Affairs may be sought with comparative ease, while Count Matsukata will assume the additional portfolio of Finance, and his associate, Count Okuma, will direct Foreign Affairs. Whether the Count desires to retain Marquises Saigo and Oyama, now Ministers of the Navy and War, or whether, in consequence of the firm resolution of the two Marquises to leave the Cabinet, competent successors have to be appointed, in either case Count Matsukata must ask the assistance of the *Genkun*. The *Fiji* believes that though the Count hesitates to give prompt acquiescence to the advice of his political friends on the plea of the difficulty of adjusting the State's finance, this question of filling the chairs of the Army and the Navy also constitutes a deterrent. Still, the *Genkun* now urgently persuading the Count to succeed to the seat vacated by Marquis Ito, will give him the utmost help in the matter of forming a Cabinet.

The attitude of the *Shimpo-to* towards the hypothetical Matsukata Cabinet is thus described by the same paper. The Party will be more favourably inclined to a Cabinet led by Count Matsukata than to any under the leadership of Marquis Yamagata. But the support which the Party would extend to Count Matsukata's Cabinet would differ greatly from the blind support with which the Liberals backed the Cabinet of Marquis Ito. The majority of the members of the Party aver that they have yet to determine whether or not they will back Count Matsukata's Cabinet. A decision would be arrived at after a close examination of the Count's measures in regard to effecting a radical change in the Cabinet's policy. As to the manner of the "radical change,"

opinions are somewhat divided, some professing that it would be enough for the present to carry out one-half of the proposed radical reforms, others declaring that seven to eight parts out of ten must be put into force, and so forth. However, some folk are unanimous as to the absolute necessity of introducing radical reforms in the Cabinet system. Leading members of the same party expect that the Matsukata Cabinet would not be satisfied with taking a merely temporary measure but would resolutely carry out any reform programme the Count now contemplates, even at the risk of shortening their term of office.

In this context, the following account of an extraordinary meeting of the *Shimpo-to*, taken from the *Asahi*, is worth noticing. The meeting was held on the 7th instant, with a view to determine the opinions of the party in connection with the formation of a new Cabinet. It was decided that Count Matsukata should be nominated Premier and Minister of Finance, and Count Okuma, Minister of Foreign Affairs. The meeting next took up the question as to what really brought about the fall of the Ito Cabinet. After a long debate, it was decided that defective financial arrangements must be ascribed as the real cause of its downfall. This decision incidentally involved the National Unionists. This party, led by Viscount Shinagawa, played a conspicuous part, in conjunction with the Liberals, in the matter of elaborating the post-bellum financial measures in the 9th session of the Diet. Consequently, if the *Shimpo-to* decides to attribute the fall of the Ito Cabinet to a failure to adjust the financial programme, they indirectly stand in the position of denouncing the actions of the National Unionists in the last session. To drive the Unionists into the Opposition camp would be a most serious matter, for it means that the Matsukata Cabinet would be confronted by an Opposition of over 160 votes in the House of Representatives—more than 130 Liberals and pro-Liberal members and 33 Unionists. Even should the coming session be dissolved, it is exceedingly problematical, supposing the Liberals and the Unionists work together, that the Cabinet would command a majority in a new House. It was decided at the meeting to send delegates to the Unionists and to ascertain the attitude of the latter party with regard to the *Shimpo-to's* explanation of the fall of the Ito Cabinet.

ECONOMIC TOPICS.

Many years ago, when the Nippon Railway Company was started, a foreigner in the employ of the Railway Bureau drew up a scale of rates to be charged by railway companies when lending engines, carriages, or trucks to one another. These rates for mutual accommodation have remained unchanged to this day, and the private railway companies, according to the *Fiji*, are ventilating their dissatisfaction with the scale. These rates are:—

	Per Day	Per Ton.
Locomotive, with conductors and other necessities	48 yen	
Locomotive only	21 yen	
Carriages (1st class)	3.00 yen	
Carriages (2nd and third class)	2.00 yen	
Trucks75 yen	

These rates were based upon the regulations of the English Railway Clearing-House, and are evidently unsuited to the present condition of Japanese railway traffic, especially as an English penny was at that time equivalent to 1 *sen* in Japanese currency. It follows that a railway company that borrows another's rolling stock is now enabled to reap an unjust profit, so that if things are allowed to continue in their present state railway companies will be disinclined to provide sufficient rolling stock of their own, being able to borrow it at considerable advantage. At present the Government Railways stand more in the position of borrowers than lenders of locomotives, and so forth, and though negotiations have been frequently opened by the private companies to induce the Railway Bureau to raise the charges, the Bureau seems disinclined to acquiesce in the demand.

The same journal publishes a table showing the amount of capital, mileage of lines, &c., of private railway companies throughout the country. From it we gather that there are in all 53 private railway companies in Japan which have obtained charters for the construction of 3,282 miles 78.6 chains, and of this length 1,652 miles 61.24 chains are already open for traffic. The total investment of capital is 143,354,250 yen, divided into 2,867,085 shares. However, as the paid up capital totals only 91,421,580 yen, the sum to be called in amounts to 51,932,670 yen. In other words, 32 yen have been paid on an average on every 50 yen share, so that 18 yen has yet to be called in.

As already noticed in these columns, the charters of quite a number of National Banks will expire either this year or next. All the expiring banks, in accordance with special regulations issued this spring with the consent of the Imperial Diet, have already secured the permission of the Finance Department to reorganize themselves into private concerns, or have forwarded applications for that purpose. In so changing their status, the capital of most of the banks will be increased to some extent. The *Shogyo*, from which we are quoting, publishes a list of 11 National Banks that have secured permission to reorganize their business, and calculates that the total capital of the 11 banks will be increased from 5,290,000 yen to 20,520,000 yen, that is to say, an increase of 387 per cent. If all the other National Banks are to increase their capital at this rate, the aggregate capital of private banks formerly national will reach 100 million yen or so, whereas the total of the National Bank's present capital is only 48,826,100 yen.

The *Oriental Economist* gives the latest estimate as to the probable result of sericulture this year. Investigations conducted by Government Authorities have shown that the crop is only half that of an average year in Nagano; 70 to 80 per cent. of the average in Guma; 70 per cent. in Fukushima, Gifu, Oita, Chiba, and Hiroshima, and 85 per cent. in Yamaguchi. It is only in Tokushima, Niigata, and Miye that results barely exceed the average. The amount of cocoons produced in Japan during the last 4 years is as follows.—1892, 1,480,705 *koku*; 1893, 1,686,894 *koku*; 1894, 1,800,596 *koku*; 1895, 2,258,273 *koku*. The *Oriental Economist*, without giving its data in detail, proceeds to observe that, supposing the result of this year's sericulture to be 30 per cent. less than the past year, the crop may be considered normal, and the total quantity of cocoons produced will amount to over 1,800,000 *koku*, or about equal to the quantity obtained in 1894. If so, no particular difficulty should be experienced in exporting 70,000 to 80,000 bales of silk. A point to be considered in this connection is the gradually increasing quantity of silk consumed at home. A trustworthy authority has arrived at the following result in connection with last year's cocoons:—

	Bales (Japanese).
Total quantity of silk produced last year ..	220,000
Quantity consumed at home	100,000
Quantity exported as fabrics	30,000
Quantity sent to Yokohama	120,000

Supposing this year's crop shows a decrease of 30 per cent. on last year's, the total quantity of raw silk produced in Japan should stand thus:—

	Bales (Japanese).
Total quantity of silk produced	154,000
Quantity consumed at home	100,000
Quantity sent to Yokohama	54,000

The Nippon Ginko has at last announced a rise in the rate of interest on loans, the increase being 1 *rin* per diem. In other words, whereas the old rates ranged between 1 *sen* 9 *rin* to 2 *sen* 1 *rin*, a day, that is 6.935 to 7.3 per cent. per annum, the average is now 7.4 per cent. approximately, or an addition of 0.2 per cent. as compared with the old rate. It is confidently believed that the present rise will not affect the money-market, as the majority of banks in Tokyo had already raised their rates from 2 *sen* 5 *rin* to 2 *sen* 7 *rin*. This rise in rates in the second

half of the year has been occasioned through the growing tightness of the market. Signs of a tight market always loom ahead, though not so markedly as this year, and the Nippon Ginko therefore thinks it advisable to take the step just announced. Other banks took this course some two months ago, and the fact that the Bank has not hastened in the matter is a clear proof that the rise is not due to any apprehension of a panic, so much spoken of by some sections of the public. August is a month, when, owing to various causes, as the *Bon* festival of the old calendar, the falling due of the *saki* tax, and so forth, the circulation of money is brisker than at other times. That the rate was not raised last month furnishes proof that the future of the money market does not cause apprehension. The *Nichiichi* observes that the step taken by the Nippon Ginko will conduce toward securing tranquility in the market. The sudden activity that brought the amount invested in commerce and industry since the termination of the war to about 700 million *yen*, and also the marked discrepancy in the balance between imports and exports, are enough to shake the money market were matters left to their own course. The excess of imports over exports might not create much trouble had the purchasing power of the people really increased. But this is not easy to credit, especially when it is remembered that the silk and tea markets are unusually depressed and that one calamity after another has devastated various parts of the country.

Tokyo papers give some information relating to deposits in Postal Saving Banks. The Post Office opened Saving Banks in 1875 and the deposits that year aggregated only 20,122 *yen* by 2,184 depositors. Since the Savings Bank Regulations were amended in 1878 and again in 1891, facilities were given for encouraging thrift, and the business began to markedly improve, as will be seen from the following table:—

Year.	Deposits.	Withdrawals.
1882.....	768,036.....	594,222
1883.....	1,886,225.....	747,739
1884.....	4,688,183.....	1,988,778
1885.....	6,770,074.....	3,357,330
1886.....	12,425,162.....	6,039,032
1887.....	10,901,419.....	8,826,165
1888.....	10,001,837.....	9,208,464
1889.....	10,712,635.....	10,843,121
1890.....	9,573,847.....	11,294,445
1891.....	10,826,585.....	10,437,852
1892.....	11,906,608.....	11,029,528
1893.....	13,941,842.....	11,889,412
1894.....	13,590,760.....	14,476,343
1895.....	16,287,986.....	14,520,335

In the above figures fractions of *yen* have been omitted. Depositors whose deposits are more than 500 *yen* each, number 2,529, their total being 1,066,500 *yen*. According to investigation made at the end of March last, the classification of depositors by occupation, and the deposit made by each class, are as follows:—

	Deposits. Yen.	No. of Depositors.	Average Deposit. per person.
Agriculture.....	8,213,686	453,445	11
Trade.....	6,750,466	224,246	30
Industry.....	2,607,806	954,022	7
Miscellaneous.....	2,402,580	79,711	31
Mechanics and la- bourers.....	1,476,001	68,604	21
Unknown.....	2,796,787	99,009	28
Officials and Military Coolies.....	2,605,806	83,448	31
Pupils and Students.....	342,156	66,301	5
Fishermen and Sailors.....	331,409	13,258	24
Unprofessional.....	331,395	12,238	27
Temples, Shrines, &c.....	1,017,426	27,427	37

The Japanese Central Tea Guild has decided to spend a sum of 2,000 *yen* on advertisements in American papers, so as to counteract the growing influence of Ceylon tea, which, owing to the skilful way in which it is pushed, is becoming more and more popular in the States. The Central Guild convenes an extraordinary general meeting at Miye on the 5th prox. One of the topics of discussion will be, how to tide over the present difficulty, and what steps should be taken to insure the future prosperity of this important industry in Japan. Some of the tea

men are in favour of applying to the Government for a loan of 350,000 *yen*, though it is considered doubtful whether this request would be acceded to.

A Tokyo periodical prints a note illustrative of the recent development of the textile fabrics industry in various weaving centres of Japan. The depreciation in the gold price of silver, it says, and the successful issue of the war, imparted a great impetus to the industry, as is shown in the following table, which excludes cotton and hempen fabrics and only deals with silk or mixed goods. In the figures for Ashikaga, cotton fabrics may be considered as constituting about a quarter of the total. The figures are based on official researches, and may be taken as tolerably accurate:—

SILK AND MIXED GOODS PRODUCED IN PRINCIPAL WEAVING DISTRICTS.

	Hachioji.	Nishijin.	Tango.
1888.....	Quantity... Not certain.	Not certain.	Not certain.
1889.....	Quantity... do	do	586,115 tan.

It will be seen from the above that, taking the figures of the first year as the standard, the increase ranged between 1.05 to as much as 9.08 times and that values increased between 1.45 to 11.33 times. Besides the above, the crape of Nagahama, the *nanako* silk of Kawagoye, the mixed fabrics of Nagoya and of Echigo are also important products. When so rapid a development is achieved with the old fashioned methods of weaving, it is conceivable that much greater increases will follow when machine-weaving becomes more popular. It ought to be remembered that Fukui looms chiefly turn out *habutaye*, and Kai a special kind of silk used for lining and so forth; Tango, a crape, and other places mostly figured goods used for clothing.

Captain Ito Gigo, I.J.N., the newly appointed *attaché* at the Japanese Legation in France, and his wife; Dr. Kimura Shosuke, Naval Surgeon, who has been ordered to England; and Captain Narita Katsuro, I.J.N., who was appointed an *attaché* in the Japanese Legation in the United States, were received in Imperial Audience by T.I.M. the Emperor and Empress on the 9th inst. at 10.30 a.m.

THE WAR AND ITS EFFECTS ON COMMERCE.

The Bureau of Taxation in the Department of Finance has compiled a concise review as to the effect of the war on the foreign commerce of Japan during the last year. It is epitomized as follows:—(1.) The sudden increase in the demand for clothing and other materials needed in the Army and Navy, and the extraordinary increase in the import of these materials must be considered as the greatest influence that the war exerted on the foreign commerce of the country. (2.) Since the outbreak of the war, in consequence of the departure of Chinese merchants from Korea, who virtually monopolized the markets there, the influence of Japanese merchants in that Peninsula became paramount and led to an expansion in the volume of commercial transactions between Japan and Korea. (3.) The removal of the absurd delusion that foreigners entertained of Japan, namely, that her civilization was superficial and the Empire was no match for the Colossus of China, the significant removal of this idea by the glorious issue of the war, tended considerably toward increasing the value of things Japanese, so that foreigners began to inquire for the products of the victorious country. (4.) The expectation that every trade and industry in Japan would be stimulated into excessive activity, even beyond the degree of necessity and usefulness, tended to increase the volume of imports. (5.) The unusual wages that military coolies and common people earned during the war increased their purchasing powers, and this ultimately tended to encourage imports. (6.) The war has enhanced the value of Japanese goods and eliminated to a certain extent the vicious customs that previously existed between foreign and Japanese merchants engaged in Japanese commerce. So many labourers were drawn off to the seat of war or requisitioned for work connected with it, that the Japanese merchants, who were only too ready to accept any cheap order, regardless how such goods would affect the reputation of Japanese products, could not undertake to supply these demands. Foreigners also were fully aware of this fact, and did not press for delivery of shoddy goods. (7.) The requisition of thousands of men for the war affected the production of Japanese commodities, and the excess of demand over supply tended to raise the prices of goods. (8.) The rise in interest on money during the war more or less checked free investment in works of production, so that the export of goods was to a certain extent reduced. (9.) The requisition of steamers for Government service considerably interfered with the shipment of goods, so that the market rose and obstructed the export of commodities. (10.) During the War the people naturally strove to cut down all superfluous expenditures as much as possible, and this frame of mind must have, to a certain extent, interfered with the purchase of imported goods. (11.) The payment of the war indemnity by China and the consequent derangement of the silver market must have affected the commercial relations of Japan. (12.) The interference of the three Powers and the retrocession of the Liaotung Peninsula led the people to be on their guard and convinced them of the absolute necessity of maturing and developing the resources of the country. This may have temporarily affected the sale of foreign goods. (13.) The departure of Chinese merchants from Japan largely affected commercial transactions between Japan and China, though it was found at the end of the year that the total trade did not suffer a great diminution as compared with ordinary years.

The report then proceeds to enumerate the principal commodities whose export or import show either an increase or a decrease in consequence of the war. Commodities whose import was augmented by the war were: woollen cloth, flannel, blankets, serges, shirtings, and T-cloths, hempen and cotton canvas, leather, coal, iron and steel articles, zinc, lead, watches, liquors, hemp and flax, cotton and cotton yarns, wool and worsted, paper. Com-

modities whose export was augmented by the war were; liquors and tobacco (for consumption of officers and men in Korea and China), coal, camphor, and fine art goods. Commodities whose import was decreased by the war were beans and machinery. Commodities whose export was lessened by the war were timber and dried cuttlefish, both owing to the scarcity of labour. The commodities whose export or import was influenced by the restoration of peace, and show an increase were:—Imports—Cotton and woollen fabrics and mixed goods, cotton-silk goods, tobacco, watches, raw cotton, wool and worsted, hempen cloth, aniline dyes, liquors. Export: fine art goods. Reductions in imports were in rice, owing to the bettering of the condition of the poorer classes, the principal consumers of inferior imported rice. There was a reduced export of cotton yarns, owing to the excessive home demand. Taken as a whole, the war, by enhancing the market price of commodities, interfered with the export of goods, while it facilitated the import of foreign stuffs, owing to the requirements of the army and the public at large. The influence of the war upon Japan's foreign commerce does not end here; there are other factors whose influence will continue for a long time. The annexation of Formosa is the most important of these. The sudden expansion of shipping is another, as also the steady extension of railways. Most of the steamers purchased by the country during the war are of a size not suited for the coasting trade, but for navigation on the high seas. Naturally, therefore, those steamers will be applied to the expansion of marine communications between Japan and distant countries. The war has thoroughly convinced the country of the absolute necessity for building satisfactory railways. The unusual prosperity that the railways enjoyed subsequent to the war also encouraged railway enterprise. The following figures show the number of steamers that were added to Japan's shipping register during the two years 1894 and 1895:—

	No. of Steamers.	Cost. Yen.
First half of 1894.....	6	898,000
Second half of 1894.....	32	7,304,549
First half of 1895.....	26	3,419,790
Second half of 1895.....	13	1,280,765

In the third place, the indemnity which Japan is to receive from China will not only promote the wealth of the country, but will directly and indirectly develop its productive power and thus tend to augment the volume of the export trade. In the fourth place, the opening of four new inland ports in China, as the result of the victory of Japan, will also tend to promote commercial relations between the two countries. In the fifth place, the extraordinary demand that the war made on woollen fabrics, and the consequent unusual prosperity that woollen weavers at home enjoyed, enabled them to expand the scope of their business. At the same time the necessity for starting an iron foundry, so long spoken of, became more urgent. When these two industries are established on a firm basis, the features of Japanese commerce will be greatly changed. In short, the war gave an impetus to commerce in this country. But it is not unattended by evils, the most important being the rise in the cost of production and living.

TROUBLE IN THE TOKYO CITY ASSEMBLY.

The Water-works Scandal is a perennial source of trouble in the city of Tokyo. Once more the City Council are contemplating resignation *en masse*. The cause of the pothole is the amount of remuneration that Mr. Masujima, Barrister-at-Law, and other lawyers entrusted by the Council with the task of prosecuting the defendants of the Water-pipe Scandal case, have demanded from the city while the Court that is hearing the suit is still sitting. The fault lies both with the Council and the lawyers, the former thinking the affair one of public interest, and especially as the five lawyers, with the exception of Mr. Masujima, are members of the City Assembly and did not at first demand any fees, while the

six lawyers on the other side acknowledge that although they did not speak about remuneration at all in the beginning, they now feel they should receive something for their trouble. Mr. Masujima, after accepting the City's brief, was subsequently obliged to go to America on business of the Nippon Yusen Kaisha, whose legal adviser he is, and during his absence he recommended the City Council to employ in his stead Messrs. Motoda, M.P., and Iyo, both of whom are members of the City Assembly. Even before Mr. Masujima's return, the question of remuneration began to cause trouble in the Council, the lawyers having demanded what the Council considered quite an exorbitant sum. The affair was, however, temporarily laid aside, pending the return of Mr. Masujima, the principal Counsel for the city. Mr. Masujima returned, and negotiations were opened by the City Council with him as to the terms of remuneration. Though we are not exactly certain as to his answer, we are led to infer, says the paper from which we quote, that he must have asked 20,000 yen for himself and 10,000 yen each for his five associates. A bill asking for the approval by the City Assembly of such a sum was laid before the meeting of the Assembly held on the 3rd instant. The Governor, Marquis Kuga, questioned by some of the members, announced that the Council had not arranged the terms beforehand as the lawyers signified that they would undertake the prosecution without remuneration. Another member then charged the lawyers with want of faith, and urged that no remuneration be given them. After promising their services gratis it was most unscrupulous for them to demand such a sum, and especially before the case was concluded. Should they resign their trust on account of the Council refusing to pay their fees, so much the better. Not a single member defended the Bill, which was rejected on the first reading by an unanimous vote. The affair, however, can not terminate here. Some steps must be taken to arrive at a definite conclusion. Opinions are divided among the members of the Assembly and also among the Council. Mr. Tomita, ex-President of the Nippon Ginko, and ex-Governor of Tokyo, but now a member of the Council, says that now that the bill relating to the lawyers' remuneration has been rejected by the Assembly, the Council ought to resign *en masse*. This was objected to by another speaker, but Mr. Tomita forwarded his resignation.

A section of the City Assembly who hold moderate views on the subject, argue that whether or not the Council had any clear idea of what they were about in entrusting the affair to Mr. Masujima and his associates, it is evident that suitable remuneration must be paid them for their services. They would like to ask the lawyers to reduce their bill. This proposal is regarded with disdain by the extremists, who now charge the Council with conduct savouring of personal consideration. They accuse the Council of failing to arrange the terms beforehand, and of a breach of trust towards the City in employing Messrs. Motoda and Iyo after the return of Mr. Masujima. Further, they accuse them of having given 100 to 150 yen to each of the lawyers as actual legal expenses. These they consider as acts of personal consideration. They therefore maintain that the Council must resign in a body, otherwise they may move a vote of want of confidence in the Council at the next sitting of the City Assembly. The next sitting therefore is likely to prove a very stormy one.

MINING IN JAPAN.

Mining is essentially a speculative business, writes the *Yiji*, but yields an immense profit should circumstances be at all favourable. The copper mines of Besshi have contributed to the present prosperity of the Sumitomo family; the Copper mine of Ashio has raised Mr. Furukawa from a mere citizen to a millionaire; while the Takashima and Miike collieries have added millions to the treasury of the Mitsubishi and the Mitsui family. Again, Mr. Yasuda has reaped considerable wealth from his sulphur

mine in Hokkaido. Now, what is the total output of the mines in Japan and what advance has been made lately? In 1892 the output amounted to 15,145,817 yen; in 1893 it was 16,385,817 yen, and in 1894, 20,199,874 yen. An increase of more than 40 per cent. in three years is not a bad record. Here is the table enumerating the principal minerals obtained during the two years 1893 and 1894:—

	1893. Yen.	1894. Yen.
Coal	6,837,809	9,585,155
Copper	4,903,515	5,567,947
Silver	2,723,402	2,716,769
Gold	607,365	788,574
Iron	392,473	567,491

This table shows what the principal minerals of Japan are, but it would be erroneous to infer that other minerals are of small importance in Japan. That is not the case. In point of fact gold, iron, and other mines have developed to a greater or less extent because of the facility for working them. Yet the output of kerosine increased from 200,000 yen in 1893 to 260,000 yen in the following year. Sulphur, plumbago, tin, lead, manganese, and so forth, all show a similar increase. It would not be an exaggeration to say, that the supply of various ores is almost inexhaustible in Japan, and that the mining industry has not yet advanced beyond its threshold. What the *Yiji* can not help but wonder at in this context is that capitalists are so engrossed in the mania for speculating in railways and other business, all of which must, from the nature of things, fail to achieve original expectations, that a source of big profit is entirely neglected. At any rate, now that the railway mania is passing away and transactions in "potential shares" have dwindled to a narrow margin of profit, the attention of capitalists and enterprising men will be inevitably turned to mining affairs.

NAGASAKI DOCK-YARD.

The Mitsubishi Dock-yard at Tategami, Nagasaki, has recently undergone an extensive enlargement and is now engaged in building steamers of a size that has never before been attempted in Japan. The principal steamers in course of construction at the Dock-yard include one of over 1,500 tons capacity for the Osaka Steamship Company; another of over 5,400 tons, for the Nippon Yusen Kaisha, and a third of about 2,600 tons for the Mitsubishi, besides a number of smaller craft. The Osaka Company's steamer will be completed by May, while the Yusen Kaisha's vessel is to be delivered by October, 1897. In July of next year the construction of another ship of the same size will be commenced. This also is for the N.Y.K. The Tategami Dock-yard having been considered inadequate to meet the increasing demands of the public, it was decided to construct another dock in the proximity of the Akiura works. This was started in August last year, and was to be completed by November. There is also the Kosuge yard, owned by the same firm, where slips are provided for the repair of steamers. At present the slips are occupied by nine steamers, two of which are owned by foreigners, the *Gaelic* being the biggest. More than 30 other steamers are waiting their turn. Between January and June of this year, 104 Japanese and 84 foreign ships were overhauled at this Dock. The staff of the Dock-yards and the mechanics and workmen employed include thirty Japanese and foreign experts and business managers, and 87 clerks on the staff, 2,000 mechanics, and about 1,500 workmen. If to those are added the men engaged on the small boats that convey the staff, mechanics, and workmen, from the shore to the respective stations, the whole aggregate over 3,800. Supposing that a man is paid on an average 50 yen a day, the pay-sheet amounts to more than 55,000 yen, or 660,000 yen per annum. But the amount really paid to the men in a year reaches over 1,000,000 yen, as they are frequently engaged on overtime work. The proprietors were fortunate in securing the services of Mr. Clark, a noted English ship-builder, formerly in the service of the Spanish Navy.

THE POLITICAL SITUATION.

PENDING the nomination of a new Administration, the broad differences existing between the two "slates" forecast by public speculation, seem to be briefly these: first, that if Marquis YAMAGATA become Premier, a Ministry comparatively independent of party support will be formed, whereas, if Count MATSUKATA preside, the nation will be carried one stage nearer to party Government than it was carried by the alliance between Marquis ITO and the Liberals; secondly, that the former event will not be attended by any sweeping changes in the *personnel* of the Cabinet, while the latter will involve thorough re-organization of the Ministry. To put this into other words, the assumption is that Marquis YAMAGATA'S accession to power would not signify any reversal of the policy pursued by his predecessor, whether in home affairs or in foreign, and that, consequently, many of the present holders of portfolios would consent to serve under him; whereas a Cabinet directed by Counts MATSUKATA and OKUMA would strike out a route so new that few of the Ministers now in power could agree to follow. There are among the present Ministers six whose positions would not, apparently, be affected under Marquis YAMAGATA'S regimen, though it must be noted that the six include Marquis SAIONJI, who is determined—so rumour alleges—to follow Marquis ITO out of office under all circumstances. Assuming His Excellency's intention to be rightly interpreted in this matter, and observing that, apart from the President, the Cabinet numbers ten members, it follows that five vacancies would have to be filled under Marquis YAMAGATA, whereas, under Count MATSUKATA, there would be about eight new portfolio-holders, according to the *Fiji Shimpō's* estimate. That journal does not essay the interesting task of actually designating the names on the two slates, but it appears to think that, whoever may succeed to the office of Minister President, Count OKUMA and Count MATSUKATA will certainly be in the new Ministry. As to the party relations of the Cabinet, our contemporary's idea is that, if Count YAMAGATA comes into power, he can not count on the *Shimpō-to* as allies, neither need he reckon with the *Fiyu-to* as open enemies. He will, in fact, stand virtually aloof from political parties, being secure of support from the National Unionists only. On the other hand, if Count MATSUKATA assume the direction of affairs, he can be tolerably certain that the *Shimpō-to* and the National Unionists will support him, and he must be prepared to find that his alliance with Count OKUMA will convert the *Fiyu-to* into open enemies. We do not, for our own part, perceive any reason for assuming the possibility of a Cabinet presided over by Marquis YAMAGATA and including Counts MATSUKATA

and OKUMA. If the two latter statesmen agreed to join such a colourless combination, pledging themselves, at the same time, to pursue, without radical deviation, the policy hitherto adopted by the statesmen they displace, they would most assuredly see themselves severed, on the one hand, from their present supporters, the *Shimpō-to*, and by no means reconciled with their enemies, the *Fiyu-to*. That would be a species of political suicide such as Count OKUMA, at least, will never commit. He has allowed the Progressionists, over whom he has presided with great ability ever since their birth as a party—he has allowed them to identify themselves irrevocably with the principle of "Responsible Cabinets," and there is not, in our opinion, the remotest probability that his return to office will become a means of re-establishing the old system of Administrative independence. That, indeed, would fairly lay him open to the charge of employing his party and his platform as mere stepping stones for climbing into office. The *Tokyo Shimpō*, it is true, accuses him of precisely that manoeuvre, and, at the same time, alleges that all the minor sections forming the *Shimpō-to* are nothing better than tools of the Progressionists, by union with whom they have lost their individuality and been completely overshadowed. But the *Tokyo Shimpō* being the organ of the Liberal Party, its utterances on such a subject must be read with reservations, and, for the rest, the lesser elements of the Opposition must have foreseen pretty clearly the fate that awaited them when they abandoned their independent organizations for the purpose of fusion with a party of such intellectual eminence, political sagacity, and stubborn fighting power as the Progressionists. In the context of this question of party relations, it is interesting to note the views held by the *Nichi Nichi Shimbun*, a journal of acknowledged political insight, though not unbiassed as to its judgment in the present instance. It says that a MATSUKATA-OKUMA Cabinet can not reckon on receiving the full support of the *Shimpō-to* (the present Opposition); that it will have to reckon with the hostility of the *Fiyu-to*, and that the attitude of the National Unionists towards it will depend on the legislative measures framed by the Ministry. Frankly speaking, we do not attach much importance to these forecasts. In every instance that we can recall, journalistic predictions as to the grouping of political parties have proved erroneous in Japan. During the last session of the Diet, the balance of power was held by the National Unionists; and that it will remain in the same hands next session, seems beyond question. Further, it is certain that the National Unionists temporarily broke away from the ITO Cabinet and its Liberal supporters towards the close of the session, and that their invertebrate shuffling on that occasion involved disgrace, the memory

of which only a strong *coup* can efface. Whether the *coup* will be made at the cost of the outgoing or the incoming Cabinet, we have no means of judging.

It should be noted in conclusion that neither the *Nichi Nichi Shimbun* nor the *Tokyo Shimpō* includes a YAMAGATA Cabinet within the range of practical possibilities: they both think that the future Minister President will be either Count MATSUKATA or Count OKUMA.

The *Tokyo Shimpō* predicts the following as the most probable organizations in each case:—

MATSUKATA CABINET.	OKUMA CABINET.
Minister President...Count Matsukata.	Count Okuma.
Foreign AffairsCount Okuma.	Count Okuma.
Home AffairsCount Goto.	Count Goto.
FinanceCount Matsukata.	Count Matsukata.
NavyCount Kabayama.	Viscount Nakamura.
ArmyViscount Kawakami.	Viscount Kawakami.
CommunicationsViscount Mayeshima.	Viscount Mayeshima.
JusticeCount Ōki.	Baron Kitabatake.
Agriculture and CommerceUncertain.	Count Sano.
ColonizationViscount Takashima.	Viscount Takashima.
EducationViscount Kuki.	Count Ōki.
Chief SecretaryMr. Hirayama.	Mr. Shimada Saburo.

JAPANESE OFFICIALS.

JAPANESE officials, railway officials or otherwise, will be glad to see that one foreign resident, at any rate, is willing to bear testimony to the courtesy and helpfulness that distinguish their general behaviour, entitling them to a character very different from that assigned to them by recent correspondents in this journal. "Et Cetera" has only nine years' experience to draw upon, but we ourselves have thirty, and we can affirm most positively that during the whole of that time we have never witnessed an act of wilful discourtesy on the part of a Japanese official towards a foreigner, though in places largely frequented by foreigners we have observed instances of distinct breaches of Japanese etiquette in the conduct of petty officials. The "studied incivility" spoken of by a correspondent, "Viator," is to us an astounding revelation, totally inconsistent with our own observation. Indeed we have no hesitation in saying that, so far from meriting the bad reputation given to them by two of our correspondents, Japanese railway, postal, and police officials deserve to be classed among the most civil and obliging in the world. One fact, undeniable and universally attested, is that, whereas in Western countries officials of inferior grade, whether railway porters and guards, police constables, or post-office folk, are ready to accept a *douceur* in the great majority of cases, nothing of the kind is known in Japan. Over and over again we have offered money, or seen money offered, to a Japanese railway porter for discharging services that a traveller in England could not hope to obtain without payment, yet in no instance could the man be induced to accept anything. On the other hand, the most trivial inquiry, the slightest application for assistance, usually elicits a cheerful and polite response. There may be, and probably are, excep-

tions to this rule : no rule is without exceptions. But it is well to avoid the injustice of mistaking the exceptions for the rule, and there seems to be some danger of that kind of error on the present occasion. On the whole, however, not much can be gained by general affirmations or contradictions. No description of the experiences of others will convince a man that his own experience is isolated and exceptional. A more useful and essential point is the demeanour of foreigners themselves when travelling in Japan. We are well aware that to discuss such a subject is only too likely to provoke recrimination and indignant protest, yet, as no just estimate can be formed without looking at both sides, we may not close our eyes to the fact that the attitude of the foreigner is not calculated, in many cases, to elicit courteous and helpful treatment. If this assertion surprises any of our readers, we invite him to direct a little practical attention to the subject. He will not see anything in the nature of personal violence: the days when that kind of thing occurred are long past. But if he recalls the demeanour invariably adopted towards railway officials by travellers in England, and if he contrasts his recollection with the demeanour of foreign travellers towards railway officials in Japan, he will soon discover a very marked difference. Not in all cases, of course. Very often the foreigner pursues his way quietly, politely, and in precisely the same manner as though he were journeying at home. But very often, too, he is rough, impatient, and overbearing, treating the Japanese *de haut en bas*, and allowing every obstacle to betray him into exhibitions of angry and imperious remonstrance. An example of this has been furnished even in the letters recently addressed to this journal. One of our correspondents accused the Yokohama railway officials of "absolute insolence" because, on the ground of certain articles of baggage having arrived too late, they had refused to check them. How can the epithet "absolute insolence" be properly applied to such procedure? "Gross mismanagement," "flagrant neglect of duty," or any cognate expression would seem appropriate, but "absolute insolence" introduces us to a new order of ideas, illustrating precisely the demeanour referred to above. A still more striking illustration was furnished in the subsequent course of the correspondence. The Japanese Traffic Manager, in reply to our correspondent's letter, wrote a most civil explanation, in which, after giving an epitome of the statements made by the railway porters and booking clerks with reference to the incident in question, he concluded by saying:—

The authorities are fully aware that in operating a large Railway System such as this, occasions will now and again arise for complaint against the conduct of their employés. The courtesy and kindness of travellers, however, in bringing the circumstances direct to the notice of the management is always duly appreciated, for only by those means can irregularities be promptly seen to and

notice taken of the offending officials, and repetition guarded against.

Certainly nothing could have been more courteous or considerate than this. Yet in the answer it evoked we find the following:—

Finally, and with regret, to the charge of carelessness, insolence, and neglect of duty which I make against your employés, I must add that of conscious, deliberate, and detailed falsehood.

Now as to the point directly under discussion between our correspondent and the Traffic Manager, we venture no opinion, but we do think that such charges are those quoted above, couched in such language, would never have been publicly advanced, under the circumstances, in any Western country. Like begets like. We can not expect the Japanese to treat us with deference and kindness, if our own attitude towards them is harsh, masterful, and supercilious. There may be grounds for an occasional complaint, but general accusations of "studied incivility," such as "Viator," for example, prefers, are diametrically opposed to the facts.

EARL LI.

MR. ARCHIBALD COLQUHOUN'S panegyric on Earl Li, written for the *Saturday Review* and re-produced elsewhere in these columns, seems to exhaust all that can be urged on behalf of that undoubtedly remarkable man. But probably to no part of the world, nor to any section of the human race, may be applied with fuller justice the old saying that the unknown seems always magnificent. Were it possible to analyse the feeling of respect for Chinese statesmen that still survives their interminable blunders, and to probe the sentiment of awe inspired by the multitudinous spectacle of the Chinese people and the vastness of their territory, we should find that the *ignotum* is at the bottom of it all. There is a remnant of mystery about the Chinese. We can not quite fathom their potentialities or gauge their resources, and wherever knowledge fails, imagination steps in to fill the blank with something very like chimeras. Japan, in the late war, supplied an object lesson that should have dispelled many illusions; but somehow as the memory of the war recedes into the past, the phantasy of China's greatness emerges from the obscurity to which it had apparently been relegated for ever, and we are again called upon to worship a statesman whose career was recently supposed to have closed with one of the most gigantic fiascos on historical record. Excuse after excuse may be found for the "Great Viceroy." Mr. COLQUHOUN, indeed, devotes only 7 lines to the task of extenuation, against 314 occupied by the business of eulogy. But others, imbued with a truer sense of proportion, have pleaded for Li that he was the victim of inevitable circumstances, and that, although

his achievements, when submitted to the crucial test of practice, proved absolutely *nil*, he nevertheless made as much out of the elements at his command as could possibly have been made out of Chinese elements under the conditions of his time. That proposition may be true; but, if so, we are compelled to accept the corollary that nothing could have been made out of Chinese elements during the past thirty years; which means that all idea of China's potentialities must be abandoned, and that her place is in the lowest rank of helpless monsters. What other conclusion is tenable? It appears to us that the alternatives are very distinct. Either LI HUNG-CHANG abused his opportunities and failed signally to utilize the resources within his reach, or else China's resources are mythical and her condition is such that no opportunities whatever can be turned to her solid advantage under the Government now ruling. During thirty years, that is to say, from the subjugation of the Taiping rebellion until the outbreak of the war with Japan, the whole responsibility of developing China's military strength may be said to have rested on the shoulders of LI HUNG-CHANG. He was virtually dictator in that matter at all events, and when the nations saw him acquiring a powerful, well-equipped squadron of modern war-ships; building magnificent fortifications and supplying them with the best armaments of the age; organizing armies, drilling them, nominally, on Western lines, and arming them with weapons of precision, the natural conclusion was that, with the instincts of true statesmanship and at the dictates of intelligent patriotism, he had appreciated his country's wants and set himself resolutely to supply them. Yet what happened when Japan raised her hand against this apparently impregnable structure? The whole thing fell to pieces as helplessly as Death went down at the first touch of GARETH'S lance. It may be urged that the ships were not properly found in ammunition; that the soldiers were ill-trained; that the Generals were corrupt and incompetent; that the defence of the fortresses was a mere farce. Perhaps so. But they were Li's fortresses, Li's soldiers, and Li's ships. No failure could have been more signal, and that the failure was due either to Li's errors or to China's hopeless impotence, is an inevitable conclusion. That is the broad fact: details are insignificant. Passing, however, beyond the sphere of material development, it is claimed for Li that he evinced remarkable diplomatic capacity at the supreme moment of his country's difficulties. But history will scarcely endorse that claim. For, in the first place, Russia's interference to keep Japan out of the Liao-tung Peninsula was not Li's contriving. The Northern Power acted solely in its own interests, and if Li failed to appreciate the sinister significance of Russia's preference for Chinese propinquity as compared with

Japanese, his political insight must be singularly defective. Moreover, if upon him rests in any degree the responsibility of having facilitated Russia's meddling with the Shimonoseki Treaty, events will certainly convict him of having contributed, in precisely that degree, to the disintegration that awaits his country, and to the advent of the supreme struggle that the Far East is destined to witness. Thus the ex-Viceroy's record, as we read it, consists of only two chapters: one containing a tale of unvaried failure as a military organizer; the other, an indictment for having brought China perceptibly nearer to the worst danger that menaces her.

ENGLAND AND IRELAND.

It has been customary to contend that the Irish have no genuine basis for the grievances alleged by them against England, and that, in agitating for Home Rule, they are simply playing the part of rebels. Even those that were disposed to admit the existence of grievances at some era in the past, alleged that everything of the kind had been remedied, and that Irishmen being now placed on exactly the same footing as Englishmen, Plans of Campaign, Parnellism, and so forth, deserve no manner of sympathy. But it now appears that Ireland has still a substantial ground of complaint, whatever efforts England has made in modern times to do her justice. "The Royal Commission," says the *Saturday Review* of July 25th, "appointed to inquire into the financial relations of Great Britain and Ireland, published its Report weeks ago. Ten out of the thirteen Commissioners agree that we have taken £2,750,000 a year more from Ireland than Ireland ought to have paid. And this fleecing of England's weak sister has been going on at this rate for something like half a century. According to the finding of a Commission mainly composed of Englishmen, we owe Ireland considerably over £100,000,000 sterling; a sum that, wisely expended on light railways, harbour extensions, and drainage schemes, would go far even now towards making Ireland prosperous. Had this sum been left in Ireland to fructify, it is more than likely that Ireland would never have suffered as she suffered in the early Eighties, and then we should have had Home Rule in a much milder form."

The only thing to be said about this discovery is that, in all probability, the Irish themselves had no idea of it until ten Royal Commissioners stumbled upon the facts. Had any such knowledge been common property, it would have figured long ago in the manifestoes of the agitators. Scarcely less interesting than such a revelation is the attitude of the *Saturday Review* towards it. Here is what that journal says:—

But what is to be done now? The politicians have paid no attention to this Report; it is, in fact, being met with silence—the "Todesschweigen" that allows no whisper to disturb the grave wherein unpleasant things are buried. For our part, as we have already said, we rejoice in this Report; it shows that the cry for Home Rule has not its root in sentiment, but in material grievances, and a rich country like England can easily turn these grievances into gratitude. But will England even now act generously in this matter?—that's the rub. We hope so, and shall press the point in and out of season. This Report has yet another bearing; it explains the existence of the physical-force party in Irish politics, just as the illegal levy of ship-money explained Hampden's revolt. Consequently we hope that the Home Secretary will imitate President Kruger's magnanimity, and set the so-called Dynamite prisoners free; for these men, at any rate, took no lives and shed no blood. Moreover, we want to make friends with the Irish, and that is to be accomplished by giving them what they want, so far as their desires are consistent with higher laws and not what think they ought to want.

Truly the *Saturday* has blossomed out in a new place.

FLOODS AND EARTHQUAKE.

The Kinai (Kei-Han) districts suffered considerable damage to life and property from the last storm. The following details appear in official reports sent from the afflicted districts to the Home Department:—

In Kyoto 10 persons were wounded, mostly owing to the blowing down of houses, of which 21 were reduced to ruins and about 1,100 were more or less severely injured. Five bridges were washed away; embankments were broken in two places, the number of houses flooded aggregated above 1,600, and the damage done to public roads and other works was extensive.

It was in Fukuchiyama, Tamba Province, however, that the gale wrought the greatest havoc. Over 150 houses were washed away by water inundating the streets through breaches in embankments, and some 200 persons were drowned, among whom the corpses of not more than one half have been recovered and identified. In other parts of the Kyoto district, about 35 persons were killed; dwellings, farms, and so forth suffered heavily.

The section of Ise situated at the mouths of the rivers Kiso and Yebi was also much devastated, the calamity being aggravated by huge waves blown landward, so that all the regions along the sea were more or less inundated. Up to the 2nd instant, the reports showed that 30 persons had been killed and 35 wounded. The houses washed away totalled 172, and those wholly or partially wrecked were above 4,000. Ships and boats were sunk or damaged to the extent of 168, while roads, embankments, and arable land suffered extensively. In four villages in northern Ise 8,000 persons are receiving State relief, their houses or furniture having been washed away.

The districts in Aichi Prefecture bordering the sea, as Chita, Kaisai, and so forth, were swept by the storm-driven tide. Eleven persons were killed, 15 were wounded, more than 1,300 houses were either totally or partially destroyed, and 100 others were swept away.

The following returns from Nara and Shiga Prefectures give the effects of the gale there:—

Nara: houses totally destroyed, 193; sheds blown down, 237; houses flooded, 272; houses washed away, 46; persons killed, 44; persons wounded, 6; bridges swept away, 20. Besides the above, roads were demolished in 5 places and embankments breached in 32 localities. The returns from Shiga are: persons killed, 36; persons wounded, 34; buildings entirely or partially destroyed, 2,377. Roads broken up and embankments breached in numerous places. Landships also occurred, burying a number of persons.

A representative of the *Tokyo Shimbun* has learnt from the Home Office Authorities that the number of persons drowned or killed by falling houses and landslides, must aggregate about 1,000. Truly this is a most unfortunate year for Japan.

The Governor of Akita notifies the Home Office that the earthquake that lately visited that prefecture killed 159 persons and totally destroyed 1,562 houses. From despatches received by the *Yiji Shimo* from special correspondents, we gather that the rural town of Rokugo and its vicinity suffered most from the calamity. In the district that comes within the jurisdiction of the Rokugo Police Office, over 110 persons were killed. In the town itself all the buildings, except a dozen or so, where entirely destroyed. The same despatch puts the number of wounded at 412. In another village a piece of ground measuring over 10 acres was suddenly elevated to a height of 20 ft., while another plot of ground subsided to a depth of more than 15 ft.

In Iwate the calamity was fortunately not so severe. The town of Hanamaki suffered most. Fissures were made in several streets and muddy water issued from them, covering the streets for more than 3 ft. Casualties to life seem to have been slight. In this respect and also as to the extent of damage done to property, no accurate account has yet appeared.

In reference to the gale that visited the central portion of Japan, we find that the casual-

ties to life and property were very extensive. In the Kyoto Municipal district the town of Fukuchiyama, as already noticed in these columns, suffered most, the river running close by suddenly breaching its embankments and rushing into the streets before the people could escape to elevated spots. In the town 204 persons were drowned, though the number of houses hurled to the ground by the flood did not exceed 151. In other districts under the control of the Governor of Kyoto 42 deaths have been reported. From Tango no intelligence has yet been received owing to interruption of telegraphic communication, and the extent of the disaster in that province is apprehended to be as serious as in the surrounding districts.

In Hyogo Ken 90 persons were either killed or are missing; while 49 cases of injury have been reported. The embankment of the river Minato was breached for a length of 195 yards and the resulting flood washed away 28 houses, entirely or partially destroyed more than 200 houses, while those flooded exceeded 1,800. In Mukogun and Kawabe-gun embankments were similarly breached and considerable havoc was wrought. The oldest inhabitants do not remember the like of this flood. The extent of the calamity is likely to increase as particulars come in from distant places. In Shiga Prefecture the gale killed 48 persons and wounded 65. It also totally destroyed 2,648 dwelling houses and 1,334 sheds. Damages caused to roads, embankments, etc., are proportionally great.

The Governor of Osaka reports that the calamity caused the death of 21 persons and the wounding of 19, while six are missing. Five cattle were also killed. Houses totally and partially destroyed aggregated 445 and 6,617 respectively. From Fukui, Nagano, and Nara reports have also reached the Home Office, though they tell less fearful tales than come from other districts.

ANOTHER STORM.

The storm that swept over the central part of Japan and Shikoku from the 5th to the 8th inst., was unusually heavy. In several places railway traffic has been suspended and telegraph lines are down everywhere. The districts visited by the storm were Kochi and Tokushima, in Shikoku, and Osaka, Kyoto, Shiga, Gifu, Aichi, Shizuoka, Ishikawa, Toyama, and Yamanashi in the central part of Japan. The storm was especially heavy at Hikone, where in 24 hours the rain gauge recorded a fall of 685 millimetres, that is to say, 3,770 *koku* of water per *tan*. Such a fall is not only very rare in Japan but also in other parts of the world. The storm that visited Tanabe, Wakayama Prefecture, on August 20th, 1889, when the rain gauge recorded 900 millimetres, and another that occurred at Daisen, Hoki Province, three years ago, when 747 millimetres of rain fell, are the only cases in which the rain-fall exceeded that at Hikone since the meteorological observatories were inaugurated in Japan. In consequence of the storm, telegraphic communication between Nagoya and Tsu, between Tsuruga and Kanazawa, as also the Tsuruga-Nagahama line, one of the two lines directly connecting Tokyo and Osaka, Kobe, and Hakodate, are interrupted, and messages for foreign parts are refused at the Yokohama Post Office. The Tokyo-Hiroshima and Tokyo-Kyoto direct lines, the Toyama-Kanazawa, and the Nagahama-Gifu lines have also ceased to operate. In some places, as at Fukui in Echizen, Takasago and its vicinity in Harima, and a few others, telegraphic messages, even when received at the offices, can not be forwarded to their destinations owing to floods.

The following telegrams are to hand this morning:—

Fukui, Sept. 9.

Owing to the incessant rainfall, that has continued since the 4th inst., several embankments were breached, and some houses in the town were flooded five feet above the floor. The telegraph is interrupted. On the 8th inst. the water began to abate, but the rain has not stopped yet.

Niigata, September 9.

The embankments at Kurojo-mura Koshi district being damaged, about 300 houses were flooded.

Nagano, September 9.

Cultivated lands along the banks of the Chikugawa have been flooded.

Takaoka, Sept. 8.

The embankments of the Futatsukamura have been breached for a distance of 120 yards and that of the Yanagase for 60 yards. The town of Takaoka has been inundated.

Utsunomiya, Sept. 9.

The railway bridge over the Kinugawa has been rendered dangerous by the recent heavy rain, and trains have stopped running.

Yokkaichi, Sept. 8.

(Delayed in transmission.)

The Tsuge and Yatomi line of the Kansai Railway is blocked.

Kanazawa, Sept. 9.

The recent heavy rain caused the rivers to overflow and several districts are flooded.

India, like Japan, Siberia, and Northern China, has been suffering severely from floods this summer, great damage being done to railways, roads, crops, and houses. In reference to the storms of this week in Central Japan more news is to hand this morning. The Sangu Railway has been blocked by floods, and at Tsu the sea-wall is considerably damaged. At Gifu the river embankments are again breaking down in several places, and the adjacent lands are flooded. Wires are down in and around this unfortunate town, and now, owing to the sudden stoppage of all means of transport, rice is getting scarce and the general discomfort is thereby considerably increased. A telegram from Nagoya announces that Takama-mura, Nijo-mura, of Higashi Kasugai district, and Kawanaka-mura in the Nishi Kasugai district, are entirely under water, in some places the flood being eight or nine feet above the floors. About 60 houses have been swept away. The railway bridge on the Ryomo line, near Takasaki, has been completely washed away. From Shizuoka comes news that the embankments of the Oigawa have been broken for 300 yards to the west, and 60 yards east of the town have gone. Some railway cars were upset near Tsu, on the 8th inst., and the fireman and driver were injured. Kobe has had a full share of the storm and reports much damage. Many Japanese there are receiving public relief.

TREATMENT OF ANIMALS IN THE ZOOLOGICAL GARDENS AT UYENO.

A correspondent addresses us again on the subject of the inhuman treatment to which animals are subjected in the Uyeno Zoological Gardens. Our readers may remember that, during the course of the past two years, we have more than once referred to this subject, especially with regard to the unhappy elephant. Concerning the latter, our correspondent says:—"The elephant stands from morning till evening with three of his legs closely chained to poles, in such a manner that the poor beast is unable to move at all. Nothing of the sort has ever been witnessed in any zoological garden in the world. It can scarcely be doubted that the donor of the elephant presented a tame animal: no ship would have taken an untamed one on board. Why, then, this unnecessary brutality?" We agree with our correspondent that the elephant must have been tame when it reached the Gardens, but what its condition is now after two years' incessant torture, who shall say? The thing is terrible to think of, but apparently to draw attention to it is mere waste of time. "Farther on," continues our correspondent, "one finds some horses—why they should be there at all I can not say—with their halters fastened in such a way that they can neither raise nor lower their heads. The bears' cages, moreover, are all too small." Evidently the persons charged with the control of the Gardens are quite indifferent about the treatment extended to the animals. It is sad that in a highly civilized city like Tokyo, no influential person can be found to espouse the cause of these tortured animals.

FUNERAL OF MR. A. STEIN.

The mortal remains of Mr. Augustin Stein, late Assistant Manager at the Yokohama office of the Nippon Yusen Kaisha—whose death occurred suddenly on Saturday forenoon—were interred in Yokohama Cemetery on Monday afternoon. The cortege left the house of the deceased at Kanagawa about 2.30 o'clock, reaching the place of interment about two hours later. In the sad procession walked all the heads of the various departments of the N.Y.K., Captains and officers whose vessels happen to be in harbour, many Japanese, and nearly the whole of the German community. The coffin was covered with lovely wreathes, silent witnesses to the high esteem in which the deceased had been held. The Rev. E. Schiller, of Tokyo, conducted the funeral services, and during the proceedings, Mr. R. Suzuki, on behalf of the residents of Kanagawa-machi, delivered a funeral oration in Japanese. It ran somewhat as follows:—Alas, our friend, whom we had all come to love and esteem, has left this world of ours, leaving us plunged in deepest sorrow. Some of us had known him from the day when he first arrived on these shores; other only made his acquaintance after he had joined the Nippon Yusen Kaisha. What his services have been to that company, its officials can but inadequately tell; what he did for Japan, in encouraging her development, in extending to her wise council in the early as well as in the later years of his sojourn here, can also never be fully told. Since he came here, the flag of the company that he served so well has gone forth from Japan to distant countries, so that now Europe and America have both seen it fluttering in the breeze. Much of the success of these distant ventures are due to the untiring zeal and foresight of our late friend. Similarly his heart ever expanded in the cause of charity. Few have been the cases of distress around Otsuna-yama, where he lived, that have not received generous and kindly help from him. He subscribed liberally to the funds raised for the benefit of the soldiers in our late war. He expressed sympathy in many ways for the soldiers' families. His munificence was again seen in his ready subscription to the relief of sufferers by the late seismic disaster in the north-east of Japan. In all verity, he was full of good works, and for these loving traits in a loveable character we esteem him highly. Many are the foreign residents who now live in our midst, but none have won more truly our affection. Difficult, indeed, is the task of administering consolation to the bereaved, and I feel it almost impossible to find the words that would adequately express our deep grief at our friend's untimely decease. I merely offer these few remarks as a token of our gratitude for our friend's great kindness and surpassing benevolence to the people of the land from whence he has gone to his last long home.

THE GALE OF THE 30TH AUGUST.

A correspondent writing from Hiyezan, where many residents of Kobe, Osaka, and Kyoto spend their summer holidays in tents, says:—"The gale on Sunday night made sad havoc in this old mountain. Sugit trees ten feet in circumference were snapped like lead pencils. In the court before the Shaka-do, fourteen immense trees have fallen prostrate. Two of them fell across one corner of the temple and still rest there, illustrating the enormous strength of the framework of the building. Naturally many tents were over-turned, but there was no serious loss or injury to any one in the camp, though some of the trees fell unpleasantly near the tents. The priests say they never heard of such a destructive gale in the past." In addition to the exceptional violence of the storm, we have to note the great area over which its ravages extended. While big trees were being snapped across or torn up by the roots at Hiyezan, near Kyoto, a similar catastrophe was occurring on the plain between Chiusen-ji and Yumoto, where striking evidences of the typhoon's fury are now visible.

KOREAN ITEMS.

Referring to the want of a foreign physician at the Police Head-quarters in Seoul, *The Independent* says:—

Visiting the Police Head-quarters the other day, we saw a butcher who had gotten into a quarrel and during the course of it had received an ugly cut across the side of the neck, and he was in immediate danger of dying from loss of blood. Again, visiting the prison inside the little West Gate, we found a number of criminals who had been caught in the country and before being sent up here to Seoul had been beaten across the legs below the knee until the bones were all fractured and the flesh had been terribly torn. The lack of surgical aid together with the heat had caused the wounds to putrefy and the whole prison was filled with an almost unbearable stench.

With reference to the rebellion in the peninsula, we collect the following items from the last three issues of the above journal:—

Magistrate of Pyeng Yang reports that 500 rebels entered that district and commit outrages among the people and demand money from the Magistrate. He asks for an immediate relief by dispatching troops to that place.

Governor of South Chung-Chong reports that four rebels entered a private house in Jiksan and carried away two bags of rice and \$85 in money. The Government troops captured them and recovered the stolen goods, and also found on their persons the War Office passes indicating that they are on parole. Their crime is greater because they have broken their promise of good behaviour. The Law Department is going to sentence them to be hung. The rebels in Chul-Won carried away \$1,740 of Government revenue. But the people in that district made up \$870, and pray the Government not to make them pay again for the rest, as it is impossible for them to pay the tax twice in a year.

Captain Kim Myeng Whan reports that 400 rebels led by Min Yong Ho and Sung Ik Hyen arrived in Hyo-Yang and Kim-Sung districts and burned the houses and robbed the people in the most outrageous manner. The Captain sent a company of his troops and drove them away, but they are now holding a strong position on the high mountain in Kim-Sung. He asks the War Office to send him reinforcements in order to make an attack on them at this position.

It is evident from all this that tranquillity and good order have by no means been established as yet in Korea.

In its issue of August 25th, *The Independent* has an article from which we extract the following:—

The history of Korea for 1896 will be read by future generations with as much interest as the chapters for the two previous years. A special chapter cannot be omitted in recording the events of this year, in regard to the formation of two political parties in the country. These parties not being organized as in other countries, one who looks from the outside will see no distinctive parties in the Government. But the fact is that there are two strong opposing parties. Their objects and policies are diametrically opposed one to the other, and the party line is pretty tightly drawn between them. The one party is composed of men whose ambition is to return to the old state of affairs that existed before the Japan-China War; and the other is to extend the reformation to different Departments, to diminish the old abuses, to promote friendly intercourse with foreign powers, to increase educational facilities, and to adopt foreign laws and customs as far as expedient. From the complexion of their platforms we might term the former the Conservative and the latter Progressive party.

The strength of each party is hard to estimate from the outside, but we dare to say that the Conservatives are stronger numerically and otherwise. Naturally, most foreigners sympathize with the Progressives, but do not care to show their feelings in such a manner as to be objectionable to the other side.

FORMOSAN NEWS.

A telegram from Head-quarters in Formosa, dated the 20th ultimo, reached the War Department in Tokyo on the 3rd instant. It ran as follows:—

The officer in command of the Kelung garrison having reported by wire that from 150 to 160 insurgents had assembled at Tsu shang, with two field-pieces, Captain Hanazaki was instructed to march against them at the head of two half-

companies. He set out from Kelung on the morning of August 19th, and one half-company of his men was to reach Hwang-tsz-lia, the camp of the rebels, at 7 a.m. that day.

The officer in command of the garrison at Shui-pin-kew reports, under date of the 19th instant at noon, that having received from the natives information of the presence of two rebels, he took steps to arrest them, but one escaped over the river by boat, and the other swam across but was shot on reaching the opposite side. The same officer reports that a party of ten men and women, who were engaged picking tea on the hills at Shwang-chi-kow and Chang-sso-heu, outside Ku-chih-chwang, were suddenly attacked, on the morning of August 16th, by a number of the aborigines, and nine of the tea-pickers were killed, one woman only escaping.

We do not understand why the above telegram should have taken such a long time in transport, or how a body of insurgents can have been found in the neighbourhood of Kelung, as seems to have been the case.

Referring to opium smuggling in Formosa, the *Yomuri Shimbun* says that one of the methods adopted by the smugglers is to place the drug in hermetically sealed kerosene tins, which are then lowered into the water and tied under the ship. Another plan is to pack balls of opium in the middle of cases containing pickled vegetables, which the Customs officials pass unsuspectingly. We fail to see how the former device could serve its purpose, since without the Customs mark the kerosene tins could not be landed.

Fuller intelligence has now almost disposed of the injurious reports originally circulated about Japanese atrocities in Formosa. The stories, as we showed at the time, bore intrinsic evidence of falsehood and exaggeration, but were nevertheless credited without scrutiny and published by a section of the local foreign press, comments of a strong character being added. Examining the evidence lately furnished by English or American correspondents, who write from Formosa, presumably with full access to trustworthy sources of information, we have little difficulty in arriving at the conclusion that, though many innocent people doubtless suffered at the hands of the Japanese soldiery, the indiscriminate violence and wholesale cruelty charged against the Civil and Military Authorities are without foundation. Two explanations offer with reference to the fact that law-abiding inhabitants were involved in the troubles. One is that many of them, despite their own inclinations, were forced by the bandits to become participants in the latter's crimes; the other, that the Japanese were sometimes quite unable to distinguish between peaceful citizens and insurgents. The burning of villages, about which such curiously exaggerated reports were published, seems to have been limited to cases where some of the villagers had sided with the rebels, and, further, retaliation of that kind was evidently on a very small scale. Mr. J. W. Davidson, whose letter to the *Hongkong Daily Press* we reproduce below, thinks that the grant of money made by the Emperor and Empress of Japan and the Treasury—53,000 yen in all—will amply suffice to alleviate any suffering inflicted on peaceful folk during the operations against the insurgents. If that be a correct estimate, the amount of suffering cannot be very large.

Taipeifu, August 15th.

The reports that have been circulating in the north regarding the Mid-Formosa rebellion are as legion as they are contradictory. It is with the hope of gaining a closer insight into the true condition of affairs that I am leaving to-morrow morning for a several weeks' trip through the lately disturbed districts. Unfortunately, there has not been much of an attempt made to get at the facts, the enemies of the Japanese seemingly being satisfied in accepting the Chinese reports as authentic, and the Japanese and their new friends are inclined to stamp the same reports as exaggerated, if not falsehoods without a semblance of truth. That many innocent people have suffered during the trouble is a point upon which they both agree, but whether such suffering could have, as a consequence of war, been prevented or not is where they differ. At all events the affair was not of such seriousness or of such magnitude as one would be led to believe after reading the voluminous reports that have been published during the last

month, the editor of one journal being so far deceived as to express editorially that the whole island was seething with rebellion. It touched the district in which the foreign merchants of Anping have camphor interests, subjecting them to a heavy loss. This has led to a thorough ventilation of the subject, which may be fortunate in the respect that it will lead to a careful investigation.

The insurgents have all fled to the mountains. Those about Tai-ping-ting are supposed not to exceed two or three hundred in number. At present one battalion is garrisoned at Hoolin and another at Lim-ki-po. These troops hold the insurgents in their mountainous strongholds, cutting off all communication with the outside. Tai-ping-ting has the savage territory to the rear and a steep rocky pathway from the plain below is the only entrance. As a stronghold, it is almost impregnable, and, with provisions and ammunition, could be held against a considerable force of invaders for an unlimited time. There are some few small tracts of cultivated land within their enclosure, yet not sufficient to afford the required food. Formerly this clan, who were but a little better than banditti, resorted to Lim-ki-po, the village in the plain below, during times of peace, and retreated to their mountainous resorts upon the approach of danger. Under the Chinese Government it is said that the prefecture of Hoolin, which was originally established at Lim-ki-po, was so often threatened with plunder and attack that it was thought best to remove it to Tau-lak.

Now that the Japanese have garrisoned the village, shutting off the rebels from supplies, the latter have made several attacks upon them. The latest report received from Tai-chung (Taiwanfu) states that on the morning of the 9th inst. the rebels opened a continued fire on the Japanese sentinels stationed at Lim-ki-po; also during the darkness of early morning a few shots were fired at the sentinels at close range, the rebels retreating to the south. It will be the policy of the Japanese to guard these places carefully and to attack the rebels when they are eventually forced to evacuate their strongholds from want of food. Major-General Tatum, Commander of the troops in Formosa, returned to the capital on the 12th, after being satisfied of the thorough routing of the rebels. At an interview I had with him on his arrival I gained some information regarding affairs in the south. The causes of the rebellion he thought were not difficult to account for. The Chinese who started the rebellion no doubt found it easier to live under the Chinese than the Japanese Government. It was a well-known fact that many of the bands who took the lead in the late trouble had never been thoroughly subjugated by the Chinese authorities, and in certain districts it had been the custom to pay tribute to these robber bands. For such classes to come under the laws of any government would be to sacrifice the life of ease they were enabled to live as a result of their raids. The worse part of this was that these banditti often forced the country people to join them in opposing the Japanese. The poor country people, not having the force to resist, were obliged to desert their homes and fields to carry on a conflict with which they had no sympathy. In answer to the report published in the Japanese papers that certain foreigners had supplied the rebels with ammunition, the General informed me that he was unable to account for its origin. In examination of the prisoners it was found that the rifles were either those that had been distributed by or secured from the Chinese troops or had been in the possession of the rebels for a long time. One prisoner claimed that he had received powder from a foreigner, but there was no evidence to support this nor any reason to believe that, if secured from that source, it had not been procured before the arrival of the Japanese, as it was formerly found necessary to protect themselves against the savages. The General expressed his dissatisfaction with the commander of the troops at Hun-lin, who, he thought, deserted his camp when he might have held it until reinforcements arrived. While the rebels were considerable in numbers, they were sparsely provided with weapons, from one-fifth to one-half only of their number possessing fire arms. No doubt the officer referred to, seeing a comparatively great number advancing, over-estimated their strength, and, fearing that his troops might be surrounded and communication cut off, withdrew to a safer district. Of a different metal was the commander of the troops at Nantow, for with only 200 men he held his post against the attack of four times that number of rebels for four days, when reinforcements arrived to release him.

Fighting in the interior is specially difficult, for the irregularity of the ground and the numerous plots of underbrush and jungle, offers an opportunity for guerrilla warfare which could be scarcely equalled.

As to the Chinese report of an engagement, sent by a correspondent from the south, in which it was stated that the Japanese loss was 200, I refer to the records at head-quarters, which gives the total loss up to the present day:—

	Wounded.	Killed.	Total loss.	
Officers	13.....	7.....	20	
Sub-officers	22.....	6.....	28	
Soldiers	114.....	53.....	166	
Gendarmerie officer.....	1	}.....	14.....	24
" Sub-Officers	2			
Gendarmes	7.....	}.....	2.....	9
Policemen	7.....			
Civilians				
Native coolies	2			
Total	168.....	82.....	247	

* Drowned.

The Chinese loss has not been ascertained. Several villages in which the residents had taken part in the rebellion have been burnt. In these districts there were many innocent people who necessarily suffered as a result of the rebellion. With such people Their Majesties the Emperor and Empress of Japan have shown their sympathy by graciously presenting 3,000 yen to be distributed among them, 50,000 yen for the same purpose will follow from the State funds. This amount is more than an abundance, and it is hoped that the Chinese in their ignorance and simplicity will not receive it with the idea that it has been given by the donors through fear and that all that is necessary to receive a similar amount is to rebel again.

A report appeared in the *Kokumin Shimbun* from its Formosa correspondent at Chang-wha under date of 10th July, which was generally copied in the foreign papers, stating that Li Chung Sing (Li-shun-sei), the well-known merchant of the north, was of doubtful loyalty to the Japanese, and even going so far as to state that he had aided the rebellion. To the higher Japanese officials and to the foreigners who are acquainted with this most estimable gentleman, it is unnecessary to state that the whole report is a lie plain and unvarnished. What the petty Japanese who give life to such reports expect to gain by it is difficult to imagine. But at the present time, while the island is slightly disturbed, to circulate such reports is criminal and should be considered as such, for the loss of liberty and even life of the perfectly innocent is endangered by them.

CHINESE NOTES.

The Japanese Authorities are endeavouring to recover and transport to Japan the remains of the two youths executed in Nanking in the autumn of 1894, on a charge of being spies. Application has been made to the Viceroy, and it is expected that His Excellency will give the necessary permission. These ill-fated sufferers were the youths handed over to the Chinese by the United States Consul-General.

Mukden was visited by a heavy gale one night towards the close of July. Despite the great heat prevailing at the time, large hail-stones accompanied the torrents of rain, some of them as big as a man's fist, it is said. Numbers of boats were dashed together and sunk in the river. Among other incidents, the case is reported of a boatman who, after effecting his escape, threw himself again into the river on learning that the fleet of grain-vessels with which he had been serving was lost.

The great volume of water sweeping down the Peiho has burst the mud embankment at the southern end of the Tientsin reach, and poured into the plain, with a result that a large tract of country is under water six feet deep. The damage to farm produce is extensive, but there are hopes that as the millet crop is in a very advanced stage and the stalks exceptionally long, it may be harvested from boats. This accident has seriously impaired the scouring process that was taking place in the river, for the current below the breach has been reduced almost to nothing. A steam tug that attempted to pass the breach with a lighter in tow, was drawn in by suction, and left high and dry among the cabbage fields.

It is rumoured that Earl Li, on his return to China, will be re-instated in all his former positions, including the Viceroyalty of Chihli, and that Viceroy Wang, the present holder of that post, is rapidly losing credit in Peking.

An anti-foreign *émeute* was anticipated on

August 24th in Kien-ning, the town having been placarded with notices fixing that date for burning down missionary property and massacring all foreigners. In point of fact there was only one foreigner there at the time. Telegrams giving intimation of what was pending were received in Foochow on the 15th of August, and due instructions were sent thence to the officials in Kien-ning, the result being that the expected trouble did not occur.

The native preacher of the English Mission in Longong has been arrested and beaten by the official runners there, and four foreign missionaries have left Foochow for the scene of the outrage.

In Shanghai during the last three nights of August gongs were beaten and lanterns were displayed for the benefit of those friendless souls who have met death by drowning in river or sea.

On the 1st of September the journalistic globe-trotters, M.M. Leroy and Papillaud, left Shanghai for Peking, where they intend to issue, in Chinese and English, another number of *En Route*. The *North China Herald* opines that this is a bold undertaking, as it supposes it will be the first foreign paper ever published at the capital of the Middle Kingdom.

A native correspondent writing to the *N.-C. Daily News* from Wuchang, the provincial capital of Hupeh, states as follows:—H.E. Chang Chih-tung is raising a body-guard battalion of 500 men, between the ages of 16 and 30. The new battalion will be drilled and officered like the Tzech'iang Brigade (*Ad Astra*) raised by H.E. last year at Nanking and now quartered at Woosung, and is intended to be the nucleus of a new army corps for Hupeh. There is great reason to believe that a rumour, recently going the rounds of mandarinism, that Viceroy Liu has strongly recommended to the Throne the advisability of placing Viceroy Chang as the former's successor at Nanking, is true. Viceroy Liu desires to retire into private life and he is patriotic enough to wish to see the best man at such an important post.

The military telegraph line connecting Shanghai with the neighbouring cities of Ch'uan-sha and Nanhui (colloquially pronounced Ts'ay-so and Nay-way respectively), erected during the late war with Japan, is being now taken down by the local mandarins acting under instructions from Nanking, and the telegraph operators are ordered back to Shanghai. The telegraph poles, however, will remain under the care of the local garrisons of the three cities.

News received from Kinchou, Manchuria, not far from Shanhaikuan, reports that the Roman Catholic priests have built a church, schools, etc., in that city since the late war. Prior to this there was no Roman Catholic station in that part of the country though further east the converts of that faith number nearly 50,000 souls. An irate mother-in-law of the city, recently hammered her spindle into the bosom of her son's wife, one night, while the latter lay asleep, and to make matters more sure hammered a two inch nail into the top of the skull of her victim. The murderess and her son then absconded, and are now being searched for by the officials.

Despatches received from Peking by the *N.-C. Daily News*, from native sources report that at a meeting of the Grand Council to discuss a memorial of H.E. Li Hung-chang sent from Europe, the Emperor is credited with the remark that H.E. "was the best man, after all, for the important post of Viceroy of Chih and Imperial High Commissioner of the Peiyang Administration, and that Wang Wen-shao, the present incumbent, was more fit to be a Court Minister than a Provincial Viceroy," or words to that effect. Perhaps this may have been "a feeler," at the instigation of the Empress-Dowager, H.E. Li's staunchest supporter, put out by the Emperor to test the temper of his advisers. It is, however, said that His Majesty made the remark in so assertive a manner that not a single Grand Councillor ventured to openly criticise it, or seemed inclined to risk his post by daring to oppose what was well-known to be the pet desire of the powerful Empress-Dowager. If this report be true, then the return of H.E. Li Hung-

chang to his old *yamen* at Tientsin where he has ruled for twenty years will not be long delayed, after he has gone to Peking for an Imperial audience to report upon what he has done and seen in Europe and America. As for H.E. Wang Wen-shao, a place will very likely be given him in the Grand Council, with a probable Assistant Grand Secretaryship.

Says the *China Gazette*—The interior of China is not exactly the place where one would look for pictures by the great masters, yet within a short distance of Shanghai there are three beautiful examples of Munkacsy's genius. These three pictures, all of large size, were presented by the great Polish painter to one of his school-mates, who is now a member of the Jesuit Order. One of the pictures is at Woosieh; another at Sungkiang, and the third at Naiziang in the little Jesuit mission churches at these places.

According to Chinese advices, says the *Mercury*, the post of Minister to the United States, Peru, Spain, and the Brazils will be likely given to Yu Kang, at present Chinese Minister to Japan, but it has not transpired who will succeed the latter.

THE TROUBLES AT MANILA.

With reference to the revolt at Manila, reported on Monday in a press despatch from Tokyo, we find in Canadian exchanges a telegram from London, bearing date of August 21st, that runs:—"An official despatch from Manila announces the discovery in the Philippine Islands of a separatist conspiracy, the object being to secure independence from Spain. According to the official advices, 21 persons have already been arrested in the Philippine Islands, several being Freemasons. The news has caused great excitement in Madrid and the police in consequence to-night raided the Hispano-Philippine Club and seized a large quantity of papers." Commenting on this, a London letter writer says:—The development of the troubles of Spain is followed here with considerable interest. The outbreak in the Philippine Islands is regarded as seriously increasing her difficulties, and the news of the discovery of the conspiracy has caused great excitement in Madrid, where it is stated that the Government is considering the advisability of promptly reinforcing the Spanish garrisons. The outbreak, however, is not a surprise to the Government officials, as news reached them some time ago of considerable activity among the half-breeds. The object of the conspirators is to secure the independence of the Philippine Islands from Spain, and a committee of the refugees at Hongkong is said to have relations with the Cuban insurgents.

The *Shanghai Mercury* publishes the following telegram, that bears date, Hongkong, August 29th, 9.17 a.m.:—"A very serious and great conspiracy has just been discovered at Manila. There have been hundreds arrested on the charge of treason and imprisoned. A Madrid telegram, dated the 22nd of August, and published in the Manila papers, states that the conspiracy was hatched in the Philippines. It has raised unanimous protest throughout Spain and the Government has closed the Hispana-Filipano Club and imprisoned its officials."

The *China Mail* of August 29th says:—"A sensational account has already been published of an attempted revolt amongst the natives of the Philippine Islands, but from extensive inquiries made we are led to believe that the state of affairs has been greatly exaggerated. That some trouble had taken place was quite apparent to those who have recently been in Manila. It has been alleged that the natives and half-castes are once again endeavouring to subvert Spanish authority. Revolutionary Clubs have been formed, and seditious pamphlets are constantly being circulated amongst the natives, and the leaders have been actively engaged bringing the conspiracy to a head. It has been stated that during the past three weeks over three hundred natives have been thrown into prison. It has also been alleged that this is a bogus conspiracy instigated by the priests to draw the attention of the Spanish Government to

what they consider their very dangerous position. The natives are said to be very peaceful, but the priests are so haunted with a terrible dread of the natives, and the fear of a revolt in the near future, that they have without the slightest reason, thrown these natives into prison at Manila, and they hope that by this means the Spanish Government will be compelled in their own interests to considerably increase the strength of the European garrison. The discovery of four hundred stand of arms near Manila has been regarded by the priests of supreme importance for the success of their scheme, and they have represented that these were imported by the natives. As a matter of fact, however, the arms were intended for Mindanao. The third version of the story is perhaps the most remarkable. In 1892 Dr. Rizal, a native, was banished from Manila to Dapitan, near Mindanao, for having published two books in which he strongly condemned the Spanish Government. On the 6th August he was transferred from the fortress at Dapitan to the steamer *Espana* and taken on to Manila, where he was put on board the gunboat *Ovalora*, and afterwards transferred to the cruiser *Castilla*. The priests are said to have circulated stories to the effect that the natives were only waiting for Dr. Rizal to land when the rebellion would take place, and on this report it is supposed the sensational rumours have originated. The opinion has been expressed that the conspiracy was really formed with the object of turning the attention of the Spanish Government from Cuba to the Philippine Islands, as it is alleged the European soldiers are woefully in the minority, it being estimated that of the 13,000 soldiers quartered in the Philippines only 1,500 are of true Spanish blood.

On Monday, August 31st, the *Daily Press* wrote:—"Further particulars are to hand concerning the conspiracy in Manila. They strongly support the idea that the priests are alone responsible for the agitation, their object being, as was stated in our account on Saturday, to prejudice the natives in the eyes of the Spanish Government by spreading absurd fabrications about their increasing restlessness and thereby inducing the Government to send a few regiments of soldiers of true Spanish blood in order to safeguard the priests' authority. More natives have been thrown into prison, and it is also reported that an American named Collins has been apprehended. The *Puensang* arrived from Manila on Saturday morning and reports that as she was about to leave on the 26th August the captain was ordered to remain in the harbour. After waiting for about five hours the Customs officials came on board and arrested two first class passengers who had taken tickets for Hongkong. They were natives of Manila, and the reason given for their arrest was that they had taken an active part in stirring up strife. The vessel was then allowed to proceed on her voyage. It is further reported that the President, Treasurer, and Secretary of an association alleged to have been concerned in the conspiracy have been arrested. There is also a story that some of the leaders are in Hongkong and Japan, and that arms have been sent from Japan to Manila, but of course it is difficult to say whether any reliance can be placed in these reports."

The conspiracy in Manila, says the *Daily Press* of Sept. 2nd, has culminated in a rebellion, and it has been deemed advisable to send the British gunboat *Redpole* in order to protect our interests there in case assistance is necessary. The first news of the outbreak reached Hongkong on Monday night, when Commodore Boyes received a telegram from the British Consul in Manila stating that a serious rebellion had broken out and that there had been a conflict between the rebel forces and Government troops just outside Manila. The Commodore at once concluded that affairs had reached such a climax that it was necessary to send a gunboat to Manila to safeguard British interests, and orders were immediately given for the *Redpole* to proceed without delay. She got up steam and left here at eleven o'clock yesterday morning, and is due in Manila on Thursday

night. The information conveyed in this telegram was certainly of a very serious nature, but yesterday morning another telegram was received which somewhat allayed the alarm occasioned by the British Consul's wire. This second telegram was from the manager of the Manila branch of the Hongkong and Shanghai Banking Corporation and was as follows—"Small rebellion has broken out in Manila. In our opinion is not serious. There is no cause for anxiety." The news of the receipt of this telegram was soon spread about the colony and those who have interests in the Philippine Islands were naturally pleased with its tone. We think more reliance can be placed on the Bank telegram, because it was despatched twelve hours after the British Consul's telegram, which was probably sent during the panic that would be created by the receipt of the first news.

It is exceedingly difficult to form a correct impression of the prospects of the rising in the Philippines, says the *China Mail*. Our inquiries lead to the belief that the Mestizos are the only native or semi-native faction against the Government. As the Mestizos are not so very numerous, it is believed in some quarters that the disturbances will meet with the same fate which has followed all previous attempts to upset Spanish rule in the Philippines. The priestly element, which is generally regarded in the Provinces as a rule—by the natives—as their best, or only, form of government, is reported to be altogether with the Spanish authorities. A new element seems to be now imported into the situation, and that is a wave of sympathy (direct or indirect) with the insurgents in Cuba. It is not credited by those who are in a position to know that the rebels (as they are now called) can have the remotest chance of succeeding against the Spanish troops, unless disaffection among the troops themselves favours the rebellion.

AGRICULTURE IN AMERICA.

The terrible distress that prevails in the agricultural districts of the United States, that is to say, in the West and the South, may be inferred from the fact that many farms which, in past years, brought a substantial income to their owners, can not now find tenants, even at nominal rents, the net profit derived from working them being insufficient to pay the taxes. The growing of wheat in the West is said to be a thing of the past. For example, California, in 1883, exported more than 43 million bushels of wheat, valued at over 50 million dollars, whereas, in 1893, her export was only 18 million bushels valued at less than 9 million dollars. In other words, the quantity exported fell 57 per cent. in 10 years, and the value per bushel depreciated more than 50 per cent. That these appalling statistics are due, in great part, to competition from silver-using countries, as India and Russia, there can be no question.

THE OBSTRUCTIVE PEIHO.

There is promise that Tientsin will soon be as accessible as ever by river. The Peiho behaved very badly this summer, silting up in such a fashion that steamers could not get within many miles of the bund at Tientsin, or were caught and held prisoners by the mud in their attempts to struggle down stream. But now a current of 4½ knots is rushing down, and the volume of water has increased so much that the lead shows 20 feet alongside the *Monacacy*, which was aground a few weeks ago. The bed is scouring rapidly in the upper reaches, and it is expected that steamers will be able very soon to reach the old berths opposite the settlement, provided that the breach in the embankment below be speedily repaired.

M. EDMOND DE GONCOURT.

Not much notice seems to be taken in Japan of the death of Monsieur Edmond de Goncourt, yet the Japanese owe him a great deal for the enthusiasm and appreciation that marked his attitude towards the art of this country. The Goncourt brothers are regarded in France as great novelists, and to them belongs the credit of having taught the world to understand Watteau, and Fragonard, and Chardin. But what especially interests us in this part of the world is that they were the first French collectors, and genuine admirers, of Japanese chromo-xylographs. Monsieur Edmond de Goncourt devoted a whole volume to discussing the excellences of the two Utamaro, and well worthy the Japanese masters are of such appreciation, though Dr. Ernest Hart, whose point of view we totally fail to grasp, declines to accord to either of the Utamaro a place in the gallery of great Japanese artists. It is alleged that Mr. Whistler in London adopted the same attitude at the same time towards Japanese pictorial art as did the MM. de Goncourt in Paris, but we believe that Mr. Whistler was a later convert than the French amateurs. At all events, he never succeeded in arousing among London dilettanti the genuine yet discriminating love of Japanese art that exists in Paris, to which latter city, as a consequence, most of the gems of this country's artists, above all in the line of pictures and prints, have gravitated.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

MR. UKITA AND THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am exceedingly sorry for the notoriety I have obtained in the pages of your paper on account of my religious opinions and consequent unfortunate relation with some of the missionaries in Japan. However, one of the two recent articles on the Doshisha, published in the *Mail* of the 29th August, obliges me to trouble you with this communication in reference to myself, as it is nothing more nor less than a libel on my personal character.

In the first place, a correspondent whose name is not given, but whose sources of information are said by the editor to be exceptional, states that the "prime cause of the difficulty" in the Doshisha is "the growing influence of the Kumamoto men in the College," and "their disposition to make a clan affair of the institution." He speaks emphatically of "downright partisan administration," and of "strong clan feeling, reinforced by chauvinism," which "is blinding the eyes of the Trustees of the Doshisha." Now the term clan-administration is an opprobrious name in this country, so often used by the Opposition party against the present Government, but it is entirely inapplicable to the Doshisha Institution. It is true that the Kumamoto men were engaged in the Institution, both as students and teachers, ever since 1876, two years after Mr. Niishima's return from America. But clanship has nothing to do in the matter. The Kumamoto men in the Doshisha are very few in number, at present only three in the faculty, including the President. Among the trustees, one half of them have always been not Kumamoto men, and in recent years the majority of the active members were not so. Moreover, the Kumamoto men in the Doshisha have no backing from their clansmen at home or abroad on account of their connection with Christianity. Whatever influence they may have in the college, they do not owe it to any cause of clanship whatever. It may be that some of them do not wish to give up the Doshisha to the theological and sectarian influence of the missionaries, but to say that they have a "disposition to make a clan affair of the institution" is a misnomer, if not an injustice.

In the next place, it is alleged that "the Kumamoto men had" not "been willing to refrain from ridicule and attempts to bring their foreign colleagues into contempt." I wish that the correspondent would cite the names of the Kumamoto men who did such an act in the college, and the time when they did so. The lectures of Capt. L. L. James, which offended the missionaries, were delivered not at the instance of the Kumamoto men in the school. In my own case, I have publicly dissented from orthodoxy,

and denied the infallibility of the Bible, which is not essential to the belief in Christianity. If that is contempt and ridicule, I have nothing to say against the statements made by the correspondent except the collective term used in it which is a great injustice to my colleagues in the school.

The whole subject has been thoroughly discussed by President Kozaki in the open letter to the Prudential Committee of the American Board, first published in the *Japan Daily Mail*, August 6th, 1896. He states therein that the missionaries "have urged the Trustees not to allow in our institution, either by our teachers or by temporary lecturers invited from the outside, any expression of opinions which they have judged to be adverse to the interest of Christianity." Again, "more than once they have proposed to put restrictions on the freedom of thought in our institution, while the policy of the Trustees is to extend the sphere of this freedom and quicken the spirit of faith by the positive method rather than by any negative means of restriction. From this course arose the conflict of views, and from it the misunderstanding now existing between us." He states the reasons why the Trustees were not able to grant their request: "firstly, because such a policy, we believe, is against the original purpose of the founder of this institution; secondly, because it would rather injure the influence of Christianity and retard the progress of true religion; and thirdly, because the opinions considered so heretical by the Missionaries are not so in our view."

In the last place, wherein is the libel on my name, the correspondent writes as follows:—"The case was also embarrassed not a little by the fact that Professor Ukita—not Uchita—while a beneficiary of Yale University, and actually in the receipt of considerable pecuniary aid, wrote a critique of the University work, including some disrespectful language of one of the most respected instructors, a man of well-earned European reputation." And what turns out to be the real fact which has any reference to the above misrepresentation may be seen in the following statements which I made while I was in New Haven:—

HIGHER CRITICISM.

A few decades ago Americans regarded such scientists as Spencer, Huxley, Tyndall, as almost angels of the devil. But since Spencer's visit to the States, the late H. W. Beecher, Lyman Abbott, and others are earnestly insisting that the law of evolution is a revelation to this age. Thus those professors who stand in the front of progressive thought and are in danger of losing their positions by opposing new thoughts, have commenced to apply the scientific methods to religious investigation. They say that the Pentateuch was not written by Moses himself; the book of Isaiah was written by two different persons; Daniel is a later composition; these statements are being more and more received. Even an aged professor in Yale seminary—a progressive institution on a conservative foundation—now acknowledges the results of higher criticism in the Old Testament. Only in the case of the four gospels, the centre of critical discussions, he cannot get rid of the old views. When we ask the grounds of his reason, he says there is less difficulty in regarding John as the author of the fourth gospel than in ascribing it to any other person, and that it is extremely necessary to have the testimony of the immediate disciples of Jesus in regard to his life. In my view it is impossible to know who the author of John's gospel was, but it is almost certain it was not written by the immediate disciple of Jesus, John, because the author clearly applies Alexandrian philosophy to the life of Jesus, and regards Christ as "the only-begotten son of God," a phrase not once found in the Old Testament, but found in Plato. There is also a manifest borrowing from Philo in the logos idea. And there is no reason why John should describe himself as the most beloved disciple while humbly concealing his name.

So long as the dogma prevails that the four gospels give the real life of Jesus, and that there is no error in the whole Bible, there will naturally be opposition to the results of higher criticism. But this is limited to common believers who hold to many errors, while in seminaries there is a tendency to apply scientific methods of literary investigation. This tendency is manifest in the fact that in spite of the decision of the Presbyterian assembly against Professor Briggs, the seminary continues to employ him as before.

The whole essay, out of which the above is an extract, was originally published in the *Kokumin-no-Tomo*, and contained some of my criticisms on the American life. Some missionary in the Doshisha, having caused the essay to be translated into English, the Rev. Mr. De Forest sent it to New Haven, where I lived, and published it in the *Morning Journal and Courier*, without my permission and any knowledge on my part. But I was willing to take full responsibility for the opinions I had published, so that I acknowledged my essay and showed it to anybody who asked me, whether it pleased him or not. However, I considered the conduct of the missionaries in regard to my essay as a breach of courtesy and of the social morality recognized in the civilized world. But I have received no discredit from my Professors in Yale University; on the contrary, one of them expressed his high appreciation of my article and gave me great encouragement in my studies while I was there and also after I had come back to this country.

Such being the facts, I do not care what further claim any individual makes against myself with regard to a pledge which I have not given. I have received help from Professor Ladd, who secured for me on his own responsibility the fund from Mr. Harris of New London. I asked Prof. Ladd to act in this case on his own responsibility, and this I did expressly for several reasons, but especially as I did not know Mr. Harris personally and his religious opinions as I knew those of Prof. Ladd.

The question in regard to the Doshisha is not a personal one. It is not "a solitary Professor's freedom of thought and speech" which is involved in the case. The point at issue is whether the Doshisha is to be controlled by the missionaries, who are not the Trustees of the Doshisha, or by the Trustees themselves, according to the constitution of the corporation, as framed by the Trustees while Dr. Niishima lived. The fundamental principles of the Doshisha are as follows:—

I.—This company is established to promote moral and intellectual education in close union.

II.—The name of the company is the Doshisha Company. All schools of the company must have Doshisha as a part of their name, and this constitution applies to them all.

III.—Christianity is the foundation of the moral education promoted by this company.

IV.—The company is located at Kyoto.

V.—The principal of the permanent funds of the company is not to be used under any circumstances.

VI.—The above five articles are unchangeable.

The question hinges entirely on the interpretation of the term "Christianity." Now, the missionaries claim their interpretation to be the true one, while the Trustees have refused to define it in any way so as to narrow its meaning. To accept the claim of the missionaries amounts to a change of the constitution itself, as it would compel the Trustees to refuse any one as teacher in the school whose views are not evangelical. If such were to be the method of administration in the school, the Trustees ought to have forefixed some qualifying term to the word "Christianity" before they fixed the constitution unalterably. Now the Trustees, at the time they fixed the constitution for the Doshisha Schools, knew of the existence of several forms of Christianity, but they deliberately framed the constitution as it is now left. If the missionaries are right, they can make further appeals to the Trustees, the graduates, and the students of the Doshisha. There is nothing wrong in their appealing to public opinion here and abroad. But to try to defame their former colleagues in the Doshisha, and to instigate the movement against them, by using such opprobriums as "down-right partisan administration," "strong clan feeling," &c., is morally wrong. To try to destroy the reputation of a single Professor by means of insinuations and evil reportings through various irresponsible channels, is mean and cowardly. If the missionaries have not resorted to such a method, the correspondent—if he is not himself a missionary—could not have written in such a way as he did to the editor of the *Japan Mail*. If he is a missionary himself, I should say that his conduct is unworthy of his high calling as a moral and religious teacher. But if he means to indulge in *odium theologicum*, let him indulge in it to any amount to his soul's satisfaction. Only we would not care to notice him, so long as his name is withheld from the public. However, as the Editor did introduce him as being exceptional in his sources of information, I beg of you to publish this letter.

I am, Sir, yours most truly,

K. UKITA.

The Doshisha College, September 2nd, 1896.

THE DISCOURTESY OF JAPANESE OFFICIALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There has been a discussion going on in the columns of your paper concerning railway mismanagement, a discussion into which it is, however, not my intention to enter. But there is one point in the letter of "Viator" to which I should like to draw the attention of "unbiased spectators"; that is the alleged discourtesy of Japanese officials, for which, as is farther alleged, most of us would use a stronger term; the "strongly marked," "studied incivility" of those officials and the "disgraceful impunity" with which these traits (together with others which do not concern us here) "flourish."

Now my opinion is, that every truly "unbiased spectator" must have been amazed at the gross injustice which is done by the above indiscriminate accusations to the officials of this country. My own experience in a nine years' residence here has

invariably been that the civility of these officials, whether they belong to the railway, the post, the police, or any other service, and their zealous readiness to oblige foreigners as much as it is in their power, are deserving of the highest praise, and I have no doubt that my experience is very far from standing alone. I have still to hear of a country which surpasses Japan in this respect, although I know of not a few where the reverse of that obliging disposition of officials is most notorious. Of course, it cannot be expected that no exceptions whatever should be met with even among Japanese officials, but these exceptions, few as they are and at the same time certainly the more conspicuous and objectionable by their very rarity, ought to be treated as such and not be given to the public in Japan and the world at large for the rule.

I am, Sir, yours faithfully,

ET CETERA.

September 2nd, 1896.

SIR,—I have travelled on the various Railways in Japan since the first one was opened in 1872, and I do not recall a single instance of incivility or want of attention. On the contrary, I have found the officials uniformly polite and attentive, to the wants of foreigners especially. I can recall several cases in my own experience in which they were especially considerate of the comfort and convenience of the passengers. In this statement I would especially include the officials at Yokohama. I fully endorse your Editorial and the statement of a correspondent in this day's issue.

Yours truly,

H.

Yokohama, September 8th, 1896.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have much pleasure in confirming the remarks made by "Et cetera" in your issue of yesterday, and as my experience in Japan dates from "pre-Railway" days I have probably more right to offer an opinion on the subject of Japanese officials than your very irate correspondent "Viator." I could if necessary give many instances in which officials went out of their way to oblige, the last and not the least on a very recent railway journey, but such writers as "Viator" do not deserve so much attention.

You certainly point out a good cause for incivility on the part of the Japanese in referring to the demeanour of Foreigners (in your yesterday's leader). It is sometimes positively annoying to watch and have to listen to one's fellow travellers. Not long since I heard the officials at one of the Tokaido stations informed that their refusal to put on another carriage was a "brutal outrage which should be made public!"

Yours faithfully,

OLD RESIDENT.

Yokohama, 9th September, 1896.

ENGLAND AND AMERICA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is unfortunately true that there is in the United States a good deal of antipathy toward England, though it is dying out among educated people. I think the causes of it are as follows:—

1.—The remnant of the ill-feeling aroused by the war of the revolution and of 1812. This has probably, as you suggest in your editorial of Sept. 1st, been stimulated and kept alive by the school histories. It is of course very silly that two men should hate one another because their great grandfathers quarreled, whichever great grandfather was in the wrong; but such is human nature in its present stage of enlightenment.

2.—The attitude and conduct of the English Government and the English press generally during our civil war. We were disappointed and hurt at finding England, after preaching to us so long about the iniquity of slavery, giving it her sympathy and support.

3.—The influence of the Irish in the United States. This, I believe, is less than is commonly supposed in England. It is exerted most upon the politicians and editors, and even their expressions are often mere pretence. It is not great in the people generally.

4.—The superciliousness of Englishmen, of which you speak in your editorial. This has the same effect upon the continent of Europe, as I have been told by natives of various European countries.

5.—The course of the protectionist and free-silver politicians and newspapers in the United States during the last ten or fifteen years, who, after the manner of their kind, have not scrupled to do the devil's work of preaching hatred and ill-will against England for the sake of making political capital. The world is not yet so civilized but that in every country such appeals to cheap patriotism

are taking with the masses. But a higher and better patriotism is happily beginning to grow everywhere.

There is probably no cure for these foolish and wicked national antipathies but time and the slow progress of civilization, and these are doing their work. If there are any two peoples in the world who ought to be friends, they are the Americans and the English. And I and thousands of my countrymen hope and believe that the time is not far off when they will be. If an international treaty of arbitration can be made, it will do much to bring about that result.

Very truly yours,
Sept. 4th, 1896.

AMERICAN.

THE U.S. PRESIDENTIAL CAMPAIGN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Now that the Gold Democrats have put up candidates for President and Vice-President of the United States, it is quite likely that nominations are closed, and no more candidates will enter the field. It may not, therefore, be out of place to gather up a little gossip of the present campaign, which promises to be very interesting, exciting, and uncertain. The following are the tickets in the field:—

REPUBLICAN.

McKinley, of Ohio, and Hobart, of New Jersey.

DEMOCRATIC.

Bryan, of Nebraska, and Sewall, of Maine.

POPULIST.

Bryan, of Nebraska, and Watson, of Georgia.

PROHIBITION.

Levering, of Maryland, and Johnson, of Illinois.

NATIONALIST.

Bentley, of Nebraska, and Southgate, of North Carolina.

GOLD DEMOCRATIC.

Palmer, of Illinois.

SOCIALIST AND LABOUR.

Matchett, of New York, and McGuire, of New Jersey.

The vote of the Socialist Labour Party in 1892 was only 22,613, and will probably be so insignificant again this year as not to effect in the least the final result. And yet it is the only party which takes a candidate (Matchett, of Brooklyn) from the Empire State. It is, moreover, rather a singular coincidence that the Socialist candidate for Vice-President hails from the same place (Paterson), as the Republican candidate for that office.

It is an interesting fact that three parties (Republican, Democratic, and Prohibition) split and suffered bolts on account of the currency question, which has thus become the principal issue of the campaign. The Nationalist party is an offshoot of the Prohibition party; calls itself "the broad-gauge wing," and includes in its long and broad platform free coinage of silver. The Prohibition Party platform is "narrow-gauge," demanding only the legal prohibition of the liquor traffic, but Levering is a gold man.

While Paterson, New Jersey, is the home of two candidates for Vice-President, it remains for Lincoln, Nebraska, to have the honour of furnishing two candidates (Bryan and Bentley) for the Presidency. And, while the Prohibition Party has twice before taken a Presidential candidate (St. John, of Kansas, in 1884, and Bidwell, of California, from States west of the Mississippi, in 1892) the Republican party has never, and the Democratic party has for the first time this year, taken its candidate for President from that district. The Populist Party took Weaver, of Iowa, as its candidate for President in 1892.

It was quite appropriate for the two wings of the cold water party to take their Presidential candidates (Levering and Bentley) from the ranks of the Baptists, and also for one wing to take its Vice-Presidential candidate (Johnson) from the Baptist "Christian Church." Senator Palmer, of Illinois, is also a Baptist, and Bryan is the son of Baptist parents, but is himself a Presbyterian, as is also Hobart, while McKinley is a Methodist. It is a matter of congratulation, therefore, that the leading candidates are all earnest Christian men. Bentley, by the way, is a minister.

Bryan and Palmer, the two Democrats, represent the extremes in age. While Bryan was a mere child in Salem, Ill., Palmer was the "War Governor" of that State, and then a Republican. He became disgusted with the Republican Party during Grant's administration, and, supporting Greeley in 1872, after that affiliated with the Democrats, by whom he was in time elected to the U.S. Senate. John M. Palmer and Lyman Trumbull, of Illinois, and James R. Doolittle, of Wis-

consin, were intimately associated with Lincoln, but later became Democrats.

Mention of Lincoln is a reminder of the following curious paragraph from an American paper:—

Bryan's election is called for next November for much the same causes as led up to Abraham Lincoln's election. Epoch-making events occur in cycles. The coincidences are striking. Lincoln's mother came from Kentucky; so also did Bryan's mother. Lincoln lived in Salem, Ill.; so did Bryan. Lincoln was nominated in Chicago, and unexpectedly; so was Bryan. Then as now the issues were momentous, and then as now a westerner was selected by the convention. Like Lincoln, Bryan has boldly taken a stand in defence of principles which at the most may only be deferred—never destroyed. Could I whisper in Bryan's ear I would say:—Be like Lincoln and go forth preaching the newer emancipation untrammelled.

At first sight, indeed, it would look as if Bryan is sure of election, because he is on both the Democratic and Populist tickets, and, to offset the defection of Gold Democrats he will gain the Silver Republicans. It is true, that, except the Nationalists (Silver Prohibitionists), all the "silver men" of the country are united in support of Bryan; while the "gold men" are divided between McKinley and Palmer. And, although the Democrats and Populists put up separate candidates for Vice-President, it is quiet likely that, in most States, they will be able to agree on some plan of fusion on the electoral ticket, so that the vote of the "silverites" will be divided on Vice-President only, and be plumped for Bryan for President. (In some Southern states, however, the Populists, strange to say, will be found in fusion with the Republicans.) In 1892 the popular vote for President was as follows: Democratic—5,556,562; Republican—5,162,874; Populist—1,055,424; Prohibition—264,066; Socialist—22,613; Scattering—4,664. The electoral vote the same year was as follows:—Democratic, 277; Republican, 145; Populist, 22. These figures also, if we estimate the defection of the "silverites" from the Republicans as about the same as the defection of the "goldites" from the Democrats, would indicate a sweeping victory for Bryan.

But the hope of the goldites is this: that, in many States, nominally Democratic, Palmer will draw off enough votes from Bryan to give a majority to McKinley. This is likely to happen in New York, New Jersey, Maryland, Delaware, Indiana, Kentucky, Tennessee, and possibly other Southern states. Many Gold Democrats cannot bring themselves to support actively a high-tariff man like McKinley, whose policy of "protection" they have fought so bitterly; but they can conscientiously vote for Palmer, even if, by so doing, they indirectly aid McKinley's election.

The fact of the matter is, that party lines are being tremendously broken up in this campaign, so that estimates and prophecies are not worth much. One estimate of an independent paper gives as sure for silver 171 electoral votes, coming from most of the States either south of the Mason and Dixon's line, or west of the Mississippi; as sure for gold 190 electoral votes, coming from most of the states, either north of Mason and Dixon's line or east of the Mississippi; and as "doubtful" 86 votes, coming from Illinois, Indiana, Iowa, Kentucky, North Dakota, Tennessee, and West Virginia. Total, 447; necessary for a choice, 224. But, with two tickets to divide the Democratic vote in Illinois, Indiana, and Iowa, those three States are pretty sure to give majorities for McKinley. On the other hand, with two tickets to divide the gold vote in Connecticut, Delaware, Michigan, Minnesota, New Jersey, South Dakota, and Wisconsin, some of those states are quite likely to give their electoral votes to Bryan.

It can, therefore, be readily seen that the political situation is decidedly "mixed," and that the outcome is uncertain. It is quite possible that no candidate will receive a majority of the electoral votes; and that the election will thus be thrown into the present House of Representatives. This contains about 250 Republicans, 100 Democrats, 6 Populists, and 1 Independent Silverite. These figures would seem to assure the election of McKinley, if it were not that silver Republicans are very numerous in the House and are bitterly opposed to the Ohio man. His chances would evidently be the best, but *dōmo wakarimasen*.

UNCAS.

Sept. 7, 1896.

A CORRECTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The paragraph in your last "Summary of the Religious Press," translating from the *Shukyo* items relative to reduced appropriations for the Unitarian work in Japan and to a change in the organization of Senshiu Gakuin is, between the writer and the translator of the items, so wholly

misleading, that I am compelled to ask permission to correct it.

The facts are simply that the American Unitarian Association, like all religious and philanthropic societies in the United States, has been obliged to economize under the stress of "hard times," but it has made its reduction for the Japan work in accordance with the judgment of its representative in Japan. The "three opinions worthy of note" expressed at a meeting of Unitarians held in Boston, last spring were not (1) publicly expressed, and not (2) expressed in the form given in the "Summary," and, indeed for the most important part, (3) were not expressed at all. Moreover "the main reason for the action in reference to Japan, the interest of the American Unitarians in their Indian missions and the consequent increased expenditure on these missions," is no reason at all, just for the fact that the American Unitarians have no missions in India.

The Senshiu Gakuin is being reorganized largely in the direction of Unitarian extension work, with Mr. Onishi as Dean, and Mr. Kishimoto as Secretary. Increased usefulness is looked for as the result of the changes made. The number of courses of lectures, a larger number of lecturers, and a more thorough treatment than ever of the topics taught in this important institution, are in purpose. While the Senshiu Gakuin is in no sense of the words a sectarian or proselytizing establishment, it is supported by the money of Unitarians, and it has the care and counsel of the representative in Japan of the American Unitarian Association.

Yours truly,

C. MACC.

Tokyo, September 5th, 1896.

INCIVILITY—JAPANESE AND FOREIGN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In view of the recent discussion about the rudeness of some railway officials and clerks, but without the desire of reflecting in the least upon the particular individuals who were the victims of that incivility, I beg leave to offer the following resolutions upon the subject in general:—

Whereas, the Japanese are naturally, by virtue of the long training of heredity, a very polite and courteous and kind people; and

Whereas, there is abundant testimony that this was for centuries a characteristic trait of this nation; and

Whereas, since the opening of the country to Western civilization, this charming trait has been gradually spoiled by contact with rude "barbarians" of the Occident; therefore, be it

Resolved, That we, as fair-minded and Christian men, hereby express our sorrow over the decadence of the unvarying courtesy and gentleness of the Japanese; our contempt for the arrogance and insolence of so many Occidentals; our sympathy with the Japanese in the many trying positions in which they have, and are being, placed; our congratulations upon their long-suffering and forbearance; our regret that their nature, being human like our own, is not always able to endure the tests of patience; and our hope that all rude Westerners will "pack up their tents like the Arabs and silently steal away" from Japan.

Yours most humbly,

A FOREIGN RESIDENT.

Tokyo, Sept. 7, 1896.

BRETT & COMPANY, LIMITED.

The eighth half-yearly meeting of shareholders in Messrs. Brett and Company, Limited, was held at the offices of the Company, No. 63, Main Street, on Tuesday afternoon. There were present Mr. J. H. Boag, Managing Director, in the chair; Messrs. G. Blundell, H. MacArthur, A. T. Watson, C. E. Miller, F. W. Thomas, Manager, and Mr. J. R. Best, acting as secretary.

The CHAIRMAN waited half-an-hour for the benefit of late-coming shareholders, and then asked

The SECRETARY to read the notice calling the meeting. This being done the minutes of the last general meeting of Saturday, March 14th, were read and confirmed.

The CHAIRMAN then moved from the chair that the report and accounts of the Managing Director be taken as read, they having been in the hands of shareholders for the past seven days. He then said that he would like to make a few remarks on the business of the Company. At that time last year, the Company stood indebted to the Bank to an amount of \$11,000. When he took the position of Managing Director he made it a rule, and proposed to the Manager of the National Bank of China that all the daily takings should be deposited with the Bank on the following day. In this way he hoped to gradually reduce their overdraft with the Na-

tional Bank. The Manager of the Bank agreed to this proposal and the overdraft was distinctly and almost daily reduced. This went along until October. Now up to this time Mr. Thomas had had the whole management and working of the business upon his hands, but we did not feel that we could send to England for an assistant for him. We heard that Messrs. Watson and Co., of Hongkong had at their disposal an assistant who was occasionally lent to the coast ports, so we asked the Bank Manager, who was a friend of Mr. Humphreys, the managing director of Messrs. Watson and Co., of Hongkong, if he would telegraph to Hongkong to see if he could get this assistant for us. He agreed to telegraph to Hongkong. In a little while a wire came back that the assistant was at our disposal, "terms later on." A few days before the arrival of this gentleman in Yokohama, I was asked by the Manager of the Bank to go and call on him as he had something to announce to me. When I went to the bank he showed me a letter from Mr. Playfair, the contents of which greatly surprised and startled me. I asked that I should acquaint the Advisory Committee of the contents of the letter, and withdrew. On the following Sunday Mr. Nobbs arrived and was met by myself and Mr. Blundell. Nothing was then said as to why he had come here, but when I asked him if he had received my chit informing him of the arrangement I had made for his accommodation at the Club Hotel, he very pleasantly gave me to understand that he had been sent up by the Bank, and that he was to receive his instructions from the Bank. This of course surprised us and placed his arrival here in a different aspect. I went to the Bank about the matter and learnt that Mr. Nobbs had not come up here as an assistant for the Company, and that unless we paid up our overdraft the Bank would put us into liquidation. We said that we could not agree to that, and then it was positively stated that unless the overdraft was cleared up, the Bank must put us into liquidation. The Bank therefore had sent up Mr. Nobbs really to take stock. They said that his charge would be \$10 a day and expenses. This charge we said was much too high. The Bank Manager, in demanding the paying up of the overdraft, had put us into a serious position. But your Advisory Committee by their own personal efforts raised a sufficient sum, on debentures, to pay off the Bank's overdraft and thus wiped out our debt. The Bank then instituted legal proceedings to recover the price of Mr. Nobbs' hire, legal expenses, etc. We determined to fight the action and things went on until the 31st July last, when orders came out from home instructing the Bank to withdraw from all proceedings in the action. Thus we have now no overdraft, and now no legal proceedings hanging over us. The balance-sheet now presented to you is a true transcript from the books. You will see that we state our profits on sales to have been \$15,913.69, and on adulated waters \$1,698.19. I should like to state that this profit is in part due to the under-estimating of our stock in hand last December. We took the stock at that time on the estimates of Messrs. Nobbs and Brower, as we were anxious to put it down to the lowest possible figure, but the estimate was a little too low, I think. Otherwise the accounts are correct. The Chairman then eulogised the Advisory Committee for the manner in which they had given their services on behalf of the Company, and particularly in the matter of raising the money for the debentures. He also paid a high tribute to Mr. Thomas, the Manager, for the manner in which he had worked during the past year. With these remarks he proposed that the accounts be passed.

Mr. WATSON said he would like to ask one question.

The CHAIRMAN said the proposition from the Chair had not yet been seconded.

Mr. BLUNDELL—I will second the adoption of the accounts.

Mr. WATSON—Now I should like to ask, if I am in order, what have been the gross returns—the profits have been given in the accounts—from the 30th June, 1885, to June 30th, 1896. I would then have a better idea of the working of the Company.

The CHAIRMAN—Surely, Mr. Watson, you have not so completely changed your opinions since last year? When I put that question last year, you objected to the Press being present when it was answered. Surely you do not forget that?

Mr. WATSON—I remember it, but the question need not be answered, or it can be answered just as you please. I got into very hot water over the matter last year for attempting to keep the matter private, and because I fought against the matter being made public. I only want to understand how the business is proceeding, and if you answer the question I should be in a better position to judge of our prosperity.

The CHAIRMAN—I don't think it would be in the interests of the Company to answer the question.

Mr. MACARTHUR—I think that on the occasion to which Mr. Watson refers, there was other matter, and not really trade secrets, that was attempted to be obtained. At that time we had a very serious deficit and we were anxious to discover how it had been brought about. It was about that that Messrs. Watson and Ure joined together to prevent the matter from reaching the public.

Mr. THOMAS, as Manager of the Company, thought it unadvisable to make such a matter public. They were not ashamed of their position or as to the amount of their returns, but some of the public when they saw a drug company making more than 10 per cent. were apt to compare it with similar businesses and thereupon took their custom elsewhere.

The matter then dropped, and there being no other questions, the accounts were adopted unanimously.

Mr. BLUNDELL, on behalf of the Advisory Committee, wished to say a few words. Mr. Curtis and himself, just before the former left for England, thoroughly examined the state of affairs and both were thoroughly agreed that the bulk of their present prosperity was due to Mr. Boag, their Managing Director. Mr. Thomas had certainly worked very hard, but it was owing to the foresight and energy of the Managing Director that the Company was where it was that day. He moved a hearty vote of thanks to him.

Mr. WATSON—After the remarks that have fallen from Mr. Blundell, it gives me very great pleasure to second the proposition that a hearty vote of thanks be accorded Mr. Boag and Mr. Thomas, for the work they have done for Messrs. Brett & Company.—(Hear, hear.)

Mr. BLUNDELL—A substantial vote I should have said.

The proposition was carried.

Mr. WATSON then moved that some extra remuneration be voted Mr. Thomas for the hard work he had accomplished during the year. He suggested that the Chairman, being the best man acquainted with the financial position of the Company, should fix the amount.

The CHAIRMAN quite agreed with Mr. Watson's proposal. He also thought that the Advisory Committee's labours should not be forgotten.

Mr. MACARTHUR said that if Mr. Watson included the Advisory Committee in his motion he would gladly second it.

Mr. WATSON—Most certainly the Advisory Committee's labours should be recognised.

Mr. MACARTHUR said that he had some knowledge of accounts and also of the drug business; he therefore could appreciate the labours of their Advisory Committee. They had pulled them out of the mud in which the Company was floundering, and not only by their technical knowledge, but also through their personal influence had saved the company from the clutches of the bank, and instead of putting their hands into their pockets to pay off debit balances, they were now putting out their hands to receive dividend warrants.

The CHAIRMAN asked if the proposer of the resolution would name the sum to be voted.

Mr. MACARTHUR—We must of course cut our garment according to our cloth.

The CHAIRMAN threw out a suggestion. He had not recommended any dividend in his report, but he knew many people thought that it would be prudent to declare a dividend of 5 per cent. They had a sum of \$1,700 odd to their credit now: suppose they took \$1,100 for dividend—then they would have an idea of the cloth they could cut.

Mr. WATSON then moved that the sum of \$500 be voted as a honorarium to their Manager and the Advisory Committee: \$200 to be voted to the Manager, and \$300 to be divided among the Advisory Committee and the Managing Director.

Mr. MACARTHUR seconded. This vote was merely to mark the shareholders appreciation of their service, and did not represent the value at which they estimated them. If the Company were more flourishing then the sum would have been very much larger.—Carried.

The CHAIRMAN returned thanks for the handsome way in which the Company had recognised their services.

Mr. MACARTHUR moved that a dividend of 5 per cent. be paid from the available assets on the 30th June, 1896, and that it be paid forthwith.

Mr. BLUNDELL seconded.—Carried.

Mr. THOMAS then returned thanks for the unexpected manner in which the shareholders had rewarded his exertions. He hoped to do even better in the future.—(Hear, hear.)

Mr. MACARTHUR inquired if the Chairman knew at what rate the Company's shares were

selling in the market. There had recently been some controversy in the papers about it.

The CHAIRMAN—Putting aside all newspaper reference, I can inform you that 60 shares of the Company changed hands at \$8.50 each on Saturday.

Mr. MACARTHUR—Then we are not bankrupt yet!

The CHAIRMAN—The transaction was *bona fide*. Mr. MACARTHUR—Messrs. Bisset and Ure may take note.—(Laughter.)

The CHAIRMAN said that Mr. Curtis had left for England recently for a short visit home, but his place on the Advisory Committee had not been filled. He thought that Mr. Curtis would like to resume the position upon his return.

Mr. MACARTHUR—Certainly. If necessary you could call in another shareholder should you want advice.

Mr. BLUNDELL—The path is fairly smooth now. A vote of thanks to the Chair closed the proceedings.

REPORT.

The statement of Assets and Liabilities, also Profit and Loss Account, for the year ending 30th June, 1896, accompany this Report.

Business for the year under review will be seen from accompanying accounts to have been highly satisfactory.

The indebtedness of the company has been reduced by a sum of \$4,271.05, and now only consists of 130 debentures—\$13,000.

There has been written off:—

Goodwill	\$1,500 00
Furniture and Fixtures	895.96
Aerated Water Plant and Fixtures	243.59
Old Debts Irrecoverable	942.58

In all

Stock has been thoroughly and carefully taken and now only represents actual cost value.

JNO. H. BOAG, Managing Director.

Yokohama, August 31st, 1896.

E. & O. E.

I certify that I have examined the foregoing accounts and compared them with the Books and Vouchers of the Company and find them to be correct.

PARRY A. ANGIER, Auditor.

Yokohama, August 30th, 1896.

AUSTRALIA AND JAPAN.

BY JOHN PLUMMER, M.J.S.

Sydney, July 30th.

In the Queensland and South Australian Parliaments, the question of Asiatic immigration is being somewhat warmly discussed. In the Queensland Legislative Assembly, Mr. Browne, a labour member, moved that in the opinion of the House, the continued immigration of coloured aliens was detrimental to the best interests of, and a menace to, the white inhabitants of Queensland; that the Government should without delay take steps to restrict such immigration; and that if fresh legislation was necessary to effect this object, such legislation should at once be introduced by the Government. Mr. Browne said that the best plan to prevent the influx of coloured races would be to tax their employers. The Premiers of the various colonies had recognised the necessity of federal action on this matter, but nothing had yet been done. Mr. Byrnes, a member of the Queensland Ministry, in reply, said that the conflict between Eastern and Western nations had been going on for years, and the question could not be dealt with in the way suggested by Mr. Browne. The question was whether the facts warranted the drastic steps advocated by those opposed to coloured labour. He thought we were too much inclined to over-rate the dangers from Japanese immigration. The Japanese had their hands too full at home to permit of any emigration to Australia. Referring to the Chinese, he said that all the countries of Europe were striving for the trade of China. He predicted that the whole Chinese population would yet be required to develop that vast country. The way to overcome the difficulty was to settle a large European population in the colonies. The question must be treated in a conciliatory way. In this matter we were not our own masters. Diplomacy was required, as other Powers besides Great Britain were concerned. Ultimately, the discussion was interrupted by the taking of Government business, but it will be renewed in some form or other at an early date.

In the South Australian Legislative Assembly, Mr. Griffiths, a Labour member, on an informal motion for the adjournment, pressed the Government for their policy in respect of the Japanese Treaty and the influx of alien labour, calling attention to the fact that 100 Japanese labourers were being landed in Queensland, Mr. Griffiths was followed by another labour member, Mr. Homburg, who asked for legislation shutting out both Japanese and their goods. The South Australian Premier, in reply, said that all Australia knew that his Government was against the Japanese Treaty and the influx of coloured races. He further informed the House that the details of a bill as to which there was federal agreement were now being discussed, and that the measure to restrict immigration would be introduced as soon as practicable.

Commenting on the discussions in the Queensland Parliament, the *Brisbane Courier* says:—"Queensland is virtually unanimous in its determination to take all possible measures to prevent the permanent settlement of coloured populations to whom European civilisation in all its range of privilege and responsibility is at present an impossibility. There is no political difference or quarrel about that. The duty of this generation of enfranchised Queenslanders is to preserve the country for a nation of English speech and European civilisation, and there is no proof or sign that the duty will be neglected. Coloured aliens who have to be seriously reckoned with in this colony are either Polynesians, Chinese, or Japanese. Any others are here in only insignificant number. . . . As to the Japanese, it may be admitted, we touch the most serious phase of alien immigration: serious for more reasons than one. We do not want to see an Eastern race settled permanently on our territory, and least of all the Japanese. They are in many respects a fine and promising people; it is impossible not to admire the progress exhibited in their recent history; it is difficult to avoid the conviction that they are insuring for themselves a great destiny. But their ways are not our ways, and their thoughts are not

our thoughts. Their presence amongst us in large numbers and as permanent settlers would set up on our soil the everlasting conflict between the Western and Eastern civilisations. The races would continue separate, and would certainly have their deadly quarrels in the course of time. The Japanese are ambitious, high-spirited, brave, and intelligent, and would not accept the position of an inferior people; while their frugal habits and limited wants, the heritage of centuries of life under the pressure of extreme conditions, would give them enormous advantage in the competitions of industry. In our future commerce we may yet develop an important exchange of commodities with the Japanese; it is conceivable that we and they may yet enter into defensive alliance against Russia or China, or both combined; but we trust that the Japanese in considerable numbers will never be a welcome or even tolerated permanent resident in Australia. So far, the only colony this enterprising person has entered to work in is Queensland. Tropical agriculture is now attracting him here. He comes as a humble servant under contract. But we allow that this is the thin end of a dangerous wedge. The Registrar-General estimated that the number of Asiatics other than Chinese, and such Asiatics would be mostly Japanese, in Queensland at the end of 1894 was 2,139. There is no terror in that total. Even if the whole of the 2,139 were Japanese they would only amount to about half a Japanese to every hundred of Europeans. "All Asiatic races combined only number some four per cent. of the entire population," reported the Registrar-General; thus it is evident that there is at present at least, but little occasion for any alarm that their influx will damage the interest of Queensland. Since 1893 the proportion of Chinese has fallen 0.07 per cent; whilst Polynesians and other Asiatic races have increased 0.10 and 0.06 respectively, the latter due to the arrival of Japanese on the pearl-shelling grounds of Torres Straits. The population of Japan although but a tithe of that of China, is of sufficient magnitude to invest the question of their arrival in increasing numbers with a significance which cannot attach to arrivals of the Polynesian race." It would be well if all the movements of the Japanese in Queensland during the last eighteen months could be ascertained with approximate accuracy and published. Let us know the facts. The vague generalities which were uttered in the Assembly may cause disquiet, but what is required is information as to the location of these people now in the colony and their employment. Are the sugar-planters encouraging this undesirable form of immigration? Is it possible for the Government to influence the planters in the way of inducing them to set their faces against the Japanese as plantation workers? There is no legislative restriction of Japanese immigration, and possibly it would be one of the most foolish of imprudences to pass such laws. The case may be one for Imperial diplomacy. That seems to be the opinion of most of the responsible politicians of Australia. The matter is now under federal consideration, and perhaps representations as urgent and united as the circumstances justify have already been made in the proper quarter. All we ask is that in view of the fact that Queensland is the colony immediately concerned, our Government shall intelligently and earnestly lead and not reluctantly follow in the endeavour to prevent anything in the nature of a formidable invasion of our tropical territory by Japanese settlers. This is one of the matters to which the maxim applies that prevention is better than cure."

The *Adelaide Observer*, discussing the debates in the South Australian Legislative Assembly, takes Messrs. Griffiths and Homburg somewhat severely to task. It states that Japanese immigration into Australia is inconsiderable, and that in the great majority of cases these immigrants have merely been brought under contract to take the places of other Japanese plantation labourers whose terms of agreement have expired, and many of whom are already on their way back to Japan. "Parliament will be seriously misled if the returns of immigration to Queensland are not discounted by the statements of migration from Queensland. There is little more proof or indication now than there was ten years ago of anything like an embarrassing influx of Japanese. Though these industrious people from the Far East have had the advantage of free access to the Colonies ever since the beginning of the convict days there are probably not more than 2,000 of them in all Australasia. In the future, as the population problem presses more and more heavily in Japan, these conditions may be changed, but in this connection 'the future is neither to-morrow nor next year.'" Referring to Mr. Homburg's demand for the exclusion of Japanese goods from the Australian market, the *Observer* says his request "is peculiarly inopportune just after

Japan has begun the free admission of Australian and other wool to its ports, and besides there is not at present any reason for it, or much reason in it. Mr. Homburg's idea is obviously that foreign goods manufactured much more cheaply than similar articles could be produced here should be specially taxed in the interests of the Australian labour market, but the application of such a principle would be extremely difficult and dangerous. There is no doubt that we shall not overcome the possible consequences of Japanese competition by excluding Japanese immigrants; for the rapid progress of manufacturing industries in Japan, and the establishment of a line of State subsidized Japanese steamships between Kobe and Australia may in themselves constitute a menace to the prosperity of the Australian artisan. But on the other side of the question may be urged the fact that many of the distinctive products of Japanese factories could not in any case be fabricated here on account of the absence of the necessary raw material. Mr. Homburg must remember also that Japan is not the only nation guilty of 'the sin of cheapness.' On the same reasoning by which he would exclude Japanese manufactures he must also place a ban upon German imports to the Colonies. Cheaply as the operatives at the great industrial centre of Osaka are paid, and low as is the price of the raw material employed, articles similar to some turned out there may be purchased in Bohemia and in several German towns for less money than they cost in Japan. If the Australian Governments attempt to insist that the price of imported goods shall approximate to that of locally produced articles they will undertake an impossible contract and produce such a crop of international complications as has never yet been known. Clearly, Mr. Homburg's expedition has a long way to go before it can enter the region of practical or permissible policies."

Alluding to the provisions of the Anglo-Japanese Treaty, which are engaging the attention of the South Australian Parliament, the *Observer* continues:—"The Colonies are left by the mother country perfectly free to enjoy its advantages or to spurn them. If they choose the latter alternative—if, as the Japanese Minister of Commerce suggested during the course of a recent interview with a representative of the *Observer* 'they prefer to stand in their own light'—they may act foolishly, but they will be acting well within their rights; and in the proposed restriction of Japanese immigration there is no suggestion of illegality. Judgment of the propositions may thus fairly be based on the standard of inherent merit or demerit. In this view, though there is little more probability of an incursion of Japanese into Southern Australia than there is danger of a migration of Esquimaux to the tropics, much may be said on account of racial considerations against a wholesale infusion of Oriental blood in a European population within the temperate zone. As was indicated in the report of the interview already referred to, even the Japanese Government does not object to the Australian Colonies raising up a barrier against the indiscriminate introduction of coolies 'under contract.' The only subject of protest in this relation is the possibility of all Japanese—even those wishing to visit the Colonies as purchasers of raw material—being subjected to hindrance and humiliation. The drawing of distinctions here may be difficult, but surely it is not impossible. If the various Governments are taking extra time to solve this problem before introducing legislative proposals to their Parliaments, they have an excellent excuse for their delay, and if they had not justification in this respect for a postponement of action they might reasonably urge that they could not courteously proceed in the matter so long as the British and Japanese Governments are negotiating concerning it. Already an inexcusable cause of affront has been given to Japan by the contemptuous attitude of the Sydney Conference towards the Anglo-Japanese treaty. Mention of this fact suggests the need for reminding Australian politicians that the people of the Rising Sun are not barbarians. Indeed, only by a latitude in terms can they be styled a coloured race. The average subject of the Mikado is almost as white as the average Australian, and the Japanese Parliament is composed of gentlemen at least equal in ability and character to Australian legislators. Surely the opinions and the *amour propre* of such men should be treated with respect in representative assemblies of Australian Englishmen."

The *Launceston Examiner*, Tasmania, has been discussing the character of the Japanese labourer, greatly to his advantage. It says:—"The Japanese who work for 3d. a day and the men here who recently refused 7s. 6d. a day afford a very remarkable contrast. The Japanese is content to live on a modest diet mainly composed of rice, whilst the European likes his 'drop of good

beer,' and the colonial workman usually insists upon having meat three times a day. With such contrasts as these, which may be said to be found in Great Britain as well as the colonies, we need not wonder at the fears that are expressed of the competition of the Japanese workmen in the markets of the world. For, if the Japanese workmen should acquire the skill of the Europeans, which does not appear to be at all unlikely, and if, having acquired that skill, they are still content to live as at present on the same wages, it is evident that a very serious industrial problem must arise. So far as the hard work of the world goes, we do not believe that Asiatic labour, except in the tropics, will be able to compete successfully against the British, for the navy will be so much the superior in work that his higher wages will be cheaper in the end. The boast of Mr. Burns, will we think, be justified, that a British workman can outwork four or five foreigners, but this will not apply to the manufacturing industries, or to some others. Thus, it is possible that Asiatic goods will come into competition with European goods in many parts of the world, so that the crowded populations of some parts of Europe will find the employment question a very serious one indeed. This subject is attracting a great deal of attention at the present time, because the population of Germany is increasing very fast, so fast, that there are writers who predict that an outlet must be found for it very shortly. The pressure is felt all the more, because the United States have taken steps to prevent the influx of paupers, drunkards, and persons who have not gone through their military service in Europe, so as to prevent the country being swamped with the dregs of the nations of the world. The problem of the industrial future presents itself in several alarming aspects to many writers, who frankly confess that they are unable to see the outcome of the new conditions that are developing in such a rapid manner."

The subject of Japanese industrial competition is being discussed in other Australian papers, but in a broader and more comprehensive spirit than formerly. It seems to be generally understood that while limited numbers of Japanese will make their way to other countries, the great mass of industrial energy and skill will find a practically unlimited field for remunerative exercise at home. The Hon. J. L. Parsons recently, in a lecture delivered in the Adelaide Town Hall, said that "with a country rich in coal, iron, and minerals, and very fruitful, girt about by the inviolate sea, and so almost incapable, with their great and increasing navy, of being invaded by land—with a people brave, capable, industrious, and ambitious, Japan will maintain her prestige, will advance along the path of progress in manufactures, in arts, in learning; will become a first-class military and naval Power; will have a mighty influence in regenerating and enlightening and stimulating the vast Empire of China; and, like Australia, will be one of the two dominant Powers in the Eastern Hemisphere." This is the view taken by the better class of Australian papers, and it is very unlikely to become changed.

KARUIZAWA.

READ AT THE ANNUAL SOCIAL IN KARUIZAWA,
AUG. 31, 1896, by J. WALLACE CATE.

When in the centuries gone, that grand old prophet of Israel,
Who with his single hand, withstanding the foes of Jehovah,
Called down the fires of Heaven to witness the falseness of Baal;
Who, when a recreant king with his wicked and infamous consort,
Sought to war against God, slaying his prophets and teachers,
Dared to upbraid the false monarch in the ill-gotten vineyard of Naboth,—
When this prophet of justice, freed from his trials and battles,
Vanished from mortal sight, upborne by the chariots of Heaven,
Upon his gazing disciple, the sorrowing awestruck Elisha,
Fell like the power of the spirit the robe of his vanishing master.
Would that this might befall the witless and unlucky sinner,
Who stands before you to-night thinly disguised as a poet!
Would that the mantle of those who in charming mellifluous measure,
Have sung in the days that are past the praises of Karuizawa,
Might now descend upon me, their frail and unworthy successor!

Or, what is more to be wished for, that lacking no shred of her mantle,
She whose song has once charmed us, might charm us again with its music;
But 'tis wrong to waste time in regrets, and though the measure be halting,
I put on the armour of Saul to take up the work of a David.

In a nook of the rugged mountains which traverse the island of Nippon,
(Excuse the lack of the *Dai*; it doesn't fit well in the measure),
Stood an insignificant village whose chief excuse for existence

Was that in olden times, when feudal lordlings were masters
And travelled from village to village with gallant trains of retainers,
It formed a convenient shelter and resting place in their journeys.

E'en in these later times many an unkempt matron,
Boasts of the time when fortune brought to her humble roof-tree,
One of these lords of the country to sip his tea from her teacups,
And rest his lordly corpus beneath her smoky rafters.

Among her cherished treasures in the *Yashiki's* sacred enclosure,
Hangs a wonderfully wrought *Kakemono*, the work of the lord's own fingers.
Ah! those were days of glory, days full of wonder and gladness.

Gone are the days of glory. A change came over the village,
Vanished the feudal chieftains and their bowing obsequious vassals;
The Samurai's sword and his top-knot, vanished like mist in the sunlight.

Through the single street of the village ran rivers of water unheeded,
Wearing the yielding roadway into deep impassable gullies.

Into decay fell the houses along with their miserable tenants;
Down went the trim little hamlet in grim and awful decadence;
Doomed was *Kanizawa*, by the law of survival of fittest.

Look here, my muse, now what's the use
Of being so awfully grumpy?
Your silly croaks will bore the folks,
And make them all quite humpy.
So come along and change your song,
And pipe a lighter strain,
Your doleful face is out of place,
For the dead is alive again!

With this abuse my mournful muse
Dried the tears she fain would shed,
Smoothed out her clothes and blew her nose,
And this is what she said:—

Some years ago, one summer day,
A weary traveller bent his way
O'er *Usui Togé's* lofty height,
Just as the sun's resplendent light
Bathed the clouds with gorgeous hue,
Which hung superb in heaven's blue,
Above the mountains' jagged crest—
Which stood against the distant west.
The traveller stood transfixed with awe
Before the wonders which he saw.
Unconsciously he bared his head,
And with his bated breath he said:
"How good the God who deigns to share
With mortal man a scene so fair!"
While thus he stood transfixed in thought,
The guide most ingently besought
That he would go to yonder height,
From which appeared a wondrous sight.
With every step his wonder grew,
With every step a vision new,
Till from the vantage of the height
The whole grand vision burst in sight.
Before him stretched a verdant plain,
Begirt with mountains, chain on chain;
Mountain crags and mountain glens,
Woods and rivers, hills and fens,
And far above, reared high in air,
With steep incline and summit bare,
Asama's dread and smoking crest
Loomed full and grand upon the west.
Behind him, stretching far away,
Where lights and shadows faintly play,
To where the low sun's latest rays
Lose themselves in distant haze;
Till earth and sky seem to be
Melting into eternity.

A wondrous scene of field and glade,
Of everchanging light and shade,
With stretches vast of softest green,
And rivers calm and broad between.
Upon his left in strange contrast,

Like castle walls secure and fast,
Across whose scarred and craggy face
Fantastic lights and shadows chase,
Like flitting birds in eager flocks,
Tower on high, Cathedral Rocks.
And still beyond, with many spires
Tinged by the sunset's ruddy fires,
Miogi's heights in beauty rise,
The boundary 'twixt earth and skies.
Below him, at the mountain's feet,
A little village nestled sweet,
Giving no hints to him on height,
Of filth and dirt. But fair and bright,
Seemed a retreat prepaired and rest,
By God himself for health and rest.
E'en as he stands with dimming eye,
The light fades out in the western sky.
The shadows o'er the mountains creep,
As if to lull the world to sleep.
To the soul of the traveller standing there,
The earth seemed lost in evening prayer;
And sinking there upon the sod,
His heart went up in thanks to God,
That by the beauties He hath given
Men may climb so near to heaven.
Thanks be to God for this vision of light,
Given to men through His infinite might!
For my brothers and sisters here exiled afar,
Soldiers of Christ in his glorious war,
'Gainst all the soul-marring sins of mankind,
Messengers sent to be eyes to the blind,
Feet to the lame, strength to the weak,
To the ends of the earth his lost children to seek.
This spot I proclaim as a Mecca of rest.
What afterward followed is easily guessed,
Year after year came the weary and worn,
The toiling and tired ones, seeking this bourne.
Nature still spreads her rich feasts for their eyes;
Morning and evening their thanksgivings rise.
What's here written, history has taught,
Some poets are prophets, this one is not,
'Tis history's province to tell of the past,
And therefore it happens this line is my last.

H.B.M. COURT FOR JAPAN.

Before ARTHUR HYDE LAY, Esq., Acting Assistant Judge.

FRIDAY, September 4th, 1896.

THE "SAIKYO MARU'S" MISSING TREASURE.
The third hearing of the charge against Mr. Edwin Ryder, late second officer of the *Nippon Yusen Kaisha's* steamer *Saikyo Maru*, in connection with the robbery of \$2,000, in twenty cent pieces, from the bullion-room of that steamer, was resumed this morning.

Mr. Tamio Hayashi, manager of the Yokohama Office of the N.Y.K., again prosecuted, and the Chief Public Procurator of the Local Court was present.

Mihashida Riuzon, freight clerk in the employ of the *Nippon Yusen Kaisha*, cautioned, deposed—On the 13th August I shipped 50 cases of silver coin on board the *Saikyo Maru*, then in the port of Kobe. I was assisted by *Toyoshima Eibun*, *Konokoru*, and *Terada Hihei*, tally-men, while the Superintendent of the Kobe Office, Mr. *Maki Komataro*, was standing by. We arrived in Yokohama on the 14th August, and we sent the silver ashore on the forenoon of the 15th ult. The treasure had been stored in No. 3 hatch, in the mail-room. I was in No. 2 hatch working at the time, the treasure being handled by *Toyoshima*. *Toyoshima* told me that one of the 50 cases was missing, and I immediately went with him to the mail-room and examined the place and then searched the 'tween decks. I searched the lighter, then at the side of the ship, and found there were only 49 boxes of the silver on board. After all the cargo had been discharged, I, with the second officer and the tally-clerk, made another search, but could not find the missing case.

By the Bench—I did not enter the treasure-room between leaving Kobe and arriving at Yokohama. The chief officer had the keys of the room: they hung up with others above the bed in the chief officer's room. The keys remained in his room, I believe, all the voyage, untouched. That was the custom. Probably the chief officer would lock up the room, but that I do not positively know.

The accused had no questions to ask.
The accused was then remanded in custody until 10 o'clock on Saturday morning, the *Saikyo Maru* being expected to arrive from Kobe during Friday afternoon, when two more arrests will be made.

SATURDAY, September 5th.

George Washington Conner, Master of the *Saikyo Maru*, sworn, deposed—I merely know that there is a box of treasure missing from the ship, and that in Shanghai I discovered, by opening the

Third Engineer's—Mr. Dawson—box, part of the missing treasure. I only know of Ryder's connection with the case by Dawson's confession to me.

Sakurai Seishiro, a freight clerk on the *Saikyo Maru*, cautioned, deposed—At Kobe I had nothing to do with shipping the treasure. On the freight list, I saw a document in Japanese giving a list of the cargo on board. I asked the chief freight clerk if I was to translate this, but he said he did not require it. I knew nothing about the affair until about 11 o'clock on the 15th August. That morning I went to the Yokohama Office about the accounts, and returned to the ship just as *Toyoshima* had discovered that a case of the silver was missing. The Manager of the *Nippon Yusen Kaisha* and the Purser of the *Tosa Maru* then came from the shore. I saw the cases of silver first on my return from the shore.

This concluded the evidence for the prosecution, and His Honour read over the depositions to the accused.

His Honour then cautioned the accused in the usual terms.

Accused had nothing to say.
The money found in his possession was counted in Court and amounted to \$929.80.

His Honour—Edwin Ryder, I commit you to trial on the charge of larceny from the *Saikyo Maru*.

THE THIRD ENGINEER'S CASE.

Edward Dawson, third engineer of the *Saikyo Maru*, then appeared at the bar.

Mr. Tamio Hayashi, Manager of the Yokohama office of the N.Y.K., cautioned, said—I charge Mr. Edward Dawson, formerly third engineer of the *Saikyo Maru*, with having in his possession part of the missing treasure supposed to have been stolen from that ship on or about the 15th August. Dawson being an engineer, and having no connection with the cargo, was allowed, when the treasure was found to be lost, to go on with his work, there being no suspicion against him. The deck officers, however, all had to leave the ship. Later on, by the advice of the police authorities, we wired to our Shanghai agent to order Capt. Conner to bring Dawson back to Yokohama. Later we received information that Captain Conner had found some of the missing treasure in the third engineer's cabin, while we were also told to search the baggage left by Dawson at Mr. Pass's boarding house, 184, Bluff. We searched this house and in the baggage was found part of the missing money. On this account I lay the charge against Dawson.

Dawson had no questions to ask.
George Kircher, Usher of the Court, deposed—Yesterday I proceeded on board the *Saikyo Maru*, as per warrant, at 16 minutes past 3. I found Mr. Dawson locked in a cabin on deck. A box was produced on board, in which I found some money, all in 20-cent pieces. This I now produce. I brought Dawson on shore and proceeded to 184, Bluff. There I found a trunk belonging to Mr. Dawson. It was in the store-room. This trunk was locked and Dawson gave me the key. I unlocked the trunk and found more money, in 20-cent pieces. This was brought to the Court, sealed, and put in the safe. There was about \$850.

Witness was not cross-examined.
The money was then counted by the officers of the Court and found to be a little over \$900.

Captain G. W. Conner, again sworn, deposed—A telegram was received by our Manager in Shanghai, and on that information I called the Chief Engineer and informed him that I did not want Mr. Dawson to leave the ship. The Chief Engineer soon after came back and said that he had looked into Dawson's window and saw that Dawson's boxes were packed, as if ready to leave the ship. I then took proper steps to detain Dawson on the ship. On the 29th, the day we left Shanghai, I went to Dawson and told him that I had searched the baggage in his room and had found some of the missing money. On my advice, he made a confession. He said that on the night of 14th Aug., when the ship arrived from Kobe, the second mate, Mr. Ryder, came and asked him to come to his room for a night-cap. In the second officer's room he saw a box of treasure. The second officer said: "A part of this is for you." Then the second officer took a small hatchet he had in his room and broke open the box, throwing the iron hoops overboard. Ryder then gave him a part of the money. I asked him how much, and he said he did not count it, but he thought that it was not quite half. He told me that he had spent only *yen* 1.80, and that the balance of the money, minus 120 *yen* that I had found in his baggage, was in a box belonging to him in Pass's boarding-house in Yokohama. He said he had carried the money ashore in a flannel belt. I asked him if any Japanese were concerned and he said he did not think any Japanese were concerned; so far as he knew they were innocent.

To the accused—You were going to leave at Shanghai.

Accused—Excuse me sir, I was not going to leave there.

His Honour (to accused)—You are remanded in custody until 10 o'clock on Monday morning.

MONDAY, September 7th, 1896.

This morning, Edward Dawson, late third engineer on the *Saikyo Maru*, was brought up on remand, for the leading of further evidence on the charge preferred against him, of complicity in the theft of \$2,000 from the vessel.

Mr. Public Procurator Okiyama was present. Maki Komataro, former purser of the *Saikyo Maru*, cautioned, deposed—In the former case, while giving my evidence, I made a mistake as to dates. It was on the 12th August, not the 13th, that I shipped the 50 boxes of silver at Kobe. We arrived in Yokohama on the 14th and the silver was discharged the following day. When we found one box missing, I reported the matter to the police. I do not know if any one went into the mail-room on the voyage. A man named Miyashita counted the boxes at Kobe.

Miyashita Rinzo, Freight Clerk on the *Saikyo Maru*, cautioned deposed—The evidence I have to give is the same as I gave in the case of Ryder. On the 12th of August we shipped 50 boxes of silver at Kobe; arrived at Yokohama on the 14th; on the 15th discharged the silver. We found that one box was missing, and made all endeavours to trace it. I did not enter the mail room between Kobe and Yokohama.

Kitamura Juisan, an official in the employ of the Nippon Yusen Kaisha, cautioned, deposed—I went on board the *Saikyo Maru* on the 11th Aug., succeeding to Maki Komataro as Purser of the ship. I know nothing about the loss of the treasure. I know only that we brought Dawson back from Shanghai on the ship. I do not fully know why Dawson was brought back in this manner. I never saw any of the missing money in his possession. On the morning of the 29th of August, I searched Dawson's cabin at Shanghai in company with the Captain and found \$120 in an iron box. The money was in 20-cent pieces of the 29th year of Meiji. The money was locked up in the cabin and brought to Yokohama under my care. Dawson was not present when we searched the cabin, there were only the Captain and myself.

Heinrich Wilhelm Rahberg, formerly chief officer of the *Saikyo Maru*, sworn, deposed—I can give no evidence regarding the charge brought against the accused.

Sydney Charles Pass, of 184, Bluff sworn, deposed—I only know that Mr. Dawson left a chest at my house. He brought it there on the 27th April last. It remained there until Friday last. Accused came to my house that afternoon in company with the police. The last time he was in my house was the day before the *Saikyo Maru* left on the trip after the alleged loss of the treasure. I believe he came in the evening. I am not quite sure whether I saw him or not on that occasion. The box was in one corner of the hall downstairs, where it had been since April. After Dawson went away last voyage, the box was put into a baggage-room. The box was locked and lashed with a good stout rope; Dawson having the key himself. I never saw him go to the box; nobody has seen him go to it.

This concluded the evidence for the prosecution. His Honour then read the depositions and formally cautioned the accused.

The accused preferred to make a statement. He said—I hardly know how it came about, but on the night before we left Kobe, I was sitting on the rail outside my room, when the Second Officer, Ryder, came along and said, "Here, Dawson, I want you." I said, "I'm going to bed." He said, "Come along and have a nightcap before you go"—that means a glass of whisky. I went round to Ryder's cabin, and there was a box, with some of the hoops torn off, standing on the floor of the Second Officer's room. I said, "What in all the world, have you here." He said, "Be quiet, you can have the half of that." He threw the hoops over board, and tore the lid of the box off. Then he gave me a good lot of the stuff, about half I think, but I did not count it. I don't remember taking the stuff to my room that night, but when I awoke it was lying on the floor among my boots. I threw my dirty clothes over it and went down into the engine-room. I came up soon afterwards and went into Ryder's room. I told him, "For God's sake get that stuff away." He just pool-pooled it off with another glass of whisky. He said: "Put off that whim with a glass of whisky." It remained that way until we got to Yokohama. At Yokohama I concealed part ashore—the greater part—the rest I kept in my box on board the ship. We left Yokohama, and between here and Kobe, the Chief Engineer

and I quarrelled. I told him to consider me finished at Kobe, where I intended to land and return to Yokohama. I packed up my clothes with that intention, but the Chief Engineer told me I could not leave at Kobe, also that I should be considered a deserter. We then went on to Shanghai, arriving on the Tuesday. On the Friday night I got a book or something out of my portmanteau to show to the Second Officer. While I was standing talking to him the Captain and another gentleman came along. The Captain said, "This is the man I want." So I was locked up in Shanghai that night in the police-station; next day brought on board, put in a second-class cabin, put in irons, and locked up. I came back to Yokohama, though I was not in irons all the way. That is all I wish to say.

After the statement had been read over, accused added—During the whole of this night in Kobe, I was drunk the whole time—that night in Kobe.

His Honour—Edward Dawson you are committed to trial as an accessory to the larceny of \$2,000 from the *Saikyo Maru*.

EARL LI.

It is satisfactory that Li Hung-chang is to be received in this country as a guest of the Government, and that he is to be treated with becoming ceremony. The excessive homage paid him in Germany has been made the occasion for warnings addressed to this country not to fall into a similar mistake, not to assume such an undignified and impolitic attitude. We are reminded, in effect, on the one hand, that he is not the great man—the Bismarck of China—he was once considered to be, but an ordinary "mandarin on the make;" and on the other, that nothing is to be gained by being civil to him, as he has no power to give orders, make contracts, or negotiate concessions. Anything "made in Germany" is not to be endured at present, but we shall want something more than the famous policy of *ambler les Allemands*, which seems so much in vogue, to convince us that Li should not have a fitting reception at our hands; and if it be true that he can give no orders, he still remains a big figure, not only in China but in contemporary history. He most certainly is no *quantité négligeable*.

Li's half-century of service under four Emperors, of which thirty-four years have been conspicuously successful, his prominent official position, especially in regard to foreign affairs, his marked sympathy with the progressive spirit and with a broad-minded policy, his constant courtesy and accessibility to strangers—a new departure in the Chinese official world in the treatment of the Outer Barbarian—have gained him the respect of all those who are at all acquainted with affairs in the Far East. Some four years ago, on the occasion of Li's seventieth birthday, the Viceroy Chang Chih-tung composed a panegyric on "Earl Li,"* in which, amid a mass of hyperbole, he said some things not untrue. "During the eighteen years of His Majesty's reign," Chang wrote, "the influence of your counsels has been perceptible in every act of State, and your position is now firmly established as first among statesmen. Surely you are He that Hefei was destined to bring forth! Councillor, Governor-General of the Metropolitan Province, Naval Minister, Superintendent of Trade; we see you engaged in these quadruple duties, and in each *facile princeps*. You have vindicated your right to all your titles. Our Prince is, indeed fortunate in the possession of such a Minister." And again:—"You are altogether admirable; in literature deep, in warcraft terrible, in perception acute, in genius sublime; you are entrenched on every side, unassailable." In estimating the value of the eulogy one must remember that it was Chinese etiquette on such an occasion, and perhaps also the fact that Chang did not love Li. Under somewhat similar circumstances do not our own statesmen occasionally say very handsome things of each other?

From the Western point of view, let us see what Li has done—what, as Americans say, he "amounts to." More than thirty years ago Li Hung-chang assumed an important place in the political world, and not merely of his own country, and he has ever since continued to play that part with no diminished lustre, except on the occasion of the Sino-Japanese war, whereby his influence was undoubtedly shaken. When the Peking Government was engaged in what was a life and death struggle with the Taiping rebels, Li became *taotai* (magistrate) in the province which was then the centre of the rebellion. The situation was critical, and demanded the exercise of exceptional talents and attributes, altogether different from those usually required in such a posi-

tion. Li grasped the situation—one of those in which capable men of action find their opportunity—and rose to the occasion. He at once commenced the work of organizing the Imperial forces, which were in a state of the most complete confusion, amounting to anarchy. Having the brains to see the value of Western organization and leadership, he had the courage to employ these. By the aid of Europeans of ability—such as Gordon ("Chinese Gordon"), Giquel, Macartney (now Sir Halliday), and others—who took service with him, he was able not only to crush the Taiping rebellion, but at various points to lay the foundations of the Government arsenals, which led to the introduction of European machinery and skilled appliances into the Middle Kingdom. The first factories—at Shanghai and Nanking—were followed by other places. If the results achieved in this, as in other directions, have fallen short of what was hoped, one must bear in mind the stupendous opposition which had to be met and overcome.

The prestige gained by Li from the successful campaign against the Taiping rebels (1862-65) was great. Raised at once to high office, he was overlaid with honours, accompanied by multifarious and onerous duties. Other risings of minor importance—two of them Mahomedan—were then suppressed by him; and in 1870 he was appointed Viceroy of Chih-li, a post which he has since retained. In addition to the laborious office, he has been Imperial Commissioner for Trade and Coast Defence, and more recently Vice-President of the Board of Admiralty and Director-General of Railways. Beyond these officially gazetted appointments, he was Chief Adviser, and practically Foreign Minister, being always pushed into the breach when action was imperative. He was the negotiator of treaties and, in a large degree, the arbiter of peace and war. The amount of unceasing labour involved by these duties, considering the minutiae required by Chinese official routine, it is almost impossible for a Westerner to realize. It is a marvel how the work was got through. And all the time Li found leisure to see any foreigner, from a plenipotentiary to a bagman, who wanted to see him on any reasonable pretext. A marked feature in Li, and one to his credit, has been this readiness to receive foreigners and assimilate Western ideas. Always tolerant, always accessible, always urbane, his association with foreigners has helped to beat down the deep-rooted, colossal objection of the Chinese official world to any such intercourse. And hereby Li has rendered the Western world and his own country a very considerable service.

It has been well said of Li that the key to his character is "practical." An Opportunist of Opportunists, he deals only with the practicable, goes step by step, only moving when sure of his footing. He has sympathy with the visionary or enthusiast. His strong points from our standpoint—and in a Chinese official how astonishing they are!—are his indifference to tradition, his disregard for the veneration of things simply because they are ancient, his interest in the present, and not the past. In other words, he is touched, if not imbued, with the modern spirit. And there he stands apart, absolutely alone, in the whole Chinese official world.

In the making of railways he has not been able to accomplish much, and his Director-Generalship may be considered a mere sinecure, in the almost total absence of railways. But it must not be forgotten that, if there is little to show in the matter of railways, there has been much talk, and also *something* has been done. It is not only in China, too, that the period of palaver, as a prelude to the introduction of useful railways, is prolonged. Li was a firm believer in railways years ago, and is still. I remember well how, in 1883, he told me that, in his opinion, had railways existed from Central China to the South, there would have been no Tongking question; and I believe he meant it.

Not only in matters of defence, military and naval, has Li, contrary to the most violent prejudices and established tradition, attempted to introduce Western invention and appliances; but he founded, and was the leading spirit of, the China Merchants' Fleet, created with the view of introducing European business management generally into the Chinese system. Far from being a brilliant success, compared with what has been accomplished in Japan, still it has been of service to China. The Chinese way of looking at this step of Li's is interesting, and we have it from the pen of Chang Chih-tung, in the address to Li already quoted:

"In the old days Russian ships came hither, and Persian merchants were met in Tang's capital. 'Nibble away at the husk and you will at last reach the grain'—this was the guiding principle of the foreigners who came across the seas and entered our ports. We admitted them and they

* Translated by Mr. H. C. Brewitt-Taylor.

were guests. Presently the positions were reversed; we were guests, they masters. Wishing to stop the drain, we had to turn to ourselves for aid. The Wu rice comes from the south, hemp from Shuh, in the west. We saw how we could turn the sea to our advantage and have ships for defence. Now our ships carry the skins of Ch'eng to the markets of Chow. Produce of every kind pours into every land, and foreign cloth and gold are piled in heaps in our provincial stores. There is plenty for all, and poverty ceases to exist. We hold our own and more—the water begins to return from the sea. These advantages are due to You, for the formation of the Steamship Company was Your work."

Mainly owing to the influence of Li the Chinese Government were induced to adopt the telegraph, which now covers the empire in all directions, to permit the construction of railways, which have been started whenever and wherever opposition could be overcome, and to encourage mining enterprise. In the field of education, too, he has done good work. The various schools established by him—military, naval, torpedo, telegraph, railway, and, last but not least, medical—are all surely, though silently, unobtrusively, and slowly, effecting a change. And, in all this work of reform, he has stood a solitary figure. If he has not attempted any sweeping reform, if he has not taken in hand the "regeneration of China," he has at least, in his opportunist way, introduced the thin end of the wedge which will shake to the foundation the abysmal self-conceit and slavish submission to tradition of the Chinese mandarin. Already the strongest, ablest, and at one time also most bigoted, among the viceroys has compromised with the spirit of the age and is following Li's example. And this is significant.

What all this means only those who know China—the China which lies apart from the China of the treaty-ports—can possibly in a measure appreciate. With jealous critics in the Pekin Tsung-li Yamèn, clinging to the Past as the sole source of knowledge, with the people indifferent or solidly opposed, not always supported by the British Minister and the powerful influence of the Chinese Customs service, under Sir Robert Hart, who paid court to the Tsung-li Yamèn, he faced the difficulties alone. National reforms, even administrative reforms, are not easily accomplished in other countries than China, and considering the condition of the empire, the verdict on Li's life-work must be that he has rendered good service to civilization.

On several occasions it has been my fortune to have interviews with Li, and, in common with all others, I was struck by the shrewdness of his remarks and by a feeling that he was getting to the bottom of things. He had a habit of "pumping" all he came across, and as he had men of all nationalities and representing a variety of interests, the amount of information he amassed from his interviews must have been very considerable. Being in the north of China, at the time of the Tongking war, when the so-called Fournier Convention was concluded, he asked me what I had been doing in Tongking and what I was about in China. On my telling him, he said "But you are in Government service," I endeavoured to explain that I was on leave; but he replied, "I understand; we also have our *weiyuans*. You are an official spy." In China, I presume, only a Government agent would have been collecting information as I then was.

In the field of diplomacy Li has shown skill, sagacity, and breadth of view, and his reputation in this respect has, in Chinese opinion, if not in reality, been maintained by his last act, after it had suffered in a military sense, for he succeeded, though at a price which may prove heavy, in depriving Japan of almost all her advantages in the hour of victory. His two former chief achievements in this arena were the negotiations arising out of the Margary affair, in connection with the Chefoo Convention of 1876, when, as generally admitted, out of a most difficult and dangerous situation for China he managed to secure an arrangement which, intended as a chastisement, turned out to the advantage of China. At the time of the Franco-Chinese conflict (1883-85) Li was entrusted with the negotiations, and if the result was not altogether satisfactory to China, that was certainly not Li's fault. Both in regard to the Bourée treaty and Fournier Convention, Li did well for his country, and it would have been to China's advantage if either had been accepted and maintained. Neither pleased the Chinese Jingo, and the latter treaty was by them wantonly broken, involving China in a year's war, an expenditure of sixty million taels, and the loss of that fleet in the Min (which I witnessed), after which the original terms obtained by Li were perforce accepted.

It is commonly believed, in this country, that Li's measures of "reform" were largely influenced

by the opportunities offered for self-aggrandizement in power and wealth, that he only differed from his brother colleagues in doing things on a bigger scale, and that his combination of business with statesmanship has made him one of the world's millionaires. However he may have acquired the greater portion of his means, there is no doubt he is wealthy; but it is doubtful whether his fortune would compare with that of several South African millionaires, not to speak of dozens in Europe or America. It seems unnecessary to dwell further on this subject; we have to examine both sides of the medal; and it is the balance of services we have to arrive at.

As regards Li's military failure in the Sino-Japanese conflict, it must be remembered that the war was forced on China. He alone, unsupported, had attempted anything, and when the old-time Chinese system failed, and failed miserably, the whole blame was laid on Li, and not unnaturally, for we all know that nothing fails like failure.

More might certainly have been accomplished by Li, but also less. In estimating the degree of success which has attended his efforts, we must bear in mind that the temper of the time in China has not been favourable. Had that been kinder, the result would have been very different.

Li has come to Europe, as a *wei-yuen*, to spy out the land, to see which nations are really great; and on his return he will advise the throne. Let us avoid over-homage by all means. But it would be foolish, indeed, to underrate and neglect Li because in the Sino-Japanese war he failed to justify general expectation, or because Germany has been overletting him. The German manufacturers may have lost their heads in the bustle to secure orders; but the German Government and capable Germans from China like Mr. Detring know perfectly what they are about. The *impressions de voyage* which the distinguished Chinese statesman will take back they judge to be important, and they wisely determine that to the best of their ability they shall be favourable to Germany.

It is right that he should be received as a great man, for he is one; with all his faults he has rendered a signal service to civilization. It is politic that he should be impressed with the power of England, for he is still a force in the Far East, and the one prominent figure in the Chinese Empire. And if Germany has her workshops for war and battalions of soldiers, we have our London and our industrial centres, our Armstrong works and our fleets; and at sea we can best impress Li with our "flying clouds, ranging the ocean by submerged vessels." If, too, there are at present no orders for artillery, and munitions of war and strategic railways for a "regenerated China," there are still alliances in Europe to be sought for, allies who will be paid for with trade privileges and concessions of various sorts, and so long as China exists, with her 350 millions and her immense latent resources, there is something—and a big something—to be gained.—ARCHIBALD R. COLAHOON in the *Saturday Review*.

LATEST TELEGRAMS.

(RUITER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, September 3.

The National convention of Gold Democrats held at Indianapolis has adopted a platform upholding the Gold standard and opposing the free coinage of silver. The convention has nominated General Palmer, of Illinois, for the Presidency.

Count Shouvaloff has been seized with a paralytic stroke and his condition is critical.

London, Sept. 7.

T.I.M. the Czar and Czarina have visited

Breslau where they were accorded a splendid reception. At a banquet in honour of their Majesties' visit the Emperor William toasted the Czar as the bulwark of peace. The Czar's response was of the briefest character.

A French Squadron has been ordered to the Levant.

Sir Philip Currie, British Ambassador to Turkey, has returned to Constantinople.

The Nile railway has been reopened. Twenty miles of the line were relaid in ten days.

(FROM THE "N.-C. DAILY NEWS.")

London, August 31.

It is estimated that about one thousand innocent Armenians have been massacred in the streets of Constantinople, the troops being passive spectators.

Marines have been landed for the protection of all the embassies at Constantinople.

The embassies have appealed strongly to the Sultan direct to stop the horrors which are taking place, and refer to the violation and looting of foreign domiciles, and point to possible grave results.

Hongkong, September 1.

A rebellion has broken out in the Philippines, and fighting has commenced. H.M.S. *Redpole* has been despatched to Luzon. The rising is not considered serious.

London, September 1.

Germany has refused, on the ground of his offence being a political one, to extradite Khalid, the Pretender to the Zanzibar Throne, who took refuge in the German Consulate at Zanzibar.

London, September 2.

Prince Ranjitsinhji's cricket score for the season is two thousand seven hundred and thirty-nine runs, which beats the previous record score made by Dr. W. G. Grace.

The Embassies at Constantinople have refused to illuminate their houses in honour of an anniversary [the 20th] of the Sultan's accession to the Throne, and are drafting a note pointing out that the recent massacre of Armenians was organised with the connivance of the authorities. The excitement is subsiding. Altogether five thousand Armenians have been massacred in Constantinople.

Prince Lobanoff died of aneurism at a country station. The general opinion is that his successful policy will be continued. H.I.M. the Czar will continue his tour.

London, Sept. 3.

A new Organic Law embodying reforms has been promulgated in Crete.

Colonel F. Carrington reports that operations are now proceeding against six forces of the rebels, who are located chiefly in the Buluwayo and Salisbury districts.

Mr. Thornton's eleven has beaten the Australians by an innings and thirty-eight runs.

London, Aug. 21.

Two native Egyptian papers have been suppressed in consequence of their shameless attacks on Queen Victoria.

London, Aug. 31.

The further advance of the Nile expedition commences about 5th September, and it is expected that Dongola will be reached about the beginning of October.

(FROM "LE COURRIER D'HAIPHONG.")

Paris, August 22.

The political situation in Crete is less alarming, the Powers having agreed on the reforms to be demanded from the Sultan in favour of the Cretans.

Paris, August 23.

The Colonial Minister is considering a project intended to give more elasticity to the Administration of Cochinchina, but he is not sure that the Government can grant complete autonomy to Cochinchina or destroy the unity of Indo-China.

Paris, Aug. 25.

General Weyler has interdicted the coffee and sugar cane crops in Cuba, because the proprietors pay taxes to the insurgents for gathering them.

(FROM JAPANESE PAPERS.)

Soul, Aug. 31.

The Japanese Minister has sent in a formal note of protest against the answer sent him by the Korean Government, in which they urged that they could not entertain the proposal to give the concession of the Seoul-Fusan railway to the Japanese by reason of the Southern rebels being still unpacified. Li Wan Yong, Minister of the Foreign Office, presented the note to the King yesterday. Some time must yet elapse ere the question is settled.

Nara, Sept. 2.

The damages done by the recent storm are tabulated as follows:—Wrecked buildings, 430; houses flooded, 272; houses swept away, 46; deaths (by crushing), 44; injured, six; bridges swept away, 20; breaches in embankments, 32; hillocks demolished, two; temples wrecked, two; school buildings wrecked, two; house burnt, one; telegraph posts destroyed, three.

Takamatsu, Sept. 2.

The damages in the neighbourhood of the Tokigawa and the Kurakawa are very serious.

Nagasaki, Sept. 2.

It has been decided by the Prefectural Assembly to spend yen 250,000 on improving the harbour.

Kagoshima, Sept. 2.

Messrs. Haseba and Kashiwada, Members of the Diet, left for Tokyo to-day.

Soul, Sep. 3.

The Tai Wön-kun and his wife, and Li Chai-sung, went to the Min-yé Palace to offer birthday congratulations. The King did not appear, and the Tai Wön-kun became very angry. After a while the King received his mother in audience.

Akita, Sep. 3.

The number of wrecked houses in Rekugo and vicinity, amounts to 1,777; deaths, 76.

Nagoya, Sept. 3.

According to the researches of the Authorities the number of deaths by drowning in the recent storm was 36; houses swept away, 28; houses wrecked, 1,000; and in the district of Kuwana 3,600 persons are receiving aid.

The Sanyo Railway Company has restored its lines to working order.

Soul, September 3.

The anniversary of the King's birth was very quietly observed in the capital. The foreign representative attended court, but the only flag to be seen flew above the Foreign Office.

Nagasaki, September 3.

The Bayard, the French flagship, has left for Vladivostock.

Yokote, Ugo, Sept. 4.

Governor Hirayama arrived here to-day to inspect the scene of disaster; he will proceed to Rokugo to-morrow.

Yokote, Ugo Sept. 4.

The Tokyo Red Cross Association has sent a doctor and three nurses here to assist in succouring the injured.

Fukui, Sept. 4.

A feeble shock of earthquake was felt at 4 p.m. to-day.

Kyoto, Sept. 4.

H.I.H. Prince Fushimi arrived here to-day.

Yokote, Ugo (Akita Ken), Sept. 5.

Owing to the heavy rain last night, those people who left their houses when the earthquake occurred are drenched. There was a big shock of earthquake this morning.

Utsunomiya, Sept. 5.

Fire broke out in Motomachi, 6 o'clock yesterday afternoon and about 50 houses were destroyed.

Sakata, Sept. 5.

Since the great earthquake of the 31st ult. many feeble shocks have occurred every day.

Tokyo, Sunday, Sept. 6.

The natives of Manila have risen in revolt against Spain. A British man-of-war was despatched from Hongkong for the protection of British residents, and the Japanese Government will also despatch a war-vessel.

NOTES BY EMIL KERNENY.

(a) Black selected an irregular opening, which hardly gives a satisfactory development. White, it seems, advanced the King's Pawn too early, and the exchange of Q P brought the Black pieces into action. The present move of Black is quite ingenious and forces the win of a valuable Pawn.

(b) Of course it to Kt 4 would be of no value on account of R to Kt 4. The text move nevertheless is inferior. Black certainly overlooked the ingenious continuation White had on hand.

(c) Splendid play. If Q takes R then White replies Q takes R ch.

(d) This looks very tempting. It seems, however, that R (B 8) to B 6 was much stronger. White then threatens R takes Q Kt P as well as Q to K 4, and the defense would be very difficult.

(e) Brilliant play, which forces the exchange of Rooks and relieves Black's game somewhat.

(f) The sacrifice of the exchange is forced, for if Black plays K to Kt 5, then P to B 3 ch would win the Queen. It seems Black should have played on his 4th turn K to R instead of K to Kt 4.

(g) A disastrous error. White should have played P to B 3, followed by K to B 3 and K to K 2. Being the exchange ahead a victory was quite assured. The text move enables Black to advance the K B P, which cuts off the adverse King. Subsequently Black wins the game by excellent end play.

STEINITZ-LASKER MATCH.

This is fixed for next month, October, at Moscow. We are making arrangements to obtain early telegraphic records of its progress, and shall place them before our readers as received.

GAME No. 564.

The following game was played at the Nuremberg Chess-Club between Dr. S. Tarrasch and the

well-known problem-composer, Mr. Max Kuer-schner. Score and notes from the London Field:

RUY LOPEZ.

WHITE.	BLACK.
1. M. Kuer-schner.	Mr. Tarrasch.
1—P to K 4	1—P to K 4

36—R to Kt sq.	36—R to R 8 ch. (n)
Resigns.	

NOTES.

- (a) Against such an opponent as Dr. Tarrasch, it would be better to select a less complicated form, and simplify the game with 4—B takes Kt, followed by 6—P to Q 4.
- (b) This advance only weakens the centre; the Black Kt can be brought into play again over Q 2. 10—B to Kt 3, to retard Black's threatened 11..... P to K B 4, would have been better.
- (c) Bringing the Kt into play, which Black could have done by losing some time, whereas now he has it easy. 14—B to B 2 seems the obvious alternative.
- (d) White has a difficult game, and it is not easy to mend it. Perhaps 15—P to B 3 would have been as well.
- (e) A very dangerous-looking move, but it is more ingenious than would appear at first sight.
- (f) To prevent 21..... Q to K 4; but, Black's object being the powerful K's side attack, White should have secured the position with 24—Kt to B 3 first. White's game looks safe enough but for the Doctor's brilliant sacrifice, which, however, is not so transparent at this stage.
- (g) With the Kt at B 3, he could now have retaken even with R.
- (h) This deep combination White overlooked although Dr. Tarrasch had it in view, no doubt, all along. The sacrifice wins by force.
- (i) A fine coup de repos, and much stronger than 27..... Kt to K 6 ch.
- (j) Another fine move, but only the sequel of the whole combination.
- (k) 32—Kt to Kt sq. would have been answered by 32..... R to K 5.
- (l) If 34—Kt takes B, then simply 34..... P takes Kt (best) and wins. White cannot survive the check with K R 6.
- (m) Threatens 35..... P to B 6 ch.; 37—Q takes P, R to R 7 ch., etc.
- (n) Very pretty in spite of the Q guarding the square. If 37—Q takes R, then 37..... B to Q 5 ch.; 38—K to Kt 2, P to B 6 ch.; 39—K to Kt 7 ch., and wins. A remarkably fine game.

"COMMON-SENSE" RULES.

In *Common Sense in Chess*, Emanuel Lasker gives the following rules for the development of the pieces:—

I.—"Do not move any Pawns in the opening of game but the K and the Q Pawns.

II.—"Do not move any piece twice in the opening but put it at once on the right square.

(Mr. Lasker believes that the Kts should be posted on B 3, and the KB "somewhere on his original diagonal, if not exposed to exchange, at Q B 4.")

III.—"Bring your Kts out before developing the Bishops, especially the Q B.

IV.—"Do not pin the adverse K Kt (by B to Kt 5) before your adversary has castled."

We quote the following from Tinsley's masterly column:—

ANCIENT AND MODERN CHESS.

An eminent authority, Sir Duncan Forbes, formed the conclusion that the invention of chess was due to the ancient Hindoos. The exact details are never likely to be known, but Sir Duncan Forbes concluded that all the writers of Arabia and Persia agreed *nem. con.* that chess was invented in India and introduced into Persia in the 6th century of the Christian era. Four hundred years ago Caxton gave forth, as the first specimen of the divine art of printing, *Ye Booke of the Chesse*. Dr. Hyde, of Oxford, two hundred years later, and Sir Williams Jones towards the close of last century, "ransacked the treasures of the gorgeous

East with the view of discovering the origin and of tracing the progress of the royal game."—(*Chess Players' Chronicle*, N.S., vol. I., 25). When and how chess made its way into Europe is an interesting question. There is no doubt, as we have shown in past issues, that Italy and Spain produced many notable players and writers between 1250 and 1800 A.D.; but chess history generally, and previous to the advent of Philidor in the middle of last century, stands out with anything but distinctness.

Several writers have discussed the question whether the ancient Greek and Roman writers knew chess. A writer in the old *Chess Players' Chronicle* concludes that neither the Greeks nor the Romans were acquainted with the game. The fact that there is no very distinct allusion to the game in the classical writings, that their authors and men of sedentary habits played ball and other trivial amusements, and that the old Roman writers lament that the youth were addicted to dice and games of hazard seem to justify the conclusion above noted. Had chess been known to the Greeks it is scarcely probable that their writers would have refrained from theorizing on the subject; the game would also probably have been referred to as an unexceptionable amusement or in disparaging terms.

Perhaps one of the strongest arguments is that the Greeks were a nation of soldiers, and that the gymnastic element was that which was most favoured in ancient educational systems. The conclusion of the argument is therefore that chess was not known to the ancient Greeks and Romans, and that had they been acquainted with the fact that chess was practised among other nations they would not have looked with favour upon its introduction into their own countries.

The earliest chess column printed in England is said to have been that in the *Liverpool Mercury* in 1813. The diagrams were printed without the squares being shaded, but in other respects the pieces and general arrangements differed little from those at present in use. Ten years later a chess column appeared curiously enough in the *Lancet* (1823), the game being introduced to the medical profession as "the only one to which the medical student may profitably devote any portion of his time and attention. It is liable to none of the objections which apply to games of chance; it holds out no encouragement to cupidity. And while it affords an agreeable relaxation from more serious pursuits, it strengthens the intellectual faculties by the unremitting attention which it demands, and may even have some influence on our moral habits by the lessons of foresight, patience, and perseverance which it inculcates." The column appeared without diagrams, and its life was a very short one. The following is the *Lancet's* first problem, and it will be found easier than most modern two-movers:—No. 382—White (6 pieces), K at Q R 3; R at Q B sq.; B at Q R 5; pawns at Q R 4, Q Kt 2, Q B 7. Black (4 pieces), K at Q R 2; Q at Q 4; pawns at Q R 3, and Q Kt 2. White mates in three. The chess column in the *Illustrated London News* has been running for over 50 years. Its original author and conductor until about 1874 was Mr. Staunton. Our own column commenced May 26, 1893.—*Weekly Times*.

Queen Olga, British steamer, 2,146, G. Harris, 12th September.—Kobe, Oil.—Standard Oil Co.

PASSENGERS.

ARRIVED.

Per British steamer *Ancona*, from Hongkong via ports:—Mrs. Smith and child, Rev. K. Hayakawa, Mr. E. W. Blodgett, and Mr. M. Fernando in cabin; one Chinese in steerage.

Per British steamer *Empress of Japan*, from Vancouver, B.C.:—Mr. L. D. Abraham, Miss Bessie Alcorn, Mrs. W. P. Anderson, Miss Isabel Anderson, Miss L. Atkinson, Miss W. Atkinson, Miss E. C. Bennett, Captain J. M. Benson, Dr. and Mrs. Begg, Mr. F. S. Blackwell, Rev. and Mrs. A. C. Borden, Mr. John S. Bradstreet, Mrs. M. E. Calloun, Mr. Chong Hock How, Miss Colman, Mrs. Coxon, Mr. and Mrs. H. C. Davies, Mr. H. Davies, Mr. J. V. Davies, Mr. R. J. Davis, Miss Davis, Mr. F. B. Deacon, Miss D. M. Douw, Surgeon-Major Doyle, Mr. and Mrs. D. S. Ellsworth, Mr. and Mrs. P. S. Fiedler, Mr. E. Evans, Rev. and Mrs. C. Goodrich and child, Miss B. Goodrich, Miss G. Goodrich, Mrs. Graham, Miss Gurrie, Miss Lizzie Hart, Mr. and Mrs. Hancock, Miss Hancock, Mr. J. T. Hamilton, Miss Haigraue, Mr. R. M. Harter, Miss E. Hartwell, Mr. T. M. Henderson, Commodore and Mrs. Swinton Holland and servants, Miss Joan Holland, Miss Margerie Holland, Master Holland, Mr. M. R. Jeffers, Mr. C. S. Joslyn, Miss King, Rev. and Mrs. Henry Kingman and child, Miss C. Kingsmill, Mr. Albert Kahn, Mr. Leopold Kahn, Mr. Edward Kahn, Mr. and Mrs. Bryan Lathrop and servant, Mr. Vincent Lawford, Mr. Louis Longin, Colonel and Mrs. John Magee, Miss E. Mitchell, Mr. W. J. Morse, Miss C. McCormick, Miss B. McCoy, Rev. and Mrs. W. P. McVey, Miss Grace Newton, Rev. J. E. Pease, Mr. S. Pohle, Mr. E. Runge, Rev. Dr. and Mrs. Scott, Mr. H. Scott, Mr. H. Scott, Miss M. Scott, Miss B. Scott, Miss Shimizu, Mr. H. Shoda, Mr. E. M. Schlussel, Rev. and Mrs. Shepard, Miss M. E. Shockley, Mr. E. T. Shortland, Captain A. Leigh Smith, Mr. W. G. Smith, Mrs. Smith, Mrs. H. E. Soules, Mr. D. P. Thompson, Mr. Taylor, Miss Vautier, Mr. Yee Chu Ta, and Mr. Zarese in cabin; 11 passengers in second class, and 132 passengers in steerage.

Per French steamer *Natal*, from Marseilles via ports:—Mr. Garonne, Mr. Lamore de Lamivaude, Mr. G. de Cuers de Cogolien, Mr. Gatillou, Mr. Baieu, Mr. Blum, Mrs. E. O. Kellog, Mrs. Miller, Mr. Macklin, M.D., Mr. Fletcher, Mrs. Allen, Mr. Thompson, Mr. Tollahomed, Mr. E. D. Wells, Mr. and Mrs. Carroll and 4 infants, Mr. Pidgeon, Mr. Oshima, Mr. G. Reiffinger, Mr. Leu Ono, Mr. Kamakidji Oishi, Mr. D. H. Hagaska, Mr. and Mrs. Ballet Reymand, Mr. Choza Ouchi, Mr. Koyabe, Mr. Prigent, Mr. Soloyef, Captain C. S. Johnson, Colonel A. Houlett, Mr. E. S. D. Pereira, Mrs. Suanah, Mr. Campagnol and boy, Mr. O. Conner, and Mr. Kanaka in cabin.

Per British steamer *Empress of India*, from Hongkong via ports:—Rev. St. A. Baylee, Lieut. Barnardiston, Mr. J. H. Watson, Captain Rowlett, Miss MacIntosh, Mr. and Mrs. Vidal, Miss Vidal, Messrs. H. E. Yen Nien, F. F. Jaques, S. Dean, G. Caldwell, R. Tauzalin, Dr. and Mrs. Ringer,

Mr. W. H. Howard, Rev. and Mrs. Caultis and child, Mr. and Mrs. Craddock and 2 children, Mr. E. W. Sharples, Mr. Chaw Tze Koi, Mr. and Mrs. Cheukoff, Messrs. O. Gilmour, E. Stypmann, J. W. Broadbent, Mrs. Netland and 2 children, Captain Sarnon, Mr. J. Seymour and 2 children, Messrs. E. White, E. B. Skottowe, B. Dallas, Miss F. Dallas, Mr. M. Ginsburg, Mr. R. R. Reed, Captain Crawford, Lady Tichborne, Mrs. B. Merlin, H. J. Owen, H. Britschneider, H. F. Arthur, P. H. Bernays, Y. Saito, T. H. Joseph, G. Whiting, Miss Skinner, and Mr. P. C. Forsyth in cabin; 11 passengers in second class, and 289 passengers in steerage.

Per British steamer *China*, from Hongkong via ports:—Mrs. Chas. Seymour, Mrs. MacHaffie and daughter, Mr. and Mrs. J. Meier, Mr. and Mrs. Sachse, 3 children, governess, and amah, Captain Clark, Dr. E. Bailey, Hon. and Mrs. J. F. Connelly and 2 children, Mr. H. Heitmann, Mr. H. Dieckmann, Mr. H. Blum, Mr. and Mrs. W. L. Tallien, Mr. T. Brinne, Mr. Frank Burton, and Mr. E. H. Tusk in cabin. For San Francisco:—Messrs. W. P. Connelly, N. W. Pond, K. Noro, M. Yenyah, and K. Shida in cabin.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Miss Nelson, Mr. Wade, Colonel Strelbetzky, Messrs. Clayton, Oshima, Kobayashi, Mikigawa, Nemoto, Viscount Nomura, Misses Nomura (2), Iriye, Tanaka, Messrs. Kajitori, Oka Azabu, Nakano, Fukunaga, Kobayashi, Kawamura, Tajima, Sakurai, Sugiyama, Major-General Isobe, Messrs. Sugiyama, Suzuki, Fukui, Yoshisuye, Jesselson, and Shibayama (2) in cabin; Messrs. Oda, Yanagase, Kawasaki, Urano, Nakata, Asukai, Kawano, Matsunoto, Miss Mori, Miss Shobara, Messrs. Yera, Noguchi, Nasaka, Ito, Shimidzu, Nagashima, Kikuchi, Edkarpi, Larson, and Tson Tsem Yuen in second class, and 211 natives and 5 Chinese in steerage.

DEPARTED.

Per British steamer *Doric*, for San Francisco via Honolulu:—Mrs. R. F. Bickerton and son, Miss S. P. Birnie, Baron R. de Batz, Mr. G. Clark, Mr. A. Chamberlain, Mr. W. F. Crichton, Mrs. A. Duncan, Lieut. and Mrs. H. F. Fickbohm, Mrs. M. Freeman, Miss Hellyer, Miss Haggood, Mrs. A. T. Hill and 3 children, Miss M. Hennessey, Mr. and Mrs. F. Hellyer, Mr. Krausch, Mr. C. Lichtenfelder, Mr. E. R. Morris, Mr. G. Morris, Mr. Chas. H. Mitchell, Mr. F. V. McNair, Jun., Mrs. F. V. McNair, Mr. Otto Messing, Mrs. E. Morris, Miss G. Morris, Mr. G. S. Northcote, Mr. and Mrs. V. Gilpin Robinson, Mr. O. Reichter, Commander W. W. Reisinger, U.S.N., Mr. R. Shewan, Mr. K. Stadniski, Mr. B. O. Squire, Miss B. Smith, Mr. J. C. Siegfried, and Mrs. A. Whartenby in cabin.

Per French steamer *Sydney*, for Shanghai via Kobe:—Mr. and Mrs. Addis, infant and amah, Mrs. S. Yajima, Miss A. Rotz, Mr. and Mrs. Rickman and 2 infants, Mrs. Cooper, Mrs. Meuser, Mrs. Moore and infant, Mrs. Edye, Sister St. Dominique, Sister St. Odile, Messrs. O. Pollak, R. de Souza, Chew An Pang, Show Fun and infant, C. F. Stockwell, Miss Cobb, Miss Dresser, Messrs. Marcus Goldstein, A. Fong, Loo Tsu Yuen, Lai Hong How, Arabi Fairer, F. Cloux, Lieutenant McIntosh, Captain Armstrong, Messrs. Millochau, H. Spony, K. S. Torii, and Van Roskowski in cabin.

Per British steamer *Empress of Japan*, for Hongkong via ports:—Mr. and Mrs. A. K. Gregson, Mrs. Pemberton, Mr. R. E. Toeg, Mr. W. U. Beauchler, Mr. and Mrs. J. O. P. Bland, Miss Melvin, Mrs. Jos. Cunningham, Mr. Stafford Sassoon, Rev. and Mrs. Wallace, Mrs. Toeg and 2 infants, Mrs. Haskell and son, Miss Jamieson, Mrs. J. Davis, Mr. and Mrs. Shapleigh, Mrs. and Miss Humphreys, Mr. A. P. Probst, Rev. and Mrs. S. R. Hope and child, Col. The O'Gorman, Rev. W. McGregor, Mrs. N. Clerk, Mr. G. A. Goodwin, Miss E. R. Scidmore, Miss Talmage, Miss Coppon, Major W. de B. Hatton, Mr. S. A. Levy, Mr. and Mrs. R. B. Moorhead, Miss Moorhead, Mrs. J. D. Thompson, infant and nurse, Mr. and Mrs. Ballant, Mr. E. U. Smith, Mrs. Pieters, 2 children and infant, Miss Takata Tane, Mrs. Hulhold, Messrs. A. L., and G. Kahn, Mr. F. J. Bardens, Mr. V. E. Abraham, Rev. J. W. and Mrs. Moore and child, Miss N. C. Stewart, Mr. R. Barton Wright, Mr. E. W. Barton Wright, Mr. Valentine Chiroi, Mr. F. H. Bugbird, Mr. John Liddle, Mr. and Mrs. O. Mordhorst, Mr. C. J. Dudgeon, Mrs. A. Coxon, Mr. Jose Vidal, Mr. D. E. Brown, Mr. E. H. Tusk, Lady Lima Tichborne, Mrs. Beaufoy Merlin, Mr. R. C. Forsyth, Mr. F. T. Gause, and Captain Wynn in cabin; Mr. A. Lugebil in second class, and Mr. and Mrs. Yue Sing and daughter in third class.

Per Japanese steamer *Saikio Maru*, for Kobe:—Mr. E. W. Rutter, Mr. M. Zumoto, Miss Fox, Mr. K. Tagi, Mr. K. Satake, Mrs. Tipple and 2 children, and Rev. C. Rambach in cabin; Messrs.

R. Saito, K. Kato, K. Shiraki, M. Shimizu, K. Shimomura, and K. Ishida in second class. For Shimomura:—Mr. Fardel and Rev. Mr. and Mrs. Hind in cabin. For Nagasaki:—Mr. G. C. Bouman and Mr. J. H. Ross in cabin; Mr. Y. Umehara and Mr. N. Hidaka in second class. For Shanghai:—Mr. and Mrs. J. Ford, Mr. J. Chambers, Rev. and Mrs. T. J. Arnold, Mr. E. W. Pugh, Mr. G. W. Hooper, Mr. A. M. Howe, Mr. H. A. Little, Mr. and Mrs. Matheson, Mr. S. Hayashi, and Mr. A. H. Heath in cabin; Mr. William Curtis and Mrs. Shirazawa in second class, and 71 passengers in steerage.

Per British steamer *Empress of India*, for Vancouver, B.C.:—Lieut. Barnardiston, Rev. St. A. Baylee, Mr. Geo. Bowack, Mr. J. M. Chambers, Mr. S. Dean, Mr. R. C. Forsyth, Mr. C. de Granphrey, Mr. T. M. Henderson, Mr. T. H. Joseph, Mr. Stanley Leathers, Mr. R. Metz, Miss MacIntosh, Mrs. Beaufoy Merlin, Mr. Rudolph Metz, Mrs. Netland and two children, Mr. R. Oshima, Captain Rowlett, Captain Sarnow, I.G.N., Mr. J. Seymour and two children, Miss L. A. Skinner, Mr. E. Stypmann, Mr. M. Suzuki, Rev. and Mrs. E. F. Tatum, Miss Joy Tatum, Mr. Robert Touzalin, Lady Lina Tichborne, Mr. A. Vidal, Mrs. Vidal, Miss Vidal, Mr. J. H. Watson, R.N., Miss L. M. White, Mr. E. White, Mr. Giles Whiting, Mrs. Wyley, Miss Wyley, and His Excellency Yen Nien in cabin.

BISSET & URE'S SHARE REPORT.

Yokohama, September 11th.

Telegraphic advices from Hongkong report that the following changes have taken place in the share market:—Hongkong Banks have risen to 192 per cent. premium, H. & W. Docks to 200 per cent. premium, H. & K. Wharfs to \$54.50, and Indo-Chinas to \$47.50.

New Amoy Docks have been sold to Hongkong at \$13 and West Points at \$18.

Club Hotels have changed hands locally to-day at \$69, at which rate a few more shares are on offer. Grand Hotels have also been sold at \$170, and at this rate shares are wanted. Iron Works are in demand at \$105, and Debentures of all kinds at quotations. A sale of Langfeldts is reported at \$130.

ITCHING SKIN DISEASES

Instantly
Relieved by
CUTICURA

A warm bath with CUTICURA SOAP, and a single application of CUTICURA, the great skin cure, followed by mild doses of CUTICURA RESOLVENT (the new blood purifier), will afford instant relief, permit rest and sleep, and point to a speedy, economical, and permanent cure of the most distressing of itching, burning, bleeding, scaly, and crusted skin and scalp diseases, after physicians, hospitals, and all other methods fail.

Sold throughout the world. British depot: F. NEWBERRY & SONS, 1, King Edward-st., London, E. C. POTTER DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U. S. A.

Women and Women Only

Are most competent to fully appreciate the purity, sweetness, and delicacy of CUTICURA SOAP, and to discover new uses for it daily. In the preparation of curative washes, solutions, etc., for annoying irritations, chafings, and excoriations of the skin and mucous membrane, or too free or offensive perspiration, it has proved most grateful and comforting. Like all others of the CUTICURA REMEDIES, the CUTICURA SOAP appeals to the refined and cultivated everywhere, and is beyond all comparison the most effective skin purifying and beautifying soap in the world.

THE GREATEST WONDERS OF MODERN TIME**HOLLOWAY'S PILLS.**

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.**HOLLOWAY'S OINTMENT**

Uncertain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout
World. May 1st, 1896.

"NEW CODES AND OLD CUSTOMS."

YOKOHAMA: SATURDAY, SEPT. 19TH, 1896.

SUMMARY OF NEWS.

H.I.H. the Prince of Wales won the St. Leger with Persimmon.

THE cricket match on Saturday resulted in an easy victory for Mr. White's Eleven.

THE floods in Mino and Owari have been most destructive of life, property, and crops.

It is estimated that the recent storms did damage to the extent of 10,000,000 yen.

BARON SUYEMATSU, of the Legislative Bureau, sent in his resignation on the 15th inst.

THE new treaty between Japan and Holland was ratified on the 8th inst. at the Hague.

COUNT MATSUKATA has been appointed Minister President of State and Minister of Finance.

THE Tea Merchants' Bank of Yokohama will be inaugurated on or about the 1st of November.

MOST of the telegraph wires damaged by the late gales have been restored to working order.

THE train-service is slowly getting into working

order again, but some weeks must elapse ere through communication between Yokohama and Kobe is established.

MISS ELSIE ADAIR and a versatile company have drawn big audiences to the Public Hall this week.

THE Government of Korea has granted the privilege of felling timber in Ham-gyôg-do to a Russian.

CONSTANTINOPLE is still in a condition of nervous unrest. Trade is paralyzed and the Treasury is empty.

TYNAN, the notorious No. 1, of the Fenian organization, after 14 years' hiding, has been arrested at Boulogne.

ALL the steamers that left Yokohama on Friday and Saturday for Kobe encountered bad weather on the passage down.

THE Kiushu Beer Brewery Company is to be established in Kokuramachi, Buzen, with a capital of yen 300,000.

NEARLY all the small boats capsized during their race on Saturday. *Mary* won the big yacht race with only a few minutes to spare.

ADMIRAL KAWAMURA, Privy Councillor, and others, will commemorate the 20th anniversary of the death of the late Saigo Takamori.

DURING the week the dramatic company of H.M.S. *Humber* have given two performances at the Public Hall of the drama "Blow for Blow."

VERY little news has reached Japan regarding the Manila disturbances, but at Hongkong the revolution is believed to be more serious than was at first expected.

A BORING started by the Zo-o Kerosene Oil Company, Limited, has struck oil at a depth of 166 yards. The oil spurted up to a height of 86 yards above ground.

MAKONI, the rebel Mashona leader, has been captured, tried by court-martial, and shot. Major Watts has been arrested in connection with the execution of Makoni.

MR. FUKUZAWA YUKICHI held a *conversazione* from one o'clock on the afternoon of the 13th. Li Shun-young, Yu Ki-shun, and other Koreans were among those invited.

HEEDLESS of the objections lodged by Great Britain and Italy, the Porte has deported a shipload of Armenians and has adopted rigorous measures to prevent their return.

OWING to the inclemency of the weather on Tuesday the *flle* arranged on board the Mexican corvette *Zaragoza* in honour of President Diaz, had to be postponed for two days.

SHOULD Viscount Katsura become Minister of State for War it is expected that Baron Kodama, now Vice-Minister of the Department, will be appointed Governor-General of Formosa.

THE preliminary meeting of the committee entrusted with the task of investigating the merits of the broad gauge system, was held at the Tokyo Chamber of Commerce on the 14th inst. at 6 p.m.

THE late Yezawa Kingoro, ex-proprietor of the Tenshodo, who was drowned the other day at Oiso, while bathing, bequeathed yen 1,000 to the poor students' library in his native place, Chiba.

By a notification promulgated on the 12th inst., it is announced that the Government of Portugal will suppress all private telegrams that

are supposed to be tinged with the suspicion of connection with treason or plots against the State.

THE *Kokumin* reached its 2,000th number on Tuesday, and to celebrate the occasion issued a large plate, a study by the celebrated master Beisen, the subject being "Moonlight on mountain and lake."

THE First National Bank's charter expires on the 25th inst., but from the 26th, the Bank will reappear under the new name of the First Banking Corporation, Ltd., with a capital of yen 4,500,000.

MONSIEUR DESLANDRES, the Principal Astronomer of France, who came out to this country to observe the recent solar eclipse, was received in audience by his Imperial Majesty on the 11th inst. at 10.30 a.m.

THE Armenian Revolution Committee has sent a circular to some of the Embassies declaring that, unless the reforms asked for are granted by the Porte, demonstrations of a serious character will ensue.

THE amount of deposits in Post Office Savings Banks during March was yen 1,600,497.195. The amount of withdrawals was yen 1,436,989.763. There has been an increase in withdrawals of yen 212,210.211, i.e. 17.3 per cent.

At the end of last month the banks in this empire numbered 1,249, with a total capital of yen 223,500,044. Comparing these figures with those of the preceding month there is an increase of 26 banks, with an increased capital of yen 8,465,501.

BARON NABESHIMA KAN (ex-Governor of Hiroshima Ken), Mr. Todama Shosuke, Rear-Admiral Kodama Toshikuni, Rear-Admiral Tanaka Tsunatsune, Mr. Samejima Takenosuke (*chargé d'affaires* and *ad interim* private secretary to the Premier), were recently raised to the House of Peers.

THERE is not much improvement to be noted in the import trade, as the fluctuation in exchange appears to have made both buyers and sellers proceed with caution. At the commencement of the week holders asked more money for the Yarns and Grey Cloth enquired for, and as rates of exchange rose as the week wore on buyers hung back in the hope of a further rise in their favour. Fancy Cottons have been moved to some extent, but the business is not great. Woollens are not entirely neglected, but enquiries have not resulted in much actual business. Only a few enquiries for Metals, the stock rapidly increasing and prices are nominal. In the Kerosene market, holders are firm, and buyers do not appear to be anxious to operate. There is very little doing in Sugar of any kind, but stocks are ample. The Silk market looks healthier. Holders, who seem to be scared by a small fluctuation in exchange, made a substantial reduction in their demands at the commencement of the week, but a better feeling in the States was cabled with a slight rise in the value of silk there, when up went prices on this market and dealing once more became impracticable. Nothing doing in Waste Silk, buyers and sellers being wide apart in their ideas of values. In the Tea trade there continues to be a moderate business, buyers having looked up the parcels of the better qualities that were still to be found on this market, the third crop having proved to be generally undesirable leaf. Exchange having further declined at the beginning of the week, then took a turn in the opposite direction, and rates gradually improved till at the close they leave off rather better than a week ago.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

On Friday, the *Fiji* and other metropolitan journals thought the reorganization of the Cabinet by Count Matsukata was doomed to be a fiasco, as the Count himself thrice asked the Emperor to relieve him of the task. The difficulty in filling the vacancy at the War Office was the immediate cause of the trouble. Viscount Katsura positively refused to listen to Marquis Saigo and Count Inouye upon the matter, and reiterated his declaration that he would leave his post. When he found himself in this very difficult situation, Count Matsukata proceeded to the Palace on the 16th inst., and represented to the Emperor that he was unequal to the task of forming a Cabinet. The Emperor, however, graciously told the Count to think the matter over and endeavour to overcome the obstacle. Immediately after the Count left the presence of the Emperor, His Majesty sent Marquis Tokudaiji, the Lord Chamberlain, to Count Kuroda, enjoining the latter to expedite the formation of the Cabinet. The result was another gathering of the senior statesmen at the residence of Count Kuroda early on the morning of the 17th. What transpired is of course unknown, says the *Fiji*, but at a little past 10 the same morning Count Matsukata again proceeded to the Palace and for the third time requested the Emperor to release him from the obligation of forming a Cabinet. The Emperor again enjoined the Count not to give up the task, so that in the end, His Excellency could not bring himself to persist in his request. The *Fiji's* news was corroborated by other papers favourably inclined to Count Matsukata and Okuma, notably the *Yomiuri* and the *Nippon*. The first went so far as to say that it gave up the affair in despair. It averred, in tones of bitter regret, that the possibility of a Matsukata Cabinet was ended by the events of the 17th instant, when the Count proceeded to the Palace and was received in audience by the Emperor. The *Yomiuri* grieved to be obliged to declare that the formation of a responsible Cabinet pledged to introduce radical reforms in the administration of the country was impossible. The same paper and the *Nippon* accused, either explicitly or implicitly, the wire-pullers of the Choshu statesmen for having instigated Viscount Katsura to take up his present position. The *Yomiuri* observed that Marshal Marquis Yamagata was at heart not disinclined to place himself once more at the head of the Cabinet. The main reason why he declined when first asked by the wire-pullers of Counts Matsukata and Okuma, was because he saw that those wire-pullers were only offering him the post in the hope that he would decline and that then they could turn with clean hands to the two Counts.

The press this week did not neglect to discuss topics not directly connected with the leading problem of the day. We shall deal in this summary with those topics, as we have followed the progress of the Cabinet crisis from day to-day and have reproduced the opinions of various papers of the metropolis regarding the matter. The educational policy of Japan is discussed in a grave manner by the *Mainichi*. It grieves to observe that the status of scholars is steadily falling and the dignity and influence of instructors as steadily waning. The cause of the former phenomena must be sought in the defective educational policy of the State, while the latter must be due to the decay of the true spirit of scholarship. The educational policy of the Government calls for urgent reform, the main defect being the subordination of educationists to Government officials dealing with the educational affairs of the country. So thorough is this subordination that even the President of the University and the Heads of its respective colleges are in danger of being removed at the pleasure of obscure officials in the Department of Education. This vicious and entirely mischievous system prevails all through the land down to the petty village schools, whose teachers have to become servile servants of village and district councillors and

obliged to fawn on them to save their miserable pittance from being cut down. Under these circumstances, the true progress of sound education is impossible. Nor are the instructors themselves free from blame. They themselves have no true conception of the noble pursuit in which they are engaged, and they can not call forth a determination to devote their life to the investigation of science or in training men of sterling worth. Of course it must not be forgotten that they are constantly tempted by worldly considerations to forsake an ill-paid calling, and this of course destroys their influence among their pupils. Is there any scholar now of the type of the late Senator Nakamura Kein, whose career lay beyond the pale of fame or interest? He devoted his whole life to the cause of learning. Is it possible to find an equal of Mr. Fukuzawa, who furnishes such an admirable example to his pupils? In short, to rescue education from its present state of backwardness and stagnation, the Department must be distinctly separated from politics, and society should be taught to regard educationists with respect and consideration.

The *Fiji* discusses China's attempt to impose duties on goods manufactured on her soil, whether by natives or aliens. Our contemporary is rather glad to see China making such an attempt, holding that it is calculated to promote the interests of Japan. Theoretically, China's idea of imposing such duties is entirely untenable, and Japan has a perfect right, in virtue of the Shimonoseki Treaty, to refuse the appeal of the Middle Kingdom. But viewed from the standpoint of material interests alone, the proposal of China deserves the deliberate consideration of Japan. China is a very good customer of Japan, and the import of Japanese commodities, especially cotton yarns, is steadily increasing. The causes for this must be sought in the fact that while, on the one hand, home industries are still in their infancy in China, foreign competitors, on the other, are at a disadvantage with regard to dispatching goods to China, as compared with the Japanese merchants and producers. Can it be conducive to the interests of Japan when, in strict accordance with the provisions of the Shimonoseki Treaty, both foreign and Japanese capitalists start manufactures in China? It was partly owing to this consideration, the *Fiji* learns, that the Mitsui Firm decided to abandon for the present its original idea of starting a spinning mill at Shanghai. Japan must not be actuated by mere theoretical considerations in the matter, but should view the question from every standpoint of practical value and interest. Needless to say, Japan must not give away prescriptive rights secured to her by Treaty, unless, on the eve of conceding a step to China, she ask the latter for suitable compensation.

As a corollary to the discussion relating to proposed Chinese imposts, the *Fiji*, in a subsequent issue, gives some suggestions as to the compensation that ought to be demanded from China in return for expunging the free manufacture clause in the Shimonoseki Treaty. They are, the free export of raw cotton from China, the free import of marine products, and, lastly, free navigation between ports not yet opened for purposes of commerce.

The *Mainichi* devotes two leaders to discussing the problem of railway construction. In the first it observes that in laying a railway attention should be paid to preventing the marring of the landscape, while obstructions to the currents of rivers should be avoided for the sake of irrigation works. The second article deals with the present interruption of railway communication, and maintains that this untoward occurrence must partly be due to the negligence of railway experts to provide against floods. The *Mainichi* points to the case of the Sanyo Railway which is constructed along a slope terminating with the sea. The Sanyo track is always in danger of damage by flood. Efficient drainage schemes have also been entirely neglected. No wonder, therefore, that a slight storm often interrupts traffic on this

line. But such defects are not confined to the Sanyo road, similar remarks may be applied to all lines throughout the country, whether Government or private. The delays and inconvenience that a temporary suspension of railway communication brings about, subject the people, and especially merchants and producers, to serious loss. How much more serious would be the consequence should such suspensions as those now prevailing on several lines occur during time of war!

The *Nichi Nichi* writes in strong terms about the necessity for subjecting life insurance companies to more rigid control. Leaving out of the calculation the hundreds of petty companies, there are some fifty organizations dealing with life insurance, and the number of persons insured totals over 210,000, with paid-up premiums of 45 million yen. In other words, the number of policy-holders does not exceed 1/10 of the total population of the country and the paid-up premia average a little over 1 yen per head. Life insurance business in Japan is therefore still in its infancy. The *Nichi Nichi* observes that the defective development of this business is partly attributable to unfair competition now prevailing among the companies, and to the distrust in which the public hold them. The companies overlook one important matter with respect to their business. They seem to forget that, from the very nature of the business, they must be content with a narrow margin of profit. Far from being satisfied with small profits, the insurance companies of Japan, in their eagerness to secure large returns, do not scruple to invest their funds in risky concerns and often indulge in sheer speculation. A certain insurance company is understood to have absolutely no capital of its own, while only 19 out of the 50 companies are provided with statistical death rates, the majority undertaking business without a fixed standard to go upon. It is as if a ship should sail without a compass; nothing could be more dangerous. There is also a considerable difference in the charges, chiefly in connection with life insurance. In some companies the rate is as high as 38 per cent. of the premium, while in others it is only 7 to 8 per cent. The want of competent control lies at the root of these evils. The *Nichi Nichi* learns that the Authorities are legally authorized to enforce strict regulation of newly-established joint-stock companies dealing with life insurance, but that they cannot interfere with companies established prior to the enforcement of the Law of Companies, Firms, and Partnerships. Our contemporary now urges the Authorities to improve the law relating to the control of life insurance companies, so that every company or firm engaged in it may be subject to strict supervision.

THE NEW MINISTRY.

The *Official Gazette* this morning announces that at 4.20 p.m. yesterday Count Matsukata Masayoshi was formally appointed Minister President of State, the ceremony being performed at the Palace in the presence of Count Hijikata, Minister of the Imperial Household; Marquis Saigo, Minister of the Navy; Count Kuroda, President of the Privy Council; and other Ministers. Count Matsukata will hold the portfolio of Finance in conjunction with the Premiership, Viscount Watanabe Kunitake being relieved of the office.

The *Asahi* announces that the following appointments will be made to-day:—Count Okuma, Minister of Foreign Affairs; Count Kabayama, Minister of Home Affairs; Viscount Takashima, Minister of War, *ad interim*, and Minister of Colonization.

The exports from Yokohama last month were valued at yen 3,562,451.930; from Kobe, yen 3,039,117.560; the imports at Yokohama were yen 6,720,973.170; Kobe, yen 8,525,370.230. The amount of duties paid last month was yen 572,150.322.

EDITORIAL NOTES.

FOUR BEARS KILLED IN ONE HUNT.

A HOKKAIDO man narrates a most successful bear-hunt, which took place on August 27th at Kurizawa-mura, near Sorachi. In a forest not far from the village is a forestry station of the Konishi Agricultural School, and several bears had been seen prowling in the vicinity for about a fortnight before the hunt took place. They did considerable damage on the experimental farm and caused much alarm, so that their extermination was resolved upon. Taoka, a local hunter of great repute, set out with ten beaters at noon of August 27th, and thoroughly searched the woods. After a prolonged hunt, suddenly one of the hunters came face to face with a huge bear. He might have touched the shaggy brute, so near was he; and it was impossible to use his gun. Taking to his heels, the hunter became the hunted, for Bruin followed rapidly and even succeeded in biting him twice in the thigh. This made the fugitive utter a loud yell, which was heard by Taoka. Advancing at full speed in the direction of the cry, Taoka found that the bear had reached his fainting prey and was about to make an end of him. At this moment a bullet from Taoka's rifle struck the bear in the abdomen, inflicting a fatal wound. Hardly had the bear been killed, when other cries were heard, the hunters shouting that they had come across the female with two half-grown cubs. Taoka was soon on the spot, and killed the trio with three clean shots at rather long range. Thus four bears had fallen to his rifle, and all in less than ten minutes. On the return to the village, Taoka was fêted and made much of—as indeed he deserved to be.

THE MESSEAGERIES MARITIMES.

THE report presented at the recent meeting at the Messageries Maritimes states that in conformity with the new conditions of the last convention entered into with the Government, the work of transforming the machinery of the steamboats *Caledonien*, *Océanien*, *Salaste*, *Sydney*, and *Yarra* into triple-expansion engines of greater power had been proceeded with. This transformation has been the means of accelerating the speed of the boats one knot per hour. The report also mentions the change effected in the internal arrangements of the cabins of the *Oronogue*, in view of its transference to the Mediterranean service; the application of lateral keels to the mail boats *Armand Behic* and *Ernest Simons*; and the installation of the electric light on board the *Haiphong*. The report goes on to state that the fleet is composed of 59 steamers, of a total tonnage of 213,091 tons, with a horse-power of 167,550, showing an increase compared with the previous year of three vessels of 12,136 tons, and 9,600 horse-power. Two new twin-screw boats were being constructed for the principal line of Indo-China. They form the first of the new series of steamboats to be put in hand in consequence of the renewal for nine years of the convention of 30th June, 1886. These steamboats were of a splendid type and of great power. They had all the latest improvements calculated to give satisfaction to their customers, and to meet all the wants of the service. The postal service had been executed with the usual punctuality. The rate of speed on the Indo-China line and on the Japan line had been 13.25 knots. The conditions of the convention of 30th June, 1886, stipulated 13 knots for the principal lines of Indo-China.

THE DONCASTER ST. LEGER.

THE belief has been steadily gaining ground in England as the summer's racing proceeded, that the St. Leger would be left to St. Frusquin and Persimmon when it came to racing, as the Duke of Westminster's Regret, who at one time was thought to have a great chance, gradually showed that he was not equal to the distance—in fact the length of his tether is a mile, and it is probable that he was not started on the Town Moor, that is to say in the Leger. However, yesterday's telegram settled all doubts, and the Royal owner of Persimmon has had the pleasure of leading in a

winner that must now be classed as the best horse of his year. It will be interesting to read the details of the race, as the Duke of Westminster, in the probable absence of Regret, started a couple out of the seven horses he had entered in the race that ran second and third—Labrador and Rampion. The former colt—by Sheen ex Ornament—never distinguished himself as a two-year-old, having only won the Ham Stakes at Goodwood, and in not very brilliant company, though he tried five times during the year; but he must be credited with a place in the Guineas. Rampion, a chestnut colt by Amphion ex Rydal, first sported silk in the Coventry Stakes at Ascot—won by Persimmon, to whom he ran unplaced, his only other appearance on the T.V.C. being at Goodwood, where he won the Molecombe Stakes from Faversham by a neck. The Prince's win will have been immensely popular at the great northern gathering, and for that matter throughout the country, and Persimmon's win at Doncaster gives evidence that the colt will have a good show in his remaining three engagements this season. The first of these is in the rich Jockey Club Stakes at head-quarters—10,000 sovs.—though here he will have to put up 12lb., but the course is only a mile and two furlongs across the flat. The second engagement of Persimmon is in the Lowther Stakes at the Second October Meeting, and the third the Limekiln Stakes at the Newmarket Houghton, the latter over the Rowley Mile.

NEW P. AND O. STEAMERS.

MESSRS. HARLAND and Wolf launched from their yard at Belfast recently a large new steamer, the *China*, for the Peninsular and Oriental Company. The *China* and the *India* her sister ship—recently launched at Greenock—are the largest steamers yet built for the company, the dimensions being—length 500 feet, breadth 54 feet, depth 37.7 feet, and gross tonnage 8,000 tons. The *China* will be driven by single screw triple expansion engines of 11,000 horse-power, but the distribution of power and smoothness of working will be ensured by employing engines of the four-cylinder tandem type. She will carry 500 saloon passengers. The ceilings of the saloon, library, and music and smoking-rooms will be highly decorated, a special feature being the fifteen panels representing the different aspects of the day, such as dawn, sunrise, twilight, and evening. The state-rooms on the promenade, spar, and main decks are exceptionally large and roomy, and well supplied with every comfort. The ship is, of course, fitted throughout with the electric light and has a large number of solid marble baths. For working cargo the arrangements are of an equally perfect character. The *China* is built on similar lines to the *Caledonia* (belonging to the same company), but is larger than that vessel. She will run on the Company's India and China mail lines.

PROFESSOR MILNE AND THE SEISMIC WAVE.

THE London *Daily Chronicle* has the following editorial note:—"Very timely is a brief article in the *Geographical Journal* for August by Professor John Milne, F.R.S., who holds that the Japanese great waves are due to seismological rather than volcanic agency. He recalls that in 1293 a great sea-wave carried away 30,000 Japanese a little south of the recent disaster, while coasts still further south have frequently suffered enormously. In 1703, on the coast of Awa, the loss of life from this cause exceeded 100,000. There was an awful loss on the Peruvian coast in 1868 and again in 1877, and these waves were felt in Japan. So the great sea-wave of 1883 in Java and Sumatra was also felt in 'the Britain of the Far East.' Happily the Britain of the West knows no greater disturbance of the sea than the great bore in the estuaries of the Severn and the Wye. But it seems Mother Earth tells us, if we only care to read her dumb language, of such great catastrophes on the other side of the world. Perhaps, if we had a national seismographic observatory, properly placed on the basalt or the granite which crop out at so many points on our islands, we should be able to tell of, and in time come to locate, great earth-disturbances the world over. At present Italy

leads the way in this department, and our only observatory is a private one on the southern chalk. Yet they say, Comrie, in Perthshire, has an earth-movement about every other day. We might surely try a seismological apparatus on a Devonshire tor, or add it to our observatory on Ben Nevis."

MISLEADING ADVERTISEMENTS.

HERE is an item taken from a London journal:—

An interesting German law came into force lately, the "Law against Unfair Competition," intended to punish the swindling of the descriptive advertiser. Next to the land of the wooden nutmeg, Germany is probably the country where devious commercial transactions most prevail, and as we in London are not infrequently the sufferers by enterprise of Hamburg and Bremen, we wish well to the new "self denying ordinance." By the way, a newspaper which publishes a false trade description may be made *particeps criminis*, and prosecuted as an accessory. This opens up an interesting prospect for those newspapers which make a good thing out of money-lenders, quack medicines, and City companies.

How would this new law operate, we wonder, in the case of a newspaper that invited advertisements by professing to have a larger circulation than any of its local contemporaries? Would it be possible to arraign the proprietor on a charge of false pretences, and compel him to prove his circulation?

CHINESE OPIUM.

THE following note by Mr. Frank Browne, F.C.S., Acting Government Analyst, Hong-kong, appears in the *Pharmaceutical Journal* of the 1st August:—

In a previous paper (*Pharm. Journ.*, 1895-6, p. 493) are recorded some observations on the smoking value of Chinese opium. Further testings have been made, and the results of two series of independent observations by experienced Chinese smokers are here recorded:—

First series:—The Chinese opium extracts have a grassy taste, and are deficient in flavour and strength. Three parts of Indian extract are equal as regards the smoking effect to five parts of the Kweichow extract. Yunnan is weaker than Kweichow, while Szechuen is the weakest.

Second series:—The taste (flavour) of Kweichow extract is much weaker than that of Patna, and the strength, as regards smoking effect, is one half that of Patna. The taste of the Yunnan variety is weaker than that of Kweichow, and its smoking effect is one third that of Patna extract. In taste and in smoking effect, Szechuen extract differs but little from Yunnan. The effect produced by smoking either of the Chinese extracts is similar to that from a proportional quantity of Patna extract.

Conclusions:—As regards narcotising power, it is noteworthy that the three opiums yield extracts greatly inferior to Indian extract, although the Chinese opiums have been shown, especially in two varieties, to contain larger quantities of morphine than are present in Indian opium.

FOUR IN A BUNCH.

THE *Yomiuri* reports that the wife of Mr. Ozawa, a well-known merchant of Nihombashi District, Tokyo, gave birth to quadruplets on and inst. Two of these were boys, and of the girls one died shortly after being born. The others and the mother are doing well. Curiously enough more than one child at a birth is thought most unfortunate in Japan. The idea, handed down from ancient times, is that twins or triplets are the result of some feud or wrongdoing in a former state of existence. The enemies or those harmed thus take vengeance on the parents by forcing them to rear and educate them until they, the one-time foes, reach maturity.

HAWAIIAN AFFAIRS.

THE last mail from Hawaii has brought news of the expected return of Princess Kaiulani to that country during the month of September. Private advices inform us that many rumours are floating with reference to this event: that she is to be placed on the throne with President Dole as her Prime Minister, and that England and the United States have joined to form a protectorate. It is not at all probable that the Republic can be overthrown; but it is not unlikely that an attempt may be made to restore the monarchy in the person of this popular Princess.

DESTRUCTIVE FIRE IN CANTON.

THE *China Mail* of September 4th announces that its Chinese contemporary the *Chinese Mail* (*Wah Tse Yat Po*) received a telegram from Canton that morning stating that a serious conflagration occurred in Canton on Sept. 3rd. The fire broke about eight o'clock in the Tong-yu-lan,

the Western suburb; and raged with great fury until about midnight. Over two hundred houses were destroyed. The cause of the fire is unknown. This part of the city is occupied chiefly by the *Yoshiwara*.

THE MANSION HOUSE "TIDAL WAVE" FUND.
A KOBÉ contemporary notices by the subscription lists appearing in the latest home papers received, that the Mansion House fund for the relief of sufferers by the tidal wave on the north-east coast of Japan amounted on August 6th to £3,473 9s. 6d. The Elawick Shipbuilding Company alone contributed £1,050; Lord Armstrong £250; Sir Andrew Noble £250; and Mr. A. R. Brown, Consul for Japan at Glasgow, collected £54 7s. od.

"BLOW FOR BLOW."

A VERY small but extremely sympathetic audience witnessed the second performance of "Blow for Blow" at the Public Hall on Monday evening. The piece went even better than on Saturday, and *Charles Spraggs* achieved a most notable success. We trust that when the dramatic company of H.M.S. *Humber* again appear upon the boards they will meet with the patronage to which their merits entitle them.

DEATH OF AN OLD RESIDENT.

News has been received of the death in Germany of Mr. Boehmer, late of the Yokohama Nurseries. This gentleman did much in the early days of foreign residence to make known the flora of Japan to the outer world, and few knew the Hokkaido so thoroughly, from a horticulturist's standpoint. He had been in failing health for some years past.

BURGLARIES IN SAPPORO.

The house of the Rev. W. W. Curtis, of Sapporo, was broken into by thieves on the night of the 3rd inst., and a safe containing sixty yen and a quantity of silver plate carried off. The safe, broken open and empty, was found the next day a short distance from the house. On the morning of the 4th the house of the Rev. S. C. Niven was broken into and a clock, over-coat, rug, and various other articles carried off.

THE "CATTERTHUN'S" GOLD.

The divers have succeeded in recovering 5,000 sovereigns from the wrecked steamer *Catterthun*. The work of recovery is being carried on under great difficulties on account of the strong currents and the depth—26½ fathoms—which is said to be the greatest depth of water in which diving work has ever been attempted.

THE "KOKUMIN SHIMBUN."

The *Kokumin* reached its 2,000th number on Tuesday, and to celebrate the occasion issued a large plate, a study by the celebrated master Beisen, the subject being "Moonlight on mountain and lake."

THE REVOLT AT MANILA.

EVERYTHING, says the *China Mail*, seems to point to the fact that the Manila authorities are blocking all details of the trouble in the Philippines. Quarantine now exists against telegrams.

SHIPPING STRIKE.

ACCORDING to a telegram in the Australian papers, a great shipping strike is anticipated in Great Britain, for a minimum wage and the compulsory employment of Unionists.

DEATH OF PROFESSOR HAIGHT.

MR. MILTON HAIGHT, sometime Professor in the Agricultural College at Sapporo, died at Waterloo, Canada, on the 4th August, and was buried at Newmarket on the 6th.

BARON VON BIEGELBEN.

BARON VON BIEGELBEN, formerly Austro-Hungarian Minister at Tokyo, has retired, says a Reuter's Vienna telegram, from the diplomatic service on a pension.

A LONG DRIFT.

A LIFE-BUOY belonging to the Japanese gunboat *Banjo* has been picked up by a trading schooner in the Hawaii Channel and taken to Honolulu.

THE "PAMIAZ AZOVA."

VLADIVOSTOCK papers of the 24th ult. says that the *Pamiaz Azova* has arrived there quite safe.

THE CABINET CRISIS.

Saturday, September 12th.

Judging from the Tokyo papers, the Cabinet crisis is apparently on the eve of definite settlement. The *Yiji* and others note that Count Matsukata proceeded to the Palace at about 10.20 a.m. the day before yesterday and conferred with the Emperor till past 1 p.m. On his way back, he called on two or three of the senior statesmen. Judging from these circumstances, and also from the fact that the hopes of the senior statesmen were centred round the Count, he must privately have been asked by the Emperor to accept the premiership. The Count must also have laid his views before the Emperor. In the afternoon of the same day, Marquises Yamagata and Saigo and Count Kuroda held a conference at the residence of Count Matsukata, most probably to discuss the Cabinet problem. Their carriages were still in front of his residence at 7 o'clock in the evening. Count Hijikata and Viscount Tanaka, Minister and Vice-Minister of the Imperial Household respectively, called on several of the elder statesmen that day and they then went back to submit their reports to the Emperor. All the papers, with the significant exception of the *Nichi Nichi*, say that Count Matsukata has promised the Emperor to undertake the task of forming a Cabinet, and that the new Cabinet will be gazetted within two or three days, or even earlier. The *Tokyo Asahi* sketches the following list of probable portfolio-holders:—

Premier and Minister of Finance	Count Matsukata.
Minister of Foreign Affairs	Count Okuma.
Minister of Home Affairs	Count Kabayama.
Minister of the Navy	Marquis Saigo.
Minister of War	Viscount Takashima.
Minister of Colonization	Viscount Enomoto.
Others not yet settled.	

The *Chuo's* schedules are:—

Schedule A.	Schedule B.
Premier	Count Matsukata.
Finance	Count Matsukata.
Home Affairs	Count Kabayama.
Foreign Affairs	Count Okuma.
Army	Viscount Takashima.
Navy	Marquis Saigo.
Agriculture and Commerce	Viscount Shinagawa.
Education	Baron Kuki.
Justice	Count Oki.
Communications	Mr. Shirane or Count Mr. Shirane.
Colonization	Viscount Torio.
	Viscount Takashima.

The *Chuo* says that of the two, Count Matsukata prefers schedule B. As the Count can not be governed solely by his own choice there will perhaps be several changes up to the eve of the new Cabinet being gazetted. Three candidates are mentioned by the same paper as the probable successor of Baron Ito, Chief Secretary of the Cabinet, namely, Mr. Takahashi Kenzo, Chief Editor of the *Osaka Asahi* and ex-chief of the *Official Gazette* Bureau; Mr. Narukawa, ex-Governor of Miye; and Mr. Inagaki Manjiro, author of "Japan in the Pacific," all of whom enjoy the confidence of Count Matsukata. The *Chuo*, while giving these three names, points to the probability of Mr. Takahashi's appointment.

Marquis Saigo, who had determined on resignation, has been dissuaded from the step by the earnest persuasions of the *Genkun* entrusted by the Emperor with the task of making arrangements for the formation of a new Cabinet. The fact is, writes the *Tokyo Asahi*, the Marquis's continuance at his present post is found absolutely necessary for bringing the present crisis to a definite close. Consequently, Counts Kuroda and Inouye earnestly advised the Marquis to give up the idea of leaving office, and to undertake the most important task of perfecting the programme of naval expansion. The Marquis was therefore obliged to abandon his original intention, and called on the two Counts on the 10th instant to convey them a favourable answer.

The rumoured entry of Admiral Count Kabayama into the Cabinet as successor to Count Itagaki must strike our readers with some surprise. The following, from the *Nippon*, may therefore interest them, though we are not, of course, in a position to vouch for its authenticity. "The Admiral is most favourably inclined towards the formation of a Matsukata-Okuma Cabinet. This is ascribable to his aversion to *Genkun* Cabinets, for he is a most pronounced

anti-*Genkun* statesman. He is conscious of the accumulation of vast abuses in the Government, and holds that to cleanse it a resolute step must be taken and a radical change effected. As to whether the time has matured for such drastic measures, the Admiral cannot yet decide, but he clearly perceives that a Cabinet headed by Counts Matsukata and Okuma approaches nearer his ideal than one formed by Count Kuroda or Marquis Yamagata. His entry into the Cabinet will therefore add much weight to its decisions." Indeed, the *Nippon* and *Chuo* affirm that Counts Matsukata, Okuma, and Kabayama will in reality direct the affairs of State.

Apparently, some of the Progressionist Party are desirous of inducing the public to believe that the entry of their leader into the Cabinet is due rather to the warm persuasion of Count Matsukata than to any wish on the part of Count Okuma. The *Mainichi* and *Yomiuri* repeatedly allege, in contradiction to statements made by the *Yiji* and other papers, that Count Okuma has not yet been approached on the subject of his entry, and that he will not enter office unless the Cabinet declares to be a *bona fide* party Cabinet, and so forth. The *Nippon*, not being shackled by any consideration of party interest, does not hesitate to declare that a Matsukata Cabinet without Count Okuma would reduce the present shifting of Cabinet seats to an entirely senseless and absurd farce. The consummation of such a meaningless change would place Count Matsukata in a very ridiculous position, and it would militate against the future influence of Count Okuma. The statement of the organs of the Progressionists, that the Count will only enter a party Cabinet, may be due to their intention to eliminate the *Genkun* element as much as possible from the Matsukata Cabinet. They intend in that way to deter the *Genkun* from interfering too much in the arrangement of the coming Cabinet. This supposition is somewhat corroborated by the following note from the *Tokyo Asahi*, which is tolerably free from party prejudice. "The *Asahi* says that the Count of Waseda was visited a day or two ago by a certain publicist, to whom the Count gave his opinions regarding the complexion of the new Cabinet. He felt sure that, whatever its merits, it could not last long. Still, he would enter office, provided the Cabinet's policy was satisfactory, even though its was to be organized on clan principles." The reason for his willingness to enter the coming Cabinet was that it would prove highly convenient and advantageous to him, for the Cabinet that followed would certainly be formed on the principle of party support.

Tuesday, September 15th.

Count Matsukata's negotiations, that were apparently proceeding towards a prompt conclusion, have encountered another difficulty, and are brought to a sudden standstill. The difficulty consists, says the *Nippon*, in the Count's declaration that he can not undertake to form a Cabinet unless certain views entertained by him regarding the future administration of the State are endorsed by the elder statesmen and others who now direct the Nation's affairs. The *Nippon* declares that the elder statesmen were struck with surprise when Count Matsukata announced his views. After an interval of apparent bewilderment the flames of jealousy and suspicion began to appear and vicious plots were formulated to bring about an estrangement between the elder men. The puppets of the elders were aroused to sudden activity by wire-pullers working from "behind the curtain," so that the prospect is now overclouded. The labours of the elder statesmen, that were on the eve of bearing fruit, have unexpectedly been checked, and a crisis is imminent. Nor is the surprise confined to the seniors alone, panic has overtaken political parties also. While they were loftily declaring in their overweening confidence that they did not care much who entered the Cabinet, as they had determined to support it should the Cabinet's policy square with their political ideas, or oppose it if it differed, Count Matsukata has assumed the initiative and announced a platform of his own, leaving political parties to support or oppose him just as they please. In fact the position has undergone a sudden change by this move

of the Count's. The *Nippon* adds that, as the line of the drift of affairs is fixed and immovable, nothing will prevent the formation of the Matsukata Cabinet: only it will take more time than had been anticipated.

The rumour, first published by the *Nichi Nichi*, is repeated by the *Yomiuri*, that Marquis Saigo and Mr. Shirane, who, on the advice of Marquis Yamagata, were induced to abandon the idea of leaving the Cabinet, have once more reverted to their old position. The cause is attributed to something that transpired at the conference of the elder statesmen held at Count Matsukata's residence on the evening of the day that the Count was received in audience by the Emperor. That evening the rearrangement of the Cabinet was discussed, and something seems to have induced the Ministers of the Navy and of Communications to believe that the *personnel* of the Cabinet had previously been privately arranged. This caused umbrage to the two statesmen, and they therefore decided to resign. The same paper says that on the morrow of its formation the Matsukata Cabinet will announce its platform.

Wednesday, September 16th.

The breach between Count Matsukata and the National Unionists appears to be gradually widening. The party held another secret conference on Saturday. The *Shogyo* does not pretend to a knowledge of the particulars of the proceedings, but judging from the professions of almost every member of the party that the policy that Count Matsukata intends to inaugurate is opposed to the ideas of the Unionists, and that the organization of a Cabinet on these lines can not be viewed with complacency—judging from this unanimous declaration, our contemporary thinks that the party will not only oppose the entry of their leader, Viscount Shinagawa, into the Cabinet, but would also endeavour to dissuade Marquis Saigo and Mr. Shirane, from remaining in office.

The *Chuo*, the organ of the Unionists, that up to the present has taken the part of spectator in the present drama, has begun to move. In its yesterday's issue, the *Chuo* ridicules Count Matsukata for relying so much upon the elder statesmen and the leading members of the *Shimpo-to* and pro-*Shimpo-to* publicists in regard of the formation of his Cabinet. It doubts whether the Cabinet, depending upon the support of so many props, can be expected to last long. In another note, the same journal writes strongly against prolonging the present interregnum. The *Tokyo Shimbun* describes some alleged "scenes behind the curtain." One of the most curious of these stories is the allegation that the platform, about which so much noise is made by the *Nippon* and its colleagues, was the result of a long conference between the *Shimpo-to* and their political friends, at the residence of Count Matsukata on the evening of the 6th inst.; that Mr. Oishi, ex-Minister to Korea had sketched the outlines, and that, with the unanimous consent of all present, he and Mr. Inagaki Manjiro drew up the draft of the platform. This was produced at the general meeting of the *Shimpo-to* held next day, and was adopted unanimously. The *Fiji* observes that the difficulty in finding a suitable candidate to succeed Marquis Oyama is the principal cause of the delay in announcing the organization of the Cabinet.

Thursday, September 17th.

The *Fiji* gives the following review of the political situation:—

The political sky, that promised to clear up so quickly, has again suddenly clouded, and it is not easy to predict how things will eventuate. In fact, a serious obstacle has suddenly presented itself on the road that appeared to lead to the formation of the Matsukata Cabinet. The situation is critical, and a blunder committed at this juncture may entirely undo all the negotiations of the elder statesmen. The first difficulty consists of the question of the so-called platform. On the 10th inst., Count Matsukata was received in audience by the Emperor and was privately asked to undertake the task of forming a Cabinet. The Count then submitted the views he entertained as to the future policy

of the Administration. Some hours after, Marquises Yamagata and Saigo, and Counts Kuroda and Inouye—the seniors—met at the residence of Count Matsukata, who disclosed to them the proposals he had just submitted to the Emperor. The seniors did not express any definite opinion upon these views and the Count therefore took their silence as tacit compliance. The conference then proceeded to discuss the *personnel* of the future Cabinet. When the views of the Count reached the ears of other statesmen, and they perceived that the scheme contemplated by him was the paving of the way for the inauguration of the *Sekinin Naikaku* (a Cabinet responsible to the people), so long demanded by politicians outside the Government, opposition was created. Thus the progress of the Count's negotiations was arrested. A second difficulty is presented by the Budget for the next fiscal year. In the Count's opinion, the period for perfecting the Armament Expansion programme should be prolonged, but this is stoutly opposed in certain quarters, and is a reason why a successor can not be easily found for Marquis Oyama at the War Office. A third difficulty relates to the disposition of seats in the Cabinet. The Count asked the four seniors to dissuade the remaining Ministers from resigning their posts. At the same time he adopted the opinion of his political friends outside the Government, the so-called platform, and then announced that the Ministers who sat in his Cabinet must regulate their procedure in accordance with the provisions of that platform. Some of the Ministers who remained in office at the repeated advice of the seniors think that this action of Count Matsukata in pledging them to implicit obedience to his policy is nothing short of an insult to their honour and dignity. They have taken so much umbrage that Mr. Shirane and others are about to peremptorily decline to serve in the Administration. It is true that Count Matsukata, at the conference held on the 10th inst., stated his views respecting reforms in the future Administration, but this is a totally different thing from determining a platform to regulate the movements of the Ministers of his Cabinet. Under the circumstances, the seniors, who tacitly acknowledged the views of the Count, and who, in compliance with his request, tried to arrange his Cabinet, are in a very embarrassing situation. As things stand at present, one of two alternatives should be adopted, either to give up the idea of establishing a platform or to retain the services of the remaining Ministers by making concessions. Perhaps the former may be adopted, for the demands for the platform have not been heard so loudly among the political wire-pullers for a day or two. If so, the crisis may pass without particular trouble and a Cabinet may promptly be formed.

The accounts in the *Mainichi* and *Nippon* with regard to the attitude of Marquis Saigo and Mr. Shirane are contradicted by all the other journals, including such independent papers as the *Fiji* and the *Shogyo*. The former reports that Mr. Shirane's decision to resign is firm, and that even Marquis Yamagata's influence is not likely to be of any avail. The *Shogyo* even reports that Marquis Saigo's whereabouts since the noon of the 14th inst. is unknown. The Marquis' disapproval of Count Matsukata's naval programme will make it difficult for the latter to secure the services of the Marquis. The same paper, the *Chuo*, and others not on the side of Count Matsukata, allege that the private decision of the seniors to recommend Viscount Katsura, Governor-General of Formosa, as successor to Marquis Oyama gives umbrage to Viscount Takashima, who was secretly promised by Count Matsukata the seat at the Department of War, and that, therefore, the promotion of Viscount Katsura may lead Viscount Takashima and his bosom friend Admiral Count Kabayama to refuse to enter a Cabinet presided over by Count Matsukata. Be that as it may, the whole affair is considerable tangled. The *Mainichi* says that the only things required at this juncture is resolute decision. "Let those who want to keep away be left to follow their own choice." The *Fiji* is highly vexed at the dilatoriness manifested in the pre-

sent affair. As things are at present, due arrangements for administrative business are out of the question, which is the more regrettable as the damage done by floods in various localities needs urgent attention. Affairs of State must necessarily lag behind. Viewed from outside, indeed, the failure to promptly reorganize the Cabinet is entirely inexplicable. The whole thing lies in a nutshell, that is for the seniors either to approve or oppose the views enunciated by Count Matsukata. If those views are opposed, then the Count ought to declare his determination not to accept the Premiership, but if the seniors approve they must endeavour to promptly seek suitable candidates for office. That so much time has been wasted must be due to want of resolution on the part of the seniors, who have not sufficient courage to either offer opposition or to extend support.

The attitude of the Unionists toward Count Matsukata appears to have undergone a complete change. The Unionists, observes the *Asahi*, were formerly on good terms with the Count, who once signified his approval of the fundamental policy of that party, namely, the expansion of national armaments. The present declaration of the Count that a limit must be set to this programme has created a gap between the two. The Unionists now declare that they cannot approve the views of the Count, whom they hold has surrendered to the *Shimpo-to*.

Friday, September 18th.

The Cabinet crisis has once again veered round to the original position. The chief trouble, observes the *Fiji*, that prolongs the suspension, consists in the difficulty of bringing about a cordial consensus of opinion in regard the appointment of a successor to Marquis Oyama, one section recommending Viscount Takashima and the other Viscount Katsura. The Emperor is said to be greatly annoyed at the interminable shilly-shallying, and on the 16th inst., a special messenger was sent to Count Kuroda, Premier *ad interim*, requesting his opinion as to whether it was not advisable to announce the nomination of such of the candidates for office whose acceptance of the respective portfolios had been received. The next day the Count proceeded to the Palace and put before the Emperor the exact circumstances of the case. He then called on Count Matsukata and related what had taken place at the audience. Count Matsukata declared that so long as the selection of a Minister for the Department of War was beset with so much difficulty, he could not hope to comply with the wishes of the Emperor, and therefore should be released from undertaking the task of forming a Cabinet. This statement of Count Matsukata alarmed the senior statesmen, who at once endeavoured to remove the difficulty, and resolved to place Viscount Takashima in the chair of War, in conjunction with his present office. This occurred on the 15th inst., at a meeting held at the residence of Count Kuroda, and progress was then steadily maintained along that line of policy. The trouble apparently seemed to have been settled, and a hope was entertained that the nomination of two or three new Ministers might have been made yesterday. But trouble again cropped up, involving all parties in difficulty. This arose from the declaration of Viscount Katsura that he should be relieved of the Governorship of Formosa. It should be remembered that the Viscount was first persuaded by the seniors to undertake the task of directing the affairs of the War Office and the Viscount agreed to take this advice. The arrangement, however, caused umbrage to Viscount Takashima, who, it seems, had previously been promised by Count Matsukata, the reversion of this portfolio, in addition to the one he now holds. When the Minister of Colonisation heard that the senior statesmen had decided to recommend Viscount Katsura for the War Department, and that Count Matsukata acquiesced in the new arrangement, his complacency was greatly disturbed. He told Count Matsukata that he could not think of directing the affairs of the Department of Colonization, when Viscount Katsura on whom everything pertaining to Formosa devolved was to be substituted for another. He therefore expressed

a desire to resign if the former programme was not carried out. Admiral Count Kabayama, a great friend of the Viscount, also showed an inclination to keep aloof. Such are the dissensions that have arrested the progress of forming a Cabinet, and have obliged the seniors to abandon their plan of nominating Viscount Katsura for the Department of War. The next trouble is in connection with Viscount Katsura, who refuses to remain at his present post despite the persuasions of Marquis Saigo and Count Inouye. Under the circumstances, the vexed question of Cabinet reorganization is as far from being settled as ever it was. Perhaps when the difficulty with Viscount Katsura is disposed of the whole affair may be brought to a definite conclusion.

Several Tokyo papers, some of which are completely independent, now say that Marquis Saigo and Mr. Shirane will probably be induced to remain in office, in consequence of the concessions made by Count Matsukata in regard to his platform.

THE "CORPS DIPLOMATIQUE" BARRICADED.

AN IDYL FROM CHUZEN-JI, BY A VISITOR.

Now is the time for Japan to strike a great stroke. The whole "corps diplomatique" is barricaded, shut up in Chuzen-ji. The bridges leading to the valley of Nikko are broken, the telegraph line destroyed, and no sort of communication remains between the Foreign Ministers, enjoying a well-merited rest in their far-away summer resort, and the capital of Japan. Now is the time for this country to get level for all the injuries done her by the "triple alliance." Whatever Japan declares, there is no possibility of protest by the Foreign Ministers, and, as the old Latin proverb says, *qui tacet, consentire videtur*. It is a rather hazardous matter for a Foreign Minister in Japan to leave hislegation for a country placely nearly ninety miles away from the capital and liable to be shut off from communication by a few rainy days. The lake risen more than five feet within two days, roads and houses inundated,—that is the present situation in Chuzen-ji. Here you see the genial secretary of a foreign legation prepare his proud sailing boat, not for a trip round the lake, but for getting into his dining room by a clever nautical "manoeuvre," the plain before his house being under water. A German lady with her children has two feet water in the house, and the waves are lapping against the walls. But help is near, it comes from a French gentleman and his lady, who kindly offer their house to the German, *honneur à la courtoise française!* Another "diplomatic family" living in a small house at the foot of Nantai-san is suddenly frightened by a tremendous noise, heavy stones and enormous quantities of water rolling and rushing down from the top of the mountain. They have to move, and are kindly received by another French family. And it rains and rains, day and night, night and day. Nobody knows what the end will be. Victuals become scarce, and, unless the rain ceases at once, there may come the time when a Minister who erstwhile used to drink the best of wines and to smoke the best of cigars will be satisfied to gnaw a piece of bread and smoke the dried leaves of some mountain tree. And, what is yet worse, the whole "corps diplomatique" is doubtful what course politics may have taken in the meantime, while they were shut up in their pleasure retreat. Who is the new Japanese Minister President? How is the situation in Korea? What has happened in Europe? They know nothing. A nice situation for people who are accustomed to direct the fate of the world and to make history! The only hope of the barricaded diplomats is that the Japanese Government will return good for evil and help them to get out of their scrape and into politics again before their home governments get knowledge of their representatives being barricaded in the mountains.

THE STORM AT FUKUCHI-YAMA.

There was, it will be remembered, a great storm at Fukuchi-yama on the 30th of last month, enormous damage being done to the town, while very many lives were lost. According to the local correspondent of the *Pomfuri*, at 3 or 4 a.m. of August 31st it was seen that the Fukuchi River was momentarily threatening to overwhelm the town. Everywhere people began carrying furniture and articles of value to the upper storeys or on to the roofs of their dwellings. As the river burst through the embankment, the whole town was instantly covered with water to a depth of over four feet. The embankment broke in two places: at Ukyo-guchi and Hirokoji. The waters continuing to rise, many scores of houses were soon floated off, the people on the roofs screaming for aid as they were borne rapidly away. The sight was terrible. Many of the floating dwellings collided, were crushed to pieces, and disappeared beneath the dark brown water. Day had now dawned, and the confusion increased as the water steadily rose to a still greater height. Many tragedies occurred at this hour, and heart-rending scenes were to be observed everywhere. Just before the embankment gave way, Mr. Yanagishima Kun, the chief local official, went to warn the members of a large corporation having very friendly relations with him. The oldest inhabitants of the town—for everybody was up and awake all that sad night—said that the like of such a storm had never been known. As Mr. Yanagishima reached his own house again, he heard the loud, thundering roar of the bursting flood. There was no possibility of escaping on foot, so he mounted rapidly to the roof, but only to see one house after another swept away with all their inmates. A fire just then broke out in Aza Nagamachi, and many still uninjured dwellings began to burn fiercely. The people in these houses were threatened by a double danger—fire and flood—and their piteous cries for assistance were heard on all sides. In a few minutes, however, the flames were extinguished, probably by some of the burning houses subsiding into the flood below. At Aza Naiki, close to the Kyoguchi embankment, is the barracks of the local regiment. Two men were soon seen to mount the roof—a sergeant and private—the latter bearing the Imperial Edicts tied in a bundle on his head. When they saw that the building was about to collapse under the tremendous pressure of the flood, they gave a great cheer of *Tenno Heika Bansai!* and sprang into the waves, both being expert swimmers. Fortunately, the two men reached the walls of a dismantled fort, and were afterwards taken off by the rescue-boats.

RAILWAY COMMUNICATION WITH NIKKO.

Great inconvenience has been felt both in Yokohama and Nikko owing to the difficulty of obtaining trustworthy information about the state of the railway between the two places. It may have seemed strange to our readers that we have not been in a position to furnish details of the damage suffered by the line, the possibility of travelling by it, and the probabilities as to its repair. But the fact is that things have been changing from day to day, so that information furnished by us in one issue might prove misleading or valueless before it could be practically utilized. The first trouble that occurred was at Fubasami, a station on the Nikko-Utsunomiya line, some 13 miles from Nikko. There the floods injured an embankment, and the service was at once interrupted. Of course no arrangements could be immediately made to meet the emergency, but after two days' delay the Railway Company succeeded in organizing a service of trains from either side of the injured place, and by traversing the interval in *jinrikisha*, passengers were able to get through. Two more days sufficed to repair the embankment, and there is now no impediment to transit between Nikko and Utsunomiya. Meanwhile, however, the waters from the hills had found their way to the plains, and a section of the Tokyo-

Utsunomiya railway between Kurihashi and Koga was completely inundated. Here, again, for an interval transit ceased altogether. But the delay was brief. Services of trains were quickly organized up to the edges of the inundation. The crossing of the latter, however, proved a matter of trouble, chiefly on the score of the expense. It might have been supposed that if the Railway Authorities undertook to carry travellers, the undertaking would have extended to getting them over the flooded section. But there appears to have been temporary difficulty in organizing arrangements of that nature, and thus, for a period, travellers had to trust to the resources of private enterprise, and to pay through the nose for every assistance they obtained. After two days, productive of considerable squeezing and corresponding complaint, the Railway Company were able to take the matter in hand, and a service of flat-bottomed boats, supplemented by a narrow bridge of planks, was duly organized. That means of transit, though presenting no special difficulties to male travellers with good sight and reasonably steady nerves, could scarcely be used by women or children, for the current at the place where the plank bridge was fixed, swept down so swiftly and the length of the bridge was so great, that danger of giddiness might be apprehended at any moment. Soon, however, the subsidence of the flood and consequent slowing of the current made it possible for boats to cross the whole distance, and then, for a brief interval, the journey was comparatively easy, the boats traversing the flooded section in about 2 hours, and the transfer from train to train being smoothly effected. Some travellers that made their way to Nikko at that particular period, reported favourably on the state of affairs, and the Railway Authorities gave assurances that no serious inconvenience need be apprehended. Bulky baggage could not be carried, of course, and through tickets were issued only once a day, it being evidently essential that the difficulties of the water transit should be negotiated in full daylight. Very soon, however, the conditions changed for the worse. The gradual falling of the flood and consequent shoaling of the water on either side of the river proper, made the passage of the boats very difficult. Frequent groundings took place, and it generally proved necessary that the travellers, or, at any rate, the greater part of them, should leave the boats and accomplish the rest of the way by wading. That was the state of affairs on the 14th instant, the date of our latest detailed advice, and it is not probable that things have greatly mended since then, for the uncovered section of the line doubtless needs repair, and the shallows beyond the river's banks are less easy to traverse by boat in proportion as their depth diminishes. Our readers will understand, therefore, that it has been virtually impossible to publish any trustworthy information from day to day, so constantly have the conditions changed. On Sunday, the 12th instant, for example, the Railway Authorities at Nikko stated in the morning that through tickets could be issued only by the 7.30 a.m. train, yet, two hours later, a telegram from the flooded section authorized them to forward passengers by the mid-day train also. We may note here that the unfortunate Railway Authorities are placed in an unhappy position, for whenever circumstances compel them to modify an announcement made a short time previously, they are incontinentally dubbed "liars" by foreigners of the moral bias that obtains among a certain class of "treaty-porters." On the whole, we are disposed to think—speaking with all reserve, of course—that the best way to reach Nikko from Yokohama or Tokyo, is to make a *détour* by the Ryomo Railway *via* Mayebashi to Oyama, striking the Utsunomiya-Nikko line at the latter place.

Italy is about to lay down three ironclads of a modified *Re Umberto* type, one at Spezia, one at Castellamare, and one in Ansaldo's yard at Leghorn. They will have somewhat thinner armour and much heavier secondary batteries than the *Re Umberto*, and will steam 20 knots with natural and 22 knots with forced draught.

NIKKO WEATHER.

Holiday-seekers have had a most melancholy experience in Nikko this year: the weather has been unprecedentedly bad. Up to the beginning of this month occasional intervals of sunshine relieved the dull monotony of rain, but at mid-day on the 6th instant, the place fell within the range of a typhoon that visited the north of Japan, and from that time until the morning of the 12th, the downpour was almost continuous, the moments of cessation being too brief to constitute exceptions to the unvarying deluge. On the morning of the 8th, the clanging of the alarm-bell was heard, and people peered in astonishment through the mists, marvelling at the idea that anything inflammable could exist under such circumstances. It soon transpired, however, that there was question, not of a conflagration, but of a possibility that houses might be washed away. The Daiya-gawa had risen some twelve feet above its ordinary level, and its boiling torrent threatened to undermine the land on which half a dozen dwellings stood in the lowest street of the village. Happily the catastrophe was not consummated, but that the people deemed it imminent could be inferred from the fact that all movables were taken out of the threatened houses, and some three score men, supplied with ropes and grapnels, stood on guard throughout the forenoon. It might have been expected that the unceasing rain would produce a further rise of the river, but that result depends rather upon the rapidity, than upon the quantity, of the down-pour. So long as the volume of water falling in a given time does not exceed the capacity of the channels available for its escape to the valleys, no trouble is experienced, and as matter of fact, though the rain never desisted throughout the whole day, the river had fallen fully five feet before evening. Meanwhile, the lines of communication throughout the whole district had suffered terribly. In this mountainous region, the roads are very seldom provided with culverts to carry off the torrents that descend upon their routes in bad weather, and it often happens that a road is simultaneously sapped from below and ploughed out from above, the result being total collapse. Thus at several spots on the main road from Nikko to the Ashiwo mines the rails of the tram by which the ore is carried to Nikko were left hanging over a watery abyss, the road having been completely washed out from below them. Even in the street known as Irimachi, which leads past the Nikko and Arai Hotels, a veritable quagmire was formed, and only by making a long detour could communication be preserved in this, the most fashionable, quarter of Nikko. As for the road to Chiussen-ji—a route pre-eminently subject to vicissitudes, since in places it does not rise above the dignity of a mass of clay plastered against the side of a mountain—it collapsed *in toto*. Communication was not wholly interrupted, since the worst spots could be avoided by clambering along the hills above, but for all purposes of ordinary traffic the road was useless, and Chiussen-ji's daily supply of provisions had to be sent round by Ashiwo, a *detour* of some 8 miles. Nor does that description exhaust the inconvenience, for provisions themselves became very scarce, railway communication with Tokyo being temporarily interrupted, so that the beef, bread, and flour usually despatched every morning from the capital, either failed to reach Nikko at all, or reached it in such diminished quantities as to leave only a small surplus for Chiussen-ji. Indeed, the Foreign Representatives and other members of the *Corps Diplomatique*, who have made Chiussen-ji their resort this summer, must have been in a decidedly uncomfortable condition for a short time, their inconvenience being augmented by a rapid rise in the level of the lake, so that roads were swamped, gardens inundated, and even the sanctity of bed-rooms invaded. The interruption of the railway to Tokyo was due to a landslide in the immediate vicinity of Fubasami, a place about 13 miles from Nikko, and during two days the service of trains had to cease. But with rapidity, commendable in view of the difficulties to be overcome, arrangements were

organized for running trains to either side of the damaged place, and from the 10th instant travellers to and from Tokyo had nothing to complain of beyond a detention of about an hour and a half. Northward of Utsunomiya, however, several landslips occurred along the line, and an important bridge collapsed. Communication might have been restored within a comparatively brief interval had the weather cleared, but as the rain continued with few intervals, the repair of earthworks became virtually impossible and the swollen state of the river forbade any attempt to re-build the bridge. It seems probable that several days must elapse before the service of trains can be re-opened, and in the meanwhile, visitors from Sendai and other places in the north, are held prisoners in Nikko. There has been very little interruption of the telegraph, however, for though posts were here and there tumbled into the torrents, they were dragged out again and re-erected without delay. It has certainly been most unfortunate for Nikko that such abominable climatic conditions should have prevailed there this year, for the number of visitors was altogether exceptional, more, indeed, than the hotels could accommodate, and the evil impressions carried away by them must find proportionately wide circulation. The pleasures of the place were greatly marred; also by the measures pursued in connection with the presence of His Imperial Highness the Prince Imperial. Of course the Prince himself had no cognisance of the restrictions to which his Chamberlains seemed to think it necessary to subject the public in the interests of his comfort and privacy. Nor, indeed, would any complaint have been preferred by the public had not those restrictions been rendered needlessly irksome by mismanagement. Thus, although the perpetual closure of the temple gardens, a favourite resort of ladies and children, proved an immense disappointment to many persons, no one, so far as we know, questioned the propriety of these grounds being reserved exclusively for His Imperial Highness' use. But many murmurs were uttered, justly we think, at the want of consideration shown by the Chamberlains in failing to publish any information about the Prince's intended movements from day to day. Naturally, His Imperial Highness wished to visit the various spots celebrated for scenic beauty in the vicinity of Nikko, and beyond question the limited tea-house accommodation procurable at those places had to be engaged entirely for the use of the Imperial party on such occasions. But nothing would have been easier than to send to the three principal hotels, each morning, an intimation of the Prince's destination that day, and had such a precaution been adopted it would have effectually prevented the constantly recurring unpleasantness and inconvenience of picnic parties reaching a place after a tramp of several miles only to find that neither there nor anywhere in the neighbourhood might the business of eating be consummated, a visit from His Imperial Highness being imminent. In some instances, too, a journey had to be abandoned after the travellers had set out with all their paraphernalia, for horses were not allowed to proceed by any route along which the Prince intended to proceed on the same day. These disappointments—occasionally of serious moment—might also have been obviated by a measure of the kind indicated above. To return, however, to the rain and floods. After the tremendous downpour during the night of the 7th, the rain, although continuous, did not fall in sufficient quantities to produce alarming results until the evening of the 11th, when once more the deluge recommenced, accompanied by violent gusts of wind. Next morning the Daiya-gawa had again attained destructive dimensions, and again the alarm bell summoned the inhabitants to save tottering bridges and crumbling roads. It may well be supposed that the damage wrought on this second occasion, after a week's steady sapping had loosened the foundations of paths, honeycombed embankments, and undermined precipices, was on a wholesale scale. Houses were not washed away, indeed, but mischief of many other kinds was accomplished everywhere. Perhaps the most striking catastrophe occurred

on the tram road beyond Dainichi-do. There not only were the road, the rails, the embankment, and the breakwaters swept away like so much chaff through a distance of about 200 yards, but the river cut a circular sweep out of the mountain, just as though a colossal trowel had descended vertically from above and shorn its way through the hill from summit to base, leaving a sheer precipice a hundred feet high where previously there had been a wooded slope. How this road is to be restored we cannot easily see. The labour, the engineering difficulties, and the expense must be very great, and however vigorous be the steps taken, the so called "lower route" from Nikko to Umagayeshi must long remain inaccessible. In truth, engineering skill is the great desideratum in Nikko and its vicinity. The people have not been sparing of toil, and, speaking technically, the roads they have constructed are as good, on the whole, as the materials at their disposal permitted. But the routes selected seem, in many cases, to have been the choice of men quite indifferent to the inevitable operation of natural forces. Other routes not exposed to such overwhelming dangers might easily have been found, and certainly if it was deemed necessary to defy nature in the matter of direction, some provision should have been made to mitigate her ravages. But if engineers forget that waterfalls usually tear-out beds for themselves, and that roads situated so as to play towards mountains the same part that an eaves-spout plays towards a roof, must either be made of iron or crumble to ruin when torrents descend on them from overhanging hills, it avails little that hundred of coolies should drive piles, ram mud, or construct interlacements of pine-branches. Even the folks that planned the telegraph lines, Government experts presumably, appear to have been imbued with the same lordly *insouciance*, for they caused posts to be erected on the very margin of rivers that needed to rise only a few feet in order to reach and sweep away these precarious structures. If new roads and lines of wire are to rise from the ruins of the old, it is to be hoped that a little engineering skill will be employed to avert a recurrence of very avoidable catastrophes. We may also venture to inform the owners of institutions like the Nikko and Arai Hotels that their patience does not meet with general appreciation. At the very commencement of this tempestuous time, the entrance to Arai's hostelry was converted into a criss-cross of deep fosses, and the approach to the Nikko inn from the north became a bottomless quagmire, yet the managers of the two resorts placidly left their guests to stumble, day after day, into the ditches and wallow knee-deep in the morass, though a mattock would have filled the former in a couple of hours, and a few planks and stones would have made the latter negotiable without any difficulty. The new hotel at Chiussen-ji—a beautiful building, picturesquely situated—is less helpfully circumstanced. It is not easy to negotiate with the waters of a big lake whose affluents are much more generous than its exit is capacious. For several days visitors could not reach or leave the hotel without the aid of boats, and it is to be hoped that this disastrous experience at the outset of its career will not injure the prospects of the enterprise. Some of the diplomats' residences were in equally sorry plight before the rain had ceased, and never was sunshine more welcome than the long looked-for rays on the morning of the 12th. We may add, here, that the injury to the Nikko-Utsunomiya line, at Fubasami, was repaired by the 12th instant, and that the first through train left Nikko at 2.30 p.m. that day. Between Koga and Kurihashi, however, extensive floods were reported on the 11th, and though the line was not impassable for male travellers, ladies or children would have found much difficulty in getting across. Unfortunately it has to be recorded that five casualties to life occurred at Nikko. Four charcoal-burners were buried under a land-slide, and a man who went to net fish in the backwaters along the river seems to have been swept away, for an exhaustive search by a large body of coolies in the pay of his relatives had not revealed his whereabouts up to the evening of the 12th.

FLOODS IN TOKYO.

The Sumida River has risen far above its highest mark in consequence of the persistently heavy rains. On Saturday the whole surface of the stream was covered with wreckage, and, near Etajima, hundreds of bales of rice were to be seen floating in the dark water. Scores of men were eager in their endeavours to get these bales ashore, with poles, staves, and all sorts of implements. At 11 p.m. of the 10th instant, a strong breeze blowing at the time, the river presented a scene of indescribable confusion. Two large cargo-boats drifted down and struck the Eitai Bridge, sinking almost immediately. Of smaller boats, fishing-craft, etc., anchored or moored between Teppo-zu and Akashi-machi, about one hundred and forty were borne away by the turbulent stream, the cables being severed like so many bits of string. The boats thus set adrift bore down on others near at hand, and did immense damage. The boatmen's cries for help were most lamentable, for the frail craft were rapidly being carried out into the stormy Bay. The shouts were, despite the storm, heard at the Water Police Station, and immediately two launches were sent to the rescue. With the utmost difficulty and by dint of impressing every available constable, somewhat more than one hundred of the boats were laboriously brought back to their mooring-ground. Nearly two score were swept out of sight of land, and much apprehension is felt concerning the safety of the men in them. Even the rescued boats were, for the most part, much damaged, and all had lost either oars, masts, cordage, or other gear.

FLOODS.

The papers are full of the disasters wrought by the recent gales. Most of the messages now arriving in the capital are from districts east of Nagoya, telegraphic communication further westward being temporarily suspended. The Governor of Gifu wires that the railway traffic east of Kiyosu, a rural town some 10 miles from Nagoya towards Kyoto, has been stopped, while the postal service has been entirely blocked. The wires to the south-west of Gifu are out of order, and official despatches of urgent importance alone are dealt with at Ogaki. According to reports thus far received, the disasters caused by the floods in various districts appear very serious indeed. A private telegram says that at Ogaki the floods have risen to the second storey of the houses, and that the inhabitants are suffering from insufficient food supplies. At Maebara, a small town close by Lake Biwa, a similar disaster is confronting the people; they are eagerly waiting the arrival of steamers laden with rice from Bamba. More shocking news is to hand from Nagoya, in which it is stated that owing to the collapse of the embankments of the three rivers in the Nishi Kasugai District and the sudden flooding of the adjoining villages, more than 2,000 persons are reported to have been drowned or injured. The Police went to the rescue, requisitioning 25 boats for the service. Most of the Tokyo papers, however, suspect the accuracy of these alarming figures. In Kuwana the majority of the houses are reported to be under water; and the river Yebi has risen about one foot higher than on the occasion of the floods in July. Fukui is also flooded, the water rising from 8 inches to 6 ft. above the floor, according to locality. As the floods occurred at night the damage to property is believed to be heavy. About 5,000 persons are receiving State aid. Owing to the total stoppage of all means of communication, it is not possible to ascertain the extent of disasters in the surrounding districts. Intelligence from the immediate vicinity detail the death of eleven persons, besides a similar number of missing. The damages in Toyama seem as great as in Fukui, though casualties to life do not appear in the report given by the Governor. In Tochigi, Ibaraki, Fukushima, Iwate, and Aomori, reports of similar disasters have reached the Home Office, though full details are not yet forthcoming. Nikko and its vicinity suffered from the storm.

The water in the river Daiya, that steadily rose from the 7th instant, was 10 ft. above the normal level by noon of the 9th instant. More than 10 telegraph poles were washed away, the wire between Nikko and Chusenji, and the private telephone wire connecting Nikko and the copper mine at Ashio, were interrupted, while the road between Nikko and Chusenji was damaged in more than 10 places. Landslips occurred at various places, and the passage of men and beasts was completely interrupted between Nikko and Ashio. Hichiriyama, that lies between Nikko and Imaichi, also fell. The people living along the Daiya-gawa left their houses and went to more elevated spots. Landslips killed four persons and wounded one in Nikko, while at Ashio ten were killed, two wounded, and one is missing. Disasters to life and property are also heavy in Ashikaga and Aso districts, in Tochigi Prefecture.

Railway traffic is interrupted on several lines. Trains on the Tokaido line cannot go beyond Anjo. The Yoshida-Kuroiso section of Nippon Tetsudo line was interrupted from the evening of the 9th instant, the Kansai Line is interrupted between Nagoya and Kameyama. A big break has occurred between Kodzu and Matsuda stations. The Nippon Yusen Kaisha announces a temporary increase in the number of steamers plying between Yokohama and Kobe, so as to furnish means of communication to travellers to the Kei-Han districts, now inconvenienced by the interruption of the Tokaido line. The following steamers are arranged to leave Yokohama:—*Hiroshima Maru*, at noon on the 12th inst.; *Nagoya Maru*, at noon on the 13th inst.; *Kaiyo Maru*, at noon on the 14th; *Kobe Maru*, at noon on the 15th; *Soya Maru*, at noon on the 15th; *Yamashiro Maru*, at noon on the 17th.

News from Gifu is to the effect that the houses flooded in that town and immediate vicinity are roughly estimated at 60,000, that is, twice the number of those flooded in July last. According to official researches, more than 271,300 persons are receiving State relief. The sky is still overcast, and there is no immediate prospect of its clearing up. Ogaki has already been inundated twice. Such a serious inundation has never been known before in that town. Owing to the collapse of the floodgate at Imaomachi, situated along the river Yebi, that town has been completely flooded, the water rising 4 ft. higher than on the last occasion. The break-down of this gate has been followed by the inundation of the whole circuit of Takasu, where the water rises above the roofs of the houses. A despatch from Nagoya says that the breaches in the embankments of the rivers Katsukawa and Tamagawa have caused the inundation of more than 300 *cho* of arable land, and that more than 822 people had been rescued by the Police up to the 10th. Similar tales of disaster come from Osaka, Kyoto, Shiga, Nara, Hyogo, Wakayama, Miye, Shizuoka, and so forth, though the damage is not so heavy as in Gifu, Aichi, and Shiga.

The surplus from the 27th fiscal year, writes the *Shogyo*, amounted to 20,019,464 odd *yen*, but of that sum 19,526,374 odd *yen* were appropriated for supplementary budgets for the 28th and 29th years, so that at the beginning of the current year the reserve was reduced to less than half a million *yen*. The Second Reserve of last year being practically exhausted, recourse had to be had to the Reserve set aside for extending State aid to devastated districts, in providing relief funds for the present calamities.

On the 14th inst., with the sanction of the Emperor, two sums of 176,849 *yen* and 210,000 *yen* were taken from this reserve as grants-in-aid of repair works in Toyama Ken and Niigata Ken respectively. A further sum of 123,150 *yen* was also taken from the Second Reserve for Toyama, so that now the 1,000,000 *yen* set aside for the Second Reserve for this year has been entirely expended within the first six months of the current fiscal year. Again, owing to the present expenditures, the surplus of the 27th fiscal year has been reduced to 66,240 *yen*. A surplus amounting to 2,766,658 *yen* is estimated to accrue when the accounts of the 28th year are

settled, so that funds for expenditures over and above the estimates for the current year may therefore not be totally exhausted. But such a surplus will apparently be inadequate to satisfy the claims which have been, or are to be, laid before the Treasury by the various localities that have suffered in consequence of earthquake, fires, or floods. It is estimated by the *Nippon* that the State subsidies to all these places must amount to over 10 million *yen*. The matter requires urgent attention, so that the work of repair may be completed before the first fall of snow. The expenditure of such a large sum as 10 million *yen* must not be undertaken by the Government on its own responsibility, the consent of the Diet should be secured before disbursing it. Viewed from this standpoint, the formation of a Cabinet should be concluded as promptly as possible, and an extraordinary session of the Diet convened to discuss this urgent matter.

The extent of the damage that the last floods have inflicted on crops is not yet clearly known. The Governor of Miye reports, under date of the 11th inst., that the rice harvest in the five northern districts may fall to 50 to 70 per cent. of an average year, and that the result in the nine southern districts may be 70 to 80 per cent. of an average crop. Cotton and indigo crops have been entirely destroyed in most places, while millet and crops of similar description may not exceed one half of an average year. But the damages to crops in Mino and Owari must prove very great, judging from the extent of land under water. The two provinces produce above 1,800,000 *koku* of rice, and as the districts in Mino devastated by repeated floods are the most fertile in the whole province, producing at least one-half of the entire yield, it would not be going beyond the bounds of possibility if we estimate the damage to the rice crop in Mino at 400,000 *koku*, worth at present prices 4 million *yen*.

FLOODS NEAR TOKYO.

The Nakagawa, a tributary of the Sumida that flows a short distance east of Tokyo proper, breached its embankment for a length of over 360 yards early on the morning of the 16th inst., and the villages adjoining Senzu and also those situated on the right bank of the upper course of the Sumida have been flooded. The overflow of the upper reaches of the Tone, and the consequent swelling of the current of the Nakagawa, led to the present disaster. A representative of the *Yomiuri* who visited Matsugi, where the river had forced its way through the embankment, describes the difficulty experienced by the people of the adjoining villages in procuring materials to strengthen the embankment. They usually pile up rice bags stuffed with earth when they notice signs of weakening, but the supply of bags becoming so scarce—the price rose from 1.8 *sen* to 5 *sen*—and even then an insufficient supply only could be obtained. For want of other materials to strengthen the embankment, mats and timber were piled up against the weak places. But these measures were of no avail, the water, when stemmed at one spot, threatening to break through another. At last a number of villagers, stripping off their clothes, attempted to fill the widening gap with their bodies. This, of course, was ineffectual, and the hundreds of villagers collected on the spot at last gave up the attempt as totally beyond their powers. Thus the breach at Matsugi, at first only 60 yards or so in length, gradually widened. The rural town of Shinjuku—not the Shinjuku to the west of the city, but a place along the highway leading from the north east of Tokyo to Mito—was flooded, the water rising 2 ft. above the floors. The surrounding fields have been converted into a big lake. The collapse of the embankment of the Nakagawa swelled the stream of the Ayase, and a few hours after the breakdown of the Matsugi embankment, the eastern bank of the Ayase fell, flooding the villages close by. The vicinity of the two rivers presents a scene of utmost confusion, villagers, young and old, being busily engaged in harvesting such of the rice and other crops not yet reached by the flood.

WHEN THE REVISED TREATIES GO INTO FORCE.

Here is a paragraph from the *Japan Gazette* :—

A foreigner in Kobe has had a foretaste of the unpleasant incidents we may expect to be frequent when Treaty Revision comes into force. The policeman, with that insolence which the Japanese police always display to civilians, practically arrested the foreigner because of a dispute with a *ricksha* coolie, and the foreigner, being unaccustomed to that form of police protection, resented the seizure somewhat forcibly. Thereupon he was knocked down and dragged to the police station, like a common criminal. There is of course no redress. But it is becoming quite clear that when Japanese laws come into force the officiousness of the police will be intolerable.

It is scarcely possible for a newspaper to write more unjustly, more ignorantly, or more mischievously. In the first place, the facts of the case, as narrated by the *Hyogo News* on the authority of the foreigner concerned, and as reproduced by the *Japan Gazette* itself, show that the foreigner would have been arrested by the police in any country in the world under the circumstances described. He hired a *jinrikisha*, proceeded to a certain place, and then set out to walk along the bank of a river in company with a friend, telling the *jinrikisha*-driver to wait for the purpose of carrying him back to his starting point. The *jinrikisha*-driver objected and asked to be paid at once for the journey already accomplished. The foreigner replied that he had no money and that unless the man agreed to make the return journey, he must wait until the following day for payment, and must, moreover, come to his fare's house to get payment. The man complained to a police constable; the constable stopped the two foreigners, one of the latter—not the party directly concerned—was offering explanations when the other, "impatient at this interference, started to take his friend on;" the constable thereupon caught hold of the foreigner's arm, "was called a fool, told to clear out, and thrust back;" and therewith the arrest was made. Possibly, in making it, undue force was resorted to by the police. On that point we can not speak. But it is certain that constables in any civilized country would have arrested a man behaving with similar lawlessness and violence. What connection, however, can possibly be traced between such an incident and the probable consequences of Treaty Revision? "It is becoming quite clear," says the *Japan Gazette*, "that when Japanese laws come into force the officiousness of the police will be intolerable." Japanese laws, forsooth! What on earth have Japanese laws to do with the matter? Does the *Japan Gazette* imagine that British law allows a man to refuse to pay for services already rendered by a hired cab unless a further service, not previously contracted for, be rendered; that it allows him to force upon the driver the option of performing the additional service or waiting until the next day to be paid, and then coming to his fare's house to be paid; that it allows him to start off without giving explanations to a constable whose intervention the cabman has solicited, and that it allows him to call the constable a fool and thrust him back when the constable seeks to detain him? The laws of all civilized nations agree in penalizing such behaviour. We do not imagine for an instant that the foreigner had any deliberate idea of ignoring the rights of the *jinrikisha*-driver, or of defying the police. But unfortunately he did both things, thus putting himself in the wrong and exposing himself to humiliation and suffering which we cannot fail to commiserate though declining to shut our eyes to the original responsibility. Surely such a text is badly chosen for the purposes of a tirade against the Japanese police and a prediction of the horrors awaiting foreigners when the revised treaties go into operation. If the Japanese police employed needless force, or were brutal in their methods of procedure, when making the arrest, the means of obtaining redress against them are precisely the same at present as they will be after the Revised Treaties go into operation. The *Japan Gazette* says "there is, of course, no redress." If that be true now, when the old Treaties are still in force, in what respect can

things become either better or worse after the new Treaties go into operation? But of course, there is redress: a complaint can be preferred through the Consul of the sufferer's nationality, and if necessary, strengthened by diplomatic support. This talk about the terrors of Japanese laws and Japanese police under the Revised Treaties is the veriest moonshine. It has not an iota of foundation in either recorded facts or reasonable theory, and its only effect can be to produce blind prejudice in the minds of ignorant persons. It cannot postpone the operation of the new Treaties by a second of time, and it must tend to diminish the chances of their smooth working when they do go into operation. It is a disgraceful parade of racial prejudice, proving incontrovertibly that the anti-foreign feeling attributed by some foreigners to the Japanese bears no comparison, in respect of intensity and thoroughness, with the anti-Japanese feeling entertained by those foreigners themselves. It would be difficult to find a more flagrant exponent of that anti-Japanese feeling than the *Japan Gazette* has shown itself during the past two years; and if its capacities for mischief were at all commensurate with its animus the results would be most unfortunate. Its charge, now advanced that "the Japanese police always display insolence towards civilians," is a typical example of its blind prejudice, for no more villainously false slander could be uttered against a body of men proverbial for courtesy and forbearance.

INTERRUPTED RAILWAY COMMUNICATIONS.

The repairs to the Kodzu-Matsuda Section of the Tokaido Line have been completed, and from 5 p.m. on the 13th inst., this section was reopened for traffic. The Kanzaki-Nishinomiyama section, between Osaka and Kobe, is still in the hands of the navvies, but in consequence of the waters having receded from the high-road that adjoins the railway, passengers and goods conveyed to either of the two stations alight, and passing along the road, join the train at the other end of the interruption. From Tokyo railway service along the Tokaido is available as far as Gifu, while from Kobe, excepting for the interruption between Nishinomiyama and Kanzaki, the service can be availed of as far as Kusatsu. Between that place and Gifu, however, the floods are still very high and it is not possible to predict with any certainty when this section will be restored to working order. The damages caused by the floods are especially heavy on the Mayebara-Fukui section. It is feared that before the section can be re-opened at least two months must elapse.

In regard to the private lines, the Kusatsu-Tsuge section and Takamiya-Tonda section, of the Kansai Railway; and the Koyama-Sano section of the Ryomo line, resumed traffic from the forenoon of Monday, as also did the Numazaki-Komaki and Shiriuchi-Shimoda sections of the Nippon Railway. The Furuta-Nagakubo, Shiraishi-Okawara, and four other sections, also of the same Company, are not yet restored. Between Kurihashi and Koga passengers and goods are conveyed in boats, and thus communication with the capital is maintained. But the boat service is confined only to the day time, the passage of the river by night being considered dangerous. The Sakuma-Chiba section of the Buso Railway Company is closed to traffic.

At a meeting of the Tokyo Chamber of Commerce held on the 12th inst., it was decided to despatch Messrs. Nakano Buyei, Okabe Hiroshi, and Asabuki Yeizo to the Department of Communications to ask that the complete restoration of the means of telegraphic communication be restored as quickly as possible, especially between Tokyo and Osaka.

The Admiralty have, wisely we think, at last decided to send out two "catchers" of the new type to Hongkong. The vessels will be the *Handy* and the *Hart*, and they will probably start about the end of the month.

THE WAR INDEMNITY.

The *Tokyo Economist* has some strong remarks to make in connection with the management of that part of the War Indemnity already received by Japan at present entrusted to the care of the Nippon Ginko. The question is discussed in two leaders. The Treasury, observes the *Keisai*, allows the Nippon Ginko to apply a sum of 50 million *yen* deposited at the Bank of England on behalf of the Government, as a specie reserve against the issue of convertible notes, the Bank paying interest for the use of this sum of 2 per cent. The situation stands thus :—

	Unit of 1,000 Yen.	Total. Unit of 1,000 Yen.
Convertible notes in circulation	165,000.....	165,000
Specie Reserves	55,000.....	—
Deposit at the Bank of England	50,000.....	105,000
Government Bonds	22,000.....	—
Loans advanced to the people	38,000.....	60,000
		165,000

If the deposits at the Bank of England are withdrawn and transmitted to Japan, the account will assume a different aspect, thus :—

	Unit of 1,000 Yen.	Total. Unit of 1,000 Yen.
Convertibles note in circulation	165,000.....	165,000
Issues over and above the ordinary limit	50,000.....	—
Specie Reserves	—	55,000
Government Bonds	22,000.....	—
Loans to the people	88,000.....	110,000
		165,000

The Bank will eventually issue 50 million *yen* of extraordinary notes with a view to lending to the people, and then the Treasury will collect a tax of 5 per cent. on this extraordinary issue, that is, a sum of 2½ million *yen* a year. But at present, as the Treasury allows the Bank to use the sum of 50 million *yen* at an interest of only 2 per cent, and moreover as one-half of that interest is to be refunded to the Bank as charges in connection with the costs of the deposit, the Treasury really receives only half a million *yen*. In other words, this strange method of managing the indemnity is actually causing a loss of 2 million *yen* to the Treasury.

"AT HOME" ON THE "ZARAGOZA."

The fête on board the corvette *Zaragoza* in honour of President Diaz of Mexico, arranged for the fifteenth instant—his birthday—but postponed on account of inclement weather, took place on Thursday afternoon under most pleasant climatic conditions. Admiral Monasterio and Officers converted the upper deck of their vessel into a perfect fairyland for the occasion, the artistic taste displayed in arranging bunting, foliage, and other decorations suitable to such an occasion, evoking warm expressions of pleasure from the guests as they arrived. From half-past three o'clock onward the steam-launches were kept busy running between shore and ship and by half-past four dancing commenced to the strains of the Town Band. One of the most charming features of the entertainment was the natural warblings of some dozens of song-birds that hung in cages in various parts of the main and quarter decks. The Admiral and his officers were most indefatigable in attending to the creature comfort of their guests, being unremitting in their attentions whether at dance or board, and thus a glorious afternoon was most pleasantly whiled away. Nearly all the staffs of the various Consulates were present, as well as many from the Legations in Tokyo, the Governor of Kanagawa, and other officials. Towards dusk the *Zaragoza* was illuminated, creating a very pretty effect, and causing many to wish that so pleasant an entertainment might be indefinitely prolonged.

MARQUIS ITO'S CRITICS.

AT a time of political excitement like the present one is prepared to find a great many unreasonable accusations and recriminations in the columns of party organs, but we certainly did not expect that Marquis ITO would be severely blamed for refusing to remain in office under circumstances that had driven Count ITAGAKI into retirement. Regard the matter from what standpoint we please, it is beyond practical question that the alliance between the Liberals and the Cabinet last year was the prelude to party Government in Japan, and it is also beyond practical question that without the assistance given by the Liberals the Cabinet never could have carried successfully through the Diet its various *post-bellum* measures. In other words, the Liberals, at a most important crisis of the nation's career, abandoned their old attitude of opposition, as they had previously abandoned their destructive policy, and threw their whole strength into the cause of the Administration. No one doubts that they adopted that course in the sequel of an understanding with Marquis ITO, and that Count ITAGAKI'S subsequent admission to the Cabinet, in the important position of Minister of State for Home Affairs, must be interpreted in the light of a consensus of policy between the Liberals and the Ministry. What, then, would have been said by the public if, within a very few months of Count ITAGAKI'S entry into the Cabinet, Marquis ITO had thrown him over, not because of any disagreement on an administrative question, but because the Liberal leader could not consent to become a member of a new alliance between the Government and the Liberals' inveterate opponents the *Shimpo-to*? We do not hesitate to say that had Marquis ITO pursued such a course, he would have been universally pronounced unworthy the confidence of any political party in the future. Count ITAGAKI'S resolve to leave the Cabinet was due, so far as we can see, to the prospect of Count OKUMA'S entry. Count OKUMA is the leader—nominally but none the less certainly—of the *Shimpo-to*, and his union with Count ITAGAKI in the same Cabinet would have been as though Lord SALISBURY held the portfolio of Foreign Affairs in a Ministry where Mr. GLADSTONE was Home Secretary. At one time an idea prevailed that even an anomaly so glaring might be contrived. People imagined that Count ITAGAKI, remaining in the Cabinet with Count OKUMA, might retain the allegiance of a moiety of the Liberals, and that, since Count OKUMA would bring with him the greater part of the *Shimpo-to*, the reconstructed Ministry would find itself supported by a powerful majority in the next session of the Diet. But even admitting the scarcely conceivable hypothesis that Count ITAGAKI could have

reconciled himself to the disruption of the great party at whose head he has stood for eighteen years, there would have remained the hopelessness of inducing Count OKUMA'S old and new followers to work in combination with the Liberals for constructive purposes. Thus the choice presenting itself to Marquis ITO lay, not simply between Count ITAGAKI and Count OKUMA, but between loyalty to the Liberal Party, by whose allegiance the Cabinet had already profited, or disloyalty to that Party for the sake of winning the adherence of its inveterate political foes. There could not have been any hesitation between two such alternatives. Quite another question, however, is the chain of events or complications that brought Marquis ITO face to face with a dilemma of the kind. That problem remains to be solved. Many believe that inability to procure competent statesmen for the Foreign Office and the Finance Department was the origin of the trouble. But the *Nichi Nichi Shimbun* denies the correctness of that explanation, and maintains that Marquis ITO'S failure to bring the Cabinet Ministers into line was the reason of His Excellency's resignation. Surely our contemporaries must see that what the public want to know is not the fact, but the cause, of a divergence in views in the Ministry.

YOKOHAMA AND ITS RAILWAY STATION.

THE question of changing the route of the Tokaido Railway so as to convert Yokohama into a branch station, seems to have assumed fictitious importance. From the point of view of the Railway Authorities the problem doubtless appears simple enough. The Tokaido road is a section of the great trunk line of the empire: its terminal points are the two capitals, Tokyo and Kyoto. Yokohama lies altogether outside the general direction of that road, and cannot be included in the system even by means of a loop line. If the through trains from capital to capital are to be deflected to Yokohama, they must be virtually reversed at the latter place in order to recover their original route. Under such circumstances, the idea of carrying the main trunk road away from its natural course and making it follow two sides of a triangle having Yokohama at the apex, would scarcely be entertained by any engineers in the world, unless absolutely imperative reasons dictated so strange a plan. Yokohama would be brought into the system by means of a branch line, and in view of the great tradal importance of the town, arrangements would be made at the junction of a character so complete as to obviate every inconvenience on account of either freight or passenger traffic. That is exactly what the Railway Authorities seem to contemplate. Hitherto, through trains running between Tokyo and Kyoto have been carried round by

Yokohama, diverging, for that purpose, almost at right angles from their natural direction at Kanagawa. But it having been now decided to undertake extensive works of reconstruction for the purpose of doubling the Tokaido line, the Authorities propose to revert to the natural order of things, making the road to Yokohama a branch, and connecting that place with two points in the Tokaido system, namely, Kanagawa and Hodogaya. By that arrangement Kanagawa would be the junction for all traffic northward of Yokohama, and Hodogaya the junction for all traffic southward. Very strong exception to such a plan is, however, taken by the Japanese merchants of Yokohama. They have compiled and presented to the Railway Bureau a lengthy statement of their views, but the arguments marshalled in the document do not appear to strengthen their cause materially. Considerable space is occupied by the memorialists in demonstrating the great importance of Yokohama as a commercial centre, its rapidly growing population, and the comparatively large sum contributed by it to the earnings of the line that connects it with Tokyo. All those things are beyond doubt, but their bearing upon the question under consideration is difficult to detect, unless it can be proved that Yokohama's prosperity or tradal development would be impaired by the Railway Authorities' plan. We fail to see that the memorialists have proved anything of the kind, and we shall briefly analyse the various points of their contention in order that our readers may judge for themselves. In the first place, replying to the argument of the Railway Authorities that the necessity of diverging from the natural route ought not to be imposed on the mass of persons using the Tokaido line, for the sake of the fraction using the line to Yokohama, the memorialists, with more ingenuity than ingenuousness, point out that the number of through passengers from Tokyo to Kobe is only 80 in every 10,000 of the total passengers, and claim that the convenience of the numerous travellers to and from Yokohama should not be sacrificed on account of that small number. Such a contention betrays singular superficiality. Not the through passengers from Tokyo to Kobe alone have to be considered. Every passenger whose destination is any point along the whole route of the Tokaido road between Tokyo and Kobe (or more properly Kyoto), on the one hand, and Kobe and Tokyo, on the other, has a right to object to the inconvenience of being carried out of his course to Yokohama. If a ratio of the kind suggested by the memorialists is to be set up, it should be between the number of travellers to and from Yokohama and all points south of Kanagawa, on the one hand, and the number of passengers to and from Tokyo and all points south of Kanagawa, *plus* the number to and from Kobe and all points north of Kanagawa,

on the other. In the second place, the memorialists contend that delays highly injurious to trade would be caused by the new system. But they fail together to show how such delays would occur. Consider the case of goods from the south destined for Yokohama—goods from the north need not be considered as there would be no change in the present system of direct trains between Tokyo and Yokohama. On reaching Hodogaya, the waggons containing such goods would be shunted, coupled to an engine held in readiness, and carried on at once to their destination. What would be the resulting delay? Certainly it need not exceed ten or fifteen minutes. Would that appreciably interfere with the course of trade in Yokohama? Then again, the memorialists speak of the necessity of certain goods—particularly tea—being accompanied by their consignors. Why should they not be accompanied by their consignors under the new system as easily as under the old? Is it impossible for a consignor to change cars? Could he not step out of a car at Hodogaya and transfer himself to the train by which his goods are to be carried on to Yokohama? In the next place, the memorialists dwell at some length on the importance of making the express Tokaido trains accessible to Yokohama people. They write as though Yokohama were to be excluded altogether from the express service, and they talk at large about facilities of rapid communication, promptitude of transactions, and so forth. But in point of fact the express trains will all be accessible to Yokohama people. It will be a question simply of boarding them at Hodogaya instead of at Yokohama, and since, under any circumstances, the distance between Yokohama and Hodogaya must be traversed, the whole delay involved will be the time required for changing carriages at Hodogaya. To write as the memorialists write in connection with this point indicates great want of reflection. And they have no other arguments to advance. They refer, indeed, to the projected transfer of the Yokohama station to Hiranuma, but that is an independent matter which does not call for any digression here. The question seems to turn entirely on the efficiency of the railway folks' management. If prompt and efficient measures be organized for the handling of goods and the transfer of passengers at Hodogaya and Kanagawa, Yokohama need not suffer one iota because its railway becomes a branch, instead of being an integral part, of the Tokaido main trunk road. It appears to us that the agitation fomented in connection with this subject is sentimental rather than practical, and that its result will be to create discontent where no valid cause for any such feeling exists.

THE APOTHEOSIS OF RUSSIA.

A VERY remarkable essay appears in the July number of *Blackwood's Magazine* under the above heading: we reproduce it elsewhere. Its readers will probably agree with us in thinking that the writer somewhat overstates his case in his anxiety to make it striking. But on the whole, his estimate of the situation deserves full consideration, and accords with the impressions that have gradually been fixing themselves in the minds of careful observers during the past eighteen months. So far as concerns the position recently won by Russia in the East—which, after all, is the chief point of interest for people at this end of the world—*Blackwood's* essayist does not appear to discriminate sufficiently between the real and the hypothetical values of facts. For example, he speaks of Russia's loan to the Chinese as having invested her with "an official right to interfere with the maritime customs, which is the creation of Sir ROBERT HART, and over which British subjects have exercised from the first a predominant influence," and he hints very plainly that Sir ROBERT may at any moment be replaced by a Russian. Why so? Nowhere has it been recognised that a creditor is entitled to impose new terms on a debtor, or to lay hands on the latter's property, so long as the conditions under which the debt was contracted are duly fulfilled. If the Government in St. Petersburg had entertained the project of having the direction of the maritime customs of China transferred to a Russian subject, the time of guaranteeing the loan would have been the moment for pushing that design. No such opportunity can occur again unless China fails to discharge her stipulated obligations as to the payment of principal or interest. It seems to us that the importance of Russia's monetary intervention in 1895 has been greatly over-estimated. London is the world's last resort in financial affairs, and so long as huge sums of British capital await investment, it is inconceivable that a paltry debt of fifteen millions sterling should be suffered to furnish a pretext for imperilling British interests of large magnitude in the Far East. Any menace to China's integrity, or any contingency distasteful to England, arising out of the Middle Kingdom's debt to Russia, could be at once averted by recourse to British capital. China might have to pay more for such accommodation than she now pays on the note carrying Russia's endorsement, but the difference could not be deterrent unless the reasons for a change of creditors were insignificant. It should not be forgotten that British statesmen watch all these matters far more closely and with far keener insight than any essayist or journalist. Every step taken by Russia is the object of sharp scrutiny. Less intangible, perhaps, is the apprehen-

sion so frequently expressed, and now repeated by *Blackwood's* essayist, that the Siberian Railway is to be run through Manchuria to Port Arthur. It is within the range of conception, but barely within the range, that Russia may contemplate such a proceeding. On a previous occasion, however, we pointed out the flagrant inconsistency between that supposition and the generally entertained belief that Russia's movements of absorption in Korea are hampered by the pledge she gave in 1886, on the occasion of England's evacuation of Port Hamilton. Her annexation of Korea would be of incomparably less moment to British interests than her establishment in the Liaotung Peninsula, where she would command the Gulf of Petchili and stand within arm's length of China's principal tradal routes with the outer world. Yet we are invited to suppose that, while she is restrained in Korea by the hypothesis of British dissent, its absolute certainty does not check her at all in the case of Liaotung. Unless England choose to efface herself altogether in the Far East, she can not possibly permit Russia to seat herself in Liaotung. Russia understands that thoroughly, and is shaping her programme accordingly. Heroic measures are not to her taste. No nation has manifested larger faith in time. She can afford to wait much better than to precipitate a life-and-death struggle for which she is not fully prepared. She and Great Britain are essentially aggressive Powers. It is the law of their existence. They must either grow or decline, and they are both growing. What concerns their statesmen chiefly is that the growth should be along lines of least resistance. Tsitsihar and Port Arthur is not a line of least resistance for Russia: it is, on the contrary, a line of greatest resistance. Her field of immediate operations lies much farther East—in Korea. With what object has France secured concessions for building railways from Söul to Wiju and from Söul to Wonsan? What conceivable interests can she have, or hope to have, in those regions? Is it not evident that she is playing, wittingly playing, Russia's game, and that these roads will ultimately become adjuncts of the Siberian route? The outlines of the true programme stare us in the face, yet people talk gravely of such a precipitate and desperate procedure on Russia's part as the deflection of the Siberian Railway direct through Manchuria to Liaotung. Still, it is better to be sounding alarms than to fall asleep, or to delude ourselves with the fatuous idea that a warm port is the goal of Russia's ambition in the Far East, or that her progress southward and westward would be checked by such an acquisition. She has no choice: the possession of half-a-dozen warm ports would not absolve her from the inexorable law obeyed by everything human, from a cabbage plant to an empire, the law of motion, progressive or retrogressive. She and England

may be compared to two huge glaciers moving slowly but surely forward. Unless one of them be disintegrated *en route*, their ultimate collision is inevitable. How much weight of outside assistance each will have acquired before the final impact, is a vital question, and *Blackwood's* essayist evidently attaches due importance to it.

PATRIOTISM IN KOREA.

(FROM OUR OWN CORRESPONDENT.)

Sŭl, Sept. 5, 1896.

The Editor of the *Korean Repository* in the last issue of that magazine tells us that Korea has or is about to slip back into the old ruts of the olden times. As a statement of the tendency, if not avowed purpose, of the Conservative party, this may perhaps be accepted as a correct declaration, but there is also another spirit abroad in the country. It is the new spirit born as the result of the general upheaval in 1894. It found expression in a rather peculiar, if not unique, way on the 45th anniversary of the birth of His Majesty the King.

I have lived in Korea some years, and I do not recollect that the common people ever took any notice of this day. The officials of course did, but the people went about their usual duties. This year some of the Christians suggested that it would be eminently appropriate for them to assemble in their places of worship and offer special prayer and thanksgiving to God for their King. The suggestion was made to the Rev. Dr. Underwood. He immediately acted on it and asked the several churches in the city to observe the day. From this beginning it was but a short step to the idea of a general mass meeting at Mo Ha-kwan, the place where Korea has for centuries acknowledged the suzerainty of China, but which is now to give way to Independence Park.

The meeting was called for four o'clock in the afternoon. It was mentioned in the issue of *The Independent* the previous day. Long before the hour of opening a large company, variously estimated from 2,000 to 3,000 people, gathered. It was a good-natured crowd. The Minister for Foreign Affairs, the Vice-Minister of Agriculture, Commerce, and Public Works, and military men, were on the platform. The greater part of the assembly probably had little or no idea what they came for, but not so the management. The Vice-Minister already referred to, Dr. Jaisohn, of *The Independent*, Dr. Underwood, and several Koreans, made strong addresses on the duty and necessity of patriotism. It was eminently fitting that the first meeting of this kind should be held in Independence Park, and that such patriotic sentiments should find expression there.

The very fact that some of the highest officials attended and took part in a meeting where all classes were assembled shows conclusively, it seems to me, that there is a new spirit at work in the country. The meeting was held under the auspices of the Christian Church. His Majesty knew of it, and encouraged it, and, we are informed since, was much pleased with it. The very fact that such a meeting was held and that high and low were told their duty to their King and their God is a most hopeful sign.

On the 4th inst., the mortal remains of the late Queen were brought from the Royal Palace in the northern part of the city to the Hon Chim—Spirit House—just completed in Chong Dong, in the western part of the city, where all the foreign Legations (Japanese and Chinese excepted) are located. The weather was pleasant and the crowd that lined the streets immense. The Russians had a squad of soldiers in the grounds—which to some people's way of thinking was not only unnecessary but out of place, perhaps the King requested their presence; so much the worse for him.

SOME EDUCATIONAL NEEDS.

[COMMUNICATED.]

The alleged preponderance of the coolie element is one of the stock phrases of those disposed to sneer at, or, at all events, underrate Japan's development in recent years. Some go so far as to state, in so many words, that these coolies form a direct source of menace to the State; that, in case of an armed invasion of Japan or an attack directed against her shores, these men would prove unmanageable and contribute to the immediate confusion certain to ensue in such a case. For ourselves, we hold diametrically opposite views, and while we are ready to concede that measures should be taken to up-lift the masses: to bring them to a truer realization of their status and duties as Japanese subjects, we neither can nor do regard the so-called coolies as threatening in any way or under any circumstances the stability of the nation as such.

In the first place, what is the "coolie?" Etymologically the word is of Hindustani origin, and denotes a "labourer." But it would be quite incorrect to infer that the coolies of Japan, as a class, are labourers. True, they are often glad of the first or any job that turns up. Micawber like, they are generally waiting for a chance to enrich themselves at the expense of the minimum of hard work. Yet this is equally true of the vast hordes of the unemployed, the "submerged tenth," in any land. Japanese coolies, on the other hand, often include men of more than average education; impecunious sons of small farmers; boys set adrift in the world by reason of family misfortunes or other untoward circumstances; and, besides these, a substratum of day labourers, composed principally of petty peasants, and handicraftsmen, whose skill in their special branch is not sufficient to procure them a livelihood. There is also a well defined proletarian element: scapegraces and well-nigh irreclaimable vagabonds—as indeed may be found in every community the world over. These last named, in common with the hot-headed, penniless youths already described, are directly responsible for all trouble coming from the coolie class. And there is one thing more to be considered: a large proportion of these men are the offspring of petty *samurai*—many still cling to their inherent *shisoku* rank—and these have bellicose, military instincts, the free, bold bearing so characteristic of their progenitors. Untrained in early years to any useful employment, deprived of the blades by which their ancestors carved their name to fame, their plight truly is an unfortunate one. With gentlemanly instincts they have to herd with persons socially and mentally their inferiors; and so it comes that the very qualities that were laudable in their parents or grandparents, drag these men down to ruin, cause them to lead reckless lives, and scatter broadcast the seeds of discontent, disobedience, and disturbance.

The question is: How can the Government best reach and work in the sense of a mental and physical amelioration of this numerous class? There are unquestionably good qualities to be found among the coolies; instead of letting these qualities run to seed or disappear under the weeds of vice, what shall be done to raise their possessors? The only solution lies in the educating of these masses. According to statistics recently published in these columns, it is clear that, for so progressive and enlightened an empire as Japan, the number of illiterate men and women—or particularly those who have not acquired more than the mere rudiments of knowledge—is disproportionately great. Moreover, and this is an essential point, the schools of Japan take too long a time in fitting young men for practical careers in life. Five years in a Primary, three years in a Higher Primary, and three to four years in an Ordinary Middle School—and what is the result? The student has acquired a fair knowledge of written, but not spoken English; can cipher with tolerable accuracy; knows a little each of chemistry, botany, zoology, and astronomy; is very feeble in his geographical and historical know-

ledge of any country except Japan. In a word, seven-tenths of what he has so painfully acquired are not at all adapted for launching him in some practical, bread-winning pursuit. Within three years after graduating from an Ordinary Middle School, the student forgets fully 50 per cent. of what he has learned. We speak in this connection from positive experience, and are certain of our position. These ten or twelve years of study are, in the instance, impossible to the majority of young people: their parent's position not admitting so long an abstinence from lucrative employ or, at any rate, paying work, and even when the young man is enabled to go through the whole course, he is, upon graduating, not at all fit for practical work and not so trained as to be able at once to support himself and an eventual family. This is, it must be confessed, a very unsatisfactory showing.

What possible good could such education do the lower or lowest classes—the, for the want of a better word, "coolies," and their children? It could only inspire them with a dissatisfaction with their lot and aspirations impossible of fulfilment. Some other method must be devised to give the necessary mental pabulum to these knowledge-hungry people; to fit them to take, at the earliest possible moment, a place in the struggle for existence and the means of winning their daily food. We would suggest two measures, either of which is not difficult of achievement. First, then, the heightening of the standard of the Higher Primary Schools, with a view to preparing the alumni to enter upon some practical career; combined with technical education, though not obligatory, from the third or fourth year of the Ordinary Primary Schools. Secondly, the establishment of an increased number of Technical Schools, of not too high a grade, in as many of the larger towns as possible, together with a minimum of tuition fees. Were this done, we are convinced, a great step would be taken towards rendering the coolie population innocuous, and spreading a thorough, practical education among the masses. Knowledge is power, and never more so than when kept in the right direction and leading towards a desirable goal.

IMPROVEMENTS IN LEGAL PROCEDURE.

It is exceedingly satisfactory to find that the strong acumen of the British Bench at last promises to rise superior to the tyranny of technicalities and legal quibbles, by which the ends of justice have so often been defeated. At the Jameson trial, Sir Edward Clarke, who appeared for the defence, made a brilliant speech on a motion to quash the indictment, which it appears, had been drafted with considerable slovenliness. We read in the London papers that, in other days, Sir Edward would have won his point, but on this occasion the Lord Chief Justice over-ruled him, and in doing so employed the following remarkable language with reference to the recorded cases that Sir Edward had cited:—"Many of them belong to a time when the right and the justice and the substance of the thing were sacrificed to the science of artificial statement." Let us hope sincerely that this wise dictum of the Lord Chief Justice points to the opening of an era when legal documents can be couched in the language of every-day life, and freed from formalities and technicalities at once superfluous, perplexing, and absurdly antique. Such a reform would be of immense value, and worthy to rank with it would be some method of restraining the abuses of cross-examination. The ordinary barrister, now-a-days, when he stands up to cross-examine a witness, deliberately sets himself to play the part of a clever and artful bully. If he can not shake the testimony hostile to his client's cause, he can at least essay to humiliate the witness, or render him, in some respect or another, antipathetic to the jury, with which object he too often resorts to methods as indefensible as they are rude. Cross-examination undoubtedly has its uses, but the license accorded to cross-examining barristers often outrages all canons of decency.

BREWERIES IN JAPAN.

Mr. Uyeno Kintaro, chief expert of the Yebisu Beer Brewing Company, was despatched by his employers to Germany by the last European mail, his object being to inspect the condition of the brewing industry in Germany and to equip himself with a knowledge of the latest improvements there. He is to stay in Germany for two years. On the occasion of a farewell banquet given him at the Seiyoken, Uyeno Park, Mr. Umakoshi, a Director of the Company, delivered a speech upon the condition of the company and the brewing industry in Japan. He observed that the brewers of Japan have not only succeeded in nearly putting a stop to the import of most malt liquors into Japan, but now export their produce to China and Singapore, and even as far as Bombay. In fact, the supply is hardly adequate to meet the growing demand. There are at present only four breweries in Japan carrying on business on a large scale; namely, the Kirin, (Japan Brewery Company, Ltd.); the Asahi, the Sapporo, and the Yebisu. The output of these four breweries does not exceed 50,000 *koku* per annum. Compared with the yearly output of *sake*, amounting to 4 million *koku*, the quantity of beer produced in Japan does not exceed $\frac{1}{80}$, while from the point of view of the alcohol contained in the two, the ratio falls to 1 in 300. Consequently, if the steady increase in the consumption of Japanese beer in foreign markets be taken into consideration, the quantity of beer brewed in Japan may be increased by ten or even twenty times the amount now manufactured. Of the various fermenting industries of Japan, beer brewing is generally admitted to be one of the most profitable, and this even though malt is imported from abroad. The profits would therefore be very much greater where this material produced at home. The Yebisu Beer Company is paying earnest attention to this point and is manufacturing malt experimentally from German barley with the latest appliances available. It was for the purpose of investigating this important branch of the industry that the Company decided to despatch its expert to Germany. Success in producing malt in Japan would mark an epoch in the history of beer brewing in Japan. It is said that the Yebisu Company has decided to establish another brewery capable of producing 16,000 *koku*, so that, on the completion of this scheme, the total output of the company will be increased to about 60,000 *koku*. For this purpose the Company's capital is to be increased from 600,000 *yen* to 1,300,000 *yen*. The scheme will be laid before an extraordinary general meeting of the shareholders to be held on the 25th instant.

DYSENTERY.

Dysentery, writes the *Nippon*, is causing considerable havoc in Japan, especially in Gumma Ken, where the cases totalled about 7,300 up to the 10th instant. Lack of wholesome drinking water, in consequence of the floods, must be at the root of these fearful ravages, while another factor is the tendency of the people to neglect the usual sanitary precautions. This negligence is proving very fatal. Between 1889 and 1895, cholera cases totalled 115,085 throughout the country, of whom 84,666 were fatal. During the same period dysentery patients amounted to 557,851, of whom 135,057 died. Thus the mortality caused by dysentery is greater by about 70 per cent. Classified by professions, farmers are found to be far more susceptible to dysentery than others, as is shown in the following figures:—Farmers, 80.99 per cent.; mechanics, 1.94; merchants, 4.68; other professions, 8.78; non-professional, 1.99; miscellaneous 1.62. In cholera the mortality among the farming class constitutes 45.23 per cent., while in typhus the ratio is 58.71. Consequently dysentery must be put down as a farmer's plague. From Jan. 1st to Aug. 15th of this year dysentery patients totalled throughout Japan 16,873, of whom 2,752 succumbed.

A MANILA SCHEME THREE CENTURIES AGO.

The *Mainichi* prints an interesting account of the career of Harada Magohichiro, who about three centuries ago plotted to annex the Philippines to Japan. The early life and career in Japan of this warrior are shrouded in the mists of tradition, and the *Mainichi* simply states that he was one of those bold adventurers who, becoming weary of internecine troubles, left the country at the beginning of the *Tensho* era (1573-1591 A.D.). In time, Harada arrived at Manila, where he stayed for some years, making himself thoroughly acquainted with the place and its inhabitants. He was convinced that the despatch of Jesuit missionaries by Spain to the Philippines was with the object of subsequently annexing the islands, and that, unless the idea could be summarily checked, Japan might be placed in jeopardy. His experience of the world told him that Japan should anticipate Spain and prevent her gaining possession of the Philippines. With that purpose in view, Harada returned to Japan and laid his project before Hideyoshi, then at the zenith of his fame and power. Harada represented to Hideyoshi that the latter should despatch a message to the Governor of Luzon, urging him to pay homage to Hideyoshi and bring tribute. Harada's idea was to provoke the Governor of Luzon and then to send an expedition to the South on the plea of the Spaniard's discourtesy. This proposal was highly acceptable to the ambitious Hideyoshi, and he wrote a letter, which Harada charged his nephew to carry to Luzon. The letter was drawn up in haughty language, and the Governor despatched Father Fanzobio (?) to Japan to return an answer to it. When the messenger arrived, Hideyoshi was in Nagoya, Hizen, actively directing the expedition against Korea. Harada accompanied the messenger to Nagoya, where the latter submitted the letter and presented the tribute sent by the Governor. The messenger represented at the same time that he was sent by the Governor to ascertain the authenticity of the letter from Japan. The statements of the messenger were somewhat ambiguous, but Hideyoshi, absorbed in the Korean affair, had no leisure to attend to the matter. Harada was highly rewarded by Hideyoshi for this service, and was sworn into the group of his immediate retainers and received a fief of 300 *koku* of rice. But Harada's ambition did not lie in that direction, he was impatient to obtain a definite answer from the Governor. In 1593 Harada set out for Luzon, but upon his arrival at Manila, was highly disappointed at finding that the returning Embassy had been shipwrecked and drowned, so that Hideyoshi's second letter had not reached the Governor. This was a great blow to Harada's project. But he did not despair. After remaining awhile in Manila, an ingenious idea occurred to him. He represented to the Chief of the Jesuit Mission the advisability of sending missionaries to Japan, where, he promised, they would meet with a warm reception. The chief was delighted at this, and after consulting with the Governor, determined to despatch two priests, Gonzales and Baptiste. These men, in company with Harada, arrived at Nagoya and were seen by Hideyoshi. After a short stay, Gonzales left Japan, and in 1595 Baptiste was joined by four of his brethren from Manila, and the five were allowed to engage in the work of evangelization. In the meanwhile, rumours began to circulate that the Jesuit priests, while pretending to spread the Gospel, were really intent on extending the dominions of Spain. Whether this rumour originated from Harada, or whether Hideyoshi really believed in it, history does not relate, but from that time onward the Taiko manifested distrust of the priests, whom he caused, at the instigation of Harada we are told, to be put to death. Hideyoshi then promised to follow the advice of his councillor and fit out an expedition to take Luzon, but before he could carry out this ambitious project, he was taken ill and died. Thus Luzon was saved from the misery that overtook Korea.

FUNERAL OF CAPT. KENDERDINE.

The funeral of the late Capt. Kenderdine took place on Friday afternoon and was attended by touching expressions of esteem and regard, the deceased gentleman having truly won the hearts of all who came in contact with him in the course of his busy life. The service was conducted by the Rev. E. C. Irwine, M.A., and was most impressively rendered. The eldest son and Mr. J. W. Cain were the chief mourners. The pall-bearers were Capt. Martin, Capt. Efford, Capt. Olsen, Capt. Forbes, Mr. W. Barrie, and Mr. P. Andersen. At the close of the service the Rev. E. C. Irwine said that it was with feelings of deep regret that they laid the body of their friend Kenderdine to rest within the grave. He was a man who won the affection of all his friends, and as a commander had gained the esteem of the service in which he was engaged, alike of his employers and by the passengers who had the privilege of travelling with him. He was also much liked and esteemed by his officers, which was a strong testimony of the good qualities of his character. In his home relations, as a father and a husband, we all know how kind and affectionate he was. I myself had long since found him to be a man who firmly believed in God and the truth of the revelation of our Lord Jesus Christ, and so while we shed the tear of sympathy for the sorrowing woman left behind, and for her young and tender children, yet we feel that Him whom he served so faithfully will not leave her and them without protection, but will guard and comfort them. I am also sure that among his friends will be found those who will be always ready with succour and encouragement for the loved wife he has left behind. Wreaths were sent by following:—Mr. and Mrs. Vincent, Mr. and Mrs. E. Noble, Mr. and Mrs. J. S. Robinson, Mr. and Mrs. F. O. Eustace, Mr. and Mrs. James Martin, Capt. and Mrs. J. Turner Harrison, Mr. and Mrs. E. J. Moss, Capt. and Mrs. Thompson, Capt. J. W. Ekstrand, Capt. J. F. Allen, Capt. and Mrs. J. J. Efford, Capt. W. H. Forbes, Mrs. Frances Cameron, Capt. and Mrs. R. Swain, Dr. Runkwitz, Mr. and Mrs. Holyoake Box, Mrs. Rose, Mr. R. Kondo, Mrs. Noordhoek Hegt, Mr. F. Staniland, Mrs. F. Staniland, Mr. and Mrs. W. K. Tresize, Mr. and Mrs. C. B. Clausen, Mr. F. J. W. Palmer, Mr. and Mrs. Wallace, Mr. and Mrs. Henry Macarthur, Mrs. Charles Grant, Mr. and Mrs. B. Roth, Mr. and Mrs. Pope, Mr. and Mrs. A. M. Apcar, Mr. J. Hellendall, Mr. E. Leopold, Mr. and Mrs. Manley, Mr. Ah Sung, Mr. E. P. Pallister, Mr. and Mrs. G. Booth, Mr. C. Charlesworth, Mr. J. Johnstone, and Mrs. Charles Parker.

PROMOTING BRITISH TRADE.

A Shanghai contemporary notes that among the steps that are being taken to promote British Commerce, Mr. Curzon mentioned the following in the House of Commons, on the 27th of July:—(3) The Consular Staff in Siam will be increased by two new appointments, but the exact areas of the new Consuls' jurisdictions are not yet fixed. (4) We hope before long to appoint additional British Consuls in Yunnan to promote the interests of British trade in that quarter. (5) Several new Consulships are in course of being created for now that ports have been opened to foreign trade by the Treaty of Shimonoseki between China and Japan. (6) Mr. Brenan, Her Majesty's Consul at Canton, has been despatched on a special mission of inquiry to the Treaty Ports of China, Korea, and Japan, to report upon the manner in which British trade has been affected by the recent war. (7) Mr. Austin Lee, who is about to succeed Sir Joseph Crowe as Commercial Attaché at Paris, is engaged in the preparation of a special report upon the regulations with regard to trade and shipping of the Continental ports competing with the Port of London. (8) As a result of communications which have passed between the Foreign Office and the Associated Chambers of Commerce, supplementary instructions are in course of being

issued to Her Majesty's Consuls regarding assistance to trade, the collection of samples, and information of a commercial nature. (9) More complete arrangements have recently been made for the immediate publication in the Press of invitations for tenders for work abroad. (10) Arrangements have been made for the official participation of Great Britain in the Exhibitions to be held next year at Brussels and in 1900 at Paris, and Parliament will be asked to make grants for this purpose.

A NEW VIEW OF MR. CECIL RHODES & HIS COMPANY.

L'illustration Européenne, translated by the *Literary Digest*, says:—

Several days' journey from Mafeking, where the English rapid-fire guns are massing to-day under the distrustful eyes of the Boers, and Fort Salisbury, where the Honourable Cecil Rhodes supports an agony of suspicion, 27 kilometers [17 miles] from the station of Zimbabwe, and more exactly yet, in latitude 20° 16' 30" South and longitude 33° East, enormous masses of ruins extend along the river Sabi. Occupied as they have been in seeking for gold-bearing strata, the English have not absolutely neglected the archeological treasures that these ruins without doubt conceal.

The explorer Bent made here some preliminary excavations, and his conclusions tend to no less a result than the location, here in Mashonaland, of the mysterious kingdom of the Queen of Sheba, whence Solomon obtained, in the year 992 before Christ, a mass of gold estimated at more than a million kilograms [more than two million pounds avoirdupois].

In fact, the mineral wealth of this land had already been pointed out by Arab traders to the Portuguese when they disembarked for the first time at Sofala. Now the name Sofala may be nothing else than a derivative of the Greek word Sophira or Ophir, and if we compare this name with that of the river Sobi or Saba, we must conclude that Ophir or Saba was situated in the country now granted to the Chartered Company. This latter also—it is scarcely necessary to mention—makes special allusion to the "wonderful relics" of Zimbabwe in its prospectus.

These ruins bear the distinctive characteristics of Phœnician construction. Certain of the walls are five meters [16 feet] thick and ten [33 feet] high. Mr. Bent visited numerous enclosures, several towers, and a fortress and in various places he found the remains of foundries and of working in gold. He gathered from this exploration the certainty that this dead city was not of South African origin, and that it had been abandoned and destroyed after some great invasion; for the gates of several houses are provided with walls as if it had been desired to transform them into fortresses, and from the disorder that reigns everywhere, one gets the impression that these mute ruins must have witnessed, at some time or other, a terrible war of extermination.

To-day the Mashonas dwell in primitive huts near the crumbling palaces, and 21 kilometers [15 miles] to the north rises Fort Victoria, flying the British flag.

Strange destiny! This enchanted country, this kingdom of the Arabian Nights, has become the social capital of a syndicate of speculators; and to the Queen of Sheba, that brilliant figure of Bible story, that princess of fairyland, has succeeded the administration of the British South Africa Company.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is no occasion to call public attention to the contrast between the conduct of the American Board Missionaries in this country during recent events and that of the Doshisha Company as championed by President Kozaki and Prof. Ukita. If the spirit of the one is that of "conservatism" in theology, and that of the other the spirit of "freedom of thought" the incident may furnish food for reflection. The one is Christianity, the other is anything else. Small wonder that there is a distinct cleavage visible in Japanese Christianity, that the so-called defence of orthodoxy is no longer dependent on the foreign missionaries.

But I set out to say something else. Recent events have been viewed with much more than passing interest. There has been a good deal of "I told you so" talk, and one Christian has written to the *Japan Mail* a letter such as few missionaries would have the heart to write. If facts are not greatly misrepresented, the Doshisha is not the only mission school that has undergone this secularizing process. What about the Canadian Methodist School at Azabu, Tokyo? What about the M.E. School at Aoyama and the Episcopal School at Nara? Have not the first and last named, and the Preparatory Department of the Aoyama School, been "put in line with Govern-

ment schools?" Does any sane man suppose that a pupil from one of these schools will ever secure entrance into one of the higher Government schools until the school from which he comes, like the Doshisha, has broken loose from Christian moorings, and its Japanese teachers and trustees are prepared to kick the missionaries out and join President Kozaki and Prof. Ukita in their chorus of base ingratitude? Laying all prejudices aside, when there are thousands of pupils every year for whom there is no room in the higher Government schools, what can the pupils of these little, very little, Chin Gakko expect?

The essence of this secularization of mission schools is denial of Christ. That being accomplished, nothing more remains to be done, unless it be for the actors to hide their faces in shame.

Very truly,

September 11th, 1896.

OBSERVER.

THE CONDUCT OF RAILWAY OFFICIALS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Though I have not been in Japan so long as your correspondent "H." my twelve years experience of almost constant travel fully corroborates what he says with reference to the Japanese railway officials being "uniformly polite and attentive, to the wants of foreigners especially." I have travelled very much in almost every civilized country of the world, and can truthfully say that I have nowhere received better treatment from railway officials than in Japan. I would, however, most respectfully submit, that if the ticket-offices were opened somewhat earlier than is usually the case, it would be a matter of convenience to the travelling public generally, and to those having baggage cheques to procure in particular, and this would, at the same time, lessen the "rush" which not seldom takes place a few minutes before the departure of the train.

Yours truly,

Tokyo, September 9th, 1896.

F. W. V.

CRICKET.

MR. CRAWFORD'S ELEVEN V. MR. WHITE'S ELEVEN.

This match was played in pleasant weather on Saturday afternoon, when Mr. Crawford's team was beaten badly by the eleven captained by Mr. White. Crawford, winning the toss, sent his men in first, but with the exception of himself (19) and Murray (21), the side did badly. Kingdon's bowling being very effective. Kingdon's analysis reads, 40 balls, 7 runs, 3 maidens, 5 wickets; an exceptionally bright performance. White's team opened badly, the first man being dismissed at 8, and Dickinson going out l.b.w. at 22; but upon White and Campbell coming together a stand was made and 130 was hoisted ere White was cleaned bowled by Murray. The out-going bat made ten fours and four threes. Campbell was caught at long-on by substitute off Murray, at 160, and his score included eight fours, two threes, and ten twos. The only other man on the side to get into double figures was Dr. Todd, 11. Scores:

MR. CRAWFORD'S TEAM.				
Mr. G. C. Murray, b. Kingdon	28
Mr. E. B. S. Edwards, c. sub. b. Goddard	1
Mr. K. F. Crawford, b. Kingdon	10
Mr. E. O. Kenyon, b. Goddard	1
Mr. H. R. Harries, b. Kingdon	1
Mr. G. Allcock, b. White	3
Mr. H. Goddard, b. Kingdon	0
Mr. S. Thomson, run out	0
Mr. W. Goddard, b. Goddard	0
Rev. T. S. Tyng, b. Kingdon	3

"BLOW FOR BLOW" AT THE PUBLIC HALL.

The dramatic company of H.M.S. *Humber* deserved a much larger audience than that which gathered at the Public Hall on Saturday, when the drama, "Blow for Blow," was given in aid of the funds of local charities. Yokohama does not care for heavy drama: that is a fact amply demonstrated by the experience of the past few years; still the meagre attendance on Saturday exhibits but scant appreciation of the self-denying efforts of a party of amateurs belonging to lands afar, who so kindly volunteer their services to add to the gaiety of this dead-and-alive Settlement. It is to be hoped that this evening some amends will be made, for, putting the claims of charity altogether aside, the entertainment is well worth patronage. A good deal of healthy amusement was derived from some of the unrehearsed situations occasionally developed, as when the low comedian, in the exuberance of his spirits, tugged too heartily on his moustache, and caused the ill-gummed hirsute appendage to fall to the floor, where it was incontinently trampled on before the accident was discovered by his fellow Thespian; or when the landlady in Act I, with unskilful, clumsy fingers tried to remove poor *Alice Petherick's* dainty bonnet and found herself in a wild tangle of hairpins, that were no sooner brought into submission than she dropped the bonnet on the floor—a thing no lady, we understand, could or would do with such an article of head-gear. Some of the ladies of the audience, too, were also a little hypercritical as to the actions of the would-be females in some of the love-passages, averring that there was too much masculine abandon and muscularity about the billing and the cooing. But as for the draping of the skirts, etc., they had nothing but praise. The action of the piece is divided into a prologue and three acts, an interval of five years separating the prologue from the rest of the drama. The *dramatis personæ* include the usual characters found in thrilling drama, the heavy villain, the wrong-doing father, the good sister who is tempted by the villain to revenge a wrong done to her dead sister by Villain Number Two, against whom the heavy villain has a grudge; a couple of light comedy parts, a Number Two leading lady, and a serio-dramatic good genius. Vice predominates in the prologue till towards the end, when one personage gets thrashed, and the other arrested, while a gleam of triumphant Virtue is vouchsafed by the intended Villain Number Two declaring in all the solemnity of melodramatic art that though the girl he loves is a forger's daughter he intends making her an honest man's wife. Cheers should have followed this outburst of heroics, but "the gods" are ever absent from the Public Hall, and only mild applause greeted the fall of the curtain. Then the drama proper began. Act I., "The Plot," gives the clue to the further proceedings of the villains; Act II. introduces "My Lady Linden" and carries on the action in the higher strata of society. Vice predominates, and almost prevails, in the first scene of Act III., "On the Scent;" scene two is introduced for the sole purpose of giving the lady and gentleman low comedians a chance to irradiate the gloom, that is now setting in thickly, with some flashes of superlative humour of the homely, understandable kind. Then in Scene III., the drama culminates, Vice proclaims his triumph prematurely and is "downed" by Virtue in the nick of time, and the beautiful lesson that it is better to live a goodly, forgiving life than to attempt to return "blow for blow," is drawn, and given utterance to, by *Alice Petherick*, the charming heroine.

Mr. F. J. de Maurie made a beautiful *Alice Petherick*, twin of the injured sister, moving gracefully and speaking nicely, save that he in company with the rest was inclined to talk too fast, and thus destroyed the charm of many excellent passages. Mr. S. T. Gascoigne was an heroic *Lady Ethel Lilian Linden*, a true wife always ready to believe against belief. The part of her husband, *Sir Henry*, who thrashes the chief villain in the prologue and fails to satisfactorily carry out his promises regarding the forger's daughter, was well taken by Mr. H. J. E. Gow. *Kitty Wobbler*, the devoted milliner, found a good exponent in Mr. S. G. Lancefield, while Mr. D. Casey took the part of *Mr. Alex Bolder*, banker, in the prologue, and *Mrs. Moulsey*, landlady, in the drama. Mr. J. P. Roberts made an excellent *John Drummond*, the villainous head lawyer's clerk, and thoroughly won the hisses that such villains receive when their machinations fail; Mr. S. Renals was *Fosiah Craddock*, the embezzling lawyer and forger. Mr. F. J. Grady threw considerable life into the dull part of *Doctor Sidney Grace*; and Mr. J. Gee was inimitable in the low comedy part of

Charles Spraggs, betting-man—whilom lawyer's clerk—who has an experience of all grades of society till Dame Fortune, sorry jade, reduces him to the level of a street flautist, and tries in vain to deprive him of his Mark Tapleyish philosophy. The minor parts were all satisfactorily filled and the play moved along with pleasant celerity, no lines being forgotten or the prompter's services requisitioned. The performance this evening begins at 9 o'clock, sharp.

ELSIE ADAIR AT THE PUBLIC HALL.

Miss Elsie Adair has brought a very clever company with her this time, and a taste of their quality that they gave at the Public Hall on Tuesday creates a desire for more. From first to last the large audience was most thoroughly amused and endores very quickly became the order of the evening. The opening piece was a bright little comedietta, "A happy Pair," played by Miss Elsie Adair and Mr. Vanderlip, containing many witty lines and up-to-date pleasantries about "the spirit of the age." Then Madame Jardyne, who possesses a highly cultured soprano voice, sang "O, promise me," a German *lied*, and "Little Tillie Taylor." The singer was recalled three times. After a few remarks from Mr. Vanderlip in the stumpy orator's best manner, Miss Elsie Adair sang three songs that included "The little Mademoiselle," "I want you, my honey," and then a plaintive ditty that most unexpectedly developed an encore verse pitched in an entirely different vein that gave rise to most uproarious laughter. In every way Miss Adair has considerably improved since her last appearance here, voice, delivery, and action being more charmingly finished, while her merry face is ever wreathed in smiles. Mr. Hugh J. Emmett opened the second part of the programme with a very clever performance on the violin, and then taking the audience into his confidence he proceeded in a Corney Grain manner to hold their attention, while one succession of jokes, merry stories, and telling witticisms came tumbling along close on one another's heels, the violin assisting the while. Needless to say Mr. Emmett was recalled again and again, but at last had to decline further encores. The entertainment concluded with the Serpentine Dance, Miss Elsie Adair giving four different expositions, each more charming and wonderful than the other. Vociferous cheers greeted her at the conclusion.

The Public Hall was packed to its utmost capacity on Thursday evening, on the occasion of the second appearance of Miss Elsie Adair and her company. Somehow or other the programme, clever though it was in its way, did not seem to please so well as did the "bill" presented on the opening night, and the performance consequently lacked that happy spontaneity that arises when audience and players are of one accord. Madame Jardyne played the overture, then Messrs. Emmett, Vanderlip, and Kenake gave a sketch, a Negro Idyl, entitled "Les Miserables." During the course of the piece Mr. Emmett introduced two violin solos of pleasing beauty. Miss Elsie Adair having contributed four songs that were well received, Master Elmer Russell sang some ballads in his high-pitched resonant voice, while limelight views were thrown on a screen behind him. This lad's voice is very powerful, but it seems a pity that he should be allowed to force it unnaturally. With a little training and less exacting work the boy would develop a voice both pleasing, true, and powerful. In the second half, Mr. Hugh J. Emmett gave a ventriloquial act that proved rather wearisome, and Madame Jardyne sang three songs; the entertainment concluding with four serpentine dances by Miss Adair.

THE U.S. CONSULATE-GENERAL COURT.

Before N. W. McIVOR, Esq., Consul-General and Judge.—WEDNESDAY, Sept. 16th.

KNAPP AND SARDA V. JAMES CURTIS.

This was a case in which Messrs. E. Knapp and Paul Sarde, French citizens, sued James Curtis for the recovery of \$275, the reasonable worth of the premises at No. 76, Settlement, rented by the defendant from plaintiffs from June 10th, 1896, to September 10th, 1896.

Mr. Geo. H. Scidmore appeared for the plaintiffs. Defendant, who had filed no answer, was not present.

After opening the case briefly, Mr. Scidmore called evidence.

Emil Knapp, sworn, deposed—I am one of the plaintiffs in this case, the defendant being James

Curtis. Mr. Sarde arranged with the defendant that he should occupy the premises, No. 76, Settlement, at a certain monthly rental. Previous to this arrangement myself and Mr. Sarde were in possession of these premises, and the arrangement for the delivery of the premises to Curtis was made by Mr. Sarde with my consent. The details were left with Mr. Sarde.

Paul Sarde, sworn, deposed—I and Mr. Knapp were in possession of the premises No. 76 previous to the 10th June, 1896. On that date I delivered up the premises to Mr. Curtis. The terms were, rent at \$65 per month, and \$60 as a first instalment of \$120 for alterations in the house, to be paid on July 10th, and the rest, \$10 per month, for six months. I made a memorandum of the facts and embodied them in a lease.

Mr. Scidmore then put in the memorandum to prove the terms of the arrangement entered into between the parties, that bore out the statements made by witnesses and alleged in the petition. It was put in not as a lease, but as a memorandum proving the value and the occupation of the premises by the defendant.

Witness continuing—Defendant has occupied the premises since the 10th June, but has paid no rent whatever. I have demanded payment and have not received any of the rent.

To the Bench—I made the alterations mentioned in the memorandum at the request of defendant before he entered into occupation. He agreed to pay for the alterations, \$60 in the first month and \$10 per month afterwards. These alterations enhanced the value of the premises. I have made application for payment of these sums, but he has refused to pay them. I have left him in complete and free occupation of the premises and have never disturbed him. I have a building lease of the premises starting from 12th March, 1896, for six years.

Mr. Scidmore, in summing up, said that the claim had been proved by the satisfactory evidence of the two plaintiffs and the memorandum, signed by defendant, that had been put in. He contended that all the requirements of the law had been fulfilled and proof of occupation substantiated. The defendant had been, by permission of the plaintiffs, tenant of the premises, but having failed to carry out his agreement—paying the rent—the plaintiffs were entitled to the relief they sought.

His Honour—What is the extent of the premises?

Mr. Scidmore—A two storied house standing on the corner of Main street and the intersecting road, with two entrances on its frontages.

His Honour—And the value? No evidence has been lead as to that.

Mr. Scidmore quoted "Gear on the Law of Landlord and Tenant," but his Honour suggested that a better way of proving the value of the premises was to recall one of the witnesses.

Mr. Knapp, recalled, said that \$90 per month; in his opinion, was the value of the premises as they now stood. He had been a property owner for some eight years and knew something of house values in Yokohama. He had six or seven tenants on his properties, and so had knowledge of these affairs.

Mr. Scidmore said that defendant had entered no appearance, and had really proved his opinion of the value of the premises by the memorandum that he had signed.

His Honour said that had the defendant appeared he might have brought evidence on the point itself. Anyhow, one of the plaintiffs had stated that the value of the premises was \$90 per month, and they could not mulct the defendant in more than that sum.

Mr. Scidmore—The figure \$90 was for occupancy during a given period, your Honour.

His Honour—Judgment is entered against defendant by default: defendant will have to pay 270 yen and costs.

Mr. Scidmore asked for execution without delay, and his Honour granted special execution in accordance with the terms of judgment.

Consequent upon the subdivision of the Main Island of Japan into four "Jurisdictions" or dioceses the Committee of the Church Missionary Society have been led to modify their scheme for the administration of the Mission, and have authorised the formation of Missionary Conferences and Standing Sub-Committees for each of the dioceses—the two in the Main Island and in those of Kiu-shu and Hokkaido—in which the Society is represented, and of a General Conference of the missionaries of the whole Mission to meet once in three years. The first General Conference since these changes took effect was held at Osaka in April.

NEWS FROM THE SOUTH.

The Spanish Government is advertising in Europe for tenders for the construction and delivery at Manila of a steamship required by the Government of the Philippines in connection with the lighthouse service of those islands.

The *China Mail*, commenting on the proposed establishment of an Imperial Chinese Mail service, says:—One of the most welcome reforms in the eyes of all lovers of China is the inauguration of a postal system on Western lines. Native opposition, inevitable and characteristic, will soon be overcome. The Chinese officials know how to deal with their own people, and if the entire private postal organisation, which is a powerful corporation, protests or proves recalcitrant, that opposition to an Imperial Edict will be unavailing, while such opposition will afford another illustration of the late T. T. Meadows' asseverations, in his work on "The Chinese and their Rebellions," that the black-haired race is the most rebellious in the world but the least revolutionary. From our own experience in Hongkong, we know that the Chinese will oppose any change or innovation even although the proposed reforms are for their ultimate good. They have no idea of reforms. It is not, however, with the opposition of the postal hongs in China that we are concerned most intimately. Our interest is centred in wishing to know what the Colonial Government intends to do with native letter service established in this Colony. An abortive attempt was made several months ago, at the instance, if we remember right, of Commander Hastings (then Acting Captain Superintendent of Police) to bring these establishments under the cognisance of the Post Office authorities. Is that attempt to be renewed? With the Imperial authorities taking most decided action regarding native postal hongs on the mainland, the question will be forced upon the Hongkong Government. How does it propose to act? In 1886, Mr. Lister, then Postmaster General, was, we believe, most anxious to include in the mail-bags the large mass of correspondence which evaded the Post Office; but without assistance on the part of the Customs he was powerless to do so. This illegal procedure on the part of the native postal hongs can now be stopped if the Hongkong Post Office decides to co-operate with the Imperial Chinese Post Office. For years the entire body of native letter-carriers have flouted the Postal ordinances, as the Chinese population ignore the Stamp Act, thereby entailing an immense loss to the Treasury, while tons of China mail matter enter and leave the Colony as if no such institution as the Post Office existed. These native postal hongs contribute nothing to the postal revenue, and in the majority of cases pay nothing to the steamer; at least, neither owners nor shareholders derive any benefit, the compadore and his staff appropriating the proceeds. The monopoly enjoyed by the native letter hongs has lasted long enough. It is the stereotyped objection to innovation in Hongkong that "the Chinese will not agree to it, and the peculiar situation of the Colony on the coast of China prevents us from compelling them;" but here we have the Chinese authorities armed with an Imperial Edict enforcing the reform in China; Singapore and Bangkok make spasmodic efforts to bring the Chinese illegal letter-carriers under the law; are we in Hongkong to do nothing? As we have already said, we shall be interested to know what steps the Post Office authorities intend to take to bring the native postal hongs under their control.

The following returns of the average amount of bank notes in circulation and of specie in reserve in Hongkong, during the month ended 31st Aug., 1896, as certified by the Managers of the respective Banks, are published:—

	Average Amount.	Specie in Reserve.
Chartered Bank of India, Australia, and China	1,868,542	1,000,000
Hongkong and Shanghai Banking Corporation	4,254,769	2,500,000
National Bank of China, Ltd..	385,444	205,000
Total	6,508,755	3,705,000

According to a Hongkong contemporary, the total force of the French army in Indo-China is 24,100. The force is composed as follows:—3 regiments infantry marine, 4,800; 5 battalions of the foreign legion, 3,600; 4 regiments of native tirailleurs, 14,100; 6 batteries of European artillery, 800; and artillery auxiliaries (European), 500. There have to be added to the above the auxiliary services and the gendarmerie, which bring the total up to 24,500, under the orders of a General of Division and two brigadiers. There is also in Indo-China a native militia of 10,000 men.

The death is announced in Haiphong papers of M. Victor Roque, formerly ship-owner in Hai-

phong. He used, notes the *China Mail*, to run the steamers *Sattee* and *Nampan* between Haiphong and Hongkong. He died in the Chateau de Montifray near Tours. M. Roque, it may be remembered by some of our readers, was captured by Chinese pirates in the neighbourhood of An-chau in Tonkin, and had to pay a ransom of \$55,000 besides jewellery and piece-goods. It was after this exciting episode that M. Roque retired to France.

A telegram from Manila to a leading firm in Hongkong is to the effect that import business has been entirely suspended, owing to the Rebellion; that the troubles are more serious than was at first anticipated, and no further consignments should be forwarded.

It is believed at Singapore that the Admiralty authorities are carrying on negotiations for the construction of an Admiralty dock in the Southern Colony. There is a strong feeling amongst naval men that it is desirable to have a dock at Singapore.

There is a proposal to lay down cycling track at Singapore in connection with the Sporting Club.

The reiterated assurances of H.E. Sir William Robinson that his term of office as Governor of Hongkong is almost at an end have given rise to speculations as to who is likely to prove his successor. There is a belief in official circles that Sir Charles Mitchell, at present Governor of the Straits Settlements, is to be sent to Hongkong. In that case, how about crucifixes, asks the *China Mail*?

The *China Mail* has seen a private letter from Canton giving fresh particulars regarding the recent destructive fire. We copy the following extract:—There was a big fire in the suburbs last night, just across the Canal and immediately behind the Canal road. What breeze there was, fortunately, was from the South-east; the fire started at 7.30, and was finished about 11. The story of the fire in this; fifty ruffians of the lowest type decided to abduct a lot of women, and with that intent proceeded to the neighbourhood of the brothels—a locality where, it is said, there are 7,000 women leading immoral lives. The visitors fired one house, and in the panic that followed had secured forty women, whom they were proceeding to abduct. The energetic Chinese fire brigades coming up at that identical moment somewhat interfered with the plan of the robbers, who drew their shooting irons and shot four of the gallant fire brigade men. Not being accustomed to this kind of fire, the fire brigades were somewhat disconcerted and exhibited considerable backwardness in coming forward, and it seemed likely that the unsavoury quarter of the city would be entirely wiped out by cleansing fires. However, the robbers, probably finding it getting too hot for them, cleared out with ten of the inmates.

THE APOTHEOSIS OF RUSSIA.

It needed the horrible disaster of the Khodinsky Plain to remind Nicholas II. that he is but a man. Such would have been the ancient envisagement of the calamity, and we are still so far in bondage to the theory of Nemesis that, though we may not put it so bluntly, the explanation corresponds to a lurking sentiment in most minds. For even to those who go no further for their political conceptions than the illustrated newspapers, there was something almost awfully solemn and impressive in the pictures of this small, slight young man as the centre of such dazzling glory. The remotest ends of the earth sent their greatest and most imposing figures to do him homage. There were his own subjects of every race and creed—Russians from all the Russias, Finns, and Lapps, Courlanders and Poles from the fringes of his European dominions, Cossacks and Tartars, Kalmucks and Mongolians, Emirs from Samarcand and Bokhara with centuries of mysterious romance in their train, and half-starved savages from the remotest north-east—Greeks and Catholics and Protestants, Mussulmans and Buddhists and Pagans. The absolute power exercised by the young man over all these has passed into a commonplace of rhetoric. But there was also a second group which, to many minds, bore even more significance than the crowd of recognised tributaries. There were the unofficial vassals, the representatives of thrones nominally free, but, in plain truth, almost as subservient to the lightest whisper of their master as the meanest *moujik* struggling for his life and a tin mug with *bombons* on the Khodinsky Plain. From Count de Montebello downwards, Prince Ferdinand and Zia Pasha, Li Hung-chang, Count Yamagata, and Abbas Mirza, uncle of the new Shah—they were all *moujiks* in their degree, and they were all struggling for a tin mug with *bombons*. In this assembly, as among the recognised subjects, there was more than a parade of empty vain-glorious-

ness. Each envoy stood for a very real factor of the Emperor's power—the outer circle, as it were, of his liegemen, not less abjectly obedient than their acknowledged fellows.

The coronation came aptly as the visible embodiment of a complete and almost world-wide authority, such as no Emperor of Russia has ever wielded before. It happened to coincide with a series of brilliant diplomatic triumphs following so hard on one another's heels, that what would have supplied foreign politics for a year's meditation has become merely one point in a sequence—the successor of the last and the usher of the next. During the months that Nicholas II. has been on the throne and Prince Lobanoff has been at the Chancellery, they have made huge strides towards empire such as might have sufficed for half a century. Or perhaps it would be more true to say that with the advent of the new Emperor came the harvest of what had been sown long before, and all the crops began to be garnered together. Peace or war, Russian aggression never stands still, and it is most characteristic of her patient and far-sighted diplomacy that she reaps more in peace than at the close of her most successful wars. To explain this ceaseless and pauseless advance upon all her neighbours, they tell us that she wants an open port on an open ocean—that it is absurd to ask an empire like Russia to put up with an outlet to the sea that is blocked by ice four months in every year. But that is no answer to the accusation, if accusation it be, of universal aggression. The possession of such a port is not the end but the means. There is no end to Russian ambition; each point won is a stepping-stone to the next. Eastern Siberia has no glut of merchandise struggling for a vent at Vladivostok, nor would Constantinople be any better fitted for the export grain trade than Odessa. The port may foster a trade as yet in its infancy, but this is just another reason for saying that it is not the goal of Russian aspiration, but only a milestone on the road. If not for empire and for competitive trade, why seek an open port at all? Still less can the constant absorption of new territory be explained by any superfluity of population in the old. It is nothing, after all, but the genuine earth-hunger, the lust of unlimited dominion. England is accused of it—probably without truth, since, if England could win markets without possession, she would be too grateful for the opportunity. Conquerors like Alexander and Napoleon have been inspired by it. In our own days whole nations have been bitten by it, as in Africa, because they have realised that even the world's surface is limited, and that they must peg out their claims now or never. But Russia has been hungering and thirsting for the whole earth ever since Russia was. She pursues her unchanging aim by peace or war—most surely, as had been said, by peace. The reign of Alexander III. the Pacificator, and the activity of M. de Giers, were a perpetual struggle for empire. And if Nicholas II. and Prince Lobanoff appear more enterprising, it is only that now is the time to garner, when before it was the time to sow. And all the sheaves are coming home together. If it is a port that is wanted, Russia has now the choice of half-a-dozen. If it is territory, there are several desirable empires waiting to be carved up. If it is universal hegemony, it is hers. Russia is the arbiter of the world. The Powers that are collectively in league against her are individually as desperately anxious for their tin mug as are her direct dependants and allies. Such as have most reason to dread her, and as command the force which might throw her back, are silent and bewildered. From one end of the world to the other she has established a kind of divine right. "There is even a new language fitted to the new cult. "A service to the peace of the world" is the new name for an act of complaisance to the Tsar, as "treachery to the common interests of civilisation" is the brand of such as seek to thwart him.

This language sounds extravagantly, but it is hardly a word more than the truth. And it is well worth the while of Britons to consider in a little detail the factors which have combined into what may be very literally called this commanding position. It is Britain that this position threatens, beyond any doubt—not perhaps by the choice of either Russia or of ourselves, but certainly by the imperative necessities of our relative positions in the world. In the Eastern hemisphere Great Britain and Russia are the only two expansive Powers in any real sense. There are others, such as France and Germany, which resist absorption, and even seek out barren spheres for the expansions that never comes. But the fact that such Powers resist absorption is only the more reason for certainty that the time will come when there will be no room left for the simultaneous enlargement of both. The moment may come in the twentieth century

or in the twenty-first, but come it must and will. And however the advocates of an Anglo-Russian understanding may delude themselves or others in London, there is no delusion in Petersburg. "Hostility to England is the alphabet of Russian policy," says the forward school; "an understanding if you will," say even the most moderate, "but it must be an understanding, not of common interest, but of rivalry." That such an understanding must be either impossible or useless will be argued later; at present we may endeavour to see what the dangers are against which, whether by understanding or by opposition, we have to guard ourselves.

The beginning of the Russian "boom" was, of course, the French connection, growing almost imperceptibly, from ordinary courtesy on the one side and slaving sentiment on the other, through the nebulous limbo of *rapprochement* and *entente*, into full-grown, full-armed alliance. To what extent and in what conditions this alliance is valid it is at this moment neither possible or important to determine. What is important, is that French people and French deputies believe that Russia and France are one, and that Prince Lobanoff is quite content to suffer them to think so. To see how far the alliance goes we must see it in operation, and that we shall hardly see without a European war. It is true that the diplomacy of the two countries plays together, as in Constantinople or Cairo; but on the other side, French and German diplomacy have played together for two years in Africa against Great Britain, and between France and Germany there is certainly no alliance. Nevertheless, it is in such diplomatic concert as is to be found between Messieurs de Nelidoff and Cambon at Constantinople, between the French and Russian representatives on the Caisse de la Dette at Cairo, that the practical working of the alliance has hitherto been best seen. It has brought Russia no very palpable advantage in Europe, but it has secured her flank there and given her a very useful leverage for work elsewhere. International rivalries during the last few years have shifted almost entirely from Europe to Asia and Africa. This is due partly to the completion of European military systems and the mutual fear springing from them, which results in an equilibrium neither stable nor unstable, but rather what the statist calls neutral equilibrium—where a body is impelled by any force, there it remains so soon as the force is exhausted—and partly to the conviction, already noticed, that those who wish to take up unoccupied patches of the earth must do so in this generation or never. The French alliance freed Russia to enter into the scramble with both hands.

A few weeks ago it looked as if by this alliance Russia had not only defended her European flank, but had actually broken up any possibility of danger from that quarter. The Triple Alliance appeared to be on the point of falling to pieces. Germany had plunged into the torrent of colonial rivalry, and it washed her up alongside of France and Russia. It may be that she was impelled to improve her relations across the Rhine and the Vistula by a wholesome respect for the increasing solidarity of the Franco-Russian combination. But in the main the Kaiser's policy appears to have been determined by rivalry with this country in Africa. This rivalry dated from the days of Angra Pequena and Walvisch Bay and Dr. Peter's futile raid on Uganda. It had been embittered when Mr. Rhodes forestalled German concession-hunters at Bulawayo. It was stirred into new life by the unlucky agreement which Lord Rosebery or Lord Kimberley concluded with the Congo State in the early months of 1893. This wild and blundering arrangement brought France and Germany together: they protested simultaneously against various parts of it, and they protested successfully. Association with France led up naturally to an introduction to Russia, and as naturally we found the three Powers taking common action in the Far East. Meanwhile, bad blood grew worse between this country and Germany, until it issued in the outbreak of January last, as everybody knows.

This breach affected the Triple Alliance, and therefore Russia's European position, in two senses. First, there was the new friendliness of Germany—or rather the revival of the old Bismarckian friendliness; and secondly, there was an unequalled opportunity of turning the screw on Italy. Italy was never a very whole-hearted member of the Alliance, nor could be unless it were quadrupled by the accession of England. Ten years ago her navy, especially if reinforced by such a fleet as Austria commands, might conceivably have sufficed to keep France from invading her at any point she pleased. To-day it is quite inadequate for that purpose, and each year sees it fall farther behind. If Germany and England were to fall out, what was the use of Ger-

many to Italy, seeing that the Kaiser was far more able to involve her in hostility with France than to defend her if she were attacked? The conclusion was obvious. If Germany joined the Dual Alliance, Italy must join too; even if Germany were refused by the allies, Italy would still—failing any hope of the British fleet—do better to agree with her adversary quickly. We have been told again and again by our special correspondents that the counsel of prudence had become an actuality; that Italy had come in and made her submission to Russia with the rest. And after the disaster of Adowa such a result might have been reasonably expected at any moment. The chronic necessities of the situation were rendered acute by the Russian relations with Abyssinia.

Into the history of this queer connection it is not necessary to enter minutely, although the whole affair is an admirable lesson in Russian diplomacy. Russian traders and Russian travellers had quietly percolated through Abyssinia for years; some of the bashful traffickers even went by way of Persia to escape observation. It has been notorious for years that Menelik has been armed from Onok by Russia's good friends the French; and doubtless here again the allies worked in concert. Out of these underground workings there suddenly cropped up a certain Prince Damto, personally conducted by M. Leontieff, on a mission to gladden the Emperor with the gift of Menelik's Order of Solomon's Seal—as it were a prize at a flower show. The authorities at Moscow were vastly interested to discover that the Abyssinian Church was a long-lost sister of their own (which it is not in the least), and much ecclesiasticalunction was outpoured upon the fortunate Damto. The deputation returned with the politest of messages for Menelik. Then came Adowa and the Red Cross mission to the wounded Abyssinians. The Abyssinian methods of ambulance are hardly more orthodox than the Abyssinian Church, and the Russian army surgeons were certain to find their patients either fully recovered or eaten by sorrowing relations. But no matter; the expedition sailed. It is true that the nurses all turned back, but the soldiers went on. All this was but the thinnest veil over the menace to Italy. Russia had got a footing in the country from which Italy had just been thrown out neck and crop. If Italy wished to get back, she could either do it by purchasing the favour of Russia with her adherence, or attempt to do it at the cost of her enmity. Or else she could resign her African ambitions altogether and make her peace with Russia or not as she chose. The one spirited and dignified course, which was to smash Menelik at Axum, was not taken. For the rest, Italy could either keep her sphere of influence with Russia's leave or stand the chance of being ousted when Russia saw a favourable opportunity. Russia is not as yet an African Power, but she sure she would have no objection in becoming one—especially when thereby she could command the Indian route through the Red Sea, while France dominated the Cape line at Madagascar.

But here, it may possibly be guessed, Russia, for a wonder, sustained a check. It is difficult to explain exactly what happened between Italy and the other members of the Triple Alliance, and between Italy and England. But judging from the evidence of the Italian Green-book, perhaps it was this. The Kaiser was unwilling to go the whole way towards cordiality with the Dual Alliance, or else his overtures were not favourably received. Thereon he would have pressed King Humbert, when he met him recently at Venice, to maintain the Triple Alliance—in opposition to the tendency of Rudini, his new Premier—and therewith to persevere in the African policy also as far as might be. Italy asked England to help her with a demonstration against the Khalifa, which would, and did, relieve the pressure on Kassala. Lord Salisbury agreed, by way of keeping up a counterpoise to France and Russia; this would explain the unexpected cordiality of Germany with regard to the Soudan advance. The Triple Alliance, in short, was set on its legs again by Lord Salisbury, and Russia was disappointed. Such, at least, is a possible reading of the events of the past few weeks. Yet, even if it be correct, Italy is badly weakened, and with her the anti-Russian combination in Europe. Moreover, the very discourteous publication of the recent Green-book, and the studious omission therefrom of all that might offend France or Russia, shows that Rudini, at least, is all for the Russian connection. And in Abyssinia Russia has fitted a thumb-screw which she may twist upon Italy whenever she will, and also—should Menelik be willing to lend his formidable power to the Khalifa—upon British supremacy in Egypt.

It is not in Europe, however, but Eastward, that the recent triumphs of Russia have been won; and these triumphs were duly summarized in the presence of many illustrious envoys at the coro-

nation. For the first there was the half-sinister, half-abstract figure of Prince Ferdinand of Bulgaria. A triumph over so pitiful a creature was not, perhaps, worthy of the full magnificence of the occasion. Since he nerved himself, first to get rid of Stambouloff, who had made and mastered him, and next to stand aside while the maker and master was murdered by semi-official agents of his Government, it was quite plain that all the Prince needed was permission to abase himself. Yet the victory cost nothing, and, poor as it is, is not without a definite promise of advantage for the future. The enmity of Alexander III. towards Prince Ferdinand was rather personal than political: it is said that Ferdinand promised the late Emperor that he would in no case accept the throne of Bulgaria, and accepted it three days later. But once the Prince had proved his fidelity after the manner of Judas, and it was plain that all he asked was permission to grovel, there was no political reason why that grace should not be accorded him. When Alexander III. died personal hostility ceased, and Prince Ferdinand was allowed access to the doormat. Arrangements are accordingly being made to reinstate Russian trade in Bulgaria at the expense of Austria. There is likewise a plot to heal the schism in the Orthodox Church by handing over the Bulgars of Macedonia to the spiritual care of the Greek Patriarch, thereby destroying all hope that this province will ever pass to Bulgaria. We have not heard much lately of this project, which aroused the most furious opposition in Bulgaria; but because it is in abeyance it by no means follows, where Russia is concerned, that it is given up. It is true that Bulgaria is no longer of prime importance as regards Constantinople, since Prince Lobanoff and M. de Nelidoff have flown at the taller game, and secured the Sultan himself. Yet it must always be of value as an outpost close to the objective: the sea-route to Constantinople might be cut, in conceivable eventualities, by a superior British fleet, and with Bulgaria friendly Roumania might be attacked in front and rear. In any case the submission of Prince Ferdinand means one thing: it puts an end to the scandal of the smallest of European Powers openly defying the greatest. Stambouloff snapped his fingers and bade Russia come on, while Britain and the Triple Alliance stood by and applauded the performance. That is over now. Bulgaria has repented in sackcloth and ashes, and the Emperor of All the Russias is exalted.

Possibly the most sensational of Russia's bloodless victories was personified in the presence of Zia Pasha, envoy from the Sultan of Turkey. That Abdul Hamid should throw himself bodily into the arms of his ancient enemy and the avenger of his persecuted Christian subjects, came to the general public as a most bewildering reversal of all their ideas. Turkey combining with Russia against England! It was the first step towards the restoration of the Empire of Chaos. But to any one who had penetrated even a little way behind the scenes at Constantinople, the revelation was no way surprising, and was indeed but the accomplishment of the inevitable. They had seen it coming for years, long before this country finally threw away any shred of influence she still had at Constantinople by her mad campaign for the Armenians. The truth is that Lord Beaconsfield's Berlin Treaty and Cyprus Convention, instead of being the dawn of a new Anglo-Turkish policy, were the last flicker of the old. The policy of Lord Stratford de Redcliffe and of the Crimean war was dead—killed by the religious intolerance of Great Britain. The fanatic Turk, except in times of especial excitement, tolerates the Armenian, and allows him to wax rich before his eyes. The fanatic Briton found himself unequal to the tolerance of the Turk at the opposite corner of Europe. As soon as Mr. Gladstone came into office in 1880, the British Government set itself sedulously to work to destroy British influence in Turkey. The Turk is like all other Orientals: yet you can let him alone, you can bribe him, or you can beat him; but you must do one of the three. Our Government preferred a system of perpetual nagging with a view to reform, backed neither by secret-service money nor by gunpowder. Years before the Sassun massacres the consistent refusal of commercial concessions to Englishmen showed that our influence was dead: it was this attack on our pockets—so Murad Bey, the young Turkish leader, has told us—which convinced him that soon or late Great Britain would be avenged on Turkey. Of course that is not the true reason of our intervention after Sassun; but the instructiveness of the explanation lies in the fact that it is the honest belief even of an enlightened Turk. Russia's policy, on the other hand, was clear-sighted and resolute, as always. She began with the advantage of having put pressure upon Turkey in the only way Turkey can

understand—at the cannon's mouth and at the point of the bayonet. Turkey was therefore naturally disposed to turn to her rather than to Britain. She followed up her advantage by buying up any man who was likely to be of use. One of her very first purchases, if we may believe the unanimous report of Constantinople, was Ghazi Osman, the hero of Plevna, to whom in war it would fall to lead the Turkish armies against her.

Thus she was well prepared when the crisis came in the spring of last year. It is perhaps excusable that Sir Philip Currie, new to his place and conditions, should have underrated, as he did, the astuteness of M. de Nelidoff, but it was not the less unfortunate. "I can do what I like with that man," he is reported to have said of the prince of diplomats; after which the man naturally did what he liked with Sir Philip. How completely Great Britain was befuddled we did not know till the Blue-books made a clean breast of the dismal muddle. M. de Nelidoff divided his time between the Yildiz and the consultation-chamber of the three protesting Ambassadors; he urged reform with one breath, and advised the Sultan not to grant it with the other. Every step taken by the British Cabinet drove Abdul Hamid further back upon the support of Russia. To what extent the Armenian agitation was semi-officially fostered at Tiflis and in Russian Armenia it is not easy to say. It is possible enough that Russia opened the campaign, but that the general appeal emanating from the Gregorian monastery of Echmiadzin changed the direction of her policy. In any case, it was head she won, tails we lost: either the Armenians would appeal to her alone, so that he had a pretext for coercing Turkey, or they would appeal to Great Britain, in which case Russia was fully prepared to take her place as the Sultan's defender. It came down tails, which perhaps was the alternative Prince Lobanoff preferred. Then came the exposure. Whether there is a secret treaty or not matters very little; no treaty is needed. Turkey is to all intents and purposes the vassal of Russia, and the only obstacle to an occupation of the so-called Armenian vilayets, or even to a descent upon Constantinople, is now to be found in the somewhat decayed patriotism of the Turkish populace. But for that, the centuries of Russo-Turkish struggle are over, and Constantinople wants only the reconsecration of St. Sophia to be Russian in name as well as in fact.

Abbas Mirza, the deputy of Persia, arrived with a numerous suite the day after the ceremony. Persia is habitually a day late, and Russia has not been unobservant of the fact. Persia lies today absolutely at her mercy. She dominates the rich province of Azerbaijan on the north-west from Trans-Caucasia; she threatens Teheran from Ashurada at the southern extremity of the Caspian; her Transcaspian railway gives her indisputable command of Khorasan on the north-east. More than that, her agents are creeping into Seistan, on the British Beluchistan border, and she has more than once attempted to extort a port on the Persian Gulf or the Arabian Sea. The only efficient troops in Teheran are called Cossacks, and are duly offered by Russian Russians. Ministers dictate at Teheran without the barest decencies of diplomatic circumlocution; Russian newspapers openly state that all of Northern Persia is to be Russian when Russia wills. Years ago a secret treaty is said to have set down in the inevitable black and white. Last autumn one sheaf in the diplomatic harvest came from Persia. A road is to be constructed from Resht on the Caspian to Kasvin: it is to be built by Russian engineers, and the interest on it is guaranteed by Russia. And already the surveys are being made for a Russian railway from Baku (probably) to the great trading city of Tabriz, and thence by Kasvin to the capital. This was more than a set-off to the British tobacco monopoly of 1890, which had to be cancelled owing to the one successful popular agitation of Persian history. We heard of no popular agitation when Russia decided thus finally to shackle the captive. And if one rivet more was wanted, it came when Shah Nasir-ed-Din was shot down before the mosque of Abdul Azim. The late Shah had yielded much to Russia; yet he was a strong man and kept all he could. His successor is a young man of whom very little is known; but that little is very much to Russia's purpose. He has had no experience of government. He is of a mild and retiring disposition. He has always been counted the friend of Russia as against his elder illegitimate brother, late Governor of Isfahan, who was supposed to favour Britain. It is the disastrous custom of Persia that the Crown Prince is titular Viceroy of Azerbaijan, the one province most completely overshadowed by Russian power: he resides at Tabriz. Shah Muzaffar-ed-Din has seen the mob of Tabriz, after the bread riots of last year, carry the bodies of the slain in protest, not to him, Viceroy and

heir to his father's throne, but to the Russian consul. Has he learnt his lesson? It would be wonderful if he had not, and in him Russia is like to have the most submissive of all her vassals.

No statelier envoy brought sincere and humble congratulations to the new Emperor than Li Hung-chang. For thirty-five years he has stood for his country in every emergency of peace or war; at the end of a long life he is coming for the first time to visit the barbarians of the West. He has brought his coffin with him, but that he has consigned to London, feeling the impoliteness involved in dying at a coronation. Is not this also an omen, even as the belated advent of Abbas Mirza? And does Li Hung-chang also conceal a secret treaty in his yellow riding jacket? It has been confidently so asserted by those who should know; but here again there is no need to insist on the superfluous. Treaty or no treaty, China also has found her asylum in Russia's hospitable bosom. When once the Siberian railway began to wind round her northern frontier, the fate of China was sealed. It was absurd to ask Russia to tolerate any but a weak and subservient Power on the flank of this railway, said the journalists of Petersburg, and Rossophiles in London repeated the cry—as if the Canadian Pacific railway were to justify a British protectorate over the United States. Soon, as the railway crawled from post to post, it became obvious that much expense and trouble would be saved by running the line through a huge corner of Manchuria direct to Vladivostok. Better still were second thoughts; run the line through Manchuria to a Chinese port that is open all the year round. It is true that American ice-crushers have now opened Vladivostok in the hardest winter, but Port Arthur and Port Lazareff were not the less attractive for that. The Chino-Japanese war gave Russia the needed opportunity, and France and Germany supplied the needed pretext of action in the interests of civilised Europe. Neither of them gained anything they could not have got without irritating Japan—but that in their affair. Russia, on the other hand, was enabled to play with the Sick Man of Asia exactly the same game as she had played with Turkey. It was our traditional policy to support China as a barricade against her. But we neither knew the feebleness of China nor, when the Japanese war revealed it, were we prepared to reinforce it. Again, therefore, we left the way open. We were so apprehensive of the hostility of Russia to our client that we forgot that her friendship was even more to be feared. Thus we gave China into the arms of Russia. The service done to the Son of Heaven by keeping the Japanese off the mainland was clinched by the Franco-Russian loan. Here again we let winning cards slip through our fingers. It is said that the loan had been promised to an English house, but our Government did not insist on the bargain. It is also said that the loan was offered to the Rothschilds, and that Lord Rosebery dissuaded them from floating it. The result was that the money was found in France, and interest guaranteed by Russia on the security of the maritime customs. The result to-day is, that Russia has an official right to interfere with the maritime customs, which is the creation of Sir Robert Hart, and over which British subjects have exercised from the first a predominant influence. At the same time the chronic impetuosity of China affords unlimited opportunities of screwing out of her any concession that may from time to time be desired. The corrupt administration of Peking offers as fatal a field for secret service money as Turkey itself, and no doubt many eligible mandarins have been bought up already. In a word, Russia holds every card at Peking, and has only to play them out at her leisure.

How many of her trumps she has already played, it is not so easy to say. Great Britain appears to have scored a point or two in the game, but hardly against Russia. We have secured half a loan of a hundred millions of taels, the issue of which is to be divided between the Hongkong and Shanghai Bank and the Deutsch-Ostasiatische Bank. This is a disappointment to the French house which tendered for the loan; but there is nothing official about it, and the security ranks after that of the transaction with Russia. We have secured the opening of the West River, which would counterbalance the concessions granted to France on her Tongking frontier, and help to bring the trade of Yunnan down to Hongkong; but the West River, open in theory, is in fact still closed. Sir Robert Hart has been trusted with the postal service as well as the maritime customs, but before this is greeted as a victory for British influence it might be wise to wait a while and see how the new arrangement works out. It may be such a victory; it may be the prelude to Sir Robert's suppression in the customs by a Russian, as Russian organs have long

recommended. We may be sure that Russia on her side has not been idle. The recent assaults upon German officers are said to have been instigated by her agents, and there is nothing improbable in the story: without doubt we shall soon see Cossack regiments and Russian officers in Peking as in Teheran. The hardly less recent trespass on the rights of British subject at Chefoo is a small thing, but it is Russia's own. The fact that the Russian Pacific squadron wintered in the bay of Kiaochau is interesting as showing the direction of Russian policy and the complaisance of China: the annexation of the position itself is improbable, since it has no inland connection with any Russian bases, and is thus defenceless against a superior fleet. Most significant is the admitted fact that the Siberian railway is to be run by Tsitsihar through Manchuria to Port Arthur, or any other more convenient port. This means handing over the vast potential wealth of that country to Russian exploitation, and, once a position is occupied on the Gulf of Pechili, handing over the keys of whole stable to the horse-thief. Men of great knowledge and tried honesty have declared positively that this arrangement is down in black and white. This was denied, but Li Hung-chang has more than half confessed it. Secret treaties are made to be denied, though it may be that they are also made to be broken. But the point is, that Russia has it in her power to take what China is said to have given her, and when she wants it she is not likely to hold her hand.

Japan was represented at the Emperor's coronation by Marshal Yamagata, the oriental Moltke who organised the conquest of Korea and the southern regions of Manchuria. But is Japan also among the vassals? Hardly in the same sense as Turkey and Persia and China; yet is it not probable enough that Japan also has recognised the hopelessness of a struggle with superior force, and has been glad to make decent terms with her antagonist? All we can say for certain is, that Japan has pocketed a defeat in Korea with a humility hardly to be expected otherwise from her by no means humble temperament. The treaty of Shimonoseki, as first negotiated, endowed Japan with a protectorate over Korea. As modified by European intervention, it left the country nominally under its own king, but really under the control of Count Inouye, the representative of the Mikado. He had the tact to leave Korean palace intrigues pretty well alone, but when he was succeeded by Viscount Miura the old struggle broke out between the Queen's family, representing Russia and the old corruption, and the Tai Wön-kun, the King's father, representing Japan and, more or less perfunctorily, reform. In October last the palace was stormed by an armed mob, and the Queen was murdered. It is certain that the assassins were Japanese bravos, and Viscount Miura was brought to trial for complicity in the act. He was acquitted, however, for want of evidence, nor does it appear that the judgment was a partial one. The result was that the unstable king was left to the care of a ministry of Japanese tendencies, while the Japanese troops proceeded to evacuate the peninsula. But on the night of the 10th of February this year happened a revolution at Seoul which has not received in this country one tithe of the attention that it deserves. That night a force of marines and blue-jackets with artillery started inland from Russian warships which happened to be lying at Chemulpo. On reaching Seoul they occupied the Russian Legation, whither the King of Korea immediately repaired. Under the protection of this Russian force he issued a proclamation condemning his whole Cabinet to instant death. Some of the right honourable gentlemen escaped; the majority were despatched in the street. A Russophile Ministry was appointed in their stead, and to this day the King governs Korea from the Russian Legation. Russian schools have been duly instituted, and the familiar expedient of a Russian loan is in progress. In plain language, Russia exercises a protectorate over Korea, and can bring down the railway terminus to any of its harbours she will. Against this cool aggression Japan, so far as has been heard, has not uttered one word of protest; certainly none has been listened to. Russian newspapers—speaking, it must be remembered, only with the approval of their Government—declare freely that Japan has given in and has made her submission. To judge by the signs vouchsafed us, it is certainly very far from impossible.

So vast is the inheritance into which Nicholas II. has entered. If his direct and recognised power is tremendous almost beyond human comprehension, how much more tremendous is his unacknowledged supremacy over all the peoples that encircle his frontiers! It needs only a word from him to call up convulsions that may change the face of the earth. In what direction this change is

likely to be set in motion it is difficult to say certainly, but it is easy to guess. Prince Lobanoff has so far unveiled the intentions of his department as to acknowledge that it holds all its spheres of activity of no account beside China and the Far East. What is known of the Emperor himself makes it very probable that he is in the fullest sympathy with his Chancellor. He is the first Russian Emperor who has himself travelled in the East and allowed his imagination to be played upon directly by its allurements. He has manifested the most constant and lively interest in the great Siberian Railway, which is the outward symbol of the new trend in Russian policy. It may be concluded with some confidence that master and servants alike recognise the boundless possibilities of this policy. China is a hundred times richer than Turkey and Persia together, and in the prospect of its easy spoil even India may well be set aside for the moment. The fruit of India is set about with thorns; China is waiting only to drop into the open mouth. The whole Pacific, moreover, will shortly witness a shifting of the world's equilibrium. As the centre of civilisation and trade moved from the Mediterranean to the Atlantic, so even in our day it will begin to swing towards the Pacific. The growth of Australia and New Zealand, the development of the western coast of North America consequent on the trans-continental railways, the rise of Japan, and the complete exploitation of China and the East Indies, all are throwing an increasing proportion of the world's weight into the Pacific. The completion of the Siberian Railway and the construction of the Central American Canal will spin round the wheels of progress more swiftly still. Nicholas II. may well resolve that he too shall be well posted to take a strong part in this huge operation.

It can hardly be any other inspiration that has dictated the extraordinary development of the Russian navy in recent years—a development which has not been regarded by us with the keenness that it surely merits. Ten years ago the Russian naval estimates were well under five millions; to-day they are about six and a half. The rapidity of the increase will be best appreciated by the proportion of ships building to ships completed. Russia at this moment has under construction exactly the same number of battleships—eight—as either Great Britain or France. But whereas, taking first and second-class battleships, the British increase is roughly one ship building to every four built, and the French two building to five built, Russia is constructing four new vessels for every five she possesses already. That is to say, that at the present rate the Imperial navy doubles itself in five or six years. Now it is tolerably plain that this rate of armament is not warranted by considerations of defence alone. If Russia is cramped in her access to the sea, there is the correlative advantage that she is singularly invulnerable to naval attack. Her fleet in the Baltic is sufficient for the strategical necessities of a war with Germany, while it is ridiculous to suppose that she needs seven of the most powerful battleships afloat to hold the Black Sea against the rusty ironclads of Turkey. So that the naval policy also squares with the supposition that ambitious schemes of foreign aggrandisement are in contemplation at St. Petersburg. If the new fleet is not to be used against this country, and with an eye to the command of the Pacific, where is the use of it at all?

In one word, it is idle to blink the fact that the Power most threatened by the colossal strides which Russia has been taking in every direction is the British Empire. To go no further than the barest material considerations, is it likely that with Russia supreme at Peking we shall be allowed to go on doing more than half of the enormous and enormously increasing business of China? Or, to take one strategical aspect out of many, when Russia could not permit a small, if enterprising, Power, like Japan to post herself on the flank of the Siberian Railway, with what comfort can we see Russia established on the Yellow Sea or in Korea on the flank of our connections between Hongkong, Sydney, and Vancouver? It is true that there is a considerable body of not unpatrician opinion which advocates agreement rather than antagonism. It is said that before Lord Rosebery left office such an understanding had been concluded, and that it was only shattered by the unexpected advent of Lord Salisbury. But if Lord Rosebery really had made such a deal on behalf of this country, it is pertinent to ask what this country got by it. Russia got China, as it appears, but what did we get? Lord Rosebery made one or two bargains of this one-sided kind while he was in office, and Lord Salisbury appears not indisposed to follow up the precedent; but in this case it is satisfactory to know that the Premier's advent was enough to close the negotiations. It may

further be asked on what lines any such agreement could be drawn. Some have made the urbane suggestion that in return for an undertaking to abstain from India, to cease co-operation with France against us, and to respect our trade, we should permit Russia to occupy Constantinople and absorb a slice of Northern China—including, it is to be presumed, Peking. Perhaps this idea was fostered by belief that M. de Nelidoff was pulling squarely together with Sir Philip Currie in the Armenian business. But in case the theory still survives that disillusion, it must be inquired what, in the first place, should we gain by such an arrangement, and how far, in the second, is Russia likely to accede to it? We should be relieved of a certain embarrassment to our diplomacy; in return for which (since the arrangement must always issue in rivalry, not in alliance) we should have to increase our naval expenditure in the Mediterranean and the Pacific. And what would Russia gain? Absolutely nothing that she could not get without us. The very hypothesis of the suggestion is that we should in no case oppose an advance to Constantinople, while Lord Rosebery certainly did nothing to oppose the advance upon Peking. And if Russia is likely to leave us our China trade, when she can take it for herself, it can only be said that Russia must be strangely changed.

The truth is that Great Britain and Russia are too big ever to agree for any time. We believe that to our race will fall the ultimate supremacy of the world; Russia believes exactly the same of herself. Sooner or later the two ambitions must collide, and we had better be making ready for that great day at once. To allow Russia to absorb all possible strength before conflict is to put a premium on defeat and ruin.

What, then, do we want? We want above all a new Eastern policy and a definite one—such a policy as is pigeon-holed in the bureaux of St. Petersburg. We have cast China overboard; we might ballast the ship with Japan. We talk of Japan as a friendly Power, and even as an ally, but with what warrant? Inasmuch as we put no pressure on her to abandon her Chinese conquests, and were the first Western Power to recognise her adolescence by compromising the privileges of extra-territoriality, is it probable that she harbours less resentment towards us than towards Russia. But we have done nothing for her; on the contrary, we have made a singular exhibition of impotence at the recent crisis of her national life, and such an exhibition is apt to depreciate the value of the exhibitor's friendship. If we are to ally with Japan, we must be prepared to fight for her if it is necessary. In some years she will command a navy which, with our own China squadron, could easily sweep the Pacific, while on land she will dispose of half a million trained men. Only, if we want the aid of this force, we must not repeat the pitiful abandonment of the Chinese policy. In one word, alliance or no alliance, we ought to be clear what we will fight for and what we will permit without fighting. It was this clarity of purpose that gave Russia each one of her recent triumphs, and it was just on this account that she never needed to fire a shot. There is an idea growing up that this country will never declare war. Yet there is such a thing as offensive defence in international politics as in strategy, and if we wait till war is declared upon us when an aggressor knows he can have his will without it we shall wait till we have no interests left to defend. We have to guard the treasure of India and take our share in the spoil of China. And as our worst enemy is and must be Russia—which is rather a tribute to her than an accusation, for it means that she is the one Power in this hemisphere which can still be formidable to us after the lapse of a couple of generations—we should make it the single-minded aim of our policy to strip the young Emperor of his gorgeous vassals and add them to the retinue of the Queen. Which cannot be done except by plain dealing and plain speaking, and the manifest resolution to follow words with blows. Otherwise there may be those alive to-day who will see the grandson of Nicholas II. saluted in the Kremlin by the Emperor of China and the tributary Princes of Rajputana and the Deccan.—*Blackwood's Magazine.*

A message having been sent on the 4th Aug. to the Prince of Wales at Cowes from General Booth, saluting his Royal Highness in the name of 10,000 Salvationists gathered at the exhibition now being held at the Agricultural Hall, from all parts of that vast British Empire "over which it might please God to call his Royal Highness to reign," the Prince replied by telegram as follows—his message being publicly read amid loud cheers in the Agricultural Hall—"I sincerely thank you for your telegram and the kind terms in which you express yourself towards me and the members of my family. I wish every success to your exhibition.—Albert Edward."

A JAPANESE HOME.

WHAT WOULD YOU DO?

[MARY MCNEIL SCOTT, IN THE "INDEPENDENT."] Now if you should visit a Japanese home, Where there isn't a sofa or chair, And your hostess should say: "Take a seat, sir, I pray." Now, where would you sit? Tell me where? And should they persuade you to stay there and dine, Where knives, forks, and spoons are unknown, Do you think you could eat with chopsticks of wood, And how might you pick up a bone? And then, should they take you a Japanese drive In a neat little "rickshaw" of blue, And you found, in Japan, that your horse was a man, Now, what do you think you would do?

WHAT I WOULD DO.

[E.S., IN "THE SHEPHERD'S VOICE," TOKYO.] If I should visit a home in Japan Where there isn't a chair or divan, And my host should say, "O-kake-nasare,"¹ I'd sit on a futon,² that's where. And what if to dinner I'm asked to remain Where I look for knives and forks, but in vain? Why! in my right hand I'd take up o-kashi,³ And fare very well on rice and o-kwasshi.⁴ And if out a-driving they ask me to go, Ichi-nin-nori⁵ or as nori no lo⁶ A man for a horse! omoshiroi,⁷ my! But for the riksha⁸ man omoshiroku nai.⁹

¹ Be seated. ² A cushion. ³ Chopsticks. ⁴ Sweetmeats. ⁵ Riding singly. ⁶ Riding double. ⁷ Pleasant. ⁸ Little two-wheeled buggy pulled by a man. ⁹ Not pleasant.

LATEST TELEGRAMS.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, Sept. 10. Makoni, the rebel Mashona leader, has been captured, tried by court-martial, and shot.

London, Sept. 11. Heedless of the objections lodged by Great Britain and Italy, the Porte has deported a shipload of Armenians and has adopted rigorous measures to prevent their return.

Major Watts has been arrested in connection with the execution of Makoni, the rebel Mashona leader.

London, Sept. 12. Constantinople is still in a condition of nervous unrest. Trade is paralyzed and the Treasury is empty.

The increase in the Bank rate of discount to 2½ per cent. was quite unexpected and was designed to arrest the drain of gold. A further rise is expected.

Exchange on London at Paris 25.17½
Exchange on London at New York 4.84½
(Tel. Trans.)

London, September 14. The Armenian Revolution Committee has sent a circular to some of the Embassies declaring that unless the reforms asked for are granted by the Porte, demonstrations of a serious character will ensue.

London, Sept. 16. The Fenian Tynan, the notorious "Number One," has been arrested at Boulogne on a warrant issued in the year 1882. It is suspected that he was engaged in other plots when arrested.

Mr. Powers, the Republican Candidate, has been elected Governor of Maine by a large majority. This election is regarded as a triumph for the Sound Moneyites.

(FROM THE "CHINA MAIL.")

London, Sept. 4. Details of the seizure of the Ottoman Bank have been received. Twenty-five well-dressed and educated Armenians entered the Bank at midday in twos and threes, whilst porters introduced bags ostensibly of bullion but actually of bombs. Suddenly several bombs were thrown,

and profiting by the alarm the Armenians closed the doors, keeping a hundred clerks prisoners, and maintaining a siege with bombs and revolvers for twelve hours.

(FROM THE "HONGKONG TELEGRAPH.")

Canton, September 4, 2 p.m. At 9.30 last night fire broke out in the densely populated part of this city known as Tong-yuan. Upwards of 200 houses have been destroyed. It is reported that at least a dozen persons were burnt to death.

The Shameen Fire Brigade did splendid work in rescuing women and children from burning houses.

(FROM "L'INDO-CHINE FRANÇAISE.")

Paris, August 31. Prince Lobanoff, Russian Minister for Foreign Affairs, who was accompanying the Czar on his visit to Vienna, died suddenly in the Imperial train last night, at the station of Scheptacka on the Brema-Kieff line.

(FROM "L'EXTREME ORIENT.")

Paris, August 27. The English have bombarded and destroyed the Palace where Kaled, the usurper, had installed himself. After returning the fire for some time, Kaled sought refuge in the German Consulate. The English are busy extinguishing the fire in the Palace, and burying the bodies of the rebels. There is still some fighting in the neighbourhood of Zanzibar.

Paris, August 28. There has been some sanguinary conflicts in several towns in Brazil between Brazilians and Italians with regard to the proposals to settle a previous difficulty.

Paris, August 30. Italy has sent a Plenipotentiary to Brazil to claim reparation for the loss of Italian lives. Brazil has already intimated its willingness to punish all culprits.

Paris, September 2. Order has been re-established in Constantinople. The places of business are re-opened, and confidence is restored.

The Spanish Cortes has adopted a proposal for a loan of one thousand million (francs?) to meet the expenses of the civil war in Cuba.

An English journal reports the escape from Cayenne of Captain Dreyfus. The French Colonial Minister has no information of the escape.

(FROM JAPANESE PAPERS.)

Kyoto, September 16. Researches made by the police of Kyoto up to the 15th inst. show that the damages done by storms in this city and vicinity are as follow—Deaths, 28; injured, 71; houses swept away, 1,132; houses wrecked, 1,721; houses partially wrecked, 1,739; houses flooded above the floor, 14,622.

Nagoya, Sept. 16. Latest researches regarding flood damages are:—Deaths, 20; injured, 10; buildings completely wrecked, 660; buildings partially wrecked, 1,048; buildings flooded, 63,566; boats lost, 36.

Otsu, Sept. 15. The action of the people of Kyoto in shutting the flood-gates of the canal, has caused much resentment on the part of Otsu citizens. Mr. Tanizawa, M.P. for Otsu, has called a public meeting to discuss the subject.

Sendai, Sept. 15. The railway line between Shiraisi and Okawara is repaired.

Gifu, Sept. 15. Seven-tenths of the flooded houses at Imao machi have since been wrecked by a heavy wind. Fatalities number 46.

Osaka, Sept. 16. The election of a representative for the Second Division of this city has resulted in the return of Mr. Matsumoto Jutarō, the voting showing a majority of 421 over Mr. Shibukawa Matayemon, the latter receiving but one vote.

Shimonoseki, Sept. 16.
Prof. Dr. Nakahama has left here for Korea by the *Chikugogawa Maru*.

The two companies that were projecting the Nagato Railway have been amalgamated.

Kofu, Sept. 17.
The mountain range adjacent to Gokaimura, in Minami Koma district, for a distance of three *ri* (1 *ri*—2½ miles) has been fissured for a depth of six feet. An expert has been despatched there.

Gifu, Sept. 17.
Researches up to date give the following details of damages:—Houses swept away, 2,401; houses wrecked, 2,764; houses partially wrecked, 3,599; houses flooded above the floor, 19,086; deaths, 148; injured, 44.

Gifu, Sept. 17.
Dysentery is raging in the flooded district. The local branch of the Red Cross Society has despatched some medical assistance.

Gifu, September 16.
The damage done by the storm of August 30th is tabulated as follows:—Wrecked houses, 4,125; partially wrecked, 2,819; deaths, 26; injured, 193.

Hiroshima, September 17.
Prof. W. K. Burton has been making a survey of the springs intended to be used for the new Water-works, and this evening left for Kobe.

Wakayama, Sept. 17.
The storm of the 11th inst. caused 80 landslides at Mitsuno-mura, Higashi Muro District. Over 5,500 *tsubo* of land have been displaced, and 58,600 trees were carried away.

CHESS.

(All Communications to be addressed to the Chess Editor.)

The Yokohama Chess Club is now closed for the off-season, and re-opens on Thursday, 1st October.

The Tokyo Chess Club is closed for the holiday-season; it will reopen on Friday, the 2nd of Oct.

PROBLEM No. 249.
By VALENTIN MARIN.

White to play and mate in three moves.

NUREMBERG TOURNAMENT.

We take the details of the final score from the *Literary Digest*, and give a few of the games from our various exchanges.

The prize-winners are as follows:—First, E. Lasker; second, Geza Maroczy; third, H. N. Pillsbury; fourth, Dr. S. Tarrasch; fifth, D. Janowski; sixth, W. Steinitz; seventh, C. Schlechter and C. Walbrodt.

THE STANDING OF THE PLAYERS AT THE CONCLUSION OF THE TOURNAMENT.

Name.	Won.	Lost.	Name.	Won.	Lost.
Lasker	13½	4½	Blackburne	9	9½
Maroczy	12½	5½	Charousek	8½	9½
Pillsbury	12	6	Marco	8	10
Tarrasch	12	6	Albin	7	11
Janowski	11½	6½	Winawer	6½	11½
Steinitz	11	7	Porges	5½	12½
Schlechter	10½	7½	Showalter	5½	12½
Walbrodt	10	8	Schallop	4½	13½
Schiffers	9½	8½	Teichmann	4	14
Tschigorin	9½	8½			

TABLE SHOWING GAMES WON, LOST, AND DRAWN BY EACH PLAYER.

Players.	Lasker.	Maroczy.	Pillsbury.	Tarrasch.	Janowski.	Steinitz.	Schlechter.	Walbrodt.	Schiffers.	Tschigorin.

45—Resigns.

NOTES BY EMIL KEMENY IN THE "PHILADELPHIA LEDGER."

- (a) Tarrasch's move against the French defense. The move is generally adopted, but Lasker believes it is an inferior development.
(b) Kt to K B 3 is the usual play. The text moves give a quicker development, but the Q P becomes isolated.
(c) Gains an important move. White cannot well play P takes K P, on account of Black's reply, B takes P ch.
(d) White loses valuable time by his manoeuvring with the Queen, R to Q 4, followed by Q R to Q sq. would have been much better.
(e) Black gained not less than three moves, and succeeded in bringing the Q to the rook's file with a powerful attack. In the present position Black threatened B takes P ch, followed by R to R 5. Black also had the continuation P to Kt 5 on hand. There was hardly a satisfactory defense. The move selected, however, enables Black to win quite brilliantly, R to Q 4, it seems was preferable.
(f) A hopeless position for White. He cannot move the Kt on account of R to R 8 mate. Q to B 7 would be of no value, for Black then replies Kt to Kt 5.
(g) Loses a piece, as the progress of the game shows. White however, had no better play. He could not play P to Kt 3 on account of Q to R 5 mate. K to K 5 would have lost, as follows: R takes R and P to Q 5 winning the Bishop.
(h) White now resigns. Black forces a win by K to K 5, followed by Kt to Q 3 and R takes P. A further resistance would be quite useless.

NOTES BY EMIL KEMENY IN THE "LEDGER," PHILADELPHIA.

- (a) Kt to Kt 5 wins a Pawn, but it gives Black a powerful attack. For that reason it is not frequently played.
(b) This is the Max Lange attack. White gains a lively attack, but ultimately Black gets the best, notwithstanding his being obliged to sacrifice a piece. Mr. Shipley, in his game with Lasker at this point, played Kt to Kt 5, and on Black's reply Kt to K 4 he continued Q takes P. This line of play is more conservative, and probably better, than the one adopted by Blackburne in the present game.
(c) Evidently Black could not play Q takes P. White had continued Kt takes B, followed by Q to R 5 ch, thus winning the K B.
(d) Black could not play Q takes P on account of Kt to Q 5 followed by R takes B ch and Kt takes P with winning attack for White.
(e) White is one Pawn ahead, and he can safely sacrifice a piece for two additional Pawns. White's attack, of course, is then completely broken.
(f) From this point White plays splendidly. It would have been bad for White to attempt the saving of Q B P and exchange. White would then be unable to develop the Queen's wing and Black's advanced Pawns would become very threatening.
(g) Of course White cannot capture the Rook without losing a piece.
(h) Black should now have played R to K B 7, and eventually given up the exchange. Being four Pawns ahead, he had good winning chances. Very likely he underrated White's attack.
(i) If K to B 3, then White continues R to Q 4 ch, and if K takes Kt, then B to R 6 ch, followed by R to Q 8 mate.

(b) If Black had played K to B 3 he would have lost the game White would continue H to K 5 ch. If Black then plays K to K 4 he gets mated in two moves, and if he plays K to K 3 then he loses the Rook. Black could not play K to B 4 either. White would simply answer K to B 3, and Black could not escape.
(c) Black can not play K to B 4, for K to B 5 would become very threatening, and thus he is obliged to accept a draw, notwithstanding the fact that he has a Rook and four Pawns against two minor pieces. A remarkable position indeed.

34—Resigns (g).	

NOTES BY EMIL KEMENY IN THE "LEDGER," PHILADELPHIA.

(a) The opening moves were similar to those adopted by Pillsbury against Lasker at St. Petersburg. It is questionable whether P takes P e.p. is the strongest combination or not.
(b) Bad play. Black with P to Q 4 forces back the Kt, and at once gains a winning position. White should have played Q to Q 3.
(c) Black gains a powerful centre and the open K B file, and he forces the White Queen into a very inferior position.
(d) Black plays the game admirably. Every move compromised White's position. The nineteenth move caused White to advance the Q B P, thus enabling Black to enter his Kt at Q 6. The twentieth move forced the advance of the K B P, weakening the King's side. Since White played his Queen to B sq. Black is enabled to play Kt to B 4, and subsequently Kt to Q 6 and Kt to B 5, and White's position has become quite hopeless.
(e) White in all probability could have resisted better by playing R takes Kt.
(f) Brilliant and sound. This ingenious sacrifice of the Kt forced the win as the progress of the game shows. Black's play that brought about this position as well as the finishing moves of this game are of the highest order. Lasker's play in this game could hardly be excelled.
(g) White can not play K to Kt on account of the threatened mate P to R 6. If he interposes the Kt then Black forces a mate in a few moves by R takes Kt.

GAME No. 568.
RUY LOPEZ.

WHITE. Maroczy.	BLACK. Steinitz.

23—P takes R	23—R to B sq. ch.
24—K to Q sq.	24—B to B 6
25—Q to Kt 5	25—B takes P
26—Kt to B 3	26—P to R 3

(a) This move is too inactive against this defence. P to Q 4 is necessary.
(b) This position is not unlike the Giuoco Piano. Whenever the second player can thus play P to Q 4, he is bound to get the best of it.
(c) There is no time for this manoeuvre particularly as Black can now advance on the Queen's side by P to Q 5 etc., which would make casting on that wing very dangerous.
(d) White's tactics have already landed him in difficulties;

he might have attempted to block his position by P to B 4 to prevent the disarrangement of his Queen's side, but then Black would probably have played Kt to B 3.
(e) There was no help for this but the absence of White's Q B adds weakness to the feeble position of his game on the Queen's side.
(f) P to Q 4 was open to objections, but Q to B 5 might perhaps have been better as a defence of the threatened Q B P.
(g) Admirably played. Anyone now can see a sacrifice looming in the distance, as the Q P is practically unprotected through this pinning of the Q B P.
(h) A dying effort which does not detain Black for a moment.
(i) To this, White should have replied with R takes R.
(j) The game is quite hopeless now.

FROM THE ANTIPODES.

Mr. O. Balk gave an interesting lecture on Chinese and Japanese chess in the rooms of the Otago Chess Club. He detailed the many movements of the various pieces, rules of the game, &c., in a clear manner.—*Otago Witness*, 16 July, 1896.

STEINITZ AND LASKER.

According to late advices from Europe, Steinitz is not yet willing to admit that Lasker's play is superior to his own. He is at the present time endeavouring to arrange for a postponement of the Buda-pest tourney, which is timed to take place on September 14th, until sometime early in November, so that an opportunity may be afforded him to have a long rest before his encounter with Lasker at Moscow, October 12th. As the latter player is also desirous of taking a rest, it is very probable that in the event of the Hungarian tournament taking place according to schedule the match between the two masters will be played off in November, unless, as does not now seem likely, Steinitz withdraws from the contest.

The Buda-pest tourney will probably rival the one recently played at Nuremberg, as most of the leading masters have signified their intention to attend, and the Emperor of Austria, it is understood, has offered a prize of \$300.

A BRILLIANT "EVANS."

(FROM THE "BALTIMORE NEWS.")

WHITE.	BLACK.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—B to B 4
4—P to Q Kt 4	4—B takes Kt P
5—P to B 3	5—B to R 4
6—P to Q 4	6—P takes P
7—Castles	7—B to Kt 3
8—P takes P	8—P to Q 3 (a)
9—P to Q 5	9—Kt to K 4 (b)
10—Kt takes Kt	10—P takes Kt
11—B to R 3 (c)	11—B to Q 5 (d)
12—Kt to Q 2	12—B takes R
13—Q takes B	13—P to K B 3
14—P to B 4	14—P takes P
15—P to K 5	15—P to B 3 (e)
16—Kt to K 4	16—P takes Q P
17—Kt to Q 6 ch.	17—Kt to Q 2
18—B to Kt 5 ch.	18—Kt to K 3
19—P takes P	19—Kt takes P (f)
20—R to K sq. ch.	20—Kt to K 5
21—Q takes P	21—Q to Kt 3 ch.
22—Kt to R sq.	22—Q to R 4

And White mates in six moves as follows:—
23—R takes Kt ch.
24—B to B 4 ch.
25—Q to K B 7 ch.
26—Q takes Q ch.
27—Kt takes K P ch.
28—Q to K Kt 5 mate.

NOTES.

(a) This is the normal position. White has now three continuations, viz., 9—Kt to B 5; 9—P to Q 3, and 9—B to Kt 5, all of which are good.
(b) This and Kt to K 2 are sometimes played, but Kt to R 4 is superior to either.
(c) An attacking move. White may also play 11—Kt to Q 2, or 11—B to Kt 3, followed by 12—Kt to R sq., and 13—P to B 4.
(d) Black rarely succeeds by this move in defending the Evans Gambit. Time is all important both in attack and in defence. The present game is an excellent illustration.
(e) Weak play, allowing the White Kt to get planted at Q 6 with a result disastrous for Black.
(f) Any other move loses at once by 20—R to K sq. ch.

HASTINGS TOURNAMENT.

The "Authorised Account" of this great contest has been published at last. It is a handsome volume of 368 pp. and contains full score and notes of all the games played, together with fine portraits of all the combatants. We understand that the enthusiastic Secretary has secured an early copy for the Library of the Yokohama Chess Club.

LATEST SHIPPING.

ARRIVALS.

Kaio Maru, Japanese steamer, 1,828, Moses, 12th September.—Kobe 11th September, General.—Nippon Yusen Kaisha.
Braemar, British steamer, 1,876, E. Porter, 13th September.—Hongkong via ports, Kobe 12th September, General.—Dodwell, Carill & Co.

Coptic, British steamer, 2,744, Inman Sealby, 13th September.—San Francisco 26th August, via Honolulu 2nd September, Mails and General.—O. & O. S.S. Co.

Irene, German steamer, 2,145, Schneder, 23rd September.—Hamburg via ports, General.—Simon, Evers & Co.

Soya Maru, Japanese steamer, 1,069, P. Gowing, 18th September.—Yokkaichi, General.—Nippon Yusen Kaisha.

Takasago Maru, Japanese steamer, 1,286, Brady, 18th September.—Kobe, General.—Nippon Yusen Kaisha.

Tsuruga Maru, Japanese steamer, 742, Fukui, 18th September.—Hakoda and Yokkaichi, General.—Nippon Yusen Kaisha.

City of Dublin, British steamer, 2,155, Rae, 18th September.—San Francisco, General.—Dodwell, Carill & Co.

Fuyo Maru, Japanese steamer, 875, Ternick, 18th September.—Nagasaki, Ballast.—Mitsu Bishi Sha.

PASSENGERS.

ARRIVED.

Per British steamer *Braemar*, from Hongkong via ports.—Mr. W. R. Krump in cabin.

Per British steamer *Coptic*, from San Francisco via Honolulu.—Messrs. H. Iquini, E. G. Ackermann, S. Iwanaga, H. J. Slater, H. Passavant, and Miss Sarah Peters in cabin. For Shanghai:—Mr. J. A. Maclean, Rev. Edward James, Mrs. James, Rev. Jas. Simester, Mrs. Simester, Rev. J. L. Hendry, Mrs. Hendry and 2 children, Rev. W. A. Main, Mrs. Main, the Misses L. R. Martin, Ida C. Deaver, Ella Leveritt, Margaret Polk, M.D., J. M. Gates, M.D., Ida Kahn, Clara E. Merrill, Mary Stone, Mary Robinson, and J. Sanders in cabin. For Hongkong:—Dr. G. E. Longeway, Miss H. Wallace, Mr. R. Earle, Miss C. A. White, Miss H. Stone, Miss S. Bancroft, Mr. G. Earle, and Miss Edna Webster in cabin. From Honolulu to Yokohama:—Mr. W. B. Vanderlip, Mr. Hugh J. Emmett, Miss Elsie Adair, Miss Tillie Jardine, and Mr. Uyetani in cabin.

Per Japanese steamer *Yokohama Maru*, from Shanghai via ports.—Mr. and Mrs. Blackhuy, Messrs. R. M. Lambuch, Tseng, Keswick, Nishikata, Yokoyama, Ozawa, Okazaki, Kikuchi, Katakata, Fukushima, Ichiji, Nakamura, Yamazaki, Kawasaki, Mnakuchi, Otake, Takagi, Habuto, Asano, Ishiguro, Chitenden, J. E. Pease, Ito, Mochizuki, Yonei, Mizuno, Sakamoto, Governor Omori, Mr. and Mrs. Umeda, Mr. and Mrs. Horibe, Mr. and Master Saito, Major Uchida, Viscount Hojio, Mr. and Mrs. Kawakami, and Mrs. Takahashi and daughter in cabin; Mr. Tashiro, Mr. and Mrs. Ogata, Messrs. Sato, Chow, J. P. Rose, F. Jesclinat, S. Ijuin, Yamada, K. Ijuin, Matsunaga, Hayashi, Fujita, Wm. Hay, and Kawachi in second class, 214 Japanese and 11 Chinese in steerage.

DEPARTED.

Per British steamer *Ancona*, for Hongkong via

ports:—Mr. Benning, Mr. N. P. Peterson, Mr. Solovieff, Mrs. C. Sanson, Rev. and Mrs. C. H. Evans, Mr. Justice Blair, Mrs. Blair, Miss S. M. Thomson, Mr. H. W. Andrews, Mr. H. W. Lea, Miss Jones, Master and Miss Pakenham, Mr. Mowles, Mr. and Mrs. J. Stemme, Mr. H. D. Humphreys, Mrs. L. Welchman, Mr. Lu Kew Sam, Mrs. Hoo and infant, Mrs. Lum, child and infant, and 2 Japanese guides in cabin; 3 Chinese and 2 children, and one Japanese in steerage.

Per British steamer *China*, for San Francisco via Honolulu:—Mr. Charles Burkhalter, Mr. P. H. Bernays, Mr. and Mrs. Nathan Bentz, Mrs. Dr. Cushing, Mr. Wm. P. Connelley, Mrs. S. H. Frank and 2 children, Mr. Spencer T. St. George Carey, Mr. K. von Lindholm, Mr. Louis C. Masten, Mrs. M. Miller, Mr. K. Noto, Lieut. Joseph Polo, Mr. N. M. Pond, Mr. K. Shindo, Dr. G. E. Shuey, Prof. J. M. Schaeberle, Mr. G. Schull, and Mr. M. Yeuya in cabin.

Per Japanese steamer *Kobe Maru*, for Shanghai via ports:—Mr. and Mrs. Valentin A. Blacque, Messrs. Alexander Price, S. Furuzawa, Y. Uyeno, K. Okakura, Miss C. Summer, Messrs. T. Chishima, K. Aota, S. Tanimichi, K. Kajiwara, T. Yamamoto, G. Migido, T. Hayashi, Miss N. Shikimori, H. Matano, Mr. and Mrs. Matsui, Mr. S. Uchida, Miss Hayakawa, Mr. K. Mizuno, Mr. S. Takahashi, Mr. and Mrs. C. H. Kragh and 2 children, Mr. F. Marshall, Mr. K. Mukai, Colonel Strelitzky, Mr. and Mrs. K. Lennan, Mr. S. Y. French, Mr. and Mrs. T. Brown, Mr. J. S. Bruce, Mrs. Vaughan Lewis, Mr. and Mrs. Bois, 2 children and nurse, Mrs. A. Johnson, Mr. and Mrs. Richardson, Mrs. Marshall, Mr. C. H. Casey, Mr. C. S. Graham, Miss M. Slade, Mr. F. L. Slade, Mr. A. P. Stokes, Miss Blackwood, and Mr. T. E. Stockwell in cabin; Mr. S. Hiragata, Mrs. Yanagita, Messrs. B. Honami, S. Imai, Y. Okita, K. Tamiya, K. Shirai, Y. Takeshita, N. Takeshita, Miss Takeshita, Messrs. K. Yendo, Y. Seki, H. Watanabe, T. Mizuno, B. Ihara, Mrs. Ihara, Messrs. Y. Hirotsu, F. Takagaki, K. Kishi, H. Tokunaka, S. Yamataka, H. Miyoshi, Y. Mizuno, and Yensoshi in second class, and 160 passengers in steerage.

Per British steamer *Canton*, for London via ports:—Mrs. Gordon Lowder, 2 children and amah, Rev. T. E. Sandeman, Mrs. Sandeman, infant and amah, Mr. J. A. Maclean, Mr. H. B. Clayton, Mr. H. Harvey, Mr. E. Hickman, Miss Howard and servant, Miss Bosanquet and servant, Miss Jackson, Miss Macquire, Mr. G. E. Boardman, Mr. J. Robledo, Mr. H. J. Neville, Mr. Price, and Rev. and Mrs. C. H. Evans in cabin.

Per British steamer *Coptic*, for Hongkong via Nagasaki:—Rev. and Mrs. Simester, Rev. and Mrs. W. A. Main, Dr. Kindeleberger, U.S.N., Miss H. Thomas, Mrs. Diehl, Mr. Geo. H. Rollison, Mr. R. T. Wright, Mr. J. Allen Hunt, Captain and Mrs. Welman, child and maid, and Mr. John Derby in cabin.

CARGOES.

Per British steamer *Ancona*, for Hongkong via ports:—Silk, 157 bales; Waste Silk, 14 bales.

Per British steamer *Braemar*, for Victoria, B.C., and Tacoma, Wash.:—

REPORTS.
The British steamer *Coptic*, Captain I. Sealby, reports:—Left San Francisco the 26th August at 4.07 p.m. Arrived at Honolulu the 1st September

at 6.19 p.m. and left the 2nd at 2.42 p.m. Arrived at Yokohama the 13th September at 11.11 a.m. Passage, 17 days, 1 hour, 35 minutes. Had variable winds and moderate weather throughout the passage.

The Japanese steamer *Yokohama Maru*, Captain R. Swain, reports:—Left Shanghai the 12th September at 2.15 p.m.; had light N.W. winds and clear weather and comparatively smooth water up to arrival at Nagasaki the 14th, at 4 a.m. after half-hour's detention at Quarantine Station. Left Nagasaki the same day at 5.15 p.m.; had moderate northerly and north-easterly winds and continued clear, pleasant weather up to arrival at Shimonoseki the 15th, at 5.45 a.m. Left again at 11.15 a.m.; had light south-easterly and north-easterly winds through whole of Inland Sea, arriving at Kobe the 16th at 8.20 a.m., after the usual quarantine detention. Left Kobe the 17th at 12.40 p.m.; had moderate northerly and north-east winds, cloudy but fair, pleasant weather; passed Oshima at 8.50 p.m. with continued north-easterly and easterly winds and fine, clear weather to Rock Island, which was passed the 18th at 10.35 a.m.; thence to arrival at Yokohama at 4.30 p.m., had fresh to moderate N.E. winds and continued fine, clear weather. At 6 a.m. on the 18th approaching, and in the vicinity of, Omai-saki passed a quantity of drift wood, also a square rigged ship standing to southward about 20 miles to south-westward of Omai-saki; at 10 a.m. passed a square rigged ship on port tack apparently bound to Yokohama. Nothing further of importance during passage. At 2 p.m. passed a Japanese man-of-war south of Sagami at target practice.

LATEST COMMERCIAL.

IMPORTS.

Yarn and Grey Cloth.—Market somewhat, holders asking increased prices to compensate for the drop in exchange, and now that silver is a little better, buyers hold off thinking that it will work further in the right direction, from their point of view. Fancies began to move a little, but the business is not of great extent or importance at present. Woolleins.—There is more enquiry, but not many bargains conducted.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—8 1/2 yds, 38 yds, 39 inches	\$2.40 to 2.80

METALS.

Very few enquiries and stock increasing. Prices more or less nominal all round. Dealers hoping that exchange (which has turned upwards from the lowest point) will go yet further in their favour.

Mit Bars, 1 inch	13.40 to	13.45
Flat Bars, 1 inch	3.45 to	3.50
Round and square up to 1 inch	3.40 to	3.50
Iron Plates, assorted	3.40 to	3.60
Sheet Iron	4.60 to	4.70
Galvanized Iron sheets	9.20 to	9.60
Wire Nails, assorted	5.30 to	5.40
Tin Plates, per box	5.00 to	5.30
Pig Iron, No. 3	1.62 to	1.65

KEROSENE.

Holders endeavour to preserve a bold front, in spite of fresh arrivals. Buyers, however, are not very keen, hoping for better terms by some delay.

American	\$2.16 to	2.18
Russian	2.14 to	2.16
Langkat	—	—

SUGAR.

Brown—No change to report. Takao somewhat lower, other sorts nominally unchanged, but with very little doing. White—A very moderate business at late quotations.

Brown Takao	\$1.90 to	4.00
Brown Manila	5.00 to	5.10
Brown Daiteng	3.45 to	3.50
Brown Canton	3.45 to	4.45
White Java and Penang	6.90 to	7.00
White Refined	7.00 to	9.00

EXPORTS.

RAW SILK.

Holders got rather scared at their small sales, and increasing stocks, so at the beginning of the week, they announced a substantial reduction in quotations. But, on the further drop in silver, they hardened their hearts once more, and are doing their best to check the enquiry which has sprung up from America. Cables from New York at the beginning of the week reported a better feeling, as the sense of the majority of voters appeared to be turning in favour of "Sound Money" with the "Silverites" losing ground. This gave more confidence to Bankers, Merchants, and Manufacturers in the Eastern States, and caused a firmer tone (with slight rise in values) in the Silk market there. At closing things look brighter still, and our quotations are now hardly practicable.

QUOTATIONS.

BISSET & URE'S SHARE REPORT.

Yokohama, September 14th.

Telegraphic advices from Hongkong report the following changes in the share market:—H. & S. Banks 194 per cent. Buyers; Hongkong Lands \$75 Sellers; China Fires \$97 Sales; H. & W. Docks 202 per cent. premium Buyers; H. & K. Wharfs \$55 Sales; Douglasses \$67.50 Sellers; H. C. & M. Steamboats \$33.25 Buyers; Pongjom Mines \$14 Sellers; Raub Mines \$4.40 Buyers; Balmorals \$2.50 Sellers; National Banks \$27 Sellers; Straits Insurance \$27 Buyers; Indo-Chinas \$47 Sales; Union Insurance \$230 Sales, and China Traders \$82 Sales.

Club Hotels have changed hands locally at \$69. Grand Hotels are in demand at \$170.

IT'S A FAR CRY

FROM FOREIGN LANDS
TO
Chicago, U.S.A.

But no matter where you live, we are anxious to do business with you in Clothing, Shoes, Dry Goods, Watches, Jewelry, Sewing Machines, Harness, Saddles, Hardware, Tools, Guns, Revolvers, Ammunition, Bicycles, Agricultural Implements, Vehicles of all kinds, Furniture, Books on every subject. We handle only dependable goods—no trash.

We believe we can send to any clime, goods of any kind, perfect in quality, at lower prices laid down, than the residents thereof can obtain there anywhere else. Our belief is founded on a quarter century's experience. To acquaint you with our facilities we will send you, or any other foreign resident, free of all charges, our "BUYERS' GUIDE," a 24 pound book, 700 pages, 13,000 illustrations, 40,000 descriptions—it is unique, useful, valuable—and also our "HAND BOOK FOR FOREIGN BUYERS," which contains all necessary information to put you in close touch with our marvelous methods. WILL YOU ASK US TO DO SO?

Montgomery Ward & Co.,

Guticura SOAP

The most Effective Skin
Purifying and Beautifying
Soap in the World.
The Purest, Sweetest, and
Most Refreshing for Toilet
Bath and Nursery.
For Pimples, Blackheads
Red, Rough, Oily Skin
and Baby Blemishes,
For Red, Rough Hands
Shapeless Nails and
Painful Finger Ends,
For Irritations of the Scalp
with Dry, Thin, and Falling
Hair it is wonderful.

Sale greater than the combined sales of all other skin and complexion soaps, both foreign and domestic. Sold throughout the world. British depot: F. NEWBERRY & SONS, 1, King Edward-st., London, E.C. PORTER DRUG AND CHEM. CO., Sole Proprietors, Boston, U.S.A.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARNES, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World. May 1st, 1896.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index,

HALF-YEARLY VOLUMES OF THE "JAPAN WEEKLY MAIL."

These Volumes contain Leading Articles dealing mainly with subjects affecting Japan and the Far East, besides numerous Miscellaneous Articles embracing a variety of topics; also Letters by Special Correspondents in Europe and America and other Countries, Commercial Trade Reports, Reviews of New Books, Government Notifications, Translations from Japanese Journals, Editorial Correspondence, Verbatim Reports of Public Meetings and the Law Courts, Theatrical, Sporting, &c., and a large number of Editorial Notes on a great variety of subjects of local and general interest, the whole forming a record not to be found in any other existing publication.

An extended Summary of the Proceedings of the Imperial Diet is given during the sittings of Parliament.

A special feature in the "JAPAN WEEKLY MAIL" is its Market Report, containing trustworthy statements of the course of trade in Imports and Exports. There is also a record of all Shipping entering and leaving Yokohama.

The following Volumes may now be obtained:—

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, SEPT. 26TH, 1896.

SUMMARY OF NEWS.

Two Cricket Matches have taken place during the week.

COUNT OKUMA is the new Minister of Foreign Affairs.

Snow fell on Mount Fuji on the 20th inst.—the first this autumn.

The Japanese Government is building a new consulate at Manila.

The Commander of the U.S.S. *Albatross*, who has been investigating the sealing grounds of the North Pacific, says that the herds will be exter-

minated within a few years if more stringent regulations are not enforced.

THE telegraph lines throughout the Empire were restored by the 18th inst.

THROUGH train communication on the Tokaido line has been re-established.

THE health of the Prince Imperial has much improved through his stay at Nikko.

THE excess of exports over imports into Japan in August was yen 279,237.630 in value.

A PARCELS POST service between Japan and Great Britain will be started from October 1st.

THE Czar and Czarina are visiting Queen Victoria at Balmoral. The Czarina is again *en route*.

THE Yokohama water-supply is again continuous throughout the day, the repairs to the mains being completed.

THE Treasurer of the Yokohama Chinese Guild is said to have made away with over \$1,400 of the Guild Funds.

THE Emperor and Empress have made most munificent donations to the districts recently devastated by floods.

An exhibition of weaving and other industries was opened at Hamamatsu on the 19th inst. The affair was very successful.

THE sailing race of last Saturday was spoiled through lack of wind, the yachts taking more than four hours to get round the short course.

WITH the beginning of October, the Choral, Philharmonic, Literary, and Chess Societies of Yokohama start on their autumn and winter work.

PRINCE MICHAEL HILKOFF, Russian Minister of Public Works and Railways, passed through Japan this week *en route* to the United States.

IN Katashiro, Kinejima district of Hizen, an extensive vein of anthracite coal has been discovered. The quality of the coal is said to be very high.

THE Kurds have attacked and pillaged the Armenian quarter of Eguin in the vilayet of Kharput, Asia Minor. Upwards of six hundred Armenians were killed.

COLONEL DE WOGACK, of the Russian Legation, is bringing out several decorations for Japanese military officers, principally of the Orders of St. Stanilaus and St. Anne.

LI HUNG-CHANG is expected to arrive in Yokohama on Monday next. He will not land, simply transferring from the *Empress* packet to his yacht the *Kwang-li*.

THE Czar has been appointed a German Admiral. During dinner at Breslau, the Emperor William thanked, in German, the Czar for having paid a visit to the country.

THE Mitsui family have sent yen 3,000 to relieve the Kyoto people that suffered by the recent floods, and yen 1,000 to the people of Tokyo that suffered from a similar disaster.

THE 20th anniversary of the death of Saigo Takamori was observed on the 20th inst. in the compound of the exhibition building at Ueno. The ceremony was large attended by officials and people of note.

THE British gunboats have returned from Dongola, where it was found that only women and old men were left. General Kitchener has

offered to pardon Bishera, the Mahdist leader, and his followers, if they surrender. The whole Egyptian expedition has now advanced to Dongola.

THE Italian Legation in Tokyo and the Italian residents in Yokohama celebrated, on the 20th inst., the anniversary of the removal of the capital of United Italy to Rome.

A LETTER from Lord Rosebery has been published in which he declares that he cannot agree to the proposal that Great Britain might depose the Sultan in view of Russia's resolve to oppose the independent action of any Power.

A CORONER's jury has returned a verdict of death from accidental drowning in the case of a Swedish quartermaster who fell from the gangway of the *Flintshire* on Saturday while in a state of helpless intoxication.

THE Armenian agitation in England is fomented by letters of Mr. Gladstone, Lord Rosebery, and Mr. Asquith, and by the increasing comments from the Pulpit and Press. Mass meetings have been arranged in various localities.

ON the appearance of the Egyptian army at Dongola the Dervishes fled to the southward, several Emirs surrendering. The gunboats and cavalry are pursuing the enemy. The Egyptian flag has been hoisted in Dongola. The Egyptians captured six guns and a large quantity of munitions of war.

THE Fenian Tynan, the notorious "Number One," has been arrested in Boulogne on a warrant issued in 1882. The Fenians Bell, Wallace, and Haines have also been arrested, as all were acting together. The same gang had organised a laboratory at Antwerp, where a complete dynamite armoury was discovered. The object of their plot is uncertain, but it is rumoured that Nihilists had joined the Fenians and that attempts on the life of the Czar, or of the Queen, at Balmoral, were meditated. All those concerned in the plot have been arrested. Tynan travelled in the guise of a Queen's Messenger.

THE general condition of the Import market is not at all satisfactory. The demand for Yarns and Grey Cloth is dull, and Fancies are not in much better request, a few small sales of Prints and Velvets being all there is to report. There have been but small sales in the Metal market, and though quotations are unchanged, Iron in general is quoted lower on the home side. The Kerosene trade has seen large purchases, buyers being at length forced into the market, where they have had to come to sellers' terms, and the position of holders continues strong. A fair amount of business has been done in Sugar, and values have somewhat improved for China and Manila kinds. Takao is quiet and nominal, and White sorts have been but sparingly taken though the market for these is steady. A revival has taken place in the Silk trade, both the States and Europe being in the market. For the latter destination a considerable quantity of fine-size Filatures were taken, but the business done had the effect of encouraging holders to pursue their usual tactics by putting up prices to the extent that further business was declined. The reduction of the stock on this market induced arrivals on a liberal scale, and buyers no longer pay the prices demanded. Nothing doing in Waste Silk. The stoppage of railway traffic through floods has kept back arrivals of leaf for the Tea market, and this has induced a firm attitude among holders, but when communications are again restored there will be as much as is wanted. Exchange has fluctuated slightly during the week, the latest movement being the rise of a point.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The formation of the Cabinet having been virtually completed with the entry of Count Okuma, the press has much to say about the new Ministry. The *Nippon* devotes several articles to the subject. It holds, with others, that the new Ministry represents a transition stage from the old *Genkun* oligarchy to the system of responsible Cabinets which is destined to be established in the near future. Occupying such a precarious position, the present Ministry, whatever may be its policy, is necessarily doomed to fall soon, and the manner of its fall will bear a most important relation to the future career of its members, for if they fall owing to inaction, their fate will be sealed, whereas, if they fall because of adopting a resolute course, their discomfiture will only be temporary. Hence action and decision must be the watch-words of the new Ministry.

The situation of the Matsukata-Okuma Cabinet, observes the same friendly paper in another article, is most delicate, for although a *Genkun* and *Clan Cabinet* combined, the very circumstances that culminated in its birth oblige it to regulate its action in accordance with the dictates of constitutionalism. It is as if a surgeon were to perform an operation upon his own body. Born amid innumerable difficulties, the new Ministry can not be expected to accomplish much. The *Nippon* will be fully satisfied if only the accumulated abuses and evils of clannism and of the *Genkun Naikaku* can be abolished for ever. Questions relating to the management of the Diet and to the arrangement of post-bellum measures are altogether secondary.

The *Osaka Asahi* writes that the attempt of the *Genkun* to secretly exert influence on the Cabinet while themselves holding aloof from it, may be said to have been practically frustrated, a circumstance constituting one of the Cabinet's sources of future danger. The *Asahi* wishes to warn the *Genkun* against any inclination of the kind, if indeed they still entertain it. Our contemporary asks them to bear in mind that the present Ministry was not organized through their endeavours, but was born after they had given up the matter in despair. Enjoying, as some of them do, great influence over the National Unionists who hold the balance of power, and great prestige among the public at large, and being at the same time numerically stronger than the Ministry, they may, even without being firmly united, discredit the acts of the Cabinet and obstruct its work, though themselves unable to form a Cabinet, and though the present Cabinet does not commit any blunder of such serious moment as to necessitate its resignation. The memory of how far they were themselves instrumental in organizing the Cabinet should shame them from adopting any such rash, irresponsible, faithless, and purely destructive course. Thus the *Osaka* journal in one breath declares that the *Genkun's* attempt to interfere has been frustrated, and in the next asserts that their interference at the outset should deter them from subsequent opposition.

The *Yomiuri* considers that the formation of the present Ministry marks an epoch in the political history of the country, for it inaugurates, so to speak, the second Restoration in the administration of Japan. Our contemporary desires once more to remind the new Ministry that diplomatic and financial blunders were the rocks on which their predecessors made shipwreck, and that it must consequently be their prime aim to strike out prudent and suitable plans in the domains of finance and foreign affairs.

The *Mainichi* publishes a lengthy article over the signature of Mr. Shimada Saburo, Vice-President of the House of Representatives, and editor of that journal. It is merely a recapitulation of arguments that have already appeared in the columns of the *Mainichi*, which we may

mention is now generally understood not to faithfully mirror the sentiments of the *Shimpo-to*, or even of the Progressionists. The *Kokumin*, the *Nippon*, the *Ponturi*, and even the *Hochi* are credited with possessing greater facilities for obtaining accurate information about that Party. Mr. Shimada argues, in the article under consideration, that the Cabinet must be built upon the nation, and that, therefore, with the view of establishing an important precedent in the constitutional history of Japan, the Ministry, should they fail to command a majority in the House, must unhesitatingly resign. In the next place, the Cabinet must keep itself pure and incorruptible, and Government servants must be strictly warned against any attempt to abuse the advantages their position confers for promoting their own selfish purposes. In the third place, the uneasiness of the people must be allayed by assuring them that they shall not be burdened with any further taxes. The writer doubts whether a sudden addition to the expenditures of the State and consequent increase of the people's burdens, such as the last Cabinet effected, can fail to impair the development of national prosperity. By way of strengthening his position in that respect, he points to the representations submitted by the Chambers of Commerce of Tokyo and Osaka to the Ito Cabinet while the 9th session of the Diet was in progress. One chief cause why the people feel deep anxiety in this context is their dread lest the recent addition to their burdens may not be the last. Hence it should be the duty of the present Cabinet to dispel all apprehensions of that nature. Mr. Shimada does not necessarily ask the Cabinet to reduce the State expenses fixed by the Ito Cabinet. What he desires is that a limit must be strictly fixed, and that measures should be devised to make ends meet in the economy of the State. Fourthly, the problem of individual rights must be attended to, and the people must be relieved from various unreasonable restraints that now impair the free exercise of those rights. Fifthly, Formosa must be purged from corruption. Sixthly and lastly, the Administration must be conducted with simplicity, integrity, and promptitude, and the speciousness, conventionality, and literary redundancy that marked the actions of the preceding Ministry must be done away with. These six reforms constitute the irreducible minimum of what Mr. Shimada expects from the Cabinet, and he avers that if his advice be not acted upon, he will be compelled to take a path different from that chosen by the Cabinet.

"We were among the persons surprised at the apparent inability of Count Matsukata," writes the *Tokyo Asahi*, "when week after week passed without any definite prospect of the organization of a Cabinet, and when the Count seemed to be chiefly relying on the help of the *Genkun* for that purpose. However, now that the composition of the Cabinet is virtually fixed the new Ministry does not appear to be so feeble as the action of the Premier seemed to suggest. The *Asahi's* hypothesis is based on the elimination, practically at least, of Choshu elements from the new Cabinet. During the three decades that have elapsed since the rehabilitation of the Imperial régime, this is the only instance of the Satsuma and Choshu clans publicly separating from each other. The abuses of favoritism that permeated previous administrations were mostly the outcome of compromises between the two ruling clans, and, at the same time, the collisions between the two constituted one of the weak points of the Government. The Choshu clan being eliminated from the Ministry now in power, the latter may prove neither so feeble nor so short-lived as the public apparently anticipate.

The *Nichi Nichi* has some strong comments to make about Count Okuma, whose entry into the Cabinet our contemporary declares to be unconditional. The four points on which the Count dilated before his entry, and concerning which he demanded a consensus of opinion on the part of his future colleagues, have fallen to the ground. On three of these important questions

the views of his future colleagues could not be brought into unison with his own, and it was only with reference to an undisputed matter, namely, the necessity of cordial unanimity among the members of the Cabinet, that he succeeded in securing the endorsement of the statesmen with whom he now sits at the same table. The whole thing was a species of fiasco. Some observe, and the *Nichi Nichi* agrees with the idea, that it would have been far better for Count Okuma not to assume such a pretentious attitude, and not to lay before his future colleagues any points concerning which he demanded their approval previously to his entry into the Cabinet, seeing that, all the while, he was prepared to enter unconditionally. Such an ill-judged proceeding on his part has materially impaired his credit in the eyes of the people.

The *Yiji* writes much on the new Cabinet. It feels more and more satisfied at finding that the political ideas of the people are so far developed that even a Cabinet change of such magnitude as the last has not affected the market in any degree. Another thing that pleases the *Yiji* is the entire change that has come over the attitude of the senior statesmen towards the Government. Hitherto, these statesmen were prone to regard the Government as their own property, and seemed to view any transfer of the control of the administration in much the same light as though a matter affecting their own possessions were on the tapis. Even when the administrative power changed hands, those previously holding it continued to hanker after it, and not infrequently attempted to subject their successors to considerable annoyance. It seemed as if the spirit of womanish jealousy regulated their whole conduct. The War has put a stop to such vicious practices, for the radical change that has taken place in the situation of Japan has made it imperatively necessary for both rulers and ruled to view national affairs from the standpoint of their relation not to domestic politics, but to foreign. Posts in the Government can no longer be regarded in the light of private property. The last Cabinet change originated, for instance, in a decision of the Ito Ministry to endure what, privately considered, must have been very distasteful, namely, the admission of statesmen belonging to a different school from those in power. The *Yiji* is therefore confident that traces of the so-called "camera influence" will disappear entirely from the future administration of the country, and that the Ministry in power will be left free to frame their own decisions and follow their own inclinations. Our contemporary can not repose any particular confidence in the new Ministry, nor can it predict the results of their administration at this moment. But the considerations enumerated above induce it to regard the situation with considerable hope.

In connection with the portfolio of the Department of Education, the same paper has a suggestion to offer to the Authorities. It strongly urges the absolute necessity of setting aside any candidate educated in the old Chinese spirit, and disposed to advocate the teaching of Confucian doctrines. Affairs in Japan are marching forward in accordance with the principles of Western civilization, and however deeply versed a man may be in the Chinese classics, or however deft in penning a Chinese essay, he can not be called a man of erudition. Indeed, a person of that description, who is out of touch with the progress of social affairs, may be considered entirely ignorant. The idea of abandoning educational matters to the charge of such a person is preposterous. Though Marquis Saionji has not held the portfolio for any considerable time, and has therefore been unable to effect much, yet the ideas he entertains and the principles on which he has acted are broad and liberal. The *Yiji* concludes that, if it is impossible to retain the service of the Marquis, a statesman of the same type must be found to succeed him.

EDITORIAL NOTES.

A SCENE FROM THE FLOODS IN SHIMOTSUKI.

On the 8th instant, says a Mayebashi paper, a carpenter living at Nabeyama, on the banks of the greatly swollen Nagano River, had occasion to go to the stream. A sudden rise took place while he was still on the bank, the rushing water carrying him off his feet and dragging him out into the river. His son-in-law, one Otokichi, heard Matazo's cries and, being an excellent swimmer, sprang to the rescue. So powerful was the current, however, that he could make no headway against it. Tosé, Otokichi's wife, had seen her husband's attempted rescue; losing all control over her own actions she, too, sprang madly into the boiling river, and tried to swim to her husband. After drifting down-stream for nearly half an hour, Otokichi was violently struck by a floating log, and lost consciousness, while the devoted wife redoubled her efforts to get within reach of the sinking man. Meanwhile, a fourth member of the family, Otokichi's younger brother, who lived several *cho* farther down the stream, had caught sight of the tragedy, and also sprang to the rescue of his relatives. Expert swimmer though he was, the tremendous force of the current proved too much for him, so that he was fain to make his way painfully towards the thicket or underbrush growing on the river's edge. Here, to his joyful astonishment, he found Matazo, the father, who had been washed thither, half-drowned, by the waves. After leading the exhausted old man to a house near by, the younger brother returned to search for his sister-in-law and her husband. Thinking that they, too, might have reached the underbrush in safety, he looked carefully among the sedges. After a prolonged search he caught sight of the forlorn pair stranded on a small mud-flat in midstream, Tosé calling loudly for help. Otokichi was dead, and Tosé was vainly endeavouring to call him back to life. In an agony of grief, the younger brother once more breasted the waves and this time succeeded in reaching the place where Tosé was. The rising of the waters continued, until only a few feet of sodden soil kept them above the waves. The two continued calling for help till they grew hoarse and hardly able to speak. Night fell, and the horrors of the river and their surroundings were still more intensified. At last, towards morning, a rescue-party put off from the nearest bank, but so great was the violence of the current that the boat threatened to capsize before the rescue could be completed. With infinite trouble and in imminent danger of their own lives, the rescuers brought the three back to the shore. Everything was done to strengthen and relieve the two survivors, but poor Tosé was found to be a hopeless maniac.

"BIMYOSAI."

THE death is recorded, under very painful circumstances, of the lady novelist Inafune-joshi, otherwise Mrs. Yamada, wife of the well-known author and poet Bimiyosai. For some years past the latter has been leading a most dissipated life, getting into a number of very shady transactions on several occasions in order to fill his always empty purse. Two or three times he has been brought up before the Courts by his victims, generally wealthy females. Yet Bimiyosai's style remained as popular as ever, and his stories invariably sold well. Last year, the novelist married a young lady, the daughter of a well-to-do Tokyo physician. She brought her husband a good dowry, and it was thought at the time that the happy couple might collaborate works of fiction, for the lady was already favourably known in second-rate magazines and other periodicals as a writer of very pleasing skill. After his marriage Bimiyosai sobered down for a month or two, but soon returned to his old loose habits and companions. Inafune-joshi, who was as faithful to him as he was faithless to her, bore with his excesses as long as possible. In July of the present year, her mother heard of her sorrows and brought her home, where she should stay until Bimiyosai could be made to confess the error of his ways. But as one ugly report

after another reached the ears of the wife, she resolved on committing suicide. About six weeks ago she took poison, but, thanks to the energetic treatment of her father, recovered. Her health, however, was permanently injured, and now the announcement of her death has caused much comment on the case in the columns of the Tokyo press. Bimiyosai is severely blamed, as indeed he richly deserves.

GERMAN NOTES.

A PRIVATE telegram, which has been substantiated officially, says that Emperor William will not, as had been supposed, go to Hungary during the coming autumn.

The city of Kiel is to have a Bismarck monument. Herr Harro Magnussen, of Berlin, has already prepared a life-size model which was found very satisfactory and has been accepted.

An interesting discussion has been going on between the two leading Hamburg papers, the *Hamburger Correspondenz* and the *Hamburger Nachrichten*, with reference to the participation of Germany at the Paris Exhibition in 1900. The former paper is supposed to represent the views of the Foreign Office at Berlin, which is in favour of taking part in the Exhibition, while the latter is regarded as voicing Prince Bismarck's opinion, and is not in favour of participation. The *Hamburger Correspondenz* says the Government had considered the subject from a political standpoint, and did not therefore consult Boards of Trade. It has decided to participate in order to obviate the impression in Paris of a deliberate slight. The *Hamburger Nachrichten*, on the other hand, regards the political side of the question as of slight importance. Many changes may take place in France between now and the year 1900. The question of representation at the Paris Exhibition must not be treated in a way that might ultimately compel the industries of Germany to participate in order to uphold the national honour. It would be a mistake to endeavour to create enthusiasm and allow oneself to be carried away by it.

In number 28 of the German *Medizinischen Wochenschrift*, Professor O. Leppin gives an interesting account of an experiment made with the X-rays. It may not be generally known, he says, that the X-rays have the property of producing a similar effect upon the skin as the rays of the sun. I had a good deal to do with the Roentgen experiments, and availed myself of the opportunity to experiment on my left hand. After a few days the skin was of a peculiar red colour and showed signs of being swollen, while on the middle and ring finger there were blisters developing, just as though I had burnt myself. The only part that remained white was where the ring encircles the finger, and at the middle joints of the fingers the red hue was less intense. After applying Gonard water, the red colour decreased, and yet, after five weeks there is still a marked difference between the right and left hand. While the right hand is white and smooth the left is reddish and wrinkled and appears many years older than the other.

INUNDATED TOKYO.

IN connection with the floods near and about Mukojima (Terajima-mura in particular), certain Metropolitan journals report that large numbers of racoon-dogs, martens, stoats, and weasels have been caught in the upper stories of half-submerged houses. The rodents were "washed out" of their holes and dens, and, having nowhere else to go, took refuge in the nearest dwellings. Quantities of these animals may now be seen in the neighbourhood of Mukojima, "which looks for all the world like a zoological park at present," adds the *Miyako Shimbu*. In this part of the city the distress is very great, and although the authorities are doing everything possible to give succour to the needy and homeless, there is, nevertheless, a great deal of suffering. In this connection the *Fominuri* tells of a gilded youth who, in company with four or five *gelsa*, went out to "see the sights" and to view in ease and comfort the distress of his unfortunate countrymen. The

inhabitants of Terajima-mura, however, failed to appreciate attentions of this sort, and so bespattered him and his companions with mud that they were fain to beat a prompt retreat.

YOKOHAMA POLICE ITEMS.

INSPECTOR IKARIYAMA, of the Bluff Police, reports that since the incarceration of J. J. Allen in the American Consular gaol, burglaries and robberies on the Bluff have entirely ceased. Comment is superfluous.—A Peruvian giving the name of Charles Adams, was found wandering over the Bluff, barefooted and in rags, on Saturday. He has been handed over to the Settlement Police.—Uyeda Hyojiro, a house-boy, aged 16, in foreign employ, is now being tried in the criminal section of the Yokohama Chihō Saibansho on the charge of stealing a cheque for yen 300 from an office in the Settlement and affixing thereto a false signature.—Nishimura Umekichi, who lately underwent examination on a charge of sending three cows to Tokyo in contravention of the Rinderpest regulations, has been fined 3 yen and severely reprimanded.—A Portuguese named Collaço has been arrested on a charge of complicity in a stamp robbery from an old postage stamp dealer in Motomachi. The man has been handed over to the Local Court.

AFFAIRS IN PERSIA.

A REPRESENTATIVE of the *Neue Freie Presse*, of Vienna, had an interview with the Persian Minister in Vienna, General Meriman Khan. The General, who has represented his sovereign at the Austrian Court for nearly two decades, is a stout, broad-shouldered gentleman of the Slavonic rather than Oriental type. He speaks with considerable *verve*, and uses French very fluently. In the first place, the reporter says, he expressed his indignation with reference to what he termed the "wanton banalities" of a large part of the European press in its recent utterances with reference to the murdered Shah, whom it represented as a ludicrous figure. There is not a word of truth in it. Shah Nasr-Ed-din was no European, but he did much for the development and civilization of his fatherland. From the fact that his successor ascended the throne in as well regulated order as could take place in the most orderly European State, you can readily see that with regard to the question of law and order among us, it cannot be as bad as some of the large organs of the European press in recent days pretended. The new Shah, Musaffer-Ed-din, is no doubt a few degrees more European than his predecessor. Many of the Austrian officers that I have engaged for Persia since my stay in Vienna, are able to inform you of the good qualities of the new ruler. Scarcely had he been proclaimed as successor of Nasr-Ed-din, when he sent me a dispatch confirming me in my present position. The last reports from Teheran say that England and Russia have recognized Shah Musaffer-Ed-din. The Sultan, France, and Austro-Hungary have also recognized him, and there is no power in Europe that will hesitate to recognize him. That Shah Musaffer-Ed-din is no ordinary man is proven by the fact that he left the governorship of Tabriz a poor man. It would have been an easy matter to enrich himself. However, there are also numerous fables in circulation about him. One familiar with Persian affairs has held him up as a "sick man" because he is of delicate constitution. It is not exactly necessary to be robust in order to be well. The new Shah will show great strength in the administration of his office. "Does your Excellency believe that Shah Musaffer-Ed-din will visit Europe, as his predecessor did?" "I believe so, but I suppose it will be some considerable time before he will come to Europe. The Shah will have many things to put in order, and has to adjust matters according to his ideas before he will go abroad. Dispatches have come from Teheran according to which there is considerable fermentation in some of the provinces of Persia." "Do not regard this too tragically," said the General, "there are elements there that love to fish in turbid waters. The turbulent performances of the nomads of Fars is by no means a criterion of the

peaceable disposition of the other inhabitants of the kingdom." "It is supposed, your Excellency, that, whereas Russian sympathies are imputed to the new Shah, Russian influence will increase." The Minister replied: "Where is Russia not influential at present? Russia operates also here with you in Europe with great skill. Russia's sphere of power in the Balkans is constantly increasing. By skilful diplomacy Russia has also been very successful in Persia, while England, as in Turkey, has not always managed with success." In conclusion, the Minister said that Musaffer-Ed-din will lay much stress on the continuity of a well regulated administration, and as a man that is well acquainted with European culture he will endeavour to stand in good relation to Europe.

ON THE BIRTH OF A PERKINSE.

THREE days after the birth of a male child of well-to-do people, his parents celebrate his nativity, which is called Hsi San, i.e. "washing the child," when eggs, sugar, and sago, which are used for nourishing the mother, are presented by near relations and intimate friends, principally ladies. The way to celebrate this is to engage a nurse called a Lao Niang, "to wash the body of the infant." One month after birth, the celebration of Man Yueh, i.e. "full month," takes place, when relations and friends come again to congratulate the family, and present gold and silver ornaments and dresses of satin, &c., to the baby, to which a musical and theatrical performance as well as a delicious lunch and dinner are prepared by the family. When the child is one year old the celebration of Chua Chow, i.e. "to reach one year," is held. The rule is to place books, flowers, cards, artificial bows and arrows, an abacus, and some buttons on his bed, and seating the little child in front of them to see which article he will pick up first. If he takes a book, it shows that he will be a literary man; the flowers and cards indicate that he will be fond of gambling; the bow and arrows destine him as a military officer; the abacus proves his future career as a merchant; and the buttons augur that he will hold the exonerating position of a high mandarin. On reaching the age of seven the boy is sent to school; the cost of tuition for a beginner being at most 10,000 Peking cash or \$1.00 Mexican. He has to learn to read the San Tze Ching, i.e. "three character classic;" Po Chia Hsing, i.e. "names of 100 families;" Chian Tze Wen, i.e. "1,000 characters." After completing these lessons the tutor will teach him Sze Shu, i.e. "four books." In the meantime, he explains the books with colloquial idioms to the student, after which he is taught the Wu Ching, i.e. "five classics," poetry and essays. Should the parents desire their son to attend the literary examinations the teacher will instruct him how to compose poems and write essays; but if they decide on a business career, at the age of thirteen or fourteen he will be sent to some Shop or Hong to learn its daily routine. In Peking most of the people marry between fifteen and twenty years of age. As soon as a man is married a heavy yoke is put on his back; he has to earn enough to support his own family, even should his parents be rich, and he carries this burden until he himself becomes the father of a son who is able to succeed him, after which he may enjoy himself for the rest of his days.—*Peking and Tientsin Times*.

JUGO YA.

THE evening of the 21st instant was the 15th of the 8th month of the lunar calendar, and used, in bygone days, to be a sort of family festival. On large trays heaps of huge rice-dumplings (*dango*) were placed with persimmons, chestnuts, raw eggs, salt, wine, and sometimes ginger. Trays were then exposed on the veranda or in some open part of the house to the rays of the "harvest-moon," the whole being an offering to *O-tsuki-sama*, or the Moon Deity, about whose personality some confusion existed even in the minds of the worshippers. Besides these edibles, stands of autumn-flowers, particularly the *susuki* and *karukaya*—supposed to be special favourites of the "man in the moon"—were also placed in the moonlight. The in-

mates then proceeded to drink hot *sake*, with boiled *tofu* or bean-curd as a relish, while songs and instrumental music served to make the hours until midnight pass in innocent revelry. This pretty custom is still observed in many country homesteads; and even in Tokyo, on Monday night, there were hundreds of houses where at least huge rice-dumplings were prepared for the general refection, while the wine-cup was kept going merrily. This is unquestionably the last remnant of that lunar worship peculiar to most Oriental peoples, and very noticeable in ancient Japanese records. But what was then a religious act is now no more than a family merry-making.

THE U.S.S. "ALBATROSS."

THE U.S. fish-surveying vessel *Albatross*, Capt. J. F. Moser, came into harbour on Tuesday morning. She has been carrying on investigations at the sealing grounds of the North Pacific Ocean into the effects of the seal-hunting of the last few years. It would appear that if the present pelagic operations of the numerous sealers who now sail from Yokohama and other places are not radically altered the seals of the North Pacific will soon be entirely exterminated. The *Albatross* is splendidly fitted up for the purposes of scientific exploration of the ways, homes, and natures of the denizens of the deep. Her collection of North Pacific zoophytes is especially noteworthy and complete. She will go to Yokosuka for cleaning soon.

WRECK ON THE SIBERIAN COAST.

THE Norwegian steamer *Hoeveding* went ashore on the Siberian coast on July 14th. The vessel, which is of iron, of 1,313 tons register, was going from Nicholaievsk to Vladivostok and ran aground during a dense fog. When the fog lifted it was discovered that she was firmly fixed on the beach. No difficulty was experienced in getting ashore, and the men got all their belongings out of the vessel before proceeding to Vladivostok. A Russian man-of-war was sent to see if the steamer could be got off, but this was found impossible. The officers and crew have arrived in Nagasaki, the captain remaining at Vladivostok until the vessel is sold.

THOSE LAWYERS.

THE *Maru Maru Chimbun* makes fun, in its peculiar way, of the Tokyo City Assembly. It depicts one of the condemned water-pipes in the act of letting a flood from a leak, but instead of water the leakage is labelled "70,000 yen," in reference to the enormous sums claimed by barristers working in behalf of the municipality. There was reason for prompt investigation, and investigation of these notorious pipes, comments our humorous contemporary; for now in the very first break they have inflicted damages on the city's pocket not far short of one hundred thousand yen—and the pipes are leaking still!

"HEROIC JAPAN."

WE learn from the authors, Messrs. Eastlake and Yamada, that their so-long delayed "History of the War between China and Japan," under the style of "Heroic Japan," will be forthcoming during the course of the present week. Instead of being 400 pages as announced in April, the book has 560 pages or thereabout, with close upon 130 illustrations, including most pleasing colotype reproductions of recent pictures of T.I.M. the Emperor and Empress. Five maps serve to elucidate the text, while as many appendices help to bring the narrative up to February or March of the present year.

THE THEFT OF POSTAGE-STAMPS.

J. P. COLLACO, the Portuguese charged with the theft of some old and valuable postage-stamps from a stamp-dealer's in Motomachi, Yokohama, has been found guilty by the Yokohama Chiho Saibansho and sentenced to six months' rigorous imprisonment.

SEAMEN'S MISSION.

By kind permission of Captain Leonard Dart, divine service will be held on the ship

Alcides on Sunday morning commencing at 10.30 o'clock. The mission launch will call round in time to convey any officers and seamen wishing to attend, returning them to their respective ships at the close of the service. The launch will also call round on Sunday, Tuesday, Wednesday, and Thursday evenings, for those who wish to attend the regular meetings held at the Mission.

POISONOUS MUSHROOMS.

GUMMA Prefecture papers report that, on the 7th instant, no less than sixteen persons in one village were poisoned by eating toadstools; of course, by mistake. Of the whole number four have since died and three others are not expected to recover. The rest, though barely escaping with their lives, are now well on the road to convalescence. Such instances are quite rare in Japan, where every country child is taught the difference between the poisonous and edible species of the mushroom.

AN ASTUTE DIPLOMATIST.

WHEN in Germany Li Hung-chang praised her armies; in France the military academy at St. Cyr, "as the nursery of future Generals," won his approbation; and now in England the astute old diplomat is reported to have observed: "I am much struck with the vastness of England's resources. It seems to me you have everything the biggest and grandest in the whole world."

EARL LI'S YACHT.

THE *Kwang-li*, the handsome steamer that is to convey Li Hung-chang from Yokohama to Tientsin, arrived in harbour on Thursday. She has a very distinguished company of mandarins on board,—who have come over to receive Earl Li,—as well as Mr. Li Ching Mai, the youngest son of H.E. Li Hung-chang, Mr. Pethick, and Dr. Liu.

SAD FATALITY IN YOKOHAMA.

COLLAPSE ON THE YOSHI-HAMA BRIDGE.

A deplorable accident attended by sad loss of life occurred in Yokohama about 5.45 o'clock on Friday evening. A new iron bridge is being built across the Creek connecting Horikawamachi with Yoshihama-cho; and for the accommodation of foot passengers and jinrikisha while the bridge is building a temporary structure has been thrown over the water a little to the north of it. On Friday evening a new junk was being yulod up the Creek with all the ceremonies usual to the occasion, and a number of people naturally gathered to see the fun, principally tea-firing women, with babies on their backs, who were just then knocking off work for the day. To obtain a better view of the diversions of the junk-men, the crowd collected on the temporary Yoshihama bridge, and more particularly in the centre of the structure. The bridge, never intended to carry such a weight, stood the strain for a few minutes, and then, almost without warning, collapsed. Over fifty persons were precipitated into the water, among them Mr. Vladimir Blad, who happened to be crossing in his jinrikisha. Mr. Blad escaped with a ducking, and the police, who appeared promptly upon the scene, managed to rescue 48 women and children alive. But some score persons were carried down by the stream and sank. Dragging operations were at once started, and by this morning nine bodies had been recovered. The scene on the banks of the Creek in the near vicinity of the accident presented a strange spectacle last night. Huge fires were lighted on the roadway, several electric lights were rigged up to assist the searchers, while hundreds of people bearing *chochin* (Japanese lanterns) wandered up and down, some in idle curiosity others searching for missing relatives or friends. In a very short space of time sweetmeat and *tofu* sellers took their stalls to the spot, and toward midnight quite a little fair was in progress. The bodies thus far recovered are those of women.

THE NEW CABINET.

At last, after weeks of intense suspense, Count Matsukata has been nominated Premier with the additional office of Minister of Finance. This sudden cutting of the Gordian knot—for the consummation of a Matsukata Cabinet had been given up in despair by some of the papers favourably inclined to him—was brought about by the withdrawal of the senior statesmen from the scene. After Count Matsukata proceeded to the Palace on the morning of the 17th inst., to ask the Emperor, for the third time, to relieve him of the task of forming a Cabinet, the seniors held a conference at the residence of Count Kuroda, and determined to no longer participate in the negotiations for the organization of a Ministry, thus leaving the Count to do just as he pleased in the matter. Upon the Count joining the meeting, the first thing he heard was the announcement of their determination. The Count then proceeded to the residence of Viscount Takashima, with whom he held a *little-a-little* council for a few hours, after which he drove to Waseda. The conference between Count Matsukata and Count Okuma lasted from 6 p.m. to 1 a.m. next morning. At this conference the constitution of the new Cabinet must have been determined, for on the morning of that day Count Matsukata proceeded to the Palace, to be received in audience by the Emperor, to whom he announced the accomplishment of the task of reorganizing the Cabinet in obedience to the wishes of His Majesty. The ceremony of his formal nomination as Minister President was performed on the afternoon of the 18th inst.

On Saturday, a long discussion was held at the official residence of the Premier, the discussion lasting from 8 a.m. till half-past 6 in the evening. The meeting was attended by Count Matsukata, Count Okuma, Marquis Saigo, Count Kabayama, and Viscount Takashima. Marquis Yamagata and Counts Kuroda and Inouye were also to have attended the meeting, though not to take an active part, but did not make their appearance. The *Yomiuri* and the *Mainichi*, especially the former, print an alleged account of what took place at that Council. According to them, Count Okuma was the first to speak, dwelling at length on the necessity of cordial union among the members of the Cabinet, especially with reference to the programme that the new Cabinet should adopt. The Count observed that the failures of previous Cabinets were traceable more to dissensions within than to causes operating from without. Therefore it was imperatively necessary for the members of the new Ministry to present a united front and to resolve on surmounting any and all obstacles that might be thrown in the way of measures they had once decided on carrying out. The *Yomiuri* goes into more detail. Count Okuma observed, it says, that the Government must be prepared to hold themselves responsible toward the people. In other words, the new Ministry must be formed on the principle of *Sekinin Naikaku* (cabinet responsible to the people). The extension of individual rights is a fundamental principle of constitutional politics, and hence the new Ministry must resolve on purging the Government of its accumulated abuses. Not only must the freedom of press, platform, and meeting be extended, but the special municipal system, that now puts a curb on the free exercise of individual rights, must be resolutely reformed. The expansion of the national armament is a subject that admits of no gainsaying, while as for finance, viewed from the standpoint of national resources, there were ample hopes of its being adjusted satisfactorily.

A half-past 11 a.m. on Sunday, Admiral Count Kabayama, and Viscount Takashima, Minister of Colonization, were nominated by the Emperor as Minister of Home Affairs and Minister of War respectively, the Viscount to direct the affairs of the Department of Colonization in addition to those of War. At the same time, Marquis Oyama and Count Itagaki were relieved of office. The Emperor has ordered that treatment similar to that extended to him while in the Cabinet is to

be accorded to the Marquis. Baron Ito was also relieved at his own desire of the Chief Secretaryship of the Cabinet. Mr. Takahashi Kenzo, ex-Director of the *Official Gazette* Bureau, and editor of the *Osaka Asahi*, succeeds the Baron.

Count Matsukata remained a short while at the Palace after the nomination of the new Ministers of Home Affairs and War and consulted with the Emperor. The new Premier returned to his official residence a few minutes after 12 o'clock, and then another Council was held on the lines of the meeting of the day before.

Marquis Saionji and Viscount Yoshikawa have firmly resolved on resigning and Mr. Shirane is also believed to be of the same resolution. Mr. Shirane is suffering from dysentery and does not receive any visitors. Viscount Enomoto tendered his resignation on Saturday last, though he may remain in office if asked by the new Premier to do so. The successors of the other three statesmen are not yet definitely settled, though the *Yomiuri* avers that Prince Konoye, member of the House of Peers and President of the Nobles' School for Boys, will be nominated to succeed Marquis Saionji. The *Mainichi* protests strongly against admitting Count Goto into the Cabinet. It does not hesitate to say that his admission would impair its credit in the eyes of everybody.

It seems, from an account given in the *Asahi*, that the new Cabinet will not announce its long discussed platform. Both the Premier and Viscount Takashima have told those who suggested this plan that they did not see any necessity for so doing. Viscount Katsura, Governor-General of Formosa, has gone to Oiso, ill-health necessitating the step. The Tokyo papers say that he will resign his post. Count Inouye also went to the seaside when the new Premier was gazetted, without even telling his family of his determination. Count Okuma is suffering from a severe attack of toothache.

REASONS FOR THE CABINET CRISIS.

One of Count Matsukata's strongest points as a financier is the skill he has always shown in obtaining the confidence of the leading business-men of the nation. Before undertaking any measure or inaugurating any policy, he invariably consulted the principal merchants and manufacturers, understanding thoroughly that without the co-operation of these men he could not hope to succeed. The *Taiyo* now alleges that Viscount Watanabe's resignation was due primarily to his failure to work in unison with the great traders and capitalists: in other words, to his departure from, or inability to follow, the routes so carefully adhered to by Count Matsukata. In proof of this assertion, the *Taiyo* points to the fate of the loan of ten millions which the Treasury attempted to float a few months ago. It is absurd to suppose, says our contemporary, that Japanese capitalists were unable to put up such a paltry amount. The truth is that they had not been properly approached beforehand, and the Minister of Finance recognised his error when the time for remedying it was past. Stated briefly, the *Taiyo's* idea is that the leading merchants and capitalists have no faith in the skillful carrying out of the *post-bellum* measures unless they are directed by Count Matsukata; and Marquis Ito, whose sensitiveness to the public pulse is proverbial, perceived that successful finance would be out of the question unless the portfolio of the *Okurasho* were in Count Matsukata's hands. It should be noted, perhaps, that the *Taiyo*, having always been a strong supporter of Count Okuma and the *Kaishin-to*, can not be acquitted of a tendency to bias. Neither are we surprised to find that this plausible reason for Viscount Watanabe's retirement is extended, by the same authority, to the case of the Foreign Minister, whose Korean policy, it asserts, has so lowered this Empire's prestige that Japanese merchants and capitalists shrink from investing their money in a country where so little consideration or protection is to be looked for. Such a criticism was to be anticipated, nor can we pretend to think that it is entirely without foundation.

THE PRESS AND THE NEW CABINET.

The Ministry not yet being completely organized, the greater portion of the vernacular press has reserved its energies for the present in the matter of criticism, but some papers have a few words to say. Before Count Matsukata was gazetted Premier, the *Yiji* observed that those persons who felt annoyed at what they considered an unconscionable tardiness betrayed their ignorance of the present state of Japanese politics. The administration of this country is in a transition stage, and therefore persons must take into consideration all outside influences while paying equal attention to any compromises that are effected within.

The *Kokumin* can not pretend to say that the constitution of the Cabinet is sound, but it can aver that it possesses the principles upon which to build a firm government. The present Cabinet is based on the confidence of both the Court and the people. It holds that the confidence reposed in the new Premier by the Emperor is greater than that enjoyed by the ex-Premier, or Marquis Yamagata, or Count Inouye. At the same time, the business circles of the Keihan districts, and all the farming, industrial, and trading communities throughout the country, base firm expectation on the Matsukata Cabinet, while Count Okuma's installation in the chair of the Foreign Office would meet the desires of nearly the whole of the country. Count Kabayama and Viscount Takashima are generally credited with having now passed beyond the narrow pale of clannism.

The *Nippon* states that, owing to its birth amidst hostile surroundings, the new Cabinet's policy will be of the feeblest. Even before it was ushered into being it encountered the opposition of civil and military circles. It is confronted by the rank and file of the Liberals; it has estranged the Unionists, and is not liked by a section of the Progressive Party. Its free movement will be checked by the remnant of the preceding *Genkun* Cabinet. No wonder, therefore, the Cabinet rests on a feeble basis. However, it will evoke the sympathy of those who are of humane disposition, for in respect of justice and impartiality, the present Cabinet will excel the last. The *Nippon* compares the Matsukata Ministry to the Southern Court the during Civil dissension, between Takauji and Yoshisada. The latter was beaten, yet the sympathies of the people were with his cause. Human sentiment is always disposed to side with the weak.

The *Tokyo Shimbun* prints some strong invectives against the new Premier. It accuses him of having overthrown the last Ministry by mean shifts and despicable devices. The Premier is represented by this journal as having obstructed the financial measures of the last Cabinet, with the help of such millionaires as the Iwasaki and the Matsumoto (of Osaka), with whom he is connected by ties of matrimony. It alleges that he instigated Viscount Takashima to make excessive demands for the Colonial Department, thus forcing Viscount Watanabe to resign the portfolio of Finance. In short, the Liberal organ charges Counts Matsukata and Okuma with being political robbers and deliberate violators of the principles of constitutional government.

CURRENT POLITICS.

On the 20th and 21st inst., Marquis Saigo, Minister of the Navy, Count Kabayama, Minister of the Interior, and Viscount Takashima, Minister of War and of Colonization, met at the official residence of the Premier, and discussed with His Excellency matters relating to the organization of the new Cabinet. Count Okuma also was to have been present, but the severe pain that he is suffering from his teeth confined him to his residence on both days. The meeting of the 21st was chiefly occupied with proposals that Count Okuma had submitted on the 19th. On the conclusion of the conference, the Premier proceeded to the Palace, and reported the result of the dis-

cussion to the Emperor. At about half-past three on the same day, His Excellency visited Count Okuma at Waseda, and talked with for about an hour and a half. A satisfactory understanding was arrived at by the two statesmen, and Count Okuma's entry into the Cabinet having been definitely settled he was gazetted Minister of Foreign Affairs on the 22nd inst. It is alleged that the views enunciated by the Count at the meeting on the 19th, were of such a character that the three Cabinet Ministers present on that occasion found much difficulty in endorsing them, and the conference between them and Count Okuma threatened to develop serious complications. But on that evening and during the next day several consultations took place, and mutual concessions having been made, a consensus was finally reached, so that a formal meeting between the Premier and Count Okuma was alone needed to consummate the arrangements for the latter's admission to the Cabinet. The *Fiji* notes that the Cabinet has not yet arrived at any decision about the portfolios of the Departments of Education, Justice, Communications, and Agriculture and Commerce. The choice of Ministers for those positions will be made immediately after Count Okuma's installation at the Foreign Office.

The views of the vernacular press are divided as to the selection of statesmen for the above four Departments. Even Prince Konoye's entry into the Cabinet as Minister of Education, though regarded by some journals as virtually settled, now appears to be problematical. The *Fiji* and others tell us that the Prince is not inclined to accept a portfolio, since he considers that such a step would be premature, and his opinion in that sense is so definite that no pressure is likely to influence him. The candidates thus far mentioned by the press are Mr. Kiyoura, Vice-Minister of Education, and Mr. Kojima Iken, formerly Chief Judge of the Supreme Court, for the portfolio of Justice; Mr. Yasuba, member of the House of Peers, for that of Agriculture and Commerce; the names of Counts Oki and Goto are also mentioned in the latter context, but it seems improbable that they will prove acceptable to the new Ministry. The Premier, on his way back from Count Okuma's residence on the 19th instant, called on Viscount Enomoto, doubtless to ascertain the latter's attitude towards the policy of the new Cabinet. It must soon become definitely known whether the Viscount will resign or remain in office.

With regard to the prospects of the new Cabinet in the Diet, it is scarcely possible yet to speak confidently. The *Fiji Shimpō*, however, notes that the strength of the various political parties in the Lower House is as follows:—

The <i>Shimpō-to</i> (i.e. <i>Kaishin-to</i> and amalgamated sections of the Opposition) ...	94
Members not registered in, but usually supporters of, the <i>Shimpō-to</i>	5
The <i>Fiyū-to</i> (Liberals).....	107
Members not registered in, but usually supporters of, the <i>Fiyū-to</i>	4
The National Unionists.....	33
Independents	57

Total 300

It will be seen that the question of a majority depends on the attitude of the National Unionists and the Independents. Our contemporary alleges that eleven of the Unionists will find themselves precluded from opposing a Cabinet in which Counts Matsukata and Kabayama, and Viscount Takashima hold portfolios, and that of the Independents, the Extremists (*Ko-ha*), numbering 22, and 19 of the Moderates will vote for the Cabinet's measures. Thus the Ministry can count on a following of 151 members, and if to these be added the five Liberals holding official positions at present, namely, Messrs. Hoshi Toru, Sakurai Tsutomu, Ishizaka Shoko, Misaki Kamenosuke, and Sukeno Michichika, the Government's supporters aggregate 156. It is difficult to appreciate the soundness of these figures. But in truth they can not be of much value. No forecast hitherto made at such an early date concerning parliamentary contingencies has proved correct, even under circumstances far less perplexing than those that now exist.

THE SEPTEMBER FESTIVAL AT NIKKO.

It was fondly hoped that the presence of His Imperial Highness the Crown Prince at Nikko this year would have prompted some special display of magnificence in connection with the autumn festival. But in truth Nikko's resources for festival purposes are absolutely inelastic. Nothing is available except a quantity of very old and very soiled vestments and armour, and so soon as these have been expended in pranking out some scores of toil-worn coolies, horny-handed artisans, and other varieties of weather-beaten bread-winners, the potentialities for parade are at an end. When the expectant tourist finds himself seated under a canopy at the end of the noble avenue that leads to the Shrine of Gongen, and catches glimpses, through the great gateway, of yellow, purple, and white robes, fluttering hither and thither, lances bristling in phalax, and sunbeams glinting on armour, he experiences a thrill of happy forecast, and prepares to take accurate mental notes of a grand pageant. But, after weary waiting, he discovers with bewilderment that what he has come out to see is a long procession consisting, in chief part, of the very men that have become familiar to him in his excursions as bearers of *kago*, runners between the shafts of *jinrikisha*, and porters of tiffin-baskets; no longer, indeed, clothed chiefly in the skins that God gave them, but decked out in faded, moth-eaten, and soiled garments, two or three centuries old and not looking a day younger than their age. It is not a spirit-stirring spectacle, and the insignificant parties of loungers that turn out to view it, do not trouble themselves to be either critical or enthusiastic. Indeed, there appear to be only two men that take it really seriously. One is the leader of the procession, the eloquence of whose strut has never been surpassed on any stage; the other, an ancient priest of tall stature who beats the great drum, delivering every stroke as though he were hammering a sentient and possibly ferocious monster, and as though the spectators ought to appreciate and applaud his temerity and peril. Certainly the one and only object of beauty and gorgeousness at the festival this year was the gold brocade covering the table at which the Prince Imperial sat, and it goes without saying that the attention bestowed by the spectators on the procession itself was as nothing compared with the interest centering upon the future ruler of Japan. The Prince looked bright and healthy. Nikko air seems to have agreed with him, for after two years during which His Imperial Highness caused considerable anxiety by remaining absolutely stationary as to weight, the scales are now beginning to tell a different and more satisfactory story. On the Prince's left sat the mother of the Emperor and on her left His Imperial Highness' mother. The ladies were in Japanese costume, and the Prince wore, as usual, a shooting coat of black cashmere, light trousers, and a straw hat. His Imperial Highness may often be seen walking about in Nikko with a small retinue. Two or three times he has visited the apology for a tennis court that some foreign sojourners have had prepared on ground kindly lent by Baron Iwasaki. The Prince evidently takes much interest in the game. He has signified his desire to play, but has been recommended by his medical advisers to defer commencing until next spring.

IMPERIAL BENEVOLENCE.

Their Imperial Majesties the Emperor and Empress have made the following munificent donations for the relief of sufferers by the recent inundations:—To Gifu Prefecture, 10,000 yen; to Shiga Prefecture, 7,000 yen; to Miye Prefecture, 6,000 yen; to Aichi Prefecture, 4,000 yen; to Kyoto City, 4,000 yen; to Hyogo Prefecture, 2,500 yen; and to Fukui Prefecture, 2,000 yen; the total grant being 35,500 yen.

THE "KOKUMIN SHIMBUN."

On the 15th instant the *Kokumin Shimbun* published its 2,000th issue. The day's paper was filled with congratulatory poems and letters—among the latter we noticed two from well-known foreigners—and consisted of eighteen pages. It gave as a supplement an excellent large-sized collytype reproduction of a landscape by the prominent artist Kubota Beisen, one of the *Kokumin's* "discoveries, and erstwhile war correspondent in Korea and China. The paper on the whole distinctly reflected credit on the management, and was, outside of the many elegantly worded poems, filled with interesting matter. Though opposed to the *Kokumin*, we heartily congratulate our contemporary upon the completion of six successful years of existence. In the leading article, Mr. Hitomi, the editor now replacing Mr. Tokutomi—who arrived in London in the early part of this month—gives a breezy sketch of the *Kokumin's* history. It started in February, 1890, with a subscription list of two thousand only. From this the paper went on until, during the war-months, the subscribers numbered over twenty thousand. At present, it is said, the average issue is fifteen thousand copies. "The history of our paper," says the editor, "has been one of constant struggle. It has generally sided with the Opposition, but ever held independent views. We cannot complain of any over-great petting on the part of the people; yet we have held our own from first to last. The *Kokumin* has been attacked at various times by enemies from every point of the compass. At one time we espoused, for a while, the cause of the Liberal Party; but now we are thoroughly hated by the members of that party. Stubborn educationalists, superficial loyalists, and prejudiced scholars have all waged war with us at times. When we were suspended for the fourteenth time—the ban on this occasion was not removed for 138 days—it was the guerdon of our warfare with clan Government. . . . That which we have thought advisable to say we have never hesitated to say freely. Our journal received undoubtedly great and favourable impulse for its energetic work during the war-months; but our present position is still more due to the fact that we have even held aloof from partisan politics, and kept up an independent opposition of our own." The editor further remarks that the *Kokumin* has long endeavoured to expose the "rottenness" of the *Fiyū-to*: "Where is that party now? Then too, have we always argued in favour of a Coalition Cabinet, with Counts Matsukata and Okuma at the head; and now we are about to see this wish realised. But even towards such a Cabinet the *Kokumin* will still pursue its independent policy. We form no company with men, but with justice; we are opposed to no man, but to sin and crime. We do not espouse the cause of any political party, but we may laud its doctrines and methods. We do not recklessly attack the Government, but we may its plans and working. In our eyes there is neither *Genkun*, nor Government, nor political party. There is but the single Nation." The policy endorsed by the *Kokumin* is put under no less than fourteen headings. We give a brief summary of the whole:—(1) Domestic Policy; to do away with the last vestiges of feudalism and bring about a Responsible Cabinet; (2) Foreign Policy; this should be strong and so powerful as to maintain the honour and guarantee the prosperity of the country, while Japan should have a deciding vote in all matters affecting the Northern Pacific and the Far East in general; (3) Finance; methods must be chosen to maintain the economical equilibrium of the nation after the War. We (*Kokumin*) urge the practice of frugality and temperance; (4) Army and Navy; these shall be kept sufficiently powerful to preserve peace and tranquillity in the Far East and the Pacific. Our navy must be supreme in the Pacific Ocean, seas of Japan and China, from the Philippines in the south to Korea in the north; (5) Korea; the independence of Korea shall be maintained at all costs; (6) Philippine Islands; sympathy must be expressed with those now trying to

throw off the tyrannical yoke of Spain. When the war of independence fairly begins we must protect Japanese life and property in the Islands, and assist in restoring order. Let us help make the islanders independent, or else buy up the whole group! (7) the Liaotung Peninsula; we must positively combat the temporary or perpetual occupation of Liaotung by any foreign country whatever. (8) Formosa; our policy in the Island must lie midway between mildness and severity. The use of opium and the wearing of queues must be strictly prohibited. A poll-tax should be paid by every Chinese coming to reside in or visiting the Island. The civil and military officials must be selected from among the best of their kind in Japan. (9) Encouragement of Talent for Government service; let gifted men be gathered from all parts of the Empire, and the balance be kept between their talents and the offices they fill. Men should rise on their abilities only. Civil Service examinations ought to be improved in this sense. (10) Enlargement of the Franchise. The present restrictions relating to age and property should be withdrawn. There must be more representatives among the electors of the mercantile and labouring classes. (11) These Liberties, we insist upon, free speech, free meetings, and a free press. (12) Farmers, labourers and merchants; for the development of agriculture, industry, and trade the necessary machinery must be procured. So soon as we have outrivalled foreign products, see that our manufactures are properly protected. We need more Consulates to ensure the interests of Japanese merchants abroad. (13) Education; maintain a soldierly morality in the schools, and search the world over for new knowledge. Our schools must be so constituted as to turn out representative citizens. (14) Literature and the fine arts; every encouragement should be given to the growth and spread of literature and art. Bounties or scholarships should be established for excellent work. (15) Society; we urge the building of more Charity Hospitals, Homes for Poor Boys and Girls, and Disabled or Aged Persons, thus lessening the sum total of distress. This is certainly a broad and, in many respects, a most excellent platform. The editor then winds up with the statement that the *Kokumin* will ever side with those who do right and work for the good of the nation; not, however, with the men as such, but with their principles. "But should even a friend make a serious blunder, we shall never hesitate to strike the needed blow: not that we love Caesar less, but Rome more!"

COUNT OKUMA.

"At the meeting of the five statesmen—Count Matsukata, Count Kabayama, Marquis Saigo, Viscount Takashima, and Count Okuma—on the 19th instant," writes the *Fiji Shimpō*, "Count Okuma urged the adoption of the system of responsible Cabinets, arguing that the obscurity now enveloping the appointment and retirement of Ministers was not in accord with the principle of constitutional Government. His proposition did not evoke any special objection, but neither was it received with marked approval. Considerable discussion ensued, and no final decision was reached. The Count also insisted that perfect freedom of the press and of public meeting should be inaugurated, and that the suspension of newspapers should be abolished. These views, also, elicited no marked opposition. Count Kabayama, however, Minister of State for Home Affairs, asked what course should be pursued in the event of a newspaper's publishing diplomatic or military secrets, and Count Okuma replied that special provision should be made to meet such contingencies. This problem, too, did not find a unanimous solution, and is to be made the subject of further discussion."

Count Okuma being the central figure of the new Cabinet, the vernacular press has naturally a great deal to say about him. The *Tokyo Asahi*, for example, professes to be in a position to describe exactly the propositions advanced by him at the meeting of the 19th instant, when Count Matsukata, Count Kabayama, Viscount

Takashima, and Marquis Saigo assembled to discuss the policy of the Cabinet. The *Tokyo Shimbun*, also, under the caption of "a great secret," informs the public that the "tooth-ache" supposed to have prevented Count Okuma from attending the subsequent conferences of his colleagues, and even from proceeding to the Palace to receive his nomination, was not a tooth-ache at all, but an attack of acute pain in the stump of his amputated leg. We do not believe that the details of the discussion between the five Ministers on the 19th instant can possibly be known to the *Asahi*, nor do we think that the Liberal organ (*Tokyo Shimbun*) is likely to have obtained special information about the state of the Count's health. The public will not have to wait long before something definite is known about the new Cabinet's political programme, and in the meanwhile it would be merely misleading to reproduce untrustworthy rumours.

CURRENT POLITICS.

Mr. Shirane, Minister of Communications, tendered his resignation on the 21st inst., but it was sent back, the Premier intimating, at the same time, by letter, that he should like to see Mr. Shirane. Next day, Marquis Saigo called on Mr. Shirane on behalf of the Premier and tried to dissuade him from resigning, but Mr. Shirane adhered firmly to his resolution, and again submitted his resignation. Viscount Nomura, ex-Home Minister, is now expected to succeed Mr. Shirane, and it is said that the Premier and Marquis Saigo are pressing him to accept the portfolio of the Department with which he was connected a number of years ago.

Prince Konoye is not inclined, it is alleged, to become Minister of Education, and a section of the Extremists in the Upper and Lower Houses of the Diet have sent for Viscount Tani, now leading a retired life in his native place, Tosa.

The desire gathers force that Mr. Kiyoura, Vice-Minister of Justice, should receive the portfolio of that Department.

Viscount Enomoto has decided to remain at the Department of Agriculture and Commerce, in deference to the urgent representations of Counts Matsukata and Kuroda. It was Viscount Enomoto that acted as proxy for Count Okuma when the latter was nominated Minister of Foreign Affairs on the 22nd instant, at the Palace.

Changes more or less numerous are expected in subordinate posts. Mr. Hoshi, Minister to America, will probably resign, and Mr. Komura, Vice-Minister of Foreign Affairs, is thought likely to succeed him. The post vacated by Mr. Komura may be given to Mr. Oishi, ex-Minister to Korea. As successor of Baron Suematsu, Chief of the Legislative Bureau, who has already tendered his resignation, Mr. Tazuki, now Chief of the Imperial Archives, is mentioned. Baron Sonoda, Chief of the Metropolitan Police, is another important official resolved, it is said, to sever his connection with the Government. As successor of Viscount Katsura, whose decision to resign is understood to be irrevocable, Lieut.-General Baron Nozu, Commander of the Sendai Division, is mentioned by some of the vernacular papers.

The *Fiji* has a long note intended to lay bare the true relations of the *Gen-kun* and Count Matsukata in connection with the organization of the Cabinet, to defend the former from the charge of excessive interference, and the latter from that of indecision. When the four senior statesmen, Marquis Yamagata and Counts Kuroda, Inouye, and Matsukata, were first enjoined by the Emperor to expedite the formation of a new Cabinet, they promised each other that whoever might undertake the task of forming the Cabinet, the others should forbear to interfere in the matter of selecting candidates for the portfolios, but that should they be asked by the one nominated Premier to undertake the task of dissuading this statesman or that from resigning, or persuading such another to enter the Cabinet, they would do everything in their power to meet the wishes of the Premier. When Count Matsukata declared his resolve to accept

the Premiership, on the evening of the 10th inst., the first difficulty that he experienced was to find a successor to Marquis Oyama. He asked the opinion of Marquises Yamagata and Saigo on this point, and was told that only two competent candidates could be recommended, namely, Viscount Kawakami, Vice-Chief of the Central Staff Board, and Viscount Katsura, Governor-General of Formosa. It was afterwards found that Marquis Oyama's opinion also coincided with that of the above two statesmen. Investigation showed, however, that Viscount Kawakami could not leave his present post, so that there was in reality no room for choice. Accordingly, Marshal Yamagata, having been entrusted with the task of persuading the Governor-General of Formosa to accept the portfolio of War, sent for Viscount Katsura on the evening of the 10th inst., Count Matsukata having then consented to place himself at the head of the Cabinet. The Governor-General did not readily fall in with the suggestion, and it was not till the next day that Marshal Yamagata obtained a favourable answer from him. The Marshal at once conveyed the news to Count Matsukata, and the latter expressed his satisfaction in warm terms. On the 12th inst., Count Kabayama happened to call on Viscount Takashima and told him that the candidate for the War Office had been definitely settled. The Viscount was surprised to hear the news. He observed that, if that was so, he could not see how Formosa was to be governed, to say nothing of a promise that he himself had received from Count Matsukata about a week previously in the matter of the portfolio of War. The embarrassment caused by this complication necessitated another gathering of the *Gen-kun*, all of whom were surprised to learn that such a promise had been made to Viscount Takashima so early as the time when Marshal Yamagata having declined to accept the Premiership, the senior statesmen were endeavouring to persuade Marquis Saigo to form a Cabinet. No very serious import, however, was attached to the incident. Count Matsukata, however, having been asked about the affair, denied that he had made any definite promise, and said that he had merely alluded to the contingency, but, at the same time, he expressed a desire to abandon the task of forming a Cabinet. He was again persuaded, however, to continue his efforts, the senior statesmen promising to arrange the complication about Viscount Katsura. Still Marshal Yamagata, finding himself in a very awkward position, asked Count Inouye to see the Viscount, and restore things to their *status quo ante*. Accordingly, the Count called on Viscount Katsura that evening, and conferred with him until three o'clock next morning, but all to no purpose, for the Viscount, indignant at what he considered an act of bad faith on the part of Count Matsukata, declared that he could not give any definite answer until he had seen the latter. When the Count reported to Marquis Saigo the result of his unsuccessful mission, the Marquis was much perturbed, but it was considered best that Count Matsukata should apprise the Governor-General of his willingness to meet him at an early date. Meanwhile, the illness from which the Governor-General was suffering became so much worse owing to his mental agitation, that he had no choice but to go to Oiso for the benefit of his health. The *Fiji* declares the foregoing particulars of the last Cabinet crisis were obtained from an influential politician.

THE MUCH ABUSED POLICE.

"The slanderers who assert that Japanese police always treat civilians with insolence," writes a correspondent from Nikko, "might possibly be ashamed of themselves—though indeed it is doubtful whether they retain any capacity for such a sentiment—had a recent experience of mine befallen them. My family went to Nikko at the close of July to spend some weeks there. Shortly afterwards, the Crown Prince arrived, and every one turned out to observe the event, among the number a young lady staying with my family. To her surprise a policeman ordered her to take her hat off when the Prince

was about to pass. She declined to obey, and, being conversant with Japanese, told the constable that it would be an act of rudeness, not politeness, for a lady to remove her hat under the circumstances. The constable did not press the point, and there the matter ended, the young lady being rather amused than annoyed. But some weeks later, being myself in Nikko, I received a visit from the local Chief of Police, who not only apologised for the man's mistake, but also begged to be informed whether any complaints had reached my ears from other foreigners, and stated that he would be grateful for any suggestions calculated to promote the comfort and convenience of foreigners in Nikko. I may add that, singular as I should deem this experience in other countries, it did not at all surprise me in Japan, where I have never failed to meet with the utmost courtesy and helpfulness at the hands of the police. By way of corollary, as illustrating the other side of the question, namely, the difficulties that the police have often to contend with in dealing with foreigners, allow me to describe an incident that I myself observed during the festival on the 17th instant. The procession, emerging from the gate of the principal temple, wended its way slowly and solemnly down the broad avenue upon which the entrance to the Prince Imperial's residence gives. On the bank overlooking this avenue, a kind of canopy had been erected, and beneath it were chairs and tables for the convenience of the Imperial party. The space on the avenue immediately in front of the canopy was naturally kept clear by the police, so that the Prince might have an uninterrupted view of the procession. All the rest of the westerly side of the avenue, as far as to the edge of a rivulet running down the centre, was given up to the use of spectators, but the space between the rivulet and the high stone fence on the other side was reserved for the procession: no Japanese attempted to encroach upon this space, or seemed to think of encroaching upon it, and no careful observer could fail to perceive that it was purposely reserved. Nevertheless, just as the centre of the procession was passing past the Imperial pavilion, a foreign gentleman accompanied by two ladies, walked down between the procession and the far side of the avenue, the three thus becoming immediately the most conspicuous objects in the pageant. It is true that the gentleman doffed his hat as he passed the Prince Imperial, but the whole performance was an intrusive solecism that might with justice have been resented by the crowd, or peremptorily rebuked by the constables on duty, when we should probably have heard another marmur about anti-foreign sentiment or police incivility. It did not appear to me that the actors in this case were influenced by the slightest intention of rudeness: the affair was probably an instance of misunderstanding, pure and simple, that would not have occurred had the offenders been in a better position to comprehend the arrangements—that is to say, had they been able to communicate with the people around them. But I have often seen such things happen in Japan, and I doubt whether we can reasonably expect all Japanese to attribute them solely to want of knowledge."

THE POPULAR VERDICT.

A correspondent writes from Tokyo:—"With the sole exception of the Liberals and their organs, there never has been a more popular Cabinet than the one now called into existence. Even the irreconcilable press, like the *Nippon*, *Kokumin*, *Yorodsu*, and others, have something good to say in behalf of the new Ministers of State, or prophesy that their work will prove of greater national advantage than that of any foregoing Cabinet. Interesting is it to note, too, that the students of the metropolis and larger scholastic centres are loud in their expressions of satisfaction. Count Matsukata is very evidently the most popular of Minister Presidents; for even those that speak slightly of his diplomatic talents give him full credit for down-right honesty of purpose and an unparalleled adroitness in the management of the national

finances. Noticeable, in particular, is the gratification expressed in commercial circles. There has been, for some months past, an ill-defined feeling of anxiety in the money-market, which was in no wise attributable to the many disasters by land and sea under which the country has had, this year, to groan. Rice is going up in value by leaps and bounds, 9 *sho* and 7 *go* being retailed per *yen* in June, while the maximum obtainable for the same sum now is less than 7 *sho*: in other words, the difference is very nearly 20 per cent. Shares have been selling at what holders consider absurdly low rates, the "bears" helping to keep quotations as far down as possible; and withal there has been an over-great number of adventurous schemes brought prominently before the public, particularly in the matter of railways and joint-stock corporations. Hence the tightness of the money-market, and hence, too, the feeling that things were going from bad to worse: especially in consideration of the large deficit in the Formosan Budget and the popular dislike to and disbelief in the Tobacco Monopoly. But with Count Matsukata at the head of the nation's finance, every one looks forward with certainty to a beneficial change: if not to seven fat years, at least to steady amelioration in the money-market and a juster management of the nation's economics. That this feeling is deep-seated is further proved by the immediate rise in the price of "gilt-edged" shares, and the appreciation even of others that have been for some time in disfavor. So both Counts Matsukata and Okuma are looked upon as "stalwarts," who will do all they can to relieve the momentary strain and place things on a sounder and more wholesome basis. Vice-Admiral Kabayama, of course, is a popular hero, the story of how he brought the *Saikyo Maru* through that memorable sea-fight on the Yalu being still fresh in the memory of the people. "If," says a Tokyo journal, "he exhibits the same degree of cool courage and ardent patriotism in the management of the Home Department as he did when steering the *Saikyo* full for the oncoming torpedo of the *Ping-yuen*, we shall have both skilful and straight-forward management of our country's domestic affairs." "It is, on the whole, novel and pleasing to find that a Cabinet acceptable to the popular majority should, after so much discussion and dissension, have been brought together; and one can only hope that the confidence of the nation, in this instance, is not altogether misplaced." We ourselves regard the above as far too rosy a showing, but since it represents one phase of opinion, we lay it before our readers.

MISCELLANEOUS TOPICS.

The Department of Education is contemplating an increase in the number of students sent abroad for the further prosecution of their studies. Hitherto the funds set aside for this purpose by the Department of Education enabled the latter to support only twenty students. It therefore follows that the number despatched in one year never exceeded ten. Now supposing that four years is the average time allowed, five students return per year, sometimes there are more, and, of course, sometimes less. The recent sudden increase in the demand for experts and scientists has demonstrated that the number of foreign-trained professors and others, are quite insufficient, and during last session the Department of Education succeeded in obtaining the permission of the Diet to send twenty additional students abroad during the current fiscal year. The Department does not consider this increase sufficient, and contemplates obtaining more funds next session to support sixty students abroad, gradually adding to the number, until by 1905 one hundred and sixty men will be training in foreign countries.

A special committee appointed by the Department of War to investigate matters relating to improvements in military equipment and commissariat, has concluded its researches in regard to the maximum limit of weight that can be carried by the infantry. The Committee has

decided that 21 kilogrammes 367 grammes is the maximum burden for a foot soldier, this decision being based on the average strength of soldiers in the first and second years of service.

Dr. Kochibe, an expert in the Department of Agriculture and Commerce, delivered an interesting lecture on the productive capacity of Japanese collieries at the regular monthly meeting of the Japan Economic Society, a few days ago. The Doctor's opinion on this important question almost coincides with the views that Dr. Wada, ex-Chief of the Mining Bureau, published a short time ago. Dr. Kochibe showed that, unlike the coal-measures of England, America, and even China, the coal-bearing strata in Japan are very thin. At most the seams are only 20 ft. thick, while seams measuring 40 to 50 ft. deep are not rare in other countries. According to a geological survey concluded two years ago by the Geological Investigation Office, the collieries thus far working in Japan cover an area of 100 million *tsubo* approximately, and the coal in them does not exceed 500 million tons. Now the quantity of coal extracted in 1894 aggregated 4,280,000 tons, and it is conceivable that this will increase to six million tons per year at no distant date. But supposing the quantity mined yearly remains at five million tons, the coal measures of Japan will be exhausted within a century. Their life must necessarily be very short, and particular attention should be exercised to prevent waste and extravagance. It is true that these calculations are based on geological and mineralogical surveys, and are therefore largely hypothetical, but the Noshomusho, in accordance with a resolution passed by the Diet in its last session, intends to carry out, during next year, a more precise survey of all the coal beds of Japan.

MR. SONODA KOKICHI'S SPEECHES.

Probably the great majority of our readers are familiar with the name of Mr. Sonoda Kokichi, the popular and able President of the Yokohama Specie Bank. But not so many know that he served as an official for eighteen years before he became President of the second greatest bank in Japan. His most important official post was that of Consul-General in London, which position he held for seven years, and unquestionably he would soon have passed to the highest ranks of officialdom had he not been persuaded, in 1890, to accept the office of President of the Yokohama Specie Bank. The directors made a wise choice when they selected him, for under his able direction the Bank has prospered uniformly, and his reputation as a financier is now of the highest. At present he is travelling in the West, partly in connection with the management of the Chinese indemnity fund, the care of which has been entrusted to his bank, and partly to extend the Bank's business relations. A suggestion as to his doings abroad comes to us in the form of a luxurious little pamphlet, containing a few of the speeches delivered by him in English, and a full statement of the Specie Bank's constitution, articles of association, accounts, and so forth. To a remarkable knowledge of the English language and fluency in employing it, Mr. Sonoda adds a charming address, and it is always a pleasure to listen to the neat and appropriate little speeches that he seems to have at easy command whenever occasion requires an oratorical effort. The volume before us contains only a very few of his most recent speeches, and when separated from the circumstances under which they were delivered, they would not, perhaps, greatly interest our readers. We shall confine ourselves, therefore, to one quotation, namely the prefatory letter written by Mr. Sonoda and re-produced in facsimile:—

I trust that those who happen to read this little pamphlet will kindly remember that there is a bank in Yokohama which is struggling hard to do good to Japan's trade with foreign countries for universal benefit, and whose president is travelling all over the world to seek friendly co-operation from those who have any sympathy or any business connections with that distant empire, the Land of the Rising Sun.

SONODA KOKICHI.
President of the Yokohama Specie Bank.
San Francisco, June, 1896.

SILVER AWAITING REHABILITATION.

IT is very generally asserted that if free coinage of silver were established in the United States at the ratio of 16 to 1, gold would speedily be driven out of circulation and the Great Republic would become not bimetallic but monometallic, silver alone doing duty as a medium of exchange. Few people, however, seem to take the trouble of thinking out the processes by which this displacement of the yellow metal by the white would be effected, and some—as in the case of a recent correspondent of this journal—maintain that no such displacement would occur, their thoughtless contention being that Oriental nations, who themselves use silver for currency purposes, would gain nothing by sending it to America and carrying away gold in its stead. These phases of the question are easily disposed of. There would, of course, be little, if any, direct exchange of one metal against the other. People would not carry silver to the States, and with each ounce, costing originally 53 gold cents, purchase 126 gold cents for shipment abroad as bullion. Such transactions, however much they might be desired by holders of silver, would be impossible, for the simple reason that no one would be found willing to sell gold for silver at that rate. Many a European or American now resident in the Orient discovers a permanent obstacle to his return home in the fact that all his savings are invested in silver securities, and that to convert them into gold at the ruling ratio would produce a lamentable shrinkage in the outcome of long years of industry and hardship. Most delightful would it be for these victims of cruel chance, might they look forward to a time in the near future when, by merely carrying their silver to America, they could convert it into twice as much gold as it is now worth; but unhappily, even though the heroic programme of the free silverites became law, no such magnificent exit from the harrowing difficulty of the Eastern exile can be anticipated. Every owner of gold in the States would cling more tenaciously than ever to his store. It is estimated that the gold now held in bank reserves and in the Treasury aggregates some six hundred million dollars, and that a similar sum exists out of sight, that is to say, unregistered. Thus the grand total is from twelve to thirteen hundred millions of dollars. Evidently, from the moment of a free-silver-coinage system's going into operation, gold payments would be suspended, and the greater part of the above total would be employed as a reserve for placing upon a gold basis all the larger enterprises of commerce, manufacture, and insurance, the credit and prosperity of which would be fatally impaired unless such a step were taken. The case of insurance affords, perhaps, the most striking illustration.

Millions of people have for years been paying into American offices premia calculated in terms of gold to assure amounts similarly calculated. To convert into silver, at the ratio of 16 to 1, these gold amounts now standing at 30 to 1, and to assume that all the premia have hitherto been paid at the same ratio, would be the most gigantic fraud recorded in the history of the world. It would signify not merely wholesale robbery, but also a total loss of foreign credit by all American offices. Evidently, measures to prevent any disaster of that kind would be imperative, and the only effective step would be a special deposit of gold by way of reserve, or a transfer of investments to gold-using countries. Offices incapable of making such a deposit, or of realizing and transferring their investments, would cease to command public confidence. In short, America would need every ounce of gold she possesses; not a dollar of it would be sold for silver at the rate of 16 to 1. From that point of view, it is plainly incorrect to predict a sudden efflux of gold in the sequel of legislation now projected by the silver Democrats. An efflux there must undoubtedly be, inasmuch as, despite the restoration of silver to the rank of legal tender within the States, a large volume of payments abroad would have to be made in gold, and there would be no compensatory inflow, since payments to America would naturally be made in the cheaper metal, silver. But it would not be a sudden efflux, neither would it be accomplished by the commonly supposed process, namely, the import of silver into America and the export of a corresponding amount of gold. What has to be anticipated is that an immense demand would be rapidly developed for all American products and manufactures marketable in foreign countries. A commodity now procurable for not less than 30 ounces of silver within the States, and saleable abroad for an ounce of gold—omitting all question of charges and so forth—could forthwith be purchased in America for 16 ounces of silver, and would still find a market abroad at the old figure in gold. Here, then, would be the great field of operations. Instead of any futile attempt to exchange European or Asiatic silver against American gold, every ounce of available silver would be carried from the Old World to the New, there to be converted into dollars possessing a purchasing power that had suddenly augmented from one-thirtieth to one-sixteenth of their weight in gold. Of course prices would ultimately adjust themselves to this altered ratio: on the American side there would be a great inflation, on the European and Asiatic, a great depression, in the market quotations for all such commodities. But pending that adjustment, the tradal disturbance would be stupendous and wholly unprecedented. Its very magni-

tude is so difficult to contemplate that people regard it as a mere chimera and refuse to be alarmed by a scarcely conceivable contingency. With regard to the stores of silver bullion available for this colossal gamble, Mr. EDWARD ATKINSON recently published a most interesting analysis. Without following him into details, we may recapitulate his conclusions. First, Germany holds several millions of ounces of silver, remaining on her hands since 1873, when she called in all her silver coins—except a certain class of thalers—and re-issued only a fraction of them as subsidiary currency. Secondly, the States forming the Latin Union possess considerable quantities of silver coins which they are unable to keep in circulation, and which they are pledged to redeem at the ratio of 15½ to 1 should the Union be dissolved. Thirdly, China has great stores of "sycee," that is to say, clumsy "shoes" of silver, which are easily purchasable at a little over their bullion value. Fourthly, the ever-increasing output of the world's silver mines, in the face of the ever-depreciating value of the white metal in terms of gold, enables statisticians to calculate that silver bullion can now be profitably produced at a cost of less than 50 cents. in gold per ounce, and unquestionably the production would be greatly stimulated were the gold value of an ounce of silver suddenly doubled. From all these sources Mr. ATKINSON calculates that something like a deluge of silver would pour into the United States if the BRYAN platform became an accomplished fact. We sometimes wonder whether the very dimensions of the financial *coup* they are invited to make may not invest it with attractions in the eyes of Americans, who love big things so dearly.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

In the pages of the *Nihon Shūkyō*, a writer signing himself 東根, Tōkon submits to the consideration of readers a number of general observations bearing on the existing state of literature, many of which show considerable insight. A reputation for scholarship in Japan, says Mr. Tōkon, does not involve any great labour. Japanese scholarship is still in an elementary stage, in which ability to receive the thoughts of others rather than to originate is all that is required. The facilities for studying special subjects are still most imperfect. The plan usually followed is to consult such libraries as are accessible and to hunt through the book-shops for books bearing on the subject of investigation, and, when this proves inadequate, to try and find out by reference to foreign journals what are the best foreign works on the branch of learning pursued and then to wait until these books have been sent from some far off country. But the present rate of exchange has greatly affected scholarship, in that, though the money at the disposal of students is not more than it was ten years ago, the number of foreign works which it will procure is very much less. The prices have nearly doubled themselves. Mr. Spencer's "Sociology" used to sell at 4 yen per copy, it now costs 7 yen. Seeley's "Psychology" used to be obtainable at 2 yen 50 sen; it now fetches 4 yen 50 sen. But the Japanese scholar has another difficulty to

encounter. Added to the limited nature of the means at his disposal is the want of knowledge of the actual merits of the books he sees advertised in foreign journals. So that it not infrequently happens that he spends his money on works that are of little value to him. A few years ago I sent to Leipsic for five or six volumes whose titles attracted my attention. On their arrival I was quite disappointed with their contents. One of them I found to consist of only 20 pages, being nothing more than the report of one lecture. On relating this story to Dr. Katō Hiroyuki the other day, he told me that I was not the only sufferer in this way, since the late Mr. Nakamura Keiū, being interested in Mental Philosophy and seeing a book advertised "Will," ordered it, but found it to be a treatise on the making of Wills. When we consider that such a work as Fisher's "Modern Philosophy," in 6 vols. costs 50 yen, we see that modern scholarship implies means. One hundred yen will not go far in the purchase of books of reference. The Japanese who are sufficiently advanced to understand two or three European languages and to possess an elementary knowledge of Greek and Latin are usually graduates of the University, and by the time they have finished their college course they are not far off 30 years of age. As a rule they do not possess independent means, and hence are obliged to become government officials or school teachers, and to spend more than half their time in earning their living up to the age of retirement. Since they do not usually attain a greater age than 60, the time that they have for the close study of any special branch of knowledge is very limited, and it is hardly to be wondered at that the works they publish are of an inferior type.

The facts stated above, says Mr. Tōkon, show that the establishment of a large public library in Tōkyō is absolutely essential to the development of learning, and is a measure which the nation can afford to postpone no longer. It is reported that the Hibiyō Parade ground is to be utilised for this purpose, and that it is proposed to amalgamate the three existing great libraries, the Naikaku (Cabinet), the Tōkyō, and the Chiyoda libraries, and to purchase foreign works in sufficient number to form an establishment worthy of the nation. For many years it would be necessary to spend at least 100,000 yen in foreign works. It is said that this project will be carried out within five or six years. We see no reason why Japan should not turn out a race of students who will prove worthy imitators of the Germans in the point of minuteness of research. The habit of studying books for the sake of reproducing the knowledge acquired as if it were original, which is so often practised nowadays, is not to be commended. Investigation must be carried on in the first place for its own sake, without any thought about the utilisation of the information obtained. It is in the method of inquiry employed and in the patience with which fragments of the required knowledge is collected that the Germans excel, and it is these characteristics that we desire to see in the Japanese student. Much of the knowledge that we have hitherto acquired from foreign sources is by no means reliable. Instead of translating from original works, it not infrequently happens that the books published in Japan are translations of translations or worse still, are the translation of the opinions of prejudiced writers in reference to the lives or the views of the great men of some other country. To listen to what an Englishman says about an eminent Frenchman, or vice versa, is fatal to a right understanding of character. But we need something more than book knowledge for the development of our power as scholars. The mere bookworm is proverbially ignorant of the world, and draws all kinds of mistaken inferences from the facts that come beneath his notice. There is much to be said in favour of the methods of teaching pursued in the University, which may be summarised as follows. The subject is first defined in a general manner. Then the definitions of English, German, and French authorities are given in the words of the authors of these definitions. Criticism of these

definitions follows. Then the connection of the subject with other subjects is shown; after which a history of the numerous theories that have been maintained on the various questions at issue is given, and then commences an exposition of the subject itself. The lecturer has no time to dwell on all the opinions held by ancient authorities, and in many instances can do no more than refer the student to works which give these opinions in full. Now it is evident that this method of instruction aims rather at telling a student where information is to be found than placing him in immediate possession thereof. Hence in the case of men who after leaving the University are able to follow up their studies in home libraries, or in foreign lands, the system answers well, but in the case of those men who immediately after leaving the University go to the provinces in the capacity of normal or middle school teachers, it not infrequently happens that they exhibit all the crudities that mark the man whose education is incomplete, many of them lacking even the enlightenment of those of their fellow-citizens who have enjoyed no educational advantages. This, however, is not the fault of the system of teaching pursued in the University, but the result of failure to follow up the instruction received there by further study. There is no denying, concludes Mr. Tōkon, I think, that there is nothing in Japan to be compared with a University education. Neither the Keiōgijiku, the Dōshisha, nor the five Semmon Gakkō of Tōkyō are to be compared with the Imperial University. I myself regret that this should be so. I should like to see a rival of the University, as monopolies are bad whether in commerce or education. The projected Kyōto University may serve the purpose we desire, but from all accounts there is a great deficiency of men competent to occupy professorial chairs in the new institution.

The *Seikai-no-Nihon* devotes a portion of its space to the discussion of Fine Art. In the 3rd issue of this magazine a number of questions bearing on the present condition of Japanese art are mooted. The first subject dealt with is the difficulty of combining Japanese and foreign art. It is not easy to decide on the principles which should govern the professed harmony of the two systems, says the *Seikai-no-Nihon*. In practice the usual result of an attempt to follow in turn each of the methods is the production of a hybrid picture that resembles what we call a *nui* (a fabulous animal with the body of a tiger and the tail of a serpent, also called *kawosaru*). A successful combination of the two methods implies a thorough knowledge of both systems and ability to determine what elements in each are best designed for blending and to what extent the harmonizing can be carried without shocking the tastes of connoisseurs. In our opinion any attempt at elaborating a theory and acting on that theory must fail. If harmony is to be effected, it must come as the result of numerous experiments. In a word, it must have a natural and not an artificial origin.

Japanese painters need to make a greater use of colours. Foreign critics constantly complain that the human being of Japanese pictures resembles Greek goddesses rather than actual men and women. The outlines of their human figures need to be more clearly defined. In the opinion of some, to whatever extent foreign methods be adopted, the Japanese system of painting should be made the basis of instruction, as is done in the Bijutsu Gakkō. To mar the beauty of Japanese painting by mixing with it foreign elements, say these critics, would be most unwise. As long as the Japanese style is maintained efficiently, it will be sure to obtain an independent reputation. To adopt foreign methods *en bloc* would be a surrender of our right to occupy a distinct place in the world of art. Instead of being masters in our own sphere, we should become servants in the sphere of others. It is on this principle, that the Bijutsu Kyōkai takes its stand. Thus the Bijutsu Kyōkai is conservative and the Bijutsu Gakkō is progressive. The one is in favour of keeping the Japanese

system unaltered; the other is in favour of blending Eastern and Western systems to a certain extent, as long as the predominance of the former is secured. The Meiji Bijutsu-kai differs from the supporters of the Bijutsu Gakkō, being more pro-foreign than the latter body. The Meiji Bijutsu-kai is in favour of the adoption of foreign methods to the exclusion of Japanese, but thinks that Japanese artists should confine themselves to the representation of purely Japanese ideas. Just as France and England, say the advocates of this line of action, each has its favourite ideas and its peculiar method of pictorial representation of those ideas, so may Japan, while observing the principles that regulate foreign painting, find abundant scope for the expression of her individualism as a nation, and thus her pictures, though foreign in outward appearance, will be intensely Japanese in the thoughts which they suggest and to which they give definite utterance.

The most popular of modern works of art, concludes the *Seikai-no-Nihon* are undoubtedly what are known as *ukiyo-ye*. The manner in which these popular sketches embody impressions and represent nature's many fleeting moods bears a close resemblance to the effects produced by foreign painters. But in the colour given to the water and to the atmosphere Japanese painters leave much to be desired. One defect of Japanese painting is excessive minuteness. Such artists as Gekkō, Keishū, Yeisen, and Yoshitoshi, belonging to what is called the 正派 *Seiha*, in their younger days, perhaps from vanity, wishing to show what they could do, inserted into their pictures a large amount of work that was almost invisible. These painters seemed to think that there is some special merit about a picture that represents objects as diminutively as a photograph, whereas in reality this over-minuteness is one of the acknowledged weaknesses of imperfectly trained artists.

The organ we have just quoted has an article entitled "A Question for the Consideration of the Fine Arts Society," by Mr. Koyama Shōtarō. When speaking of fine art, says Mr. Koyama, Japanese are in the habit of taking it for granted that Japanese fine art has no rival in the world, and no one is ever heard to say a word against it. Among foreign artists there are not a few admirers of Japanese art, who have come to this country to make a special study of it. In America it is reported that a school for teaching Japanese painting is about to be established. But there are facts on the other side. At the Paris Exhibition, Japanese pictures were rejected on the ground that they could not be considered specimens of fine art. A few years ago a selection was made from some of the best pictures painted by distinguished artists belonging to the Bijutsu Kyōkai, and these works of art were sent to France, but attracted no attention whatever (*or not fu-ryōban two maneki*) and most probably were eventually sent back to Japan. At the Chicago Exhibition Japanese painting met with similar treatment. Specimens of the various foreign schools of art were exhibited and photographs were taken of these specimens, but Japanese pictures were refused a place among these exhibits; that is, they were not considered to belong to the category of works of fine art, and no photograph of this class of Japanese exhibits was taken; and yet the paintings shown were the works of first class artists and had been specially selected. These facts naturally lead one to inquire whether the notion that Japanese fine art is superior to everything else in the world of the same kind is anything more than the opinion of Japanese in reference to their own art. It is very plain that the outside world takes a very different view. May we not be acting in regard to painting very much as the Chinese did in the late war, when amid constant defeat by land and sea, for the sake of affording pleasure to their subjects, Chinese officials repeatedly proclaimed that the Chinese forces were everywhere victorious? At any rate the failure of Japanese painting to receive the acknowledgment from the outside world which its Japanese admirers claim for it, is a fact

which calls for explanation from such bodies as the Fine Arts Society.

Under the heading of "Observations," in the part of the *Sekai-no-Nihon* devoted to literary topics reference is made to the manner in which the leading newspapers constantly alter the character of the matter they publish. From the autumn of last year up to about February of this year, says this organ, what are called *Zuihitsu* (随筆) were most popular. This class of writing has now given place to what is designated *Chawa*, Tea-table Talk. The conversations recorded often occupy seven or eight columns of a newspaper. This practice, remarks the *Sekai-no-Nihon*, no doubt owes its origin to a special demand on the part of readers, but from a literary point of view this species of composition possesses little value. If it is worthy of any distinct name, it perhaps might be called *Natsu-no-bungaku*, Summer Literature. The "Dailies" vie with each other in affording entertainment for light-minded readers. Much of this class of literature is of a very low type. One characteristic of the tales that constantly appear is no doubt a result of the late war. We observe that narratives which describe scenes of bloodshed and the gratification of the fiercer passions of mankind are specially popular. Mr. Fukuzawa's *Hyakuwa*, in the *Fiji*, and the articles signed Setsurei, in the *Nihon*, stand by themselves as specimens of the better class of light literature.

In the journal just quoted, Mr. Onishi Shinku discusses the tendency of modern influences on education and literature. The difficulty of making a living, observes this writer, sadly interferes with healthy development. A young man no sooner starts in life, burning with the desire to carry out some literary programme, than he is confronted with the fact that the career he has mapped out for himself can only be pursued by a man of independent means. Hence he is compelled to give up his most cherished ideas and to become a servant of other men in the capacity of a clerk in an office or some such position. Education now-a-days is narrowed down so as to serve the one great purpose of life, money-making. The time was when a young man would rather bear the title of *shoset* (student) than possess 10,000 yen. Study was then loved for its own sake, and no one expected to reap any pecuniary advantage therefrom. But now education is constantly spoken of as learning how to make a livelihood. Under the plea of educating for the State, the subjects taught lack the range which is essential to true enlightenment. It would seem that we are following in the footsteps of America in our regard for money. In modern days to be successful rather than to be cultured is the great aim of young men. With the late Matthew Arnold, we desire to raise our voices against this mammon-worshipping spirit of the age in which we live.

Dr. Katō Hiroyuki having been asked by the *Nihon Shūkyō* to furnish an account of his early history, with his usual readiness to write on any subject that may be suggested to him, the ex-President of the University supplies that organ with a biographical record. From this we cull the following facts bearing on Japanese literature. I come from a race of warriors, says Dr. Katō. As a boy I was brought to Edo and set to study books on military affairs, with injunctions to pay special attention to gunnery. I became a pupil of Sakuma Shōzan, and soon discovered under him how little reliance was to be placed on the knowledge I had already acquired. With a view of obtaining access to Western books on military science, I studied Dutch. At this time I began to perceive how hard it would be for Orientals to reach the stage of progress attained by Occidentals. On turning my attention to Christianity, I was astonished at the untrustworthiness of its teach-

ing, and wondered how Europeans could bring themselves to take part in the propagation of such a belief. But since Christianity was the religion of the most enlightened people of the world, I concluded that there must be reasons for accepting it unknown to me. The perusal of various books on liberty led me to regard all classes of society as on a level and to decide in my own mind that democracy was the most rational form of government, though I kept this opinion to myself. Further reading convinced me that different forms of government suited different nations. It seemed to me the manner in which the various petty states of Germany united to form one great empire found a parallel in the union of our *daimyō* under the *Shōgun* and the subsequent further consolidation of the empire under the present constitutional government. When I published the *Kokutai Shinron*, "A New View of the State," I gave greater prominence to the doctrine of liberty than in later years I should have deemed it wise to do. Some little time after the appearance of this work, my studies led me to modify my views, and I contemplated publishing a work in order to qualify the views I had expressed, but a book is not prepared in a day, and hence it happened that, before I had time to state my later convictions, the work above referred to was so strongly objected to by certain persons and was represented as so ill-befitting the office I then held in the University, that, since it no longer represented my opinion, I consented to its suppression. In its stead I published a work called *Finken Shinsetsu*, "A New Theory of Man's Rights." At this time the doctrine of liberty was immensely popular among politicians, and hence the suppression of the *Kokutai Shinron*, and the tone of my new work, added to the fact that I had become an official, furnished material for slander, and I was accused of selling my independence, and the like. I am asked by the *Nihon Shūkyō* whether it is not a fact that since the publication of the *Finken Shinsetsu* I have always maintained that the survival of the fittest means the survival of the strongest, and that the great world struggle of the present time is no other than a contention for ascendancy among the great powers. To this I reply in the affirmative. Such has been and still is my view. I am asked to name the books that have influenced my views in recent years. This it is not easy for me to do. After studying Dutch, I became interested especially in Law and Politics, and soon found that a thorough study of these subjects involved a knowledge of German and English. I applied myself to these tongues, and after perusing the works of Darwin, Spencer, Buckle, Hegel, and others, I became intensely interested in social science, and of late years have made a special study of this subject. The latter part of Dr. Katō's reply to the *Nihon Shūkyō* has special reference to religion and hence is not suitable for insertion here.

Among important books in the course of publication, the *古事類苑*, *Koji-ruiyen*, calls for special notice. It has been in hand since 1879 and will not be completed for another five years. It aims at furnishing an exhaustive history of the government, civilisation, customs, and religion of Japan, dating from the earliest ages. It is divided into 36 sections, each section being subdivided according to subjects. The whole work will consist of no less than 1,000 volumes. Projected by the Department of Education in 1879 and compiled under its supervision for a while, in 1890 it was entrusted to the Kōten (皇典) Kōkyūjo (Japanese Classics Investigation Bureau). In April of last year at the request of the Home and the Education Departments it was again transferred, being placed in the hands of the Ise Daijingu Office. Messrs. Hosokawa Junjirō and Satō Seijisū are the chief editors and the various sections have been entrusted to special experts. It has been decided to issue without delay 27 volumes, giving a history of the Imperial ancestry, and subscriptions for this portion of the work are solicited by the compilers, whose office is at No. 10, Ichibei-gashi, Koishikawa, Tōkyō. It is stated in the

Kyōrin (歌林) that there is a large demand for the new history and that already no less than 1,500 applications have been received.

A recent number of the *Waseda Bungaku* thus refers to the development of literature in the early days of the Tokugawa Era. The literature of the first sixty years of the Tokugawa régime, known as the Kāneyi (1624-1643) Literature, from this era occupying the centre of the period, developed itself in the following order. (1) History. (2) Commentaries on ancient works. (3) Buddhist literature. (4) The translation or adaptation of Chinese works. (5) The translation of European works. Among the earliest books that were introduced from the West was *Æsop's Fables*, a translation of which was first published in 1659, in three volumes, illustrated. The author of the work is not known. It is said that prior to this date pictures illustrating *Æsop's fables* reached Japan in scroll form, and it has been suggested by some that the three volumes published were compiled by means of these. But an examination of the work under consideration shows that it was a translation from some European tongue and that the stories were not invented by the Japanese to suit the scroll pictures. We know of no direct influence exercised by these stories in the age in which they were published, but in later years they did great service in administering reproof in an indirect manner when any direct form of censure would have given offence. The greatest service done to literature in the age under review consisted of the collection of a large amount of historical material, the preparation of elaborate Commentaries on abstruse Chinese books and the publication in permanent form of numbers of old manuscripts that would otherwise have been lost to the world. Of the value to posterity of all this preparatory work there can be no question.

Dr. Inouye Tetsujirō has written a preface to a new work called *東西南北*, *Tōsai-namboku*, "The Four Quarters of the Earth." In this preface he gives his opinion of the *Shintai-shi*, or *New Style Verses*, to which reference has been made in former Summaries. We epitomise from the *Tōyō-tetsugaku*, Dr. Inouye's remarks on this class of poetry. There are two classes of modern literature, says this scholar, from which much may be expected in the future. One is stage plays, the other the new style of verses. My reasons for thinking highly of the latter I proceed to give. Hitherto two kinds of poetry only have been known to the Japanese, namely the *Waka* (Japanese *uta*) and the *Kanshi* (Chinese Verses). In the *Waka* the number of words or syllables to be used in each verse is limited, and as for the ideas expressed, they are of the poorest kind, seldom amounting to more than allusions to some transient impression. Though Japanese poems of this class are sometimes very long, the variety of incident that occurs in them compared to the number of words employed is very limited. To me they always appear like trees whose blossom is abundant but which bear no fruit. Chinese verses are in a more advanced stage of development than Japanese poetry and often have sufficient power to awaken gloomy thoughts in the mind. But these verses are for from fulfilling our ideal of what national poetry ought to be. The great cause of our dissatisfaction with them is that they are Chinese, and not Japanese. What are called *Kanshi* in Japan are a pure imitation of the polished verses that great Chinese writers have given to the world. The pure wine of this class of poetry is in the possession of the Chinese; the Japanese are sipping the dregs. Though it may be too early to decide on the degree of perfection that the new verses will reach, they have the merit of being original. They constitute a new department in literature. Though when they first appeared they met with opposition, their authors have not been daunted thereby. Wave after wave of this poetry has held its own against all comers, and it looks as though this new literature would form itself into a flood and carry everything before it. Yosa was consider-

* Lit. Following the pen, that is the writer gives himself up to his own sweet fancy, confining his observations to no special subject. Two other characters 漫録, *manroku* are often added to the above, and the title is then equivalent to our term "Miscellaneous Writings."

ed an expert in the composition of *Waka*, but seeing that the age in which we live demanded a new kind of poetry, he commenced to pen "New Style Verses" and wrote in all quite a number. These have been collected and are now to be given to the world in the volume to which the title of *Tosainamboku* has been prefixed.

Among items of news published in the *Shigaku Zasshi* (Historical Magazine) we find the following. Professor Leathes, of the Cambridge University, paid a visit to the Japanese Imperial University on July 30th, being shown around the colleges by Dr. Tamboi. After inspecting the library, the Cambridge professor of history was taken into the Historical Compilation Section and saw the great preparations that are being made for the work the University has undertaken to publish. The Professor is said to have spoken in the highest terms of the thoroughness of the methods of investigation and collection of material pursued, adding that even in Europe he had never seen this kind of work so well done. The compilation of the book referred to in this note was more fully noticed by us in a former Summary.

The same magazine states that the study of Japanese history is neglected in the Higher Middle Schools; the 10 hours a week devoted to history being occupied exclusively with foreign history. Thus it comes about that students enter the University with no more knowledge of Japanese history than they have obtained in elementary schools or in Ordinary Middle Schools. It is not to be supposed, says the *Shigaku Zasshi* that a thorough knowledge of history can be acquired by attendance at the lectures delivered in the University. The subject is necessarily crowded out to a large extent by other branches of learning. It is therefore most desirable that more attention should be paid to Japanese history in the Higher Middle Schools. Impressed with this conviction, the First Higher Middle School, we hear, has decided to set aside two hours per week for the study of this subject. We trust, says the *Shigaku Zasshi*, that other schools will do the same. The defective knowledge of Japanese history and geography, observes this magazine in another note, is being realised by school authorities, and since existing ignorance of these subjects is largely attributable to the lack of efficient teachers, it has been decided to make them a special study in the Higher Normal Schools. The course will extend over two years, and 60 students in each school will be allowed to take up these branches of learning. History, continues the *Shigaku Zasshi*, has hitherto been studied in a most slipshod manner. In many cases the subject has been rendered subservient to *ethics* or to general learning; and as for the critical spirit in history, in the majority of the cases it still remains to be cultivated. The greatest resentment is felt against scholars who sift the chaff from the wheat in historical material. There are many who prefer traditional falsehood to historical truth and who think that the use of the critical knife for the removal of the superfluous growth of ages from the historic tree is sacrilegious and unpatriotic. This feeling can only be removed by such measures as that determined on by the Higher Normal Schools. Education alone is adequate to remove deep-seated historical prejudices.

The same number of the *Shigaku Zasshi* from which we have been quoting draws attention to the revival of interest in ancient literature, as evinced by the new editions of old works that are undergoing publication. The *Shigaku Zasshi* refers especially to the *Asuma Kagami*, the *Tokugawa Yikki* (實記), the *古事類苑*, *Koji-ruiyen*, and the *源鑑類函*, *Yenkan-ruihan*. A collection of material on a variety of subjects,

* As an illustration of this remark we may mention that when, not long ago, Dr. Shigeno, the eminent historian, proved conclusively that Kojima Takanori never existed, he brought upon himself a storm of opposition and was denounced as the *Masatsugu* (抹殺) *hakase*, "the slaying doctor" and accused of destroying patriots.

arranged so as to be easy of reference; a most voluminous work. It is of the nature of the Japanese to act on impulse in the matter of publishing, concludes the *Shigaku Zasshi*, and it not too infrequently happens that extreme ardour gives place to profound indifference. We trust that the movement in favour of reproducing in a readable form the works of the ancients will not prove so transient as others that we have witnessed. In reference to translations, this organ expresses the opinion that the time has come for the organisation of a translating society, maintaining that better results would be obtained by entrusting work to an association than by relying on the efforts of individuals.

The *Teikoku-bungaku* publishes a long article by Mr. Uyeda Bin on the necessity of Japanese literary students paying more attention to the minute distinctions, shades of meaning, and recondite allusions of the books they read. The students of foreign literature are to be found in large numbers, says Mr. Uyeda, but readers who penetrate beneath the surface, who aim at obtaining an accurate knowledge of the books they peruse, who spare no labour in the attempt to explore the depths of an author's mind are very rare. In all studies the aim should be to reach the foundations of knowledge, to comprehend the wide bearing of truth. For men who have gone no further than the outskirts of a citadel of learning to talk as though they had explored its every nook and corner, is, alas! too common in Japan. Considerable interest in the study of the ancient classics has been shown in the University within the past few months. We trust, says Mr. Uyeda, that the investigations of students will lead them to see how many of the ideas and how much of the learning of the ancients may be traced to religion. This is specially the case with European writers, with their law and politics, art and philosophy all had a religious origin. This being so, the neglect to study the Bible shown by Japanese literary men is excusable. Mr. Uyeda concludes his long article by exhorting his fellow-countrymen to give up their attempts to furnish plausible explanations of everything and to spend more time in mastering the thoughts and feelings of the great men of ancient literature. There are people, says this writer, who urge Buddhists to study Christianity and Christians to study Buddhism, and who think there is much to be gained by the adherents of the two systems approaching each other. There are others who regard the discussion of psychological theories of immense importance, and who talk as though men's belief were dependent on some special doctrine relating to the nature of the soul. Men who know what real religion is are unmoved by the class of agitators to whom I have referred. The man of faith has a heaven and earth of his own, pure and undefiled by the presence of the vulgar. Let those who write so much about the influence of literature study books with a view of reaching the depths of religious thought.

In a note entitled "The departure of Professor Wood," the *Teikoku-bungaku* writes in laudatory terms of the literary work accomplished by Dr. Wood in the Imperial University. We cannot but feel deep regret, says this organ, that we are about to lose the services of a man of such high qualifications as Dr. Wood. Our knowledge of Western literature is still very imperfect. We realise that we are still children when compared to men so well versed as Dr. Wood. He not only has a vast amount of knowledge, but he has the art of imparting it. His teaching was thorough. It went to the very heart of things. Dr. Wood spent many years in Germany and passed through the Heidelberg University. His knowledge of the whole range of German and English literature was most extensive and he made a special study of English novelists. We trust that those who have had the privilege of hearing his lectures have imbibed some of the earnestness, minuteness, and clearness which characterised his teaching.

The *Shinri*, in an article entitled "The rage for Translations" discusses the character and

general merits of some of the translations which have already appeared. Numerous translations, says the *Shinri*, are praised in the pages of magazines, such, for instance, as the *Tsubaki-hime*, by Nagata Shūtō and a play called *Maria Stuart* (Mary Stuart) by an anonymous author, but to us Taubouchi's "Hamlet" is *facile princeps* among modern translations. Surprise has often been expressed that such works as "The Old Curiosity Shop" and Hawthorne's "Scarlet Letter" have never been attempted, but in our opinion it is best to proceed cautiously in the matter of translation. Imperfect renderings of the works of great authors can only be regarded as an insult to the memory of these writers. The translations of detective stories by Ruikō have been very highly spoken of in some quarters, but Ruikō is in no sense a first-class translator. He has failed to reproduce many of the telling parts of the originals. Were Ruikō to attempt to render Shakespeare into Japanese, we venture to think that quite nine-tenths of the original would be left unexpressed. There is no denying that the standard of translation is much higher than it was 10 years ago. One has only to compare Mr. Taubouchi's "Hamlet" with his *Shisuru Kidan*, to see how much more skillful this scholar has become since he published his first noted work. Nevertheless, in our opinion, the progress made in the art of translating has not been sufficient to warrant the expectation that foreign masterpieces will be reproduced in Japanese in the near future. Although we admit that there are a number of good translators, when asked whether the best men available are equal to the task of tackling such works as Goethe's "Faust," Milton's "Paradise Lost" and Dante's "Divine Comedy," we are obliged to answer in the negative. To entrust such books to men like Nagata Shūtō, Hara Hōtsuan, and Konishi Masatarō would be unwise. It is even questionable whether our language is capable of expressing in an equally powerful manner many of the thoughts and sentiments which adorn the works of foreign authors. At any rate one thing is clear, that whatever may have been the progress made in respect of translation, there still remains a *terra incognita* unreachd by the most daring explorers.

A NOBLE ACT.

In the *Yiyu* we find an account of a very noble act said to have performed in Miye Prefecture on the occasion of the recent flooding of the Machiya River. The Nakano embankment being evidently about to give way, an accident that would have involved the inundation of a large tract of country, the people of the locality assembled, and applied themselves to the work of strengthening the bank. But owing to the difficulty of procuring earth and the rapidly increasing force of the current, their efforts seemed likely to prove abortive, when Mr. Amakasu Fumiye threw open his rice godowns, and bade the workers use the bags of grain stored there. Twelve hundred bags were taken out and rapidly piled up at the weak spot, the result being that the danger was successfully averted. It was a costly method of restraining a flood, but the damage thus prevented would probably have been a hundred times greater than the value of the twelve hundred bags.

FLOODS IN TOKYO.

The floods in Tokyo have practically receded. The water, which at one time reached the eaves of the houses in several parts of Mukojima, fell below the level of the floors by the morning of Sunday last, and such of the inhabitants as had been obliged to seek shelter on elevated spots, are now cleaning the mud and silt from their residences so as to make them fit for habitation once more. The flooded houses aggregated 3,191, and they held 8,111 persons. More than 11,000 yen and 110 bales of rice have been contributed by charitable folk for distribution among the poorer section of the sufferers.

KOREAN ITEMS.

From the description given in the columns of the *Soul Independent*, we gather that the old and the new in Korea were conspicuously displayed on the occasion of conveying the casket containing the remains of the late Queen of Korea to the mausoleum specially erected in the foreign quarter. "First," says our contemporary, "came a squad of soldiers dressed in foreign style and marching in some semblance of order. This might be called the *New Korea*, and we are glad it marched in front, for the moving illustration would otherwise have been incomplete; but behind them came a motley company dressed in all the gaudy hues and grotesque patterns that ever bedizened an oriental fête. All the old banners and standards and trumpery were resurrected and brought into requisition. The old Yangban strut, the inane bolting up on either side by servants, the same childish vanity in their old *lawdry gawgaws*. This is what was plainly visible. The New Korea in front dragged behind it the great mass of conservative, *jeune*, moss-back, old Korea. Is this not a perfect picture of affairs to-day? But notice that New Korea was to the front and there is good hope that it will go too fast for the mummy behind to keep pace with it, and the latter will gradually drop away and we shall some day see a renovated Korea, a Korea which has 'put away childish things.' The hearse was carried by several hundred men in mourning uniforms, and on the platform in front and behind of the hearse stood an army officer in European uniform, and two others in old Korean mourning costume. Each of the latter held a bell in their hands and rung them vigorously—the meaning of which was unknown to us. The casket was 7 feet 8 inches long and 3½ feet in width, beautifully painted with lacquer and several lines of inscriptions in gilded letters stating the titles of the Queen. The whole casket was wrapped in white satin and placed in state in the main buildings of the new Palace."

Mr. McLeavy Brown, Financial Adviser to the Korean Government, seems to be winning golden opinions. He is said to be most careful in his selection of officials, choosing always men that have given proofs of competence, and he is further credited with refusing to pay any one that does not properly discharge his duties. There appears to be some exaggeration in these statements, but the main fact of Mr. Brown's successful management is doubtless correct.

Here is one of the most exquisitely frank confessions we have ever encountered; it appears in the editorial columns of the *Soul Independent*—

If anyone has noticed in our columns any evidences of late of a tendency to lapse into abstraction and reverie he must set it down to the near approach of a certain trip to Chemulpo and the termination of temporary bachelorhood. It is this latter that has given a touch of melancholy, and has cast such a subdued light over the news columns and filled them with such cheerful topics as battle and murder and sudden death, and it may be that even our weather bureau has been tinged with a moroseness which has caused it to look into the future with a cynical eye.

Another dispute between Japanese and Chinese fishermen is reported. It is said to have occurred at the island of Chito. The Koreans endeavoured to drive away the Japanese, and the latter killed one of their assailants in the fight that ensued and then sailed away. The story comes from the Governor of Chito.

Encounters between Government troops and rebels are still reported from various parts of Korea.

The *Soul Independent* calls attention to the fact that the rice and other grain exported from Korea is packed in straw bags, the material of which is sent from Korea to Japan to be plaited into bags, and the bags are then sent back to Korea to be filled with grain, their ultimate cost being 8 *sen* each. Our contemporary naturally asks why on earth the Koreans themselves can not manufacture these bags without recourse to Japanese aid.

THE "CHUGWAI EIJI SHIMBUN."

For the sake of the readers to whom this title conveys no meaning, we may explain that it is the name of a bi-monthly magazine devoted to the study of practical English. It is not a new publication: the sixteenth number of the 3rd volume is now before us, from which it may be inferred that a considerable measure of success has attended the venture, and that the editor and proprietor, Mr. Y. Isobe, has not been deceived in his conception of the need of such a work. We confess that we scarcely hoped as much when the publication first made its appearance, for excellent as was its plan and competent its editor, a magazine depending entirely upon its circulation among the student class, and deriving no support from advertisements, must always be a precarious venture. Mr. Isobe, however, has steadily persevered. Choosing his material wisely, and always bringing industry and skill to his editorial task, he seems to have now established a secure place for his most serviceable magazine. What kind of fate, we wonder might be anticipated for a magazine published twice a month in England, solely with the object of aiding students to acquire German or French. Possibly the experiment might be worth trying, though no one has yet tried it. After all, the Japanese student is not lacking in grit and earnestness. What charms us especially about Mr. Isobe is that he is so perfectly natural. Describing a journey recently made by him to Kobe and Kyoto, he writes as though he were addressing no audience but his own memories. Take this paragraph, for example:—

I have to thank the Editor of the *Hiogo News* for his complimentary remarks upon my visit to his office, which appeared in the next day's issue of the paper. Though I am unworthy of such compliments, yet I will in future endeavour to act up to his commendations. Yet I cannot disguise from myself that I am as much elated at the kind remarks as a little school-boy might be when his teacher praises his class compositions. The same hearty thanks are due to the Editor of the *Japan Herald*, whose partiality to myself went so far as to reproduce the kind remarks of his Kobe contemporary in his valuable paper of the 10th instant, and added to them no less complimentary observations upon the present paper.

Is not that delightfully genuine! Such an absolute absence of self-consciousness or pedantry! We must quote one more paragraph also:—

On my way home, I alighted at Ejiri on the Tokaido Route and made an excursion to Kunoan, widely-known as a smaller Nikkō, passing Teshuji and Ryūgeji, two temples whence may be obtained a magnificent view of Mount Fuji, Iagonoura, Seikenji, and Mio-no-matsubara; and this deviation, though short, was the crowning pleasure of my present journey. Prior to my departure, Mr. W. B. Mason, of the First High School, had kindly promised to present me with a copy of his and Professor Chamberlain's valuable "Hand-Book of Japan"; but as he had not a copy in hand, he told me he would get it from Kelly & Company, Yokohama, where it is on sale, and send it to me by post. Unfortunately for me, as the book did not reach me while I was in Tokyo, I told my family to send it to my inn in Kyoto as soon as it arrived. Upon my return to Kyoto from Ama-no-hashidate, I found the precious gift had already arrived. When I read the passages descriptive of all these famous places which I had just visited, I was struck by the accuracy and thoroughness of the hand-book. To tell the truth, my excursion to Teshuji and Kunoan was made at the instance of Mr. Mason who had described for me the numerous charms of these places so alluringly that even after I had fully enjoyed the view of Ama-no-hashidate, so replete as it is with poetical associations, my curiosity was too strong for me to refrain from alighting at Ejiri, whence it is only three *ri* to Kunoan. In that excursion I was fortunate enough to be able to consult the book, and found it the most comprehensive and faithful guide-book for travellers in Japan ever published. In many respects we Japanese are taught by foreigners in things that concern ourselves. Is not the translation of the *Kojiki* by Professor Chamberlain the most remarkable instance? Is not Anderson's "Pictorial Arts of Japan" another example? Nay, even those charming mountains and picturesque lakes which, we pique ourselves, are our richest treasures and the sight of which always inspires us with a patriotic spirit, have found their most comprehensive descriptions in the writings of untiring foreign travellers. Professors Chamberlain and Mason's "Hand-Book of Japan" bears witness to the never-flagging energy of Europeans and the thorough treatment of a subject which is so characteristic of them.

RAILWAY ITEMS.

The Railway Bureau has inaugurated a new departure in regard to buying materials for construction purposes. Instead of sending direct to foreign countries, in most cases to England, it put its recent orders up to public bidding. Tenders for certain engines, iron work, etc., were sent in by the Mitsui Bussan Kwaisha, the Okura Firm, the Meidiya, and many foreign firms in Yokohama. They were opened on Friday last, when it was found that for five of the contracts, the tenders submitted by the Mitsui Bussan Kwaisha were lower than any of the others, with the exception of one case only. The four tenders of this well-known firm were therefore accepted as shown below:—

No. 6.—60lb. rails, 12,564 tons; bolts and nuts, 124 tons, &c., 14,570 tons in all.	
Mitsui	£81,187 9s. 7d.
Okura	£91,200 1s. 5d.
No. 7.—Girders and others, 3,206 tons.	
Mitsui	£36,543 11s. 3d.
Hirota	£36,583 1s. 10d.
No. 8.—Steam engines, 16, oil engines, 6.	
Mitsui	£5,220 9s. 6d.
Hirota	£5,680 2s. 0d.
No. 9.—Round and square iron, 2,236 tons.	
Mitsui	£2,091 16s. 9½d.
Hattori	£2,195 0 10½d.
No. 10.—Jack screws, 10 tons; Manila rope, 2,100 yards, &c.	
Hirota	£4,447 13s. 3d.
Ito	£4,090 0s. 0d.

This is the first time, says the *Shogyo*, from which we quote, that rails have been purchased at less than £6 per ton, a price far lower than that at which the Bureau used to give in England when dealing direct. Even when a private railway company put its orders up to public bidding, the price per ton was £6 5s. or so. The precedent now established should prove immensely beneficial in reducing the cost of railway construction in Japan.

The latest intelligence about the interrupted railway communications is as follows:—The Gifu-Hikone section was re-opened on the 21st inst., at the same time steam service between Bamba and Hikone commenced. Consequently, on the Tokyo-Kobe line, communication between Tokyo and Kanazaki is again possible. An express train that leaves Shimbashi at 12.30 p.m. runs through to Nagoya, beyond which the line is still interrupted. In the Tsuruga-Fukui line, the repairs of the Sabaye-Fukui section have been completed, and service was opened from the 22nd inst.

THE FLOODS IN GIFU AND NAGOYA.

The state of affairs described in Bishop Bickersteth's letter, which we publish elsewhere, is most pitiable. Rumours had reached us from other sources that the suffering in the Gifu and Nagoya districts, owing to the recent inundations, was wide-spread and acute, but we did not picture conditions so cruel as those described by Bishop Bickersteth. It is certainly an occasion calling for some charitable effort on the part of benevolent foreigners. Japan has never been visited by such a series of calamities as those commencing with the Seismic Wave of last June and culminating in the September storms and floods. A most generous response was made to appeals for help in connection with the Seismic Wave, and a repetition of such open-handed charity can scarcely be expected now. Still, as the nation is suffering from quite exceptional troubles, an exceptional exercise of benevolence may well be invited, and we have, consequently, no hesitation in commending the matter to our readers' attention. Definite means of employing, to the best effect, any funds subscribed, are indicated by Bishop Bickersteth, and we may add that if any persons find it more convenient to send subscriptions to this office, they will be duly acknowledged, and forwarded to Bishop Bickersteth.

THE SENDAI RAILWAY.

As several weeks—probably five—must elapse before trains can run through from Tokyo to Sendai, it is important that our readers should learn the actual state of the line at present, and the difficulties that beset a journey north. The injured portion of the line is between Furuta and Nagakubo, and since Furuta is the next station northward of Utsunomiya, the traveller encounters his troubles at an early stage of the journey. About a mile beyond Furuta the railway crosses the Kinu River—an affluent of the Tone-gawa—by three bridges, the Kinu at that place running in as many distinct streams. Under ordinary circumstances the two most southerly branches are petty affairs, but during the recent rains they swelled into roaring torrents, and developed such destructive force that the first bridge was entirely swept away, no vestige of it remaining except an iron girder that now lies among the boulders twenty yards below the abutments on which it formerly stood. The abutments themselves have completely disappeared, even their solid masonry being unable to withstand the disintegrating force of the water. It is easy to infer the overwhelming strength of a torrent that could transport an iron girder through such a distance and grind to powder the piers supporting it. The second bridge has suffered less; its roadway remains intact, but the shoreward backing of its abutments has been washed away, so that it now stands on two frail and ragged-looking piers. These two bridges, being comparatively small, can be reconstructed without much difficulty, but the third and principal bridge will entail great labour and expense. The Kinugawa shows, at this point, the characteristics so common to Japanese rivers: its waters travel noisily and in several runlets over a bed of boulders, some five hundred yards wide, whereas the principal stream does not itself measure more than a tenth of that width under every-day circumstances. Evidently the whole bed was covered with a boiling swirl of water during the floods, for scarcely one of the masonry piers escaped injury. They appear as though they had been attacked by some seismic shock, rather than by a rush of water, for distortion is the term more applicable to their condition than disintegration. It is difficult to suppose that these piers were soundly built originally: certainly the present condition of their masonry betrays a lack of homogeneity. Our readers will gather from what we have said that the whole space, more than a mile in width, through which the Kinugawa and its branches run, has to be traversed partly by boat and partly on foot. It is, of course, possible to ride in *jinrikisha* from Utsunomiya to Nagakubo, a distance of 15 miles, but such a detour would be out of proportion to the difficulties offered by the railway route. From Furuta to Nagakubo, however, many persons prefer to leave the railway altogether, and make their way along the high-road by *jinrikisha*. When ladies and children are in question, that many possibly be the better plan, as will be understood when we have described the details of the journey along the railway. It must be premised, however, in this context, that *jinrikisha* are very hard to procure at Furuta, and consequently no reliance can be placed on that means of conveyance by persons going north. From Furuta the train pushes on to a point within some 200 yards of the first stream to be negotiated, and at about the same distance beyond the last river passengers again find cars waiting to carry them to Nagakubo. Temporary platforms for boarding and leaving the train have been erected at both places, and every effort is exhausted by the railway officials to smoothe the difficulties of the route. But no attempt has been made by the Railway Company to organise a service of boats and baggage-carriers. They impose no charge for carrying passengers over the portions of the line that remain intact between Furuta and Nagakubo, but, on the other hand, by not issuing tickets they avoid all responsibility. Thus, on arrival at the bank of the river at either end, a pas-

senger has to take his luggage from the van and procure coolies to carry it. These coolies accompany their employer from the railway platform on the Furuta side to that on the Nagakubo side, or *vice versa*, keeping the baggage on their backs even while making the passage of the rivers—a necessary method, the flat-bottomed boats in use not having sufficient stability of flotation for the stowing of dead weights. Coolies can be procured for 20 *sen* each, or even less, by bargaining, but they are not numerous and do not compete, so that the traveller must not expect easy terms. For conveyance over the three rivers by boat, a fixed charge of 8 *sen* a head is made, and must be paid at a little office on the Furuta side, where tickets are given. The first river—going north from Furuta—is a swift, turbulent stream. Its passage, while the water was high, involved a little excitement and cost two lives, but the boatmen manage excellently and no grounds for alarm now exist. The two other rivers are comparatively gentle, but the passage of the long bridge on the Nagakubo side may prove difficult for persons with weak nerves, as the footway consists of only two narrow planks laid across the sleepers between the rails, and the height is some 15 or 20 feet above the surface of the water. What will probably be found eminently inconvenient is that no attempt is made to connect the service of trains on the two sides of the broken bridges, the results being long waits at various points, and the lengthening of the journey from Tokyo to Sendai by fully six hours, whereas the unavoidable delay does not exceed one hour. For example, leaving Tokyo by the 6.30 p.m. train, one reaches Furuta at about 10.25 in the forenoon, and, traversing the region of broken bridges in about an hour, finds oneself on the Nagakubo temporary platform before noon. But there is no train to carry one on immediately. It becomes necessary to wait until 3 p.m., and even then the train goes no farther than Fukushima, where one must be content either to spend the night, or to await the through train at 11.30 p.m., which reaches Sendai at half-past two the following morning. Why the Railway Company do not make arrangements to avoid the inconvenience of these long delays we are unable to explain. Possibly the break in the line occurred at a time when the rolling stock was inconveniently distributed on either side of the stoppage.

DESTRUCTION OF CROPS BY THE RECENT FLOODS.

According to an estimate in the *Miyako Shim-bun*, the injury done to the rice crop by the recent floods is as follows:—

	<i>Yoku.</i>
Miyagi Prefecture	550,000, or half of the crop.
Aichi and Shiga Prefectures	1,000,000, or half of the crop.
Kyoto City	250,000, or one-fourth of the crop.
Fukui, Toyama, Ishikawa & Niigata Prefectures. }	1,000,000, or from one-sixth (in Niigata) to one fourth of the crop.
Osaka and Hyogo Prefectures	200,000, or one-fifth of the crop.
The Kwan-to districts	5,000,000
Total	8,000,000

It is plain that these figures are mere approximations, but if they are correct within any reasonable limits, the monetary loss suffered in connection with the rice crop alone must have been from sixty to eighty thousand *yen*.

ROBBERY AT THE BRITISH LEGATION.

Takahashi Ichitaro (age 21), a *bello* in the employ of the British Legation, Tokyo, has been arrested on a charge of stealing an overcoat, a flannel suit, and other articles belonging to the wardrobe of Sir Ernest Satow, the British Minister.

SUBMARINE AND AERIAL COMBINATION.

One of the latest ideas in the scientific sphere is to combine balloons with submarine boats. Each vehicle of motion has a defect remediable by the other: the submarine boat can be moved in any direction, but can not discern the direction in which it ought to move; the balloon can always discern the desired direction but can not be sure of moving in it. Hence, if a submarine boat were connected with a balloon, the former could transmit to the latter electricity sufficient to operate a motor by which the balloon would receive a motion of translation; and the balloon could indicate the direction in which the boat should be steered. That is the scheme in a nut-shell. It is due to the ingenuity of Mr. G. L. Pesce, a Frenchman, and a paper describing the project was read by him before the French Society of Civil Engineers on July 11th. Evidently it would be possible to keep the balloon at a range virtually beyond the reach of projectiles, and the submarine boats would enjoy similar immunity. A portion of the inventor's essay, as translated in the *Literary Digest*, reads thus:—"To give to this association of balloon and submarine boat a greater effectiveness, it would be preferable to have a flotilla of submarine boats in charge of a single air-ship, one of the boats being specially organized and equipped for the service of the air-ship, whose connecting line it would carry. It would serve alike as a central communicating station toward which would converge all the connecting-cables of the submarine sentinels whose different telephonic lines would run to the balloon. The different submarine boats would become, for the commander, so many dirigible vessels, like dirigible torpedoes. This enormous and powerful aerial vessel, with a torpedo at the end of each of its tentacles, would group together and practically realize, we believe, the sum of the desiderata for the movable and fixed defence of ports and coasts, the cruisers remaining as an advance guard and the coast batteries as the last line of defence of the seashore. Instead of controlling, from the fixed level of a fort, sunken torpedoes located at fixed points, as is now done in the defence of coasts and ports, we could, by the simultaneous employment of balloons and submarine boats, control from a movable point in space, as high as we wish (500 to 600 yards would seem most preferable) a series of torpedoes, movable in all directions, whose position could be altered at will, at any instant, and which could be sent at any moment and in any direction against an enemy. We would be able, in this way, to hold the enemy's fleet at such a distance from the coast that the range of their guns would be insufficient to cause the least damage to our cities, which would thus rest in peace, thanks to the simultaneous action of the two different engines of future naval wars."

DIVINE JUDGMENT.

It would evidently please some folks greatly to be able to say that the calamities suffered by Japan this year from earthquakes, storms, and floods are visitations of Providence, designed to punish Japan for waging an unjust war against China. But inasmuch as these folks have always been scoffers against everything savouring of God, or faith, or piety in any form, they can not easily turn round now and invoke the deity they have so long blasphemed. They discover, however, a fresh chance of baiting the missionaries, who, being quiet, long-suffering persons, not prone to resent abuse, and never likely to retaliate upon their slanderers, are excellent game for cowardly bullies of all classes. Hence the missionaries are now taunted with not perceiving that by means of the natural calamities of this season Providence is rebuking those that waged the war and those that failed to denounce it. There is no truer evidence of thorough-paced moral snobism than a rooted objection to every one better than oneself. The missionaries might be unwilling to accept that explanation of much of the abuse they receive; but it is the right explanation, we strongly suspect.

IMPROVEMENTS IN THE SILK INDUSTRY.

Mr. Shimoyo is a well-known weaver in Ise-zaki, Joshiu, one of the silk-spinning centres in Japan, and the remarks that he made to a representative of the *Oriental Economist* in connection with improvements in weaving and sericulture generally are worthy of notice. He is convinced of the absolute necessity for improving the thrown silk industry in Japan, and thinks that the imperfection of this branch of the industry is really at the root of the inferiority of the product of Japanese looms as compared with the fabrics of the west. At present only the Nippon Weaving Company and two or three others are preparing silk yarns by employing foreign throwing machines. In other establishments a peculiar instrument that is neither foreign nor Japanese, but a hybrid of the two, is used. The mode of throwing silk with this machine consists in twisting together three threads composed of four singles filaments each, and coming from three different directions. A thread thus made is composed of 12 filaments. This work is done by one person, who turns the wheel with the right hand and holds three threads together in the left. Frequently one of the three threads is broken during the process, but the throwster does not usually take the trouble to stop the wheel and join the broken parts, the result being that a thread that should consist of twelve filaments has often only eight for a length of several feet or even yards. It is natural that fabrics woven from such yarn should be inferior in quality and not bear comparison with the product of Western looms. People deeply interested in the improvement of Japanese textile fabrics aver that the quality of raw material must be first improved; in other words, the methods of sericulturists must be radically amended. Mr. Shimoyo thinks that the order should be reversed, and holds that a desirable result can be more easily and more promptly effected if weavers improve their work. He dwells, in conclusion, on the prospect of China's becoming a formidable rival to Japan in the silk trade, and says that in China strict division of labour is likely to be established between those who produce cocoons and those, mostly foreigners, who reel them. When this division of labour is effected, Shanghai may become an outlet for silk warp alone.

FOREIGN COMMERCE OF THE UNITED STATES.

The foreign commerce of the United States for the year ending June 30th, 1896, aggregated \$1,642,910,511—viz., imports, \$779,710,024, and exports, \$863,200,487—against \$1,525,362,564 for the previous year, being an increase of 117½ million dollars, in round numbers. It is interesting to note that, whereas 49.6 per cent. of the imports were free of duty in the year ending June 30th, 1895, the corresponding figure for the year ending June 30th, 1896, was only 47.4. None the less, the great bulk of the increase in imports was on the side of dutiable articles; namely, an increase of 41½ million dollars against only 6½ million dollars on the side of duty-free imports. It would appear, therefore, that, onerous as the tariff is, it does not seriously impede the growth of the import trade, or choke off foreign competition. On the other hand, American manufactures seem to be winning an improved place abroad, for nearly 45 million dollars out of the total increase (70 million dollars) in the value of exports stand to the credit of manufactured products. The export of Indian corn shows an increase of 23 million dollars whereas that of wheat fell off by 4 millions. As for the duties collected on imports, they aggregated \$160,534,351 on a dutiable total of \$409,938,088, showing an average rate of over 39 per cent. With what envy these last figures must be regarded by some Eastern financiers! Could China levy even 10 per cent. on her imports, to say nothing of 39 per cent., how easily she might discharge all her monetary obligations to Japan and Europe.

"FREE COINAGE AND ECONOMIC WAR."

From *Bradstreets* of August 15th, we take the following:—

The probable effect of the adoption of a free-coinage policy at the ratio of 16 to 1 by the United States was considered at a recent conference at Berlin, of which an account is given in cabled advices from the German capital. This conference was held at the residence of Prof. Sering, of the Berlin Academy of Agriculture, and to it were invited Baron Von Hammerstein-Loxten, Prussian Minister of Agriculture; Dr. Thiel, First Councillor of the Ministry of Agriculture; Hon. Edwin F. Uhl, United States Ambassador to Germany; Dr. Schumacher, who has made two official visits to the United States for the purpose of studying the agricultural conditions prevailing in America; Mr. Turke, representing an agricultural machinery manufacturing firm; David Lubin, of Sacramento, Cal., as the representative of the Patrons of Husbandry, and two or three other prominent agrarians. Baron Von Hammerstein-Loxten and Ambassador Uhl, having made prior engagements, were unable to attend the conference, but all of the others who were invited were present. Mr. Lubin submitted a series of questions for discussion bearing upon the respective causes, effects and remedies connected with the decline of prices in the agricultural products of the world. Among the number of remedies suggested by the questions submitted were the remonetization of silver at a ratio of 16 to 1 and the establishment of a free-trade system.

According to the report the submission of the questions was followed by a discussion, which lasted five hours. Prof. Sering delivered an address, in which he expressed his belief that the prices of agricultural products had reached their lowest figures, but he admitted that, while they would not fall any lower, it was possible that they might remain stationary for a long time to come. Alluding to Mr. Lubin's contention, which was that if their efforts to establish a free trade system should fail the farmers of the United States ought to be granted bounties upon their exported product by the government, Prof. Sering said that he was not surprised at Mr. Lubin's demand, but he warned him and others of his hearers that if such a system of bounties were established, it would immediately elicit strong retaliatory measures in Europe, and perhaps cause the creation of a protectionist union of the European countries against the United States. It was a mere delusion he continued, for the agriculturists of the United States to suppose that France and Germany could be starved into surrendering. The Argentine Republic and Russia, he said, could provide an ample supply of wheat, meats, etc., for an indefinite time.

Concurrence in Prof. Sering's opinions was expressed by Dr. Schumacher, who said that the free coinage of silver at a ratio of 16 to 1 in the United States would necessarily induce a very serious economic conflict with Europe. Mr. Turke, whose commercial connections are chiefly with the Argentine Republic and Russia, expressed himself as convinced that both of those countries were only beginning their careers as the grain providers of the world. Russia, he said, was developing in the production of grain amazingly, and he predicted that within a few years the whole of Southern Siberia would become a serious competitor for supplying Europe and the rest of the world with cereals. Prof. Sering suggested the creation of an international alliance of the agrarians of the world, with central bureaux in London, Washington, Berlin or Paris, and that the alliance hold an annual meeting of delegates for the various agrarian institutions. The proposal was deferred for the action of a future conference. So far as can be gathered from the reports there was no serious dissent from the view expressed by Prof. Sering, who led in the discussion regarding the probability of an economic war as the result of the adoption of free coinage by the United States.

RAILWAY AFFAIRS.

The negotiations between the Nippon Railway and the Ryomo Railway Companies for the purchase of the latter line have been definitely arranged. The bargain was struck at 2,850,000 yen, the transaction having the approval of the shareholders of both companies. The purchasing company has not yet decided how it will procure the money necessary to complete the sale, but will submit proposals at the next general meeting of the Company. It is estimated that this addition to the Nippon Railway will not effect the Company's profits. It will declare the usual dividend of 10 per cent. for the year.

The Tokyo Chamber of Commerce has been investigating, in co-operation with prominent railway experts, the question of the standard gauge to be adopted in Japan. Out of more than ten of the Committee Mr. Watanabe Koki alone was against introducing the wide gauge system

in Japan; the rest are favourable to the broad gauge, and his opinion was overruled. A representation was submitted a few days ago to the Department of Communications in the name of the Chamber, requesting that the Government should determine this important question by appointing a special committee to thoroughly investigate it. The chamber, as representing the opinion of the majority in favour of a wide standard gauge, observes that even when the present railway lines are doubled and the rolling stock increased, the capacities of the railways will be inadequate to provide proper facilities for the steadily augmenting number of passengers and volume of goods needing transportation. Moreover, unless the change in the gauge is effected as quickly as possible, the opportunity may be lost for ever. The Chamber does not think it particularly difficult to change the width of the track on the Government lines, but to widen the Government lines alone would be useless if the others, such as the Nippon, the Ryomo, the Kwansai, and the Sanyo, are not similarly changed. This measure can only be carried out by issuing a law, and granting more or less State aid toward reconstruction expenses. These are all questions that the Government ought to investigate as promptly as possible.

MONETARY AFFAIRS.

Mr. Taguchi, M.P., editor of the *Keisai Zasshi*, and other advocates of bimetalism intend, with the support of their fellow thinkers, to manifest in some way their approval of the exertions of the silverites in America. They will forward a letter to them based on the following points:—

1. The purpose of the silver party in America being to eliminate the various evils incidental to the present monometallic system, the enforcement of an international bimetallic system must prove of immense benefit in promoting the world's prosperity.
2. Japan will suffer, temporarily, an immense loss when gold depreciates and silver rises in value, but the creation of a silver currency on the continent of America and the elevation of the standard currency in Japan will eventually prove a permanent source of profit to this country.
3. The maintenance of the monometallic system conduces to Russia and England becoming more and more powerful. It has enabled England to promote colonies in Africa and Australia, while the opening of gold mines in Siberia has strengthened Russia's resolve to maintain the present system. The accumulation of gold reserves in these two countries is astonishing, and augments their power. It is indeed strange that Western countries should have organized a league for the purchase of gold bullion and thus have permitted Russia and England to add so immensely to their strength. The present attempt of the American silverites to counteract these evils and to elevate silver to its proper position, evokes the earnest sympathy of Japanese bimetalists, who view the subject from the standpoint of international prosperity.

The committee appointed by the Tokyo Chamber of Commerce in 1893 to investigate the causes of the fall in silver have concluded their researches. Their report has been submitted in the name of Mr. Sonoda, President of the Yokohama Specie Bank, who presided over the meetings. The report is said to be very bulky, containing eight chapters, several of them being subdivided under a number of sectional headings. The *Mainichi* gives an abbreviated summary of the conclusions arrived at. The fall of silver, it says, has considerably disturbed the economics of the world. In regard to Japan the appreciation of gold has given a considerable impetus to the export trade. Were this rise in gold not so general, Japan with her silver currency might have succeeded in enjoying even greater prosperity. Still the benefits accruing from the increase in the export trade must have more than compensated her for any loss she has suffered from the fall in the gold price of silver.

EMIGRATION.

The *Kokumin*, in an elaborate article under the above heading, extending over seven issues, says that the population of Japan shows a marked increase in the north-eastern portion of the country, but owing to the extent of the district and the original scantiness of the population, there is still room for a greater increase. Owing to the proximity of this district to Hokkaido, which is at best only partially opened, north-eastern people very rarely emigrate. It is from central Japan and Kiushiu that the majority of emigrants come, two-thirds of the Japanese labourers in Hawaii being people of Kumamoto and Hiroshima. This shows how densely the central and southern portions of Japan are populated. According to a trustworthy authority, the numbers of Japanese that emigrated during the periods 1885 to 1889 and 1890 to 1894, are as follow:—

	1885 to 1889.	1890 to 1894.
Hawaii	12,221	21,625
Korea	916	4,930
U.S.A.	787	3,789
Russia and Russian dominions	412	2,858
Australia	68	2,037
China	682	869
Canada	0	1,716
India	1	33
South Seas	0	89
West Indies	0	517
Total	15,017	38,463

These people went abroad through the medium of regular labour agents, and devoted themselves to fishing, farming, and so forth. Besides these, a large number must have crossed the seas, either as free labourers or as prostitutes. The latter class are almost invariably followed by Japanese men who sell articles to the women that they cannot obtain in the country of their temporary adoption. The increase in the number of foreign emigrants in the short space of a decade is a striking fact, especially when compared with the growth of population. Even during last year, when, owing to the war, a considerable number of men were directly or indirectly employed in military affairs, the following agents undertook the emigration of labourers:—Ogura Ko: 844—to Hawaii 780; to Canada 64. Kobe Emigrant Co.: 419—to Hawaii 99; to Australia 5; to U.S.A. 42; to Borneo 9; to Canada 264. Hiroshima Emigrant Co.: 1,336—to Hawaii 1,271; to U.S.A. 65.

Up to June of the current year, the number of labourers that went abroad were as follow:—Kissa Emigrant Co., 410 (Australia); Kobe Emigrant Co., 211 (Hawaii); Ogura Ko, 1,935 (Hawaii); and Hiroshima Emigrant Co., 1,777 (Hawaii). Labourers that emigrated to the South Seas, to Mexico, or Brazil, or are about to do so, are not counted in the above. The emigrants tabulated above are only those that went abroad either as free or contract labourers. Some of the emigration agents have incurred a bad reputation from their proceedings, but, on the whole, the nation must thank them for acting as media for emigrants. To the South Seas alone, the agents have sent 1,900 Japanese, as follow:—

Queensland, from 1892 to 1894.....	995
New Caledonia, January 25th, 1892 ...	600
Fiji, 1894	305
Total	1,900

What causes the emigration of Japanese labourers? The writer replies that it essentially arises from over population, and that the recent war has given an impetus to the movement. From 1867 to 1894, about 100,000 Japanese went abroad with the permission of the Government, but the number must really exceed these figures for many men and women left the land without official permission. It would not be an exaggeration, therefore, to put the figures at 150,000. Now though generally termed emigrants, many Japanese go abroad as contract labourers, or with the intention of pursuing business for a time. They are merely sojourners in alien lands, and they furnish a striking contrast to the Chinese. The Chinese, wherever they go, organize a distinct community of their own, and plant, so to say, a Chinese Colony having no intercourse with the rest of the population.

Between 1885 and 1895, no less than 32,712 contract labourers and 35,734 others that left Japan on their own accord, crossed to Hawaii. Their object was to seek temporary employment there, and not to settle. We append a table of occupations showing the trades followed by Japanese emigrants abroad:—

Country.	Labour.	Men.	Women.
U.S.A.	Farming, cooking, waiting, &c.	3,762	192
Canada	Fishing, mining, farming, waiting, &c.	1,563	37
Australia ...	Fishing, farming, waiting, &c.	1,942	20
Hawaii	Farming, manufactures, cooking, waiting, &c.	21,623	940
Siam	Farming	21	6
Guadaloupe ..	Farming	290	0
East Indies ..	Farming, fishing	43	10
Russia	Fishing, mining	1,458	178
England	Cooking, waiting, &c....	229	64
Korea	Fishing, public-works, transportation.	3,662	775
China	Cooking, waiting, &c....	362	145
Hongkong ..	Cooking, waiting, &c....	265	43
Singapore...	Transportation, cooking, &c.	69	30
India	Transportation, cooking, &c.	13	9
France.....	Cooking, waiting, &c....	7	13
South Seas..	Fishing, farming	20	4
Mexico	Farming	29	0
Other places ..	Transportation, fishing, waiting, &c.	339	5
Total		35,707	2,471

Russian Siberia and Korea contain a large number of Japanese, though their object in emigrating is not stated. Especially in 1894, when Japan's influence in the Peninsula was almost paramount, the number of travellers in Korea increased extraordinarily. For instance, while in 1893 Japanese permitted to proceed to Korea totalled 572, the number jumped to 2,059 in the following year. In 1893, only 708 Japanese went to Russian Siberia, but their number increased to 966 next year, and during last year more than 2,000 railway coolies were sent to Vladivostok through the medium of Hiroshima agents alone. But the emigration of Japanese to Korea is an entirely distinct affair, owing to the special relations existing between the two countries. The Japanese in Fusan, Ninsen, Gensan, and Soul present a striking contrast when compared with Japanese emigrants in other parts of the world. In Fusan, over 6,000 Japanese live; in Ninsen 3,500; in Gensan over 2,000; and in Soul over 2,300, in all about 14,000. Then there are over 200 peddlers in the interior of the Peninsula, while over 8,000 fishermen ply their business, in accordance with Treaty provisions, along the northern and eastern coasts of Korea. More than 14,000 Japanese are therefore in Korea, where many of them have settled permanently. The Japanese settlements in Korea present a hopeful aspect and demand the earnest care of the home authorities. The South seas and Southern Asia have lately attracted the attention of Japanese, resulting in the emigration of a goodly number. The following have left Japan for those places since 1892:—

Queensland	955
New Caledonia	600
Fiji	305
Australia	459
Victoria	153
Borneo	18
Siam	20
Total	2,510

Emigrants sent through the medium of agents from the beginning of this year are not included in the above total. Apart from race prejudice, which promises to grow in the South, especially in Australia, other causes are operating to dampen the ardour for the southern march of Japanese labourers. Adverse climatic conditions are preëminent. Of 305 Japanese that landed in Fiji in May, 1892, 106 were carried off in a few months by *beri-beri*, fever, and so forth. The Straits Settlements and Southern Asia as far as Bombay, are principally lurking places for Japanese prostitutes in large numbers.

THE SALVATION ARMY IN JAPAN.

From the 12th to the 14th instant inclusive, at the Head-quarters of the Salvation Army in Japan—near Shimbashi, on Ginza—the first anniversary of the Army's arrival and opening of work in this country was enthusiastically celebrated. The large hall was on each evening well-filled with attentive audiences, who listened with eagerness to Colonel E. Wright's brief narrative of the work done by the Army since Sept. 13th, 1894. It is from Colonel Wright's description that we take the following:—In the year 1890, General Booth first decided to send Salvation Army officers to Japan, and at that time Colonel Wright was a volunteer for the work. The project was, however, abandoned for a time principally owing to lack of funds. The War of 1894 aroused enthusiastic interest in Great Britain, and it was while Japan was at the height of her glory that the "invasion" of the Salvation Army began. In July, 1895, the pioneer officers left London, reaching Yokohama early in September. A small house for meetings was secured a few days later in Tokyo (Shin Sakai-cho), and this city has now become the Head-quarters. The first meeting in the metropolis was held on Sunday, Sept. 15th. There are five Corps actively at work: two in Tokyo (Ginza and Shintomi-cho); one in Yokohama; one in Hachioji; and one in Okayama. The Ginza and Okayama Corps seemed to have met with the greatest amount of success. There are now 25 officers, of whom 16 are Japanese. "The Army knows nothing of 'native' and 'foreign' distinctions. Every officer in Japan is a Japanese in heart and interest, whether the chance of birth gave him a start in this country or not. No better evidence of this can be given than the fact that the officers who came from England accept exactly the same conditions of life as those obtaining among their Japanese comrades. In the scale of allowances, dress, food, homes, opportunity for work, chances of promotion to positions of increased responsibility and usefulness, the conditions are exactly equal." We learn, moreover, that those having the rank of "Captain" draw a maximum salary of eight *yen* per mensem; and on this pittance four women officers, of English birth, are now living in Tokyo, Hachioji, and Okayama. There could be no greater evidence of sincerity, self-denial, and zeal. Statistics show, concerning the work in Tokyo and Yokohama that no less than 603 "conversions" have been recorded during the course of the year. The foreign-born officers have spent 1,121 hours in visiting and talking with those that seemed likely to accept, or had accepted, the faith. In these hours no less than 1,245 houses were visited. Of open-air meetings quite 523 have been held, with 1,098 indoors. Those that have signed the "Articles of War" and registered themselves as "soldiers" number, in Tokyo alone, 130. But most remarkable has been the spread and sale of the *Toki-no-Koe*; the Japanese edition of the "War Cry." This mission-sheet has been twice enlarged since starting, and 1,700 copies are at present printed every fortnight; every one being sold out, as a rule, within the week. No charge whatever is made upon the Army's funds to support this paper; by its sales alone it pays its way and even leaves a margin of profit. Nothing similar can, we fear, be said of any other religious publication in Japan. Of the *Toki-no-Koe*, 26,900 copies have been printed in the twelvemonth, and of these approximately 25,000 have been sold: a most gratifying showing. Another band of officers is expected to arrive shortly from London; but these are simply to assist in opening up new corps, the idea being to put the whole work, as quickly as possible, into the hands of the Japanese officers. And it is all the more remarkable when we remember that not one of the officers that came from Great Britain last year is as yet able to address a meeting in Japanese. Everything is done through the medium of interpreters, and of a truth the Army has discovered in Japan some most zealous, eloquent, and active assistants, well worthy of high official rank. There are now, we are told, three Japanese who rank as "Captains," and several others as "Lieutenants." One of the

secrets of the Army's pronounced success lies in its officers assimilating themselves so entirely with the people. Another is that the work goes on continuously, there is no break, there are no holidays. Each Corps meets once a day, while the officers spend most of the daylight hours in making visits.

In addition to the *Toki-no-Koe*, the Army has published and widely distributed 10,000 pamphlets containing translations of two addresses by General Booth. A Song-book, with about thirty songs, was printed early in the year, and there is now in the press a new edition with more than 100 songs and choruses. Two other books are in course of preparation. The songs have "caught on" immensely with the soldiers and even with those that do not belong to the Army. A good many people in Tokyo can now sing *Mina tusume!* to the tune of "Marching through Georgia." The officers no longer meet with opposition, and the meetings are invariably well attended. In Okazawa, for example, even the street outside is often filled with eager auditors. One of the recent feats of a body of Japanese officers was to march all the way to Hachioji and back to Tokyo, holding open-air meetings wherever they halted. In six days they had 28 converts.

THE TOKYO-UTSUNOMIYA RAILWAY.

On Saturday last it became possible to run trains right through from Tokyo to Utsunomiya, and the regular service was resumed on that day, so that the journey to Nikko has now ceased to present any difficulties. A vast tract of country between Koga and Kurihashi still remains under water, owing to the same cause that operated so disastrously five years ago, namely, the bursting of the westerly bank of the Tone-gawa, and the consequent backward set of the stream. It has already been explained in these columns that the surface of the river some two miles below Koga is higher than the general level of the Koga district through which the railway runs. Hence, when the Tone escapes from its channel at the down-stream point—which tendency it always exhibits in times of heavy flood—the water sets back and forms a lake between the embankment of the river and the filling of the railway. When that occurred in 1891, the railway filling was lower than it is now, and the roadway suffered considerably. But, this year, the water did little damage, and almost immediately after its retreat, trains were able to re-commence running.

PARCELS POST.

The vernacular press states that the parcels post service lately arranged between Japan and England will come into operation from the 1st of October, and that such business will be conducted at the following offices:—Tokyo, Kofu, Chiba, Urawa, Osaka, Wakayama, Nara, Kyoto, Otsu, Yokohama, Shizuoka, Kobe, Okayama, Tottori, Nagasaki, Tau, Kumamoto, Saga, Sapporo, Hakodate, Niigata, Nagoya, Gifu, Fukuoka, Oita, Moji, Sendai, Fukushima, Yamagata, Hiroshima, Akamagasaki, Matsuyama, Yamaguchi, Utsunomiya, Mayebashi, Mito, Nagano, Aomori, Morioka, Akita, Kanazawa, Fukui, Toyama, Tadotsu, Tokushima, Takamatsu, Matsuyama, Kochi, Kagoshima, Miyazaki, and Nawa (Okinawa). Parcels must not exceed 2 ft. in length, and in circumference, must not exceed 6 ft. in all. The charges are as follow, and parcels will be transmitted for the present by the Canadian mail steamers:—

Parcels that do not weigh more than 350 grammes.....	88 yen.
Parcels that weigh more than 350 grammes, but less than 840 grammes.....	1.68 yen.
Parcels that weigh more than 840 grammes, but less than 14,700 grammes.....	9.48 yen.

The Department of Communications has issued regulations relating to a postal service in the interior for parcels deliverable in exchange for their value. The service consists in delivering a parcel to the sender in exchange for its value and in transmitting this money to the sender. The latter is to pay 5 sen extra beyond the ordinary charges on parcels. The value of

such a parcel must not exceed 30 yen. This special service will come into force from Nov. 1st, but such business will only be transacted at post offices that deal with parcels post and postal order business.

NEW HARBOUR REGULATIONS.

The following regulations for Yokohama harbour have been issued by Governor Nakano, of Kanagawa, and are suspended on the notice-boards of the various Consulates:—

"It is hereby notified that rules referring to the fairway, course, and anchorage inside the breakwaters of the Yokohama Harbour for vessels entering or leaving the port have been enacted as follows:—

"Vessels shall pass only between the East and North Breakwater Heads. Craft of small size may, however, pass between the land ends of both Breakwaters and the shore.

"When coming inside the Breakwaters, vessels shall steer West for a distance of at least two cables from the Breakwater Heads, and when going out of the Breakwaters they shall steer East for at least two cables before coming to the Breakwater Heads.

"No vessels shall moor or anchor in such positions as to admit of any part of the craft so moored or anchored encroaching on the space enclosed between two parallel lines five cables long, measured west from the two heads either of the East Breakwater or of the North Breakwater, in whatever direction they may swing."

CHINESE NEWS.

The breach in the bank of the Peiho is evidently becoming a very serious matter from the point of view of Tientsin folks. At the date of latest advices—Sept. 12th—the water of the river had been for four weeks steadily pouring into the plains instead of following the course of the stream, and apart from the destruction wrought by such an inundation, the scouring of the river bed had entirely ceased, so that the contingency of Tientsin's being effectually silted up seemed imminent. The British and German Ministers were said to have brought vigorous pressure to bear on the Tsung-li Yamên with the object of having some effective works of repair undertaken, but no result was yet visible.

The result of the *plébiscite* taken in Shanghai to determine an eleven for the interport cricket matches is as follows, the names being given in the order of voting:—

W. H. Moule.	T. Wallace.
W. H. Jackson.	P. A. Cox.
F. A. de St. Croix.	A. E. Lanning.
J. Mann.	S. M. Wallace.
R. C. Farbridge.	W. J. Tyack.
N. E. Möller.	

Simultaneously with the recent inundations in Japan, the Yangtze rose to an exceptional height, and many houses were flooded at Ichang, some also being washed away.

We take the following from the *North-China Daily News*:—

Mr. C. J. Dudgeon is proceeding almost immediately to Peking to urge upon the Foreign Ministers the importance of appointing a Commission to sit in Shanghai to consider the whole question of the proposed revision of the Commercial Treaties with China. It is suggested that a Board composed of representatives of the mercantile community, and the Customs, and presided over by a Consul, should sit in Shanghai to collect evidence, and draw up a report embodying the result of their labour somewhat in the manner of Royal Commissions or Parliamentary Committees in England. Mr. Dudgeon, in undertaking his present mission, is acting in the best interests, and has the full support of the representatives of, all foreign trade with this country.

An Imperial Decree published in the *Peking Official Gazette*, contains the following account of the late Marquis Tso's celebrated operations against the Mahomedan rebels in Kansu and Turkestan, 30 odd years ago:—

The late Marquis Tso when volunteering for his self-imposed task of reconquering Kansu and

Chinese Turkestan got the Emperor Tung Chih to allow him to do as he pleased without any limit of time to complete his task. He then with an army, almost entirely composed of Hunanese, or brigades of the Siang Army corps, amounting to some 70,000 men, invaded Kansu and by a series of rapid movements and by superior numbers and armament fought his way inch by inch into the rebel country, manifesting no haste when confronted by strong walls. On the contrary, in order to be independent of grain supplies from the other provinces, whenever he besieged a city he made his soldiers plant grain in the soil made fertile by the blood of thousands of massacred Buddhists, and by the time the harvesting period arrived the besieged city was sure to be starved out and forced to surrender while his own army lived in plenty obtained by the sweat of their own brows! By these means, with time as no object, with reinforcements pouring in from time to time, armed with the best modern weapons obtainable from Europe—the Taipings and Nien-feis were by this time completely wiped away—the late Marquis Tso drove the remnants of the defeated Mahomedans to a place called Chinchip'u, west of Lanchow, where stood nearly 150 walled villages surrounded by a circumvallation of strong mud walls. Here the rebels had gathered their women, children, and effects, and still numbering 200,000 fighting men were prepared to hold the place to the last drop of blood. The prospects of so many stern fanatics fighting for hearth, home, and religion would have awed any other mandarin, but it did not deter Tso from his fixed method of fighting the rebels, for with a well-equipped army of nearly 150,000 men and a strong force of artillery, with his lines of communication and supplies kept well open by innumerable outposts dotting the whole line from Chinchip'u to the Grand Canal in Honan, Tso prepared to invest this stupendous fortress or succession of fortresses. While the front line invested the place in front, the other brigades gradually surrounded the walls leaving only the north-western portion open to allow the rebels to escape, and again detachments from each army corps were detailed to cultivate the soil (there was plenty, for its former owners were either slain or were now besieged inside Chinchip'u) and supply the whole army with reserves of grain sufficient for ten years! For ten years the rebels stubbornly held their last stronghold yielding village after village only when it had been completely demolished by the shot, shell, and rockets which fell unceasingly day and night. First only the strong and able-bodied went out to defend the walls, then as their numbers thinned down youths and women shared the vigils of the watch on the walls, and when the last day came and the last three villages of the great fortress alone remained to the 10,000 men, women, and children to oppose 200,000 well-armed foes maddened by hate and furious at the trouble given by this handful of rebels, even little children helped to rain stones from the walls upon the crowds swarming up to the ramparts of the villages. When night fell only 600 men and 150 women mounted on swift horses escaped the massacre. Not a single child escaped with the 750 desperate refugees under their famous leader Peh Pen-lu or the "White-eyed Tiger." The 750 refugees fled past the Great Wall followed by Tso's cavalry until they reached an asylum at last inside the wall of Urumtsi. The Chinese cavalry only pursued as far as the Great Wall for flying bands of rebels still held the country.

THE ORIGINAL OF "TRILBY."

Mr. Frederic Lyster, a well known theatrical manager, alleges the probability that the idea of "Trilby" was borrowed from the career of Mde. Anna Bishop, the famous singer who made her *début* in 1839; took the musical world by storm, and subsequently married the celebrated composer Sir Henry Bishop. "The book 'Trilby,'" writes Mr. Lyster, "seems to be founded on the career of Anna Bishop, for Svengali is simply an exaggerated presentation of Bochsa, her musical director, while the Madame of the story is a replica of Lizzie Phelan, *dame de compagnie*, the very shadow of the great artist for nearly 40 years. The relations between the singer and the harpist were purely professional, yet his will dominated her every action. He rehearsed her songs in the strictest privacy, and when illness prevented Bochsa's presence at general rehearsals, Madame Bishop would also remain away, leaving me to rehearse the band without her. On these occasions, some of the clever instrumentalists would remark,

'Bishop's brains are sick abed.' Although Bochs's influence over the prima donna was evidently paramount, I never saw him descend to the slightest familiarities. He was her *maestro*, her friend, her guide, and nothing more, while she was almost childlike in her meek submission and dependence upon him. Personally, she was a sweet, amiable woman, apparently without individual will-power, and without even the faintest sense of ambition. She sang and acted because she was told to do so, seemingly as if in a prolonged dream. Even when pitted by Bochs against Jenny Lind she appeared to take no interest in the rivalry, but obeyed and trusted in Bochs and the management for the rest."

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

AMERICA AND ENGLAND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the discussion that has been going on in your columns lately on the question of the dislike for Englishmen on the part of citizens of the United States, you say that it appears to you that one of the reasons why this is true is the attitude the English Nation occupied towards the Confederate States, during the Civil War. One of your correspondents also takes the same ground. This, no doubt, is true, if for "citizens of the United States," you substitute the words "citizens of the Northern States." The feeling you speak of is not known in the South, certainly not in the "Old Dominion," whence I am proud to say I come.

It is not my object, however, to join in this discussion. I take issue with certain words which are found further on in the Editorial above referred to. You say there that it seems strange that the nation which had done so much to destroy slavery should during the American Civil War have so strongly sympathized with the side that was warring for its continuance. And you further say you can only explain this on the supposition that the English people suffered from a "temporary vertigo." If you will pardon me, Mr. Editor, I should say that the Editor of the *Japan Mail* and not the English people is subject to "vertigo." I hope it may prove a temporary one.

The Southern States were not fighting for the continuance of slavery, but for their Constitutional Rights, or what they conceived to be their Constitutional Rights, when they drew their swords in '61. Slavery was the *occasion*, but not the *cause* of the war. The quarrel had its origin in the slavery question, but the war was a "constitutional war," and would have been fought just the same, if the quarrel had risen in something else. The leaders on the South would not for a moment have fought for slaves or slavery. On the contrary, most of them considered the system wrong, and had been in the habit of giving freedom to such of their slaves as they considered capable of taking care of themselves.

And not only so, but even in the North there was no talk at the beginning of the War of emancipating the slaves. The North fought for the *Union*. The South fought for the Right of Secession.

I am fully aware that in these latter days most people, who have not looked into the matter or have not drawn it in with their mother's milk, take the same view of this matter, that you apparently do, Mr. Editor. I shall therefore endeavour briefly to convince all such people with the words of one of America's great statesmen—Abraham Lincoln. May he rest in peace!

In his inaugural address of 1861, President Lincoln used the following words:—

"I have no purpose, directly or indirectly, to interfere with slavery in a State where it exists; I believe I have no lawful right to do so, and I have no inclination to do so."

(One of the leaders in the abolition movement—Sumner—said on the floor of the Senate—February 24th, 1861:—"I take this occasion to declare most explicitly that I do not think that Congress has any right to interfere with slavery in a State.")

When the "Confiscation Act" was passed, President Lincoln sent a message to Congress of which the following is a portion:—

"It is startling to say that Congress can free a slave within a State, and yet, if it were said the ownership of the slave had first been transferred to the nation, and Congress had then liberated him, the difficulty would at once vanish . . . and the question for Congress in regard to them (the

slaves) is 'Shall they be made free or sold to new masters?'"

The policy of the U.S. Government, it is plain to see, though some time after actual hostilities had begun, was not yet defined.

On May 9th, 1862, General Hunter of the U.S. army in South Carolina issued an order declaring "the persons held as slaves in those States (Georgia, Florida, and South Carolina) to be forever free." On May 19th of the same year, President Lincoln issued a proclamation declaring the order to have been issued without due authority, and that the decision of such questions he reserved to himself as President, and that "I do not feel justified in leaving (them) to the decision of commanders in the field."

It was not until September 22nd, 1862, over a year after the war started, when the Emancipation Proclamation was issued, that the Northern States could pose before the world as making war for the purpose of freeing slavery. As a matter of fact, the Emancipation Proclamation was a *war measure*. The idea of many who urged it was that the South would thereby have a new enemy to fight and that too in its own bosom.

It was not a "vertigo" on the part of the English Nation that induced them to sympathize with the South, but a belief that the South was in the right in its interpretation of the Constitution of the United States. The South and Southerners are proud of this unbiassed expression of good-will, and dislike to have it ascribed to "vertigo," or to anything else but a desire for justice and fair-play for which the Englishman is proverbial.

Most truly yours,
September 15th, 1896.

"THE APOTHEOSIS OF RUSSIA."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with interest the article entitled "The Apotheosis of Russia," which appeared in your columns yesterday and to-day. Pardon me if I have been reminded of Coleridge's "The Devil's Thoughts," particularly the 8th stanza, which runs thus:—

Down the river there plied with wind and tide,
A pig with vast celerity;
And the Devil looked wise as he saw the while,
It cut its own throat. There, quoth he, with a smile,
Goes "England's commercial prosperity!"

Yours respectfully,

Yokohama, Sept. 17th, 1896.

EPISCOPAL SCHOOL, NARA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The letter by "Observer," in your issue of the 15th, deserves notice by me because of its reference to the "Episcopal School of Nara."

There is no reason for "Observer" to fear that our School at Nara will "undergo the scandalizing process" that has disrupted the Doshisha. The "Episcopal School at Nara" has adopted the curriculum of the Government Schools in order that its graduates may not be at a disadvantage in their examinations for entrance to the *Koto Gakko*. It can not "break loose from Christian moorings," and its "Japanese teachers and trustees" have no power "to kick out" the missionaries for the following reasons:—

1. The Directors of the School are appointed annually by the Bishop.
2. The Principal of the School is appointed by the Bishop, and may be dismissed by him.
3. No teacher of whom the Bishop disapproves may be employed in the school.
4. The School has no endowment and is dependent for its support on the Treasury of the Missionary Society.

This "little, very little *Chu Gakko*" of nearly two hundred pupils endeavours to give an education equal to that of the Government schools, and at the same time surround its pupils with Christian influences. When it fails to do this it will have no *raison d'être*.

Sincerely yours,

JOHN McKIM.

September 17th, 1896.

THE DOSHISHA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Since the publication of President Kosaki's letter, in which he defined the original purpose of the founding of the Doshisha as being, not the extension of Christianity, but the conferring upon young men of a liberal education including Christian morality, I have referred to an authentic account of Neesima's expressions on the subject. Although reluctant to prolong the controversy concerning the Doshisha, I think the pertinency of those expressions makes it suitable for them to be brought forward at the present time.

In the "Sketch of the Life of J. H. Neesima LL.D." by J. D. Davis, D.D., published in Yokohama in 1890, we find the following statement in regard to the Mission of the American Board in Kyoto:—"A short time before Mr. Neesima's return" (from America in 1874) "our Mission received a letter from Secretary Clark telling us that five thousand dollars were waiting to found a Collegiate and Theological Training school to train Christian workers for Japan." The great opposition to Christianity existing at that time made necessary much prudence, in order to obtain any footing at all for such a school; therefore it is said (page 52) that the Governor of Kyoto told Neesima, "we could teach Christianity in the school under the name of moral science." In Neesima's early appeals for aid for the Doshisha, addressed to the Japanese public, he naturally dwelt upon Christianity as supplying a better morality than Confucianism or Buddhism; but the great purpose to which he gave his life was abundantly shown to go much farther than merely intellectual and moral education.

In a circular address issued by him in the United States in 1885 (Sketch &c., pages 103, 105) he wrote thus:—"Why should we seriously object to raise up Christian statesmen, Christian lawyers, Christian editors, and Christian merchants, as well as Christian preachers and teachers, within the walls of our Christian institutions? It is our humble purpose to save Japan through Christianity. The souls and bodies of our Orientals ought to be thoroughly purged, and consecrated to Christ for establishing his glorious kingdom in the earth as in heaven. . . . We are thus compelled to attempt this broad sweep to reach and win thirty-seven millions of precious souls to Christ. Seeds of truth must be sown now: undue delay will give a grand chance to unbelieving hands to make thorough mischief and render that beautiful island empire hopelessly barren and fruitless."

In an appeal written by Neesima in 1888 and published in twenty of the leading papers of Japan, occurs this language (Sketch, &c., pp. 122-123): "The spirit of Christianity penetrates all things even to the bottom, so that, if we adopt only the material elements of civilization and leave out religion, it is like building up a human body of flesh only without blood."

Among his meditations, written in Neesima's journal while in Italy in 1884, he wrote as follows (Sketch, &c., pp. 154-155): "A policy for our Training School. . . . Let these three factors be our perpetual mottoes: 1. Christ as our foundation stone. 2. Well qualified instructors. 3. Well selected library and thoroughly equipped apparatus."

Near the close of his biographical Sketch, Dr. Davis says of Neesima (page 169): "Deeper than all other thoughts, more important than all other plans, was the thought and planning to bring the millions of Japan to Christ. This was fundamental to his whole plan for a Christian College and University."

In view of such a record, impartial observers cannot fail to recognize in the late action and declarations of the Trustees of the Doshisha, a radical departure from the conditions of its foundation. If the laws of Japan had made it possible for the property purchased with funds contributed by and through the American Board to have remained in its actual possession, the Board would be justified in withdrawing its use from an administration which so far falls short of the fulfilment of the original design of the institution. Let us hope that, as Japan is a land of reactions, a change may yet occur, going back to the spirit and principles of one who deserves to be remembered and honoured as second to none in patriotic devotion to the making of New Japan.

Very respectfully,
H. HARTSHORNE.
Hakodate, September 18th, 1896.

THE FLOODS IN THE GIFU AND NAGOYA DISTRICTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have just returned from visiting parts of the Gifu plain which have been devastated by the recent floods. The Rev. H. J. Hamilton, the only foreign resident in Gifu, kindly accompanied me. I had not time to visit the submerged district in the prefecture of Nagoya, but learnt yesterday from the Rev. J. Cooper Robinson, who had just returned from it, that its area is much smaller than that in the Gifu Ken.

Happily there is no such loss of life to record in these districts in the present calamity as after the earthquake of 1891. Yet, in itself, the death roll is a long one. According to returns given me two days ago by the relieving officer in Imau, a town to the west of Gifu, 44 persons had been drowned

in that immediate neighbourhood—though owing to the proximity of the embankment of the Nagaregawa no life was lost in the town itself—and 84 in the neighbouring town of Takasu. I was unable to obtain returns for the whole prefecture.

On the other hand the loss of property has been far greater than five years ago. The whole country for many miles is under water. The crops are wholly destroyed. Many houses are in ruins or have disappeared from their foundations. On the evening of Thursday, the 10th inst., the water reached the upper floors, and the wind, which was blowing with almost the force of a typhoon, raised great waves on the newly formed lake, which overthrew the weaker structures. In Imai, out of some 300 houses, 100 fell. Those which remain will not be habitable for some time.

The people are living in huts, made chiefly of straw, which they have erected on the embankments, and in such public buildings as escaped the general devastation. The embankments of the Nagaregawa seem for many miles with the population to which they have given refuge. The school at Imai has received over 800 of the poorest inhabitants. The good behaviour and cheerfulness of the people under such piteous circumstances seemed most praiseworthy.

The local authorities have been equal to the heavy demand made upon them, and there does not seem to be any immediate lack of food or of medical supplies. But all whom I consulted were of opinion that the distress through the coming autumn and winter will be very great. Those who have no means at their disposal, except such as they obtain by the day's toil, can indeed ill support the sudden and complete loss of home and possessions. No doubt the repairing of dykes and the re-erection of houses will, after a time, put much work into the hands of able-bodied labourers and artisans, but the old, the infirm, and the very young, have no such resource and must be largely dependent upon private benevolence. In a letter which you kindly published in November, 1891, I ventured to advocate the erection of a hostel for aged persons as one means of assisting some of the most wretched and needy sufferers by the earthquake of that year. Sufficient funds were subscribed for the purpose and the Institution has continued its useful work till the present time. The Rev. J. C. Robinson, who has throughout been in charge of the hostel, is prepared to receive other inmates as accommodation and funds may allow.

Any contributions which are entrusted to the Rev. H. J. Hamilton, Gifu, Mino; or to the Rev. J. C. Robinson, Nagoya, Owari; or to myself, will, with your permission, be acknowledged in the *Mail*, and assigned, as the subscribers may direct, either to supplying clothes and bedding to the poorest residents in the submerged districts, or to the accommodation and support of new inmates in the Nagoya Hostel.

I venture to express the hope that considerable sums may be subscribed for these objects. If this country is liable beyond others to suffer by great natural calamities, it will be felt that there is at least this much of compensation that they are special occasions of that charity which is not limited to but is characteristic of our Faith.

I am, Sir, your obedient servant,
EDW. BICKERSTETH.
Bishop.

19th September, 1896.

THE PARCEL POST.

IMPERIAL ORDINANCE.

PARCEL POST REGULATIONS BETWEEN ENGLAND AND JAPAN.

We hereby give our sanction to the present Ordinance relating to a contract entered into between the Department of Communications of the Empire of Japan and the General Post Office of the United Kingdom of Great Britain and Ireland, in connection with the transit of Parcels through the Post, and order the same to be promulgated.

His Imperial Majesty's Sign Manual.
Great Seal.

Sept. 17th, of the 29th year of *Meiji*.

Count KURODA KIYOTAKA,
Minister President of State.
SHIRANE SENICHI,
Minister of Communications.

The Department of Communications of the Empire of Japan and the General Post Office of the United Kingdom of Great Britain and Ireland hereby stipulate to establish a Parcel Post Service between the two countries, such parcels not to be subject to insurance or deliverable in exchange for their value.

The Regulations of this parcels post between Japan and the United Kingdom, and for the delivery of parcels for transmission beyond, are determined according to the following regulations.

ART. I.

Clause 1.—Parcels not insurable and not deliverable in exchange for their value may, under the heading of "parcels post matters," be transmitted between the two countries; the weight limit for parcels from the United Kingdom to Japan not to exceed 11 pounds, and from Japan to the United Kingdom 1 *kwamme* 320 *momme*.

Clause 2.—The Postal Authorities of the two Powers shall determine matters relating to the covers, size, &c., of parcels for transmission, and also decide what substances may not be posted in parcels.

ART. II.

Clause 1.—The Postal Authorities of the two Powers shall undertake, within the limit of their respective territories, to transmit or receive parcels to or from other countries with which parcels post regulations exist. For parcels of this description the Postal Authorities of the two Powers shall undertake to hold themselves responsible within the limits specified in Art. IX.

Clause 2.—For parcels coming from or destined for other countries and transmitted through and beyond Japan or the United Kingdom, the Postal Authorities of the two Powers shall consult and determine as to the mode of exchange between the various offices.

ART. III.

Charges on parcels sent by post must be paid in advance.

ART. IV.

The charges on parcels to be transmitted from the United Kingdom to the Empire of Japan, or *vice versa*, and the share to be allotted to the respective Post Offices, shall be determined as follows:—

A.—PARCELS TRANSMITTED FROM THE UNITED KINGDOM TO JAPAN.

	Parcels not more than 3 pounds.	Parcels above 3 pounds, but not below 7 pounds.	Parcels above 7 pounds, but not below 10 pounds.
Rates in the interior of the United Kingdom	5d.	10d.	1s. 3d.
Rates from the United Kingdom to Japan	10d.	1s. 8d.	2s. 6d.
Rates in the interior of Japan	5d.	10d.	1s. 3d.
Distribution and Customs charge	2d.	2d.	2d.
Total	1s. 10d.	3s. 6d.	5s. 2d.

B.—PARCELS FROM JAPAN TO THE UNITED KINGDOM.

	Parcels not more than 3 <i>kwamme</i> 320 <i>momme</i> .	Parcels above 3 <i>kwamme</i> 320 <i>momme</i> , but not below 8 <i>kwamme</i> 320 <i>momme</i> .	Parcels above 8 <i>kwamme</i> 320 <i>momme</i> , but not below 12 <i>kwamme</i> 320 <i>momme</i> .
Rates in the interior of Japan	5d.	10d.	1s. 3d.
Rates from Japan to the United Kingdom	10d.	1s. 8d.	2s. 6d.
Rates in the interior of the United Kingdom	5d.	10d.	1s. 3d.
Distribution and Customs charges	2d.	2d.	2d.
Total	1s. 10d.	3s. 6d.	5s. 2d.

ART. V.

The expenses of vessels used for the transmission of parcels shall be borne equally by the Postal Authorities of the two Powers.

ART. VI.

For parcels transmitted from the territory of one of the two contracting Powers to that of the other; no other postal duties except those specified in Arts. IV. and VII. are to be imposed.

ART. VII.

When, in consequence of a change of the place of abode of the sender, a parcel has to be re-transmitted from the territory of one of the contracting Powers to that of the other, or when, in consequence of impossibility of delivery, a parcel is sent back, the charges specified in Art. IV. shall be levied either from the sender or the sender. The customs charges already paid may be reclaimed.

ART. VIII.

Parcels containing letters or documents bearing the character of correspondence or other substance whose transmission is forbidden by the customs or laws or regulations of the countries concerned, shall not be sent by the parcels post.

ART. IX.

Clause 1.—Except in cases of natural calamities or unavoidable occurrences, when a parcel is lost or damaged, the sender—or, when the sender is absent, his representative—may lay claim for

damages corresponding to the actual amount of the loss or damage.

Provided that for a parcel not weighing over 7 pounds (840 *momme*) the damage must not exceed 12 shillings, and for a parcel weighing over 7 pounds (840 *momme*), 1 pound sterling. The sender of a lost parcel may apply for the refunding of postal charges.

Clause 2.—Obligations incidental to the paying of damages shall devolve on the Postal Authorities that control the office of despatch. Provided that the Authorities in question may lay claim for refunding of damages to the Postal Authorities in whose jurisdiction, or while in whose charge, the parcel in question was lost or damaged.

Clause 3.—Postal Authorities that have received a parcel without protest and cannot produce evidence to show that the parcel in question was duly delivered to the sender or duly sent on to the other Postal Authorities, shall be held responsible for it till evidence can be furnished.

Clause 4.—The Postal Authorities will pay the damages as promptly as possible, within a period not exceeding one year, computed from the date on which the claim for damages was duly submitted. The Postal Authorities held responsible for the damages must pay the amount to the office of transmission as promptly as possible.

Clause 5.—Claims for damages will be received within a period of one year, computed from the day on which the claim was duly lodged; on the expiration of that term the claimant shall lose his rights for recovery of damages.

Clause 6.—When, in course of transmission between the two contracting Powers, a parcel is lost or damaged, and when it can not be established in which jurisdiction such loss or damage occurred, the two Postal Authorities shall equally bear one half of the total damages.

Clause 7.—The Postal Authorities shall be relieved from responsibility when a parcel is duly received by the person entitled to receive it.

ART. X.

When, in case of emergency, the respective Postal Authorities deem the suspension of the parcels post service appropriate, it may be temporarily suspended, *in toto* or in part. Provided that in such event information of the matter must be speedily conveyed to the other Postal Authorities, by telegram when urgency is necessary.

ART. XI.

For matters not expressly provided for in the present stipulation, the postal provisions in force in the interior of the respective contracting powers shall be applied.

ART. XII.

The Postal Authorities of the two contracting powers shall determine at what Post Offices on localities foreign parcels post matters can be dealt with, as also the modes relating to the transmission of parcels and detailed processes necessary for carrying out the present stipulation.

ART. XIII.

Clause 1.—The date of the enforcement of the present stipulation shall be determined by a conference of the Postal Authorities of the two Contracting Powers.

Clause 2.—The present stipulation shall retain validity for the period of one year after one of the two contracting powers desires to abolish it, and has communicated that wish to the other power.

Clause 3.—The present stipulation is duly signed and sealed in accordance with accredited authority by the undermentioned Ministers.

The present stipulation is drawn up in duplicate and is done at Tokyo on May 21st of the 29th year of *Meiji*, and at London on June 23rd, 1896.

SHIRANE SENICHI,
Minister of Communications,
of the Empire of Japan.

NORFOLK,
Postmaster-General of the United Kingdom
of Great Britain and Ireland.

A return has been issued showing the number of desertions and failures to join sea-going vessels (registered under the Merchant Shipping Act, 1894) in various parts of the world, compiled from articles of agreement which terminated in 1895. The estimated number of persons employed in sailing ships and steamers combined, excluding masters, cattlemen, and Lascars, was 138,500. Of this total, 18,028 deserted in the British Islands, and 14,502 abroad. An analysis of the ratings given in the tables contained in the return shows that able seamen and firemen are answerable for the great majority of the desertions and failures to join, although, as a body of men, they do not number quite half the persons employed upon foreign-going vessels.

EARTHQUAKE AND TIDAL WAVE IN JAPAN.

RELIEF FUND FOR SUFFERERS.

At a meeting held at the Mansion House on Tuesday, the 21st of July, the Right Honourable the Lord Mayor in the Chair, the Council of the Japan Society of London were constituted a Committee to receive Donations to a Fund to be raised for the relief of sufferers from this dreadful calamity.

The preliminary list of donations, announced in the room, is herewith appended. Further donations are urgently needed, and should be forwarded to the Hon. Secretaries of the Japan Society of London, 20 Hanover Square, W.

Cheques should be made payable to the Hon. Treasurer, Japan Society, and crossed "Barclay and Co.: Japanese Relief Fund."

CHARLES HOLME, Hon. Secretaries,
T. F. K. TANABE, Japan Society.

The sum of One Thousand Pounds, for the relief of urgent cases, has already been placed by telegraph at the disposal of the British Minister in Tokyo.

CRICKET.

CAPTAIN'S ELEVEN VERSUS SECRETARY'S ELEVEN.

A pleasant game was played on Saturday afternoon between teams captained by Mr. Walford (Captain of Cricket) and Mr. Crawford (Honorary Secretary). The former winning the toss sent in his side to bat, White and Campbell opening for them. Only three of the batsmen got into double figures, White (62), Murray (25), and Dr. Todd (11, not out), Watts' bowling proving very successful. At the close of the innings this bowler's analysis read: 48 balls, 8 runs, 4 maidens, 7 wickets. Then the Secretary's eleven went in, but the light did not allow of the game being finished and only six wickets were down when time was called. Edwards made the top score for the Secretary's side, 53 not out, though he was missed several times by the fielders, who were very slack. One of the bats, Showler, for the Captain's team, was put out in a curious fashion. He was the third man to play, taking Campbell's place, and had to face the bowling of Edwards. A ball sent down by Edwards glanced off Showler's pads and striking Dickinson, who was wicket-keeping, rebounded on to the wicket. The batsman had moved out of his ground at the time and was given out. Scores:—

BOWLING ANALYSIS.

	B.	R.	M.	W.
Mr. A. Kingdon
Mr. G. C. Murray
Mr. F. E. White

THE Y.C. AND A.C. VERSUS VISITORS.

A scratch team of the Yokohama Cricket Club met a team of visitors, assisted by the ground men, on Wednesday afternoon, and had little difficulty in winning. With the exception of Mr. Maitland (51, not out) from Hongkong, the visitors did little in the way of scoring, being all out for 77. The home team then went in, having to face very poor bowling. At five o'clock, when rain put an end to the game, 143 runs had been made for the loss of four wickets. Scores:—

THE EARTHQUAKE IN THE AKITA PREFECTURE.

A VISIT TO THE SCENE.

(BY A SPECIAL CORRESPONDENT.)

I entered the Semboku District by the back door, from Akita on the west coast. The way by the front door, that toward the capital, of course, leaves the railroad at Kurosawajiri and after some twenty *ri*, enters this District at Yokote, the usual stopping place *en route* to Akita. Never a good road, this is now practically impassable for *jirikishas*. A pleasant ride of fourteen *ri* brought me to Omagari, the official centre of the District. The *jirikisha* business in Akita Prefecture is well managed. There are numerous companies, and it is generally possible to buy a set of coupon tickets from one point to another at a fixed rate per *ri*. The men change at frequent intervals and an average speed of nearly two *ri* per hour is kept up. But the *jirikisha* men on this occasion took advantage of the damage to the road to waive the ticket system and put the price up to nearly twice the usual rate. I started well equipped for rain, though the morning was clear and cool. Ten days of constant rain had made me wary. The weather, like some of the rest of us, does not reform its bad habits easily, and the fair promises "to do better this time," with which it had greeted us for several mornings, had been uniformly broken before noon. But when I set out the reformation proved permanent and complete. The fine morning became a perfect day. The road led up a beautiful river valley, down which flowed, full to the hills on each side, a river of yellowing rice fields. Here and there a green island of beans could be seen, but far as the eye could reach no "social smoke" and scarcely any human habitations. As we went on, the valley narrowed, and at times we left the river and crossed a little spur of the mountains. Here all signs of human life ceased, except that low bushes gave evidence that human hands had cut away the trees once covering all the hills.

After passing Wada, the fourth village, traces of recent seismic disturbance became plentiful. There were no houses to be wrecked, but the road was ploughed with great fissures, embankments were thrown down, and landslides were numerous. At Kaiwano, I saw the first wrecked houses, twenty-four of them, but after passing this village, the earth movements seemed to have been less violent, and this continued until we rounded the mountain spur, crossed a big bridge, and entered the town of Omagari. Here evidences of earthquake were plentiful enough. Fifteen per cent. of the houses had sustained some sort of injury. Props and braces were to be seen everywhere. Eight people had been killed and eleven wounded. The third storey of the hotel in which I lodged had been wrecked and the lower storeys were braced up with large timbers. From Omagari *jirikisha* fares were higher still, but I found a man who agreed to start with me early the next morning for a circuit of some eight *ri* through the villages where the disturbances have been greatest. As we left Omagari, solitary farm houses and little hamlets became more common. Of these scarcely one was left intact. Most of them were entirely overthrown; the few left standing leaned in every direction or only kept their equilibrium by means of poles and props. Many of the rice fields seemed as badly damaged as the houses. The grain, nearly ready for the sickle, was matted and twisted and buried in mud, and needed immediate attention to save it from total loss. But the hands which should have been caring for it, were busy clearing away the wreckage. Even old women and little children were working the debris over to save what they could. The people were living in sheds and tents made of matting and pieces of the wreckage. In many cases where the high thatched roof lay on the ground unbroken, an opening had been made in the side for a door and people were literally living in the roofs of their houses.

Rokugo before the earthquake must have been a rather well-to-do-looking country town. It had eleven hundred and twenty-five houses and a population of six thousand five hundred and fifty-eight. Eight hundred and thirty-two houses were totally destroyed or seriously injured. Twenty-four persons were killed, and eighty-one were wounded. Most of the inhabitants are farmers, which helps to account for the small loss of life. At five o'clock in the afternoon they were at work in distant rice fields. Except an old woman or some children left at home to keep the house, most of the destroyed houses were vacant at the time. The police station, a small, white building with the little round hood over the door which Japanese builders consider essential to "foreign" architecture, was still standing.

The officers gave me a copy of their report, which included the town itself and five outlying villages. The school building at the end of the town had been transformed into a hospital, and a corps of Red Cross surgeons and nurses were in charge. Two other hospitals have been established in the district and the wounded are all being well cared for. Among the thirty cases in the school house, several were serious and have probably resulted fatally before this. The wounded are principally old people and children. The surgeons told me it took them a week to reach the place, as, on account of the condition of the roads, they were obliged to go around by Aomori. Previous to their coming, the physicians of the vicinity worked night and day, but they were greatly troubled by scarcity of medicine caused by breakages during the earthquake.

From Rokugo, my *jinrikisha* man took me by winding paths through fields of beans, to the little village of Hataya, or rather to the site of it, for of its four hundred and twenty-one houses not a dozen remained. Two *ri* more brought me to Senya, where I saw the signs of the most violent disturbance. Here I met Mr. R. Sakamoto, M.P., whose beautiful residence had been completely ruined. He guided me over the premises and gave me a very interesting account of the disaster. He said the shocks reached their maximum at once, beginning with a violent upheaval which laid his house in ruins in three seconds. It seemed incredible that no one was killed. The interior of his godown looked as though an explosion had occurred just below it. The floor, of massive polished *keyaki*, was thrown up in the centre about two feet. A fissure about two feet wide ran directly under his house and across his yard. A large block of free stone which formed part of the foundation, looked as though it had been sliced with a knife into about twenty pieces. The two buildings that remained standing were left leaning in exactly opposite directions. Near this village, or a little to the east of it, must have been the centre of the entire disturbance. In the evening, I met a Mr. Oizumi, the principal of the Akita Agricultural School, who had been for several days in the mountain region between here and Iwate Ken. Beginning a little east of this village, he had found a fissure extending into the mountains about five *ri* and having a width of several hundred yards. In every direction from this point he told me the evidences of disturbance grew less, and he felt confident that near here was the exact centre. From Senya it is about two *ri* to the village of Takanashi. This was the worst piece of road I saw. Every bridge was broken, and for a long distance, a mile at least, the bed of the road had subsided and was covered with from a foot to eighteen inches of running water. The road bed had become a little stream.

At Takanashi is the residence of the wealthiest man in the Prefecture, Mr. J. Ikida, until recently a member of the Upper House. He is reputed to own five square *ri* of rice land. His house, with its offices and godowns and other out-buildings, look like a small village, and thirty or forty servants are constantly in attendance. The premises seemed to be about half destroyed. Mr. Ikida told me that the motion here was entirely horizontal, but so violent that he was thrown to the ground in attempting to walk. Leaving Mr. Ikida's place, another *ri* brought me back to Omagari, where I arrived about three o'clock. The officials of the District office at Omagari gave me the following as the latest statistics:—In the thirty-five towns and villages of the Sembaku District, 146 were killed and 494 wounded. 4,387 houses were wholly destroyed, 1,785, half destroyed, and 8,999 more or less injured. There are no figures on which to base an estimate of the amount of the loss. It is not so great as in the case of a fire, for even where houses were wholly wrecked, much of the lumber can be immediately used again, and nearly all of it will have some value. The calamity having occurred among the farmers, who raise their own provisions, there will be much less suffering than there would be in a city. The season, too, is the most favourable possible as the harvests are at hand. But among the many to be found everywhere who can just keep soul and body together and provide the daily necessities, any accident brings want, and there will be numerous cases of great and real distress that must be relieved.

In 1780, about the time the steam engine was invented, the consumption of coal in Great Britain was some 6,500,000 gross tons a year. It had risen to 27,000,000 tons in 1816; to 50,875,000 tons in 1850; 112,875,525 tons in 1870; to 181,614,288 tons in 1890; and to 188,777,525 gross tons (210,870,828 net tons) in 1894.

DROWNING IN THE HARBOUR.

An inquest was held at the British Consulate, Yokohama, on Saturday afternoon, before R. A. Mowat, Esq., acting as Coroner, into the circumstances attending the death of Hugo Hejdenberg, a Swede, who fell from the gangway of the steamer *Flintshire* on Friday night, and whose body was not recovered till twelve hours afterwards. The jury were, Messrs. W. W. Till, P. S. Bent, and C. T. Benney.

Captain John Dwyer, sworn, deposed—I am Master of the *Flintshire*. The body the jury have just viewed is that of Hugo Hejdenberg, age 24, an A.B., acting as quarter-master on the steamer. I saw him alive during the afternoon of Friday. I know he then asked for permission to go on shore, and leave was granted by one of the officers. Shortly after midnight I heard a disturbance on the wharf, then I heard a splash. I immediately jumped from my berth, went on deck, and sang out to the men on the wharf, asking what was the matter. I was told that a quarter-master was in the water. At the same time one of the seamen on the wharf jumped into the water. He asked for a rope, and I took the davit-fall and threw it right over the man. Then I went down on to the wharf myself. I called for lights, and within a minute a large lamp was brought, and lowered down to the water. The *Flintshire* was lying close to the wharf. The man in the water said that he could see and hear nothing. Then we pulled him out. There is a space of about three feet between the wharf side and the steamer. The body was recovered about 11 o'clock this morning. There were a number of strange sailors on the wharf when the accident happened; they were more or less intoxicated.

To Mr. Till—I did not see the man fall, but I heard that deceased fell from the gangway into the water.

To Mr. Bent—The men on the wharf were Scandinavians, I think.

Frank Ernest Reynolds, surgeon on the *Flintshire*, sworn, deposed—I saw the body of deceased soon after it came out of the water. I examined it and found *rigor mortis* well developed. There was a good deal of sanious fluid about the nostrils and flowing from the mouth. There were several bruises on the face, one about two inches long over the right eyebrow, another about one inch long near the lower jaw, and a slight abrasion on the nose. They were all trifling. I found no other marks of violence on the body. The bruises might be caused by striking the pier or ship as he fell into the water.

Eric Holmgren, a Swede, sworn, deposed—I am an A.B. of the *Flintshire* and went ashore with the deceased, who was a countryman of mine, at 7.30 p.m. on Friday. There was also with us John Carlson. We went round the town, calling in at several places for a drink. Deceased left us before we came out of the last place, and when we left we found him in the street. He was lying down on his face. This was about half-past eleven o'clock. Carlson and I carried him down to the wharf; sometimes we carried him and sometimes he walked. He was very far gone in intoxication. When we tried to get him up the gangway he fell into the water. We were not carrying him then. The gangway was a proper ladder leading from the pier to the ship; there were lines on both sides of the ladder. Carlson went up first, then I came next; deceased was behind me, and a stranger from another ship followed him. This man had gone ashore with us, having called on the ship with a companion just before we left the ship. We all returned together, five of us. The two strange sailors helped us along with deceased. I was nearly up the gangway when I heard a splash, and looked round: deceased was gone. I sprang from the gangway on to the pier, and from there into the water. I sang out for a rope and one was thrown to me. I could not see nor hear anything of the deceased and by-and-by I was hauled up.

To Mr. Till—Deceased's face was bruised through falling on the street: he grazed his nose a little.

John Carlson, sworn, deposed to being in company with deceased and the last witness all Friday night. They had several drinks together. Deceased was very drunk at the last, and after they picked him up they sometimes carried him and sometimes he walked. Witness went on board first and did not see deceased fall into the water, being then in the fore-castle.

To Mr. Bent—The other sailors belonged to the *Port Philip*.

Capt. Dwyer, recalled, said that the deck of the ship was about 18 or 20 feet above the level of the pier. The gangway was about 24 or 25 feet long, and was sloped at an angle down the side

of the ship. There are chains running down the sides, with 5 feet stanchions. The man was about 5ft. 8in. high, and he must have doubled up as he fell. The gangway is about three feet wide and the man must have fallen on to the pier and then into the water, though none of men seem to know how he fell. He might have fallen between the gangway and the ship.

Holmgren, recalled, said deceased had got half way up the gangway before he fell. He fell so suddenly that he did not know how he fell, or whether deceased struck the pier or not.

Captain Dwyer said that a chock was placed between the gangway and the ship to prevent the ladder from swinging.

To Mr. Benney—The fall would not shake the ladder; it is too heavy.

Holmgren said that the man could not get up the ladder alone, and he had hold of deceased arm up to a moment before the accident; then he released him in order to get a firmer grip of his arm. Just as he left go the man must have fallen.

Capt. Dwyer said that all the men were very much intoxicated.

Ernest Robert Henry Cockerton, sworn, deposed—I am the Fourth Engineer of the *Flintshire* and was returning to the ship about half-past twelve. I saw four or five men at the gangway making a little bother. As I got alongside I heard a splash, and a quarter-master told me that it was deceased. This man was just then going into the water. I saw nothing of the accident, only heard the splash. The men on the wharf were intoxicated, and one wanted to fight the Captain. He also had a narrow escape from falling into the water.

To Mr. Benney—The men were quarrelling among themselves.

The enquiry was then adjourned till Wednesday at 10 o'clock for the production of the two men of the *Port Philip*.

The inquiry into the death of Hugo Hejdenberg, late a quarter-master on the steamship *Flintshire*—whose body was taken from the harbour on Saturday morning—was resumed on Thursday morning in H.B.M. Court for Japan by R. A. Mowat, Esq., acting as Coroner, and Messrs. W. W. Till, P. S. Bent, and C. T. Benney, jurors.

Fritz Engstorn, a fireman on the *Port Philip*, said—I accompanied the deceased and others on shore on the night in question. We called at several places and had drinks. Between twelve and one o'clock we left the house to return to the ship. Hugo had left a few moments before. We found him lying on the ground, and finding that his legs would not carry him, we brought him down to the wharf together. When we reached the pier, two of us went in front of the deceased and two walked behind. In this way we reached the gangway. The deceased tried to walk up the ladder, we supporting him as he went. One man held his arm in front and Anderson held him from behind. Then something happened, the gangway moving to one side, and we lost hold of the deceased and he fell into the water: he fell between the ship and the wharf, striking the pier as he fell. I was too far behind, at the foot of the gangway, to help the deceased as he fell. He fell sideways into the water. I was not sober that night.

Gustave Anderson, sworn, deposed—I am a Swede, and a fireman on the *Port Philip*. The evidence just given is mainly correct, but I don't think that I was behind the deceased; I believe I was between him and the ship when we went up the ladder. I was helping to get him up, and when he fell he seemed to fall away from me sideways. We had stopped on the gangway to shift our hold on deceased when he fell. I was far from being sober. I cannot say whether the gangway shifted or not. I think I heard the ladder crack, but I do not distinctly remember now.

The Jury, after a short consultation, returned a verdict that deceased came by his death by accidental drowning on the morning of the 19th September, in Yokohama harbour.

YOKOHAMA CHIHO SAIBANSHO.

Before Judge USHIOA, President, and Judges TANAKA and KATO, Associates.

MONDAY, September 21.

THE ASSAULT ON MR. W. BARRIE.

At 10 o'clock this morning the trial of Onishi Rikichi and ten others was called on, the prisoners being charged with assaulting Mr. William Barrie, Superintendent Engineer of the Nippon Yusen Kaisha, at his house on the Bluff, at 9 p.m. on the 6th August.

Public Procurator Fukuda lead for the prosecu-

tion, and Mr. Tanaka Tsutomu, of the local bar, defended. Mr. A. H. Lay, of the British Consulate, was present, sitting next to Chief Prosecutor Okumiya.

The prisoners were all dressed in *yukata* and presented a placid appearance. Only one was a *shisoku*, Tamura Kotaro, age 27, the others being *heimin*. Onishi Rikichi, age 19, was first examined and pleaded guilty; then Hirose, a sullen speaking man, followed. His examination lasted till 12.15 p.m., when the Court adjourned to resume at 1.30 o'clock.

Tokutomi Monnojo, a native of Kagoshima, the second fireman on the *Ryofun Maru*, was the third prisoner examined. He acknowledged carrying a stick with him to Mr. Barrie's house on the night in question.

The President—You carried a stick, you say?

Prisoner—Yes, but I always carry a stick when I go ashore. I had no intention of using the stick on Mr. Barrie when I went up the Bluff that night. I am a Kagoshima man, and so always carry a stick.

The President—Does a stick represent a Kagoshima man?—(Laughter.)

Prisoner made no reply.

Tamura Kotaro, the *shisoku* of Wakayama Ken, was the next examined, and acknowledged going to Mr. Barrie's house on the night in question, but he did not carry any stick with him. Seven others were examined, some of whom pleaded guilty and then the Court adjourned till Wednesday at 9 o'clock, when arguments will be delivered on both sides.

WEDNESDAY, Sept. 23rd.

The charge of assault and battery and unlawful intrusion preferred against eleven firemen, late in the employ of the Nippon Yusen Kaisha, in connection with the assault on Mr. William Barrie, Supt.-Engineer of the Company, was resumed this morning. The accused are:—Onishi Rikichi, *heimin* of Kagawa-ken, born 1878; Neba Rikichi, *heimin* of Hiroshima-ken, born 1870; Hirose Tsukichiro, *heimin* of Miyen-ken, born 1871; Takeoka Kuranosuke, *heimin* of Hiroshima-ken, born 1873; Tamura Kotaro, *shisoku* of Wakayama-ken, born 1870; Tamawaki Kaname, *heimin* of Ehime-ken, born 1873; Fujita Jihei, *heimin* of Hyogo-ken, born 1875; Kashima Minokichi, *heimin* of Ibaragi-ken, born 1866; Tokutomi Monnojo, *heimin* of Kagoshima-ken, born 1871; Yoshida Rinsuke, *heimin* of Yamaguchi-ken, born 1875; and Kuroda Zenkichi, *heimin* of Tokushima-ken, born 1868.

Public-Prosecutor Fukuda again conducted the prosecution; Mr. Tanaka Tsurumu defending. Mr. A. H. Lay, of the British Consulate, and Mr. Okumiya, Chief Public Prosecutor, were again present. The court was crowded.

On the Court reassembling at 10.45 o'clock, the Presiding Judge asked Tokutomi Monnojo where he stood when Mr. Barrie appeared in the hall-way and pushed him, as he alleged?

Prisoner—I stood on the stone-step outside and Mr. Barrie came out on to the floor of the verandah. The Judge—Where were you, inside or outside the door?

Prisoner—Outside the door.

At this point another prisoner, Hirose, interrupted, and was sternly told to be quiet.

The Judge—Tokutomi, you then stood on the first or top step?

Prisoner—Yes.

In answer to other questions, Prisoner said—I carried a stick with me that night. I think I left it at Mr. Barrie's house; if I did not leave it there I took back to Idzumiya on the Kaigan-dori. At the end of this stick there was an empty percussion cap case.

Onishi Rikichi, in answer to the Judge, said—I saw Tokutomi at Mr. Barrie's house. I went in with him. I saw Tamawaki there; he went in, side by side, with me. I saw Mr. Barrie push Tokutomi on the head with his hand. Then Tamawaki hit Mr. Barrie.

Pressed by the Judge, the Prisoner said that Tamawaki hit Mr. Barrie on the head with a stick that was three inches in circumference.

The Judge—Where did this happen?

Prisoner—Just outside the door leading to the hall. When Mr. Barrie pushed Tokutomi, Tamawaki struck at the foreigner. Then Mr. Barrie retreated into the house and we followed him. I do not know how often we hit him, but several times as he went along the passage of the hall.

The Judge—He then got as far as the staircase; how far was that from the door?

Prisoner—About two *ken* (four yards).

The Judge—Did any lady then appear?

Prisoner—Yes.

The Judge to Tamura Kotaro—What was the nature of your stick?

Prisoner—It was a willow branch.

Onishi re-examined, said that he found the stick with which he struck Mr. Barrie in a receptacle near the staircase: in the umbrella-stand.

In answer to Assistant Judge Kato, Tokutomi said—The glass door at the entrance to the verandah was open. When we went to the house the *amah* came to the gate and she went and called Mr. Barrie. When Mr. Barrie came out we spoke to him and he replied, *Ikenai* (a denial of our request). Then he struck me between the eyes. I felt dizzy after the blow and went through the open glass door. Then we followed Mr. Barrie into the house and began hitting him with our fists. I am sure we began with our fists.

In answer to Assistant Judge Kato, Tamawaki said that the statement he had to make agreed with that just given by the prisoner Tokutomi, except in one thing. He did not hear Mr. Barrie say *Ikenai*; he heard him say *Nani, nani* (what is it).

Assistant Judge Kato—Then you now deny that you heard Mr. Barrie say *Ikenai*; and now declare that he said, *Nani, nani*—is that so?

Prisoner—Exactly so.

Public Prosecutor Fukuda said that as the examination of the prisoners had finished, he wished to call Mr. Barrie as witness for the prosecution.

Mr. Tanaka Tsurumu, Counsel for the defence demurred. He held that Yoshida Gensuke should be further examined, as he had positive evidence to show that Yoshida never went to Mr. Barrie's house, nor did he join the rest of the prisoners in their entry of the house.

The Presiding Judge then questioned Yoshida. In answer, the Prisoner described at great length a visit that he paid to the house of Yasuda Yasubei in Kaigan-dori, between 10 o'clock and 11 o'clock on the night of the 6th August: he gave details of their conversation, etc., and mentioned some four or five people who were present.

Hirose, in answer to the Judges, had nothing to say.

Tokutomi said he had something to urge. He went up to Mr. Barrie's house to put forward a simple request.

The Judge after a while stopped the prisoner, his remarks being deemed wholly irrelevant to the charge being heard.

Tamura, another prisoner, said that he only stood on the stone steps; he did not enter the house with Tokutomi or Hirose. He then began to detail the reasons for asking for more men in the stoke-holes of the N.Y.K. ships.

The Presiding Judge—You need not repeat that again. We heard it in the previous hearing.

Fujita, the next prisoner interrogated, said he wished to make some remarks about a man named Kuroda; he had a charge to make against him.

The Judge—This is beside the question. Has Tamawaki anything to say?

Tamawaki—Only that Hirose has been speaking untruths all the time.

Takeoka, in answer to the Bench, said—I agree with Tamawaki that all that Hirose says is false: all the others agree to that; Hirose is a liar.

Hirose, in answer to the Bench, acknowledged that some of his statements might contain errors; but then the men were all set against him.

Kashima, next interrogated, said—My replies are the same as those given by the others; but I deny all Hirose's statements.

The Presiding Judge then turned to Yoshida Gensuke and asked if he had anything to say.

Yoshida—Yes. Tamawaki says that Hirose speaks nothing but falsehoods. Well, I can mention one instance where I found him out. Once on the *Kinshu Maru*—

The Presiding Judge—That has nothing to do with this case. Your statements take up too much time and they are of no importance.

Kuroda Denkichi and Neba Rikichi, in answer to the Bench, accused Kuroda of deliberate falsehood. The latter added—I did not go into the house with Hirose and Tokutomi; I stood outside the gate.

The certificate of Dr. Edwin Wheeler detailing the nature of the wounds received by Mr. Barrie, etc., was next read.

Yoshida Gensuke then put in a certificate of good conduct given him by the N.Y.K., when he left the *Saikyo Maru*. At this point Public Prosecutor Fukuda said that it would be unnecessary to call any evidence in favour of Yoshida Gensuke, as Yasuda Yasubei, at whose house he said he paid a visit on the night of the 6th August was not to be found. He had stated, moreover, that the owner of the house was asleep at the time.

Mr. Ito Mineji was next sworn in as interpreter of English.

Mr. William Barrie was then called, and in answer to questions addressed from the Bench, said—I am a British subject, was born at Wolverton, Buckinghamshire, and am 48 years old. I am an engineer in the employ of the Nippon Yusen Kaisha and am their Superintending Engineer. I

live at No. 266, Bluff. I have no connection whatever with the prisoners. On the night of the 6th August, my wife and myself had been out on the grass plot in front of No. 266 until about a quarter to nine o'clock. Just at that time we re-entered the house and going to the dining-room, my wife sat down to read. I again got up and walked about outside the house until a few minutes past nine and then returned to the house and took up a book to read. After sitting for a few minutes I heard a noise in the direction of the hall-way. Just then the *amah* came in to say that a number of Japanese wished to see me, saying at the same time *Abunai*—be careful. Proceeding into the hall-way I found, in the verandah and on the steps leading to the verandah, a number of men. Walking up to them I enquired why they had come. One of the men, who appeared to be their ringleader and spokesman, said that they had come to talk about the manning of the *Ryofun Maru*. I said I could not speak to them about that matter there, but would see them at the N.Y.K. office next day. They again made their request, saying, "Won't you have a word with us?" I said "No." Then, without further parley one of the men struck me over the left side of the head with what seemed a bar of iron. The blow felled me to the floor of the hall, and the blood from the bleeding temple blinded me. Whilst in this position I was struck on the back of the head, and hit about the body. Struggling along the hall-way I again fell near the staircase, half-way along the hall. At this point my wife came to my assistance. Being blinded by the flow of blood I could scarcely see my way about the place, but finally succeeded in getting out to the back entrance. I made my way to the back gate and there found five or six men with large stones in their *himono*. After a struggle with two of the men and finding exit impossible, I closed the gate. After closing the gate I made my way along by the servants' quarters and thence to the slope leading on to the side road. Half-way down the slope I fainted away through loss of blood. I lay there for about ten minutes, and when I came to myself I heard voices of men above, evidently in search of me. Lying there quietly for a few minutes, until the sound of voices died away, I slipped down the bank, made my way to a neighbour's house and there received attention. From that point I know nothing of what happened. My wounds were attended to by a doctor; and about half-past ten o'clock I returned to my house.

To the Presiding Judge—I met the men just at the entrance of the hall-way from the verandah: that is between the two doors. Both doors were open. I don't think I could identify the spokesman now: the hall was very dark, the lamp being barely alight. The men spoke to me in Japanese. I understand Japanese sufficiently to understand the drift of general conversation. The spokesman addressed me twice. I think there must have been from twelve to sixteen men in the hall and on the steps; some were in the verandah. The man who struck me on the forehead, it seemed to me, was the spokesman. I was struck as I stood, just at the entrance to the hall-way. The first blow, across my left temple, knocked me down. As I struggled along the hall-way, many of the men jumped on my back and struck me time and again. As I reached the stairway I managed to throw them off: at this point my wife came to my assistance. I was struck frequently between the door and the staircase; at the staircase I received the blow on the back of my head. It is impossible for me to say how I was struck on the back of the head, as it was done while I was struggling along. The wound on the head must have been made by a bar or stick struck across my shoulders, the blow being felt along my shoulder to my head. I was struck on my right arm and also about the shoulders. All these blows caused swellings. The wounds incapacitated me from business for 28 days. Dr. Wheeler attended me. A great noise was made in the hall after I was rescued by my wife, but it was impossible for me to hear what was said. I could not distinguish the nature of the instrument by which I was first struck, save that it was of iron. I saw that several of the men had stones with them, but I do not recognise any of the instruments in Court. The whole of the hatstand in the hall, with the umbrellas and sticks, was upset and scattered through the hall. None of these sticks were stained black. It is not true that I pushed one of the men and that that commenced the struggle. I did not strike one of the men on the head with my fist. I lost a good deal of blood through the wound caused by the first blow. In the dim light of the hall-way I saw an iron-bar raised, and I have sufficient experience of iron-bars to recognise them when I see them. I do not know why I was assailed by these people, unless it

was due to the reducing of the number of firemen on the *Ryofun Maru*. It came within my line of duty to carry out the Directors' wishes in regard to the manning of the ships. It is not true that the Company wished to increase the number of firemen and that I refused to do so.

Cross-examined—I went to my office-desk at the N.Y.K. on the 9th of August. I saw a Mr. Watanabe at my house on the 8th August. I did not go on board any of the Company's ships on the 8th or 9th August.

To one of the Prisoners—I had neither pistol, firearm, or heavy weapon in the house, and so could not flourish a pistol at the men.

To the Defending Barrister—I only went to my desk once on the 9th August to take out some letters.

To the Bench—The piece of iron shown me now is a caulking-tool. These tools are sometimes two feet long. The other iron now shown me is a centre-punch. The iron-bar with which I was struck was very much like the caulking-tool, only longer. On the 12th August Dr. Wheeler advised me to go to Yumoto for a complete change. I still suffer from the effects of the blow: the wound healed some time ago, but I suffer severe pain at the back of my head. The wound was thoroughly healed by the third or fourth of this month.

To the Assistant Judge—I am still using medicine.

To the Chief Judge—I have no questions to ask the prisoners. My statement is an exact account of what happened. I do not know why the men selected me for an assault, as I was simply carrying out the orders of the Directors of the Nippon Yusen Kaisha.

The Presiding Judge asked the prisoners if they had any objections to urge against the statements of the witness.

None of the Prisoners, save Tokutomi, who made an irrelevant remark, and Kuroda, who exclaimed—"Oh, it is too much," had anything to say.

The Court then adjourned till 2.30 p.m.

Shirai Tsun, an *amah* in the employ of Mr. Barrie, deposed to being 39 years of age. On the night of the 6th August she was at work as usual at No. 266, Bluff. She answered the door when the prisoners came, and announced their arrival to Mr. Barrie. Two or three men were at the gate and several at the door. I told them to wait at the verandah. Then I went and announced their arrival to Mr. Barrie. I could not see their faces sufficiently well to recognise any of them. Having spoken to Mr. Barrie I retired. After a time I heard a cry, but whose voice it was I could not tell. Some one asked me to open the door. I was very frightened and did not know what to do. Then I heard a voice saying "*Sokorade mago mago suruto korosuo, soko akero*" (if you wander about there you will be killed, open the door). Then there was a noise of broken glass. Perhaps the noise of the breaking glass was a little before this, but I do not distinctly remember.

Cross-examined—I opened the gate. Two or three men came along the pathway and waited at the entrance door. Two or three men stood on the stone-steps. I do not recognise their faces to-day. I did not know what their business was, and did not pay any attention to them: I did not narrowly scan their faces. I heard one man say "not here;" then four or five men passed me. I do not know what they carried with them. I do not know if they carried anything. After the shout of "*Too akero*" (open the door), the door under the staircase was opened. I heard some one say "*Kokodewa ikenai* (it won't do here). I do not know where Mr. Barrie was knocked down. I was struck with fear when I heard the voices. Mrs. Barrie was in the dining-room when the men came to the house.

Counsel for the defence asked witness when Mr. Barrie first left the house after the occurrence.

Witness—After the 6th August Mr. Barrie was confined to his bed. After the 12th I accompanied him and his family to Yumoto. We returned on the 4th on 5th of this month.

The Judge—Did he leave the house before the 12th?

Witness—He often went outside for a short while; then he would lie on the sofa or on a long chair.

The Presiding Judge to prisoners—Have you anything to say against this testimony?

Tamawaki—What the woman heard was not *Sokora ni mago mago suruto korosu*, but *Sokora ni mago mago suruto korobasu korobasu* (let her roll down).

Witness—It may have been *korobasu* and not *korosu*; I am not sure about it.

Prosecutor Fukuda said that he found one contradiction in the evidence offered that day. According to the prisoners, 34 stokers had been allowed to the steamer; but Mr. Barrie had stated

that he was carrying out the Company's orders in regard to the reducing of the number.

The defending Counsel submitted a character of good conduct on behalf of Kuroda, a former stoker on the *Miike Maru*.

Mr. Suda Rijun, Second Assistant Superintendent Engineer of the Nippon Yusen Kaisha, was next called, and on being cautioned said—The Directors of the Nippon Yusen Kaisha had recently to reduce the number of firemen and stokers on the ships to 30 per steamer. This was in July. Owing to the great demand for stokers in the N.Y.K., due to the increase in the numbers of the Company's ships, they were often obliged to engage unqualified men for the stokers' work. The discharging or engaging of these men was in the power of the Captains alone. On the 30th of that month it was reported that some dissatisfaction prevailed among the stokers, and on the 2nd of August a request was sent to the foreman engineer, by the chief stokers for an increase in the complement of the ships' firing staff. A similar request was sent in by Mr. Yamazaki, a purser, who added that the firemen were determined to have their own way. Neither the Superintendent Engineer nor the Chief Engineers had anything to say in the matter. Some talk arose, when we found that the firemen were not inclined to obey, that if Japanese firemen would not work for us the Company would have to find stokers among Indians or Chinamen: surely the Company ought to have the right to choose its own servants. But this was only talk amongst ourselves. It must be borne in mind that we are a big Company, and our ships are liable to be requisitioned for the service of the State at any moment, so it would not do for us to be frightened by our stokers.

The Presiding Judge—Is Mr. Barrie the head of the Engineering department?

Witness—Yes.

The Judge—Is there anything specially remarkable in the *Ryofun Maru*'s boilers; are they different to any other ship's boilers?

Witness—There is more or less difference: the work in the stoke-hold of the *Ryofun Maru* is pretty hard.

Did the Company give any order to increase the number of firemen on her?

Witness—No.

The Judge—Did Mr. Barrie, from the commencement, recommend the decrease in the number of men?

Witness—I do not think so.

To the defending Counsel—Mr. Barrie came down to the office on the 9th August and said that he was ordered into the country for his health's sake. His head was aching badly and he went home immediately.

When asked by the Presiding Judge if Prisoners had anything to say against this testimony, Kuroda said that the N.Y.K. were very oppressive indeed.

The Judge—That has nothing to do with the question.

Tamawaki said the N.Y.K. were unreasonable in their demands.

The Judge stopped the prisoner.

Neba said that it was very uncomfortable working the donkey boiler of the *Ryofun Maru*. The whole steamer was bad.

The Judge—This is irrelevant.

The Prisoners having no questions to ask, the case closed so far as the giving of evidence went.

Public Prosecutor Fukuda, in summing for the prosecution, said that the evidence had been most distinct on all points and fully bore out the charge preferred. The prisoners upon finding the engine-room staff reduced from 37 to 30 became very discontented and grumbling set in among the malcontents. This finally led them to meet together in the Public Gardens where they resolved to go in a body to Mr. Barrie's house. Their intentions could not have been pacific even at this moment, for if they had merely desired to obtain a hearing for their grievances, or supposed grievances, the best course for them would have been to select a small delegation from among their number, and for this delegation to have gone up to Mr. Barrie's house. But it was not their wish to proceed quietly in the matter. At the gate of Mr. Barrie's house they met his servant and what followed had been told by the prisoners themselves. According to Tokutomi eleven of them intruded into the house, when Mr. Barrie appeared, and on his refusing to discuss their grievances, they set on him, some with sticks, some with their fists, some with pieces of iron. Such conduct was most reprehensible and deserving of severe punishment. Tamawaki, who struck the first blow over Mr. Barrie's temple, should be made an example of, to show that men are not allowed to do such things in this land; equally reprehensible was the conduct of

Hirose, who struck the defenceless man with a centre-punch, and Tamura, who used a caulking iron. Takeoka used his fist and Tokutomi a stick. These men were therefore charged with assault and battery and the others with unlawful intrusion. He hoped that the maximum penalties would be inflicted.

For the defence, Mr. Tanaka submitted that a quarrel had taken place and blows been struck, but Barrie had started it by pushing one of the men with his fist. As to unlawful intrusion, he urged that that was an impossible construction to place upon their action. They had gone to Mr. Barrie's house, saw the servant, and with her consent had entered the grounds, and then waited quietly for Mr. Barrie to appear. In regard to the cause that had sent them up to the house, he submitted that it was but reasonable that the men should feel indignant at the suggestion that they should be replaced by Chinamen. He thought that the men had greatly extenuating circumstances in their favour, and the Bench would do well to temper justice with leniency.

The Public Prosecutor then said that the offence with which Tamura Kotaro stood charged, wounding on the forehead with an iron-bar came under Art. 301 of the Criminal Code, as also did Tamawaki's, striking with an iron instrument. Hirose, who also had struck a blow, owing to his being below the full years of manhood, came within Art. 80 of the Code. Onishi and Tokutomi's offences were provided against in Art. 302. In regard to unlawful intrusion, the offence came within the purview of Art. 180.

Judgment will be given at 10 o'clock on Friday.

LATEST TELEGRAMS.

(REUTER'S "JAPAN MAIL" SPECIAL SERVICE.)

London, Sept. 17.

The Austrian press is alarmed at the agitation in Great Britain in favour of intervening in Turkey, and accuses Britain of fomenting the troubles. The papers further declare that England's isolated action will likely end in her expulsion from Egypt.

Sept. 18.

The balance of the last Chinese loan issued has only been half subscribed.

It is announced, on authority, that Great Britain meditates no isolated action against Turkey, but she will never again take the part of the Porte. She desires to continue co-operating with the Powers.

London, Sept. 22.

The Kurds have attacked and pillaged the Armenian quarter of Eguin in the villayet of Kharput, Asia Minor. Upwards of six hundred Armenians were killed.

The gunboats have returned from Dongola, where it was found that only women and old men were left. General Kitchener has offered to pardon Bishera, the Mahdist leader, and his followers if they surrender. The whole expedition has now advanced to Dongola.

London, September 24.

On the appearance of the Egyptian army at Dongola the Dervishes fled to the southward, several Emirs surrendering. The gunboats and cavalry are pursuing the enemy. The Egyptian flag has been hoisted in Dongola. The Egyptians captured six guns and a large quantity of munitions of war.

London, Sept. 21.

The Egyptian forces have occupied Kerma unopposed. The Dervishes lost heavily whilst retreating in the direction of Dongola where the gunboats of the expedition had already arrived and had seized the treasury and granaries.

A letter from Lord Rosebery has been published in which he declares that he cannot agree to the proposal that Great Britain might depose the Sultan in view of Russia's resolve to oppose the independent action of any Power.

London, September 23.

The Czar and Czarina have arrived at Balmoral on a visit to the Queen. The railway by which their Majesties travelled was strictly guarded by police.

Both the French and Russian press disparage the success of the Nile expedition while reminding Great Britain that the Egyptian question has not been settled.

The *Times* states that Russia and Japan have agreed to a joint protectorate over Korea, and he Japanese are to evacuate that country.

(FROM THE "N.-C. DAILY NEWS.")

London, Sept. 14.

The Fenian Tynan, the notorious "Number One," has been arrested in Boulogne on a warrant issued in 1882. The Fenians Bell, Wallace, and Haines have also been arrested, as all were acting together. The same gang had organised a laboratory at Antwerp, where a complete dynamite armoury was discovered. The object of their plot is uncertain, but it is rumoured that Nihilists had joined the Fenians and that attempts on the life of the Czar, or of the Queen, at Balmoral, were meditated. All those concerned in the plot have been arrested. Tynan travelled in the guise of a Queen's Messenger.

London, September 15.

The Armenian agitation is fomented by the letters of Mr. Gladstone, Lord Rosebery, and Mr. Asquith, and by the increasing comments from the Pulpit and Press. Mass meetings have been arranged in various localities.

47—P to Kt 4
48—R to R 2
49—P to Kt 5
50—Resigns.

(a) Lasker has a special variation against 4—B to Kt 6, namely P takes P; this perhaps might have been the reason why Pillsbury adopted 4—P to K 5. If 4—B to Kt 6, P takes P. Black would not hesitate to open his king's knight's file, for instance, if B takes Kt, P takes B, or if Kt takes P, B to K 2 with a good defensive game.

(b) The two Black knights move about the game in a bewildering confusion, and waste time with aimless persistency. This fact almost inclines us to the belief that it is better for Black if, instead of 7—Kt takes B P, he would play B takes P, particularly as we do not believe a second player need fear the attack which arises through White playing 8—Q to Kt 4.

(c) Now that White has got his rook on the K B file, he particularly threatens to disintegrate Black's position presently by playing P to B 5. Black therefore played P to Kt 3 to prevent this, but, as the sequel will show, it did not prevent it, but it gave Pillsbury more to think about, and caused him to conceive the finest combination that has as yet been carried out on the board in this tournament. If Kt takes B 14, P takes Kt, P to K B 4, it would be difficult if not impossible to hold a position of the nature, as White has a powerful move in 15—Kt to Kt 5.

(d) Here we should have given the preference to Kt to B sq., for though there is little prospect for the knight on that square for the future, yet it helps to hold the fort until Black can make himself more secure by other developing moves. In a position like this it is not a question of finding a good move, but of submitting to the least evil.

(e) White obtains a remarkably effective development, every one of his pieces are placed ready in position to strike when the attack is ripe. P to Kt 6 is one of a series of clever moves which take advantage of the awkward position of Black's knight on the queen's side, if Kt takes P, White may at once win back the pawn if he so pleases by 20—Kt takes P, but judging from the character of White's play, we think he would be trying for even something better.

(f) The capture of a pawn in similar positions, so irresistible to some players, seldom turns out well that we are surprised that Lasker did yield to the temptation.

(g) That something of the kind might be possible even Black must to some extent have foreseen, as explained in our note to his move of P to Kt 3. Yet we defy any player, be he ever so clever, to tell what it is exactly that White is going to do, or to point out the future course of White's play with its subsidiary combination and sacrifice on the queen's side.

(h) The two Black pieces on the queen's side are very awkwardly situated, any player would therefore feel a natural inclination to withdraw them from that position by playing B to K 2. We cannot see what Black hoped to gain by P to R 5. He might have guessed that White had some scheme, as otherwise he would not have given up two pawns.

(i) In similar positions some players are fond of raising the academic question whether a certain line of play was intuition or calculation. In this case, if one is inclined to believe that the sacrifice of the two pawns was by intuition, one must come to the conclusion that the sacrifice of the rook was the result of calculation for the purpose of getting the Black bishop away from defending the K P. In some of Steinitz's best games similar combinations may be found, where a deeply planned advance on the king's side is dependent upon a subsidiary combination on the queen's side.

(j) Here Q to B sq. has to be considered, but after Kt to B 7 ch followed by Kt (B 4) takes Q P, we do not think White need have a care for the future.

(k) It may again be taken for granted that Black would not have given up his queen without the best of reasons. If instead of B to Q 2 he moves the queen away, Q takes B P, would soon prove fatal. Still it is most remarkable that White should have been so marvellously correct in his combination in every particular.

(l) White need only mark time. Yet the ex-citute with which he proceeds in the shortest possible number of moves is not devoid of interest.

GAME NO. 571.

An interesting game between Steinitz and Blackburne, played in the seventh round.

GIUOCO PIANO.

WHITE. Steinitz.	BLACK. Blackburne.
1—P to K 4	1—P to K 4

3—B to B 4	3—B to B 4
4—P to B 3	4—Kt to B 3
5—P to Q 4	5—P takes P
6—P takes P	6—P to Kt 5 ch.
7—Kt to B 3	7—P to Q 4 (a)
8—P takes P	8—K Kt takes P
9—Castles	9—Kt to Kt 3 (b)
10—R to K sq. ch.	10—B to K 2
11—B to Kt 3	11—Castles
12—P to Q 5	12—Kt to R 4 (c)
13—B to B 2	13—Kt (R 4) to B 5
14—Q to Q 3	14—P to K B 4
15—B to Kt 3	15—Kt to Q 3
16—B to K B 4	16—Kt to Q 2 (d)
17—Q to K 3	17—R to B 2 (e)
18—Kt to Q 4	18—Kt to B 3 (f)
19—Q R to Q sq. (g)	19—Kt to Kt 5
20—Q to B 3	20—P to K Kt 4 (h)
21—Kt to K 6	21—B takes Kt
22—P takes B	22—R to Kt 2
23—B takes Kt	23—P takes B
24—Q takes B P	24—P to K R 4
25—Kt to K 4	25—K to R sq. (i)
26—P to K R 3	26—Kt to R 3
27—Q to Q 5	27—Q to Kt 3
28—P to K R 4	28—R to K B sq. (k)
29—P takes P	29—Kt to Kt 5
30—Q to Q 4	30—Q to B 2
31—B to Q 5	31—Q to Q sq.
32—R to Q 3 (l)	32—B takes P
33—R to K R 3	33—P to R 5
34—Kt takes B	34—Q takes Kt
35—P to K Kt 3	35—K to R 2 (m)
36—R takes P ch.	36—Kt to R 3
37—P to K 7	37—R to K sq.
38—R to K 6	38—R (K sq.) takes P (n)
39—Q to K 4 ch.	39—Resigns.

(a) Up to the present this is considered Black's best reply. It is not safe to play B takes Kt followed by Kt takes K P.

(b) If Kt takes Kt instead, 10—P takes Kt, B takes P, 11—Q to Kt 3, and White obtains a winning attack; but we hardly think it can be good to thus cast away the knight on the queen's side and leave the king's side unprotected. If Kt takes Kt 10—P takes Kt, B to K 2, 11—P to Q 5, Kt to Kt sq., Black's position may be defended, though we cannot say we like it much. Then, again, B takes Kt is possible, for even if 10—P takes B, castles, with perhaps more of an equal game.

(c) It only drives the White bishop where he wants to go. We should have preferred Kt to Kt sq., for the knight could from that square be more quickly transferred to the king's side, where he is wanted, *vid Q 2*.

(d) Of course there is the necessity of getting this knight into play, but in doing so Black loses time, proving that the original manoeuvre which brought this knight to Kt 3 was not good.

(e) We should recognise this at once as one of Blackburne's moves, as the apparently defensive and innocent device was prompted by the idea of a counter-attack being possible in the near future by Black playing P to Kt 4 and R to Kt 2. But on B's the rook seems more or less subject to attack, though he could not very well have played R to K sq., with a view of playing Kt to B sq., as White would reply with B takes Kt, and Black be compelled, if he plays R to K sq., to retake the White bishop with the pawn.

(f) That dreadful Q P! How effectively White does utilize it! It is an open question whether Black would have done better by Kt to B sq.

(g) Of course this is preparatory to White's playing Kt to K 6, so that if Black takes the knight, White after retaking with the pawn would have his rook pointing to the Black queen, and increasing Black's difficulties. Black might have tried a move like P to K R 3, which, while making room for the king, would also admit of P to K Kt 4.

(h) Just as we anticipated. But it does not stop White, whose terrible grip when he once gets a fair chance, as he had given him in this game, it is almost impossible to evade. One can only realise this by following White's ideas and vainly searching for moves by which Black could have got out of his unfortunate cramped position.

(i) White threatened Kt takes Q P, the king had therefore to avoid the possibility of a discovered check.

(j) In these few moves Black tries very hard to get up a counter-attack but again his opponent's failure to do so to be wondered at. Mr. Steinitz very often gets into ridiculously bad positions through wrong opening strategy, but he never loses a game in which he has an advantage.

(k) White does not trouble to hold the pawn, but rather prefers and rightly too, as the result shows, to continue his own attack.

(l) Kt to Kt sq. is of course impossible, and Q to K 2, for the purpose of enabling Black to play Kt to Kt sq., would have resulted in the loss of a piece by White playing 36—R takes P ch, K to R 2 was therefore the only available move.

(m) It was obviously no use defending the knight by R to Kt 2, for B to K 4 would win instantly. Black therefore was prepared to give up his queen; but White saw even a better way than taking the knight and getting Black's queen for the two rooks, as will be seen.

The following two games have been played in the recent triangular tournament at Berlin. The competitors were Bardeleben, Mieses, and Walbrodt, three of the leading German masters:—

GAME No. 572. FRENCH DEFENCE.

WHITE. P. Mieses.	BLACK. C. v. Bardeleben.
1—P to K 4	1—P to K 3
2—P to Q 4	2—P to Q 4
3—B to K 3	3—Kt to K B 3
4—P takes P	4—P takes P
5—B to Q 3	5—B to Q 3
6—Kt to K 2	6—Kt to B 3
7—P to Q R 3	7—Kt to K Kt 3
8—Kt to B 3	8—B to K 3
9—Q to Q 2	9—Kt takes B
10—P takes Kt	10—P to B 4
11—Kt to B 4	11—B takes Kt
12—P takes B	12—Kt takes P
13—Q to K 3	13—P to B 4
14—Kt to Kt 5	14—Q to Kt 3
15—Castles Q R	15—Kt takes Kt
16—B takes Kt ch.	16—K to B 2
17—Q R to K sq.	17—Q to Q 3
18—P to K R 3	18—P to Q R 3
19—B to K 2	19—P to Q 5
20—Q to B 2	20—K R to K B sq.
21—P to K Kt 4	21—K to Kt sq.
22—P takes P	22—B takes B P
23—B to B 4 ch.	23—K to R sq.
24—R to K 5	24—P to Q Kt 4
25—B to Q 5	25—Q R to K sq.
26—K R to K sq.	26—R takes R
27—R takes R	27—B takes R P
28—Q to R 4	28—B to B 4
29—Q to Kt 5	29—P to R 3
30—Q to R 4	30—Q to K B 3
31—Q to B 2	31—B to Q 2
32—R to K 4	32—Q to Q 3
33—B to Kt 3	33—R to B 3
34—Q to Q 2	34—B to B 3
35—R to K 5	35—Q takes R
36—P takes Q	36—R to B 8 ch.
37—Q to Q sq.	37—R takes Q ch.
38—K takes Q	38—Black wins.

Mieses tries to avoid the stereotyped form of this opening with 3—B to K 3, a variation introduced by Alapin. White gets a good attack if Black captures the pawn; Bardeleben, therefore, selects the more solid course of developing his forces.

White's first weak move is 6—Kt to K 2; it should have been preceded by 6—Kt to Q B 3, threatening 7—Kt to Q Kt 5, which Black would have had to prevent, whereas now Black threatens 7..... Kt to Q Kt 5, and White has to lose a move with 7—P to Q R 3. An apparently insignificant transposition of a move makes all the difference in a game between players of equal strength; and Herr von Bardeleben's conduct of

the defending forces proves it—if such proof were required.

Mieses made another indifferent move with 10—P takes Kt instead of 10—Q takes Kt; and a more serious mistake with 11—Kt to B 4, involving the sacrifice of a pawn, which he thought of getting back—or its equivalent in position—with 13—Q to K 3; but here again his opponent was equal to the occasion, and not only retained the pawn plus, but repelled the attack with the decisive strokes of 18..... P to Q R 3; P to Q 5; and eventually K to Kt sq., and having then his king in a safe position he had only to play the ending correctly and the game was his, and proves an instructive specimen to the student.

GAME No. 573. FRENCH DEFENCE.

WHITE. A. Walbrodt.	BLACK. C. v. Bardeleben.
1—P to K 4	1—P to K 3
2—P to Q 4	2—P to Q 4
3—Kt to Q B 3	3—Kt to K B 3
4—P takes P	4—P takes P
5—Kt to B 3	5—B to Q 3
6—B to K 2	6—B to K 3
7—B to Kt 5	7—P to B 3
8—Q to Q 2	8—Q Kt to Q 2
9—P to Q R 3	9—Q to B 2
10—Q to Q 3	10—P to K R 3
11—B to K 3	11—Kt to Kt 3
12—P to R 3	12—Kt to B 5
13—B to Q B sq.	13—Q to R 4
14—Castles	14—Kt to B 2
15—P to Q Kt 3	15—Kt to Kt 3
16—Kt to K R 4	16—B to B 5
17—Kt to B 5	17—B takes Kt
18—Q takes B	18—B takes B
19—Q R takes B	19—Castles
20—B to Q 3	20—Q to Q 3
21—P to Q R 4	21—K R to K sq.
22—Kt to K 2	22—P to Kt 3
23—Q to B 3	23—Kt to K 5
24—Q R to Q sq.	24—K to Kt 2
25—Kt to Kt 3	25—Kt to B 3
26—K to R sq.	26—R to K 2
27—R to K Kt sq.	27—Q R to K sq.
28—Kt to B sq.	28—Kt to R 4
29—P to Kt 3	29—Q to B 3
30—Q takes Q	30—Kt takes Q
31—K to Kt 2	31—Kt to K 5
32—R to K sq.	32—Kt to Q 2
33—Kt to K 3	33—Q Kt to B 3
34—P to Q 4	34—Kt to Kt 4 ch.
35—K to Kt 2	35—K Kt to K 5
36—K to B 3	36—Kt to Kt 4 ch.
37—K to Kt 2	37—K Kt to K 5

Drawn Game.

There is not much scope for observation in this game. White deviated 6—B to K 2 instead of the usual 6—B to Q 3; but the former is not a bad place for the K B in close games. Bardeleben tried for a counter-attack on the queen's side, and with that object in view he developed 11..... Kt to Kt 3, intending at the same time Q to Q 2, and B to B 4 driving the adverse queen off the diagonal. The latter manoeuvre, however, could have been carried out better had he developed Kt to K B sq., and then Kt to K Kt 3. His attempted sortie proved premature; both the advanced queen and knight had to return whence they came, thus causing a loss of time which could have been utilised to better purpose. He had eventually to give up his two bishops, and after the compulsory 22..... P to K Kt 3, the eventual draw was already foreshadowed, although White had a shade the preferable position. Bardeleben, however, played the remainder more carefully and equalised matters. The game was otherwise a grand one, and a draw the legitimate issue.

CHESS IN SYDNEY.

GAME No. 574. FRENCH DEFENCE.

WHITE. Mr. J. L. Jacobsen.	BLACK. Mr. C. Mackenzie.
1—P to K 4	1—P to K 3
2—P to Q 4	2—P to Q 4
3—Kt to Q B 3	3—Kt to K B 3
4—P to K 5 (a)	4—Kt to Q 2
5—P to K B 4	5—P to Q B 4
6—P takes P	6—Q Kt to B 3 (b)
7—Kt to K B 3	7—Kt takes B P (c)
8—B to K 3	8—P to Q Kt 3 (d)
9—B to Kt 5	9—B to Q 2
10—Castles	10—P to Q R 3 (e)
11—B takes Kt	11—B takes B
12—Kt to Q 4	12—B to Q 2
13—P to B 5 (f)	13—B to K 2
14—Q to Kt 4	14—P to Kt 3 (g)
15—P to B 6	15—B to B sq.
16—P to Q Kt 4 (h)	16—Kt to Q Kt 2 (i)
17—Kt takes Q P (j)	17—B to B sq. (k)
18—Kt to B 4	18—Q to Q 2
19—Q R to Q sq.	19—Kt to Q 3

20—P takes Kt	20—P to K 4
21—Kt (from B 4) to K 6	21—B takes P (l)
22—Kt to Kt 7	22—K to B sq.
23—Kt (from Q 4) to B 5	23—P takes Kt
24—Kt takes P	24—R to K Kt sq.
25—B to R 6 ch.	25—K to K sq.
26—Q takes R ch.	26—B to B sq.
27—Q takes B mate.	

(a) Recent authorities prefer this advance to first pinning the Kt by 4—H to Kt 5.

(b) Black does not immediately retake with Bishop, on account of possible trouble from Q to Kt 4.

(c) But now he might better develop by 7..... B takes P.

(d) Black has a somewhat cramped position, but 8..... P to K Kt 3, or 8..... P to K B 4, threatening Kt to K 5, would equalise matters. The eighth move loses time.

(e) Here he loses another move.

(f) And his pieces are soon forced into a state of inaction.

(g) Of course casting was not to be thought of, and, if P takes P, then Q takes Kt P with a winning attack.

(h) To drive the Kt from the command of K 5.

(i) He cannot well go to K 5, nor first attempt to dislodge the Queen, e.g. 16..... P to K R 4; 17—Q takes Kt P; 17—P takes Q; 18—P to B 7 ch.; K to K 2; 19—B to Kt 5 mate.

(j) Pretty and quite sound.

(k) Instructive and worthy of examination. The retreat of the Bishop is deplorable, but if P takes Kt, then P to K 6 wins speedily.

(l) If B P takes Kt, P to B 7 ch.; if K P takes Kt, 22—Kt to Kt 7 ch., K to Q sq., 23—Q takes P, &c.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Canada, &c.....	per C. P. R. Co.	Monday, Sept. 28th.
From America.....	per P. M. Co.	Saturday, Oct. 10th.
From Hongkong.....	per P. M. Co.	Tuesday, Sept. 30th.
From Europe, via Hongkong.....	per N. D. Lloyd	Wed'ay, Sept. 30th.
From Hongkong.....	per P. & O. Co.	Saturday, Oct. 3rd.
From Europe, via Hongkong.....	per M. M. Co.	Wed'ay, Oct. 9th.
From Hongkong.....	per C. P. R. Co.	Thursday, Oct. 8th.

* *Empress of China* left Vancouver on September 15th. * *City of Peking* left San Francisco via Honolulu on September 22nd. * *Peru* left Hongkong on September 22nd. The English mail is on board the steamer *Nanyo Maru*.

THE NEXT MAIL LEAVES

For Portland.....	per O. R. & N. Co.	Sunday, Sept. 29th.
For Hongkong.....	per C. P. R. Co.	Monday, Sept. 28th.
For Europe, via Hongkong.....	per N. D. Lloyd	Friday, Oct. 2nd.
For America.....	per P. M. Co.	Friday, Oct. 2nd.
For Europe, via Shanghai.....	per M. M. Co.	Sunday, Oct. 4th.
For Canada, &c.....	per C. P. R. Co.	Friday, Oct. 9th.
For America.....	per O. & O. Co.	Saturday, Oct. 10th.
For Victoria, B.C.....	per N. P. Co.	Sunday, Oct. 11th.

LATEST SHIPPING.

ARRIVALS.

Verona, British steamer, 1,878, C. H. S. Tocque, 19th September,—Hongkong via ports, 11th September, Mails and General.—P. & O. S.N. Co.
Caldonsen, French steamer, 2,500, L. Blanc, 20th September,—Marseilles 16th August, Hongkong 12th September, Shanghai 15th, and Kobe 19th, Mails and General.—Messageries Maritimes Co.
Josephine, American schooner, 16, Hansen, 20th September,—North Pacific, Skins and Sealing Gear.—A. Fisher.
Kweilin, British steamer, 1,088, J. B. Harris, 20th September,—Shanghai, via Kobe 19th September, General.—Butterfield & Swire.
Java, British steamer, 2,733, J. Chelley, 21st September,—London via ports, 25th July, Mails and General.—P. & O. S.N. Co.

Fuyo Maru, Japanese steamer, 875, Ternick, 25th September.—Nagasaki, Ballast.—Mitsui Bishi Sha.

PASSENGERS.

ARRIVED.

Per British steamer **Verona**, from Hongkong via ports:—Miss N. Bolitho, Miss A. Wauchope, Mr. G. Valesi, Captain Pritchard, Mr. E. Rutter, Mr. Pow Chong Chew, Mr. Chan Che Kai, Mrs. Wehrmann, Misses Wehrmann (2), Miss M. Jaffray, Mr. R. H. Woodfall, Mr. H. Marcus, Mr. Lea, Master S. Clark, Misses Clark (3), Messrs. Y. Tanaka, T. Nakano, F. Takagaki, A. Fair, R. C. Johnson, F. A. East, Mrs. A. Crawford, Mr. W. Macvicar, Mr. I. Izawa, Miss Bidwell, Messrs. F. Hill, Kawamura, Nagi, Osaki, Ito, R. Miyagawa, Yokohashi, Katsuki, Sakai, Mr. and Mrs. Tanaka, Messrs. Yamakami, Kurada, S. Hamada, and Sumokawa in cabin; 3 Japanese in steerage.
 Per British steamer **Tava**, from London via ports:—Mr. Naraway, Mr. and Mrs. F. A. Levey, 2 children and nurse, Mr. and Mrs. Richards, Mr. S. A. Diss, Mr. L. D. Abraham, Mr. F. J. Bardens, and Mr. J. F. Duff in cabin.
 Per British steamer **Belgia**, from Hongkong via ports:—Mr. and Mrs. J. Mannich, Mr. J. C. Peter, Mr. M. Grote, Miss. Boyes, Mr. A. H. Rennie, Mr. F. W. Rapp, Mr. and Mrs. D. C. Greene and child, Mr. G. Bayfield, Mr. A. Death, Mrs. J. Jones, baby and servant, Mr. B. C. Howard, Mr. E. W. Maitland, Mr. F. Davenport, Mr. Herbert Smith, Mr. Tschudnowsky, Miss M. Boyes, Miss C. Boyes, Mr. J. W. Rolles, Mr. D. Goh, Miss Greene, Master R. S. Green, Mr. R. Lenz, Mrs. Crichton and child, Mr. C. S. Sharp, and Mr. F. H. Olmstead in cabin. For San Francisco:—Dr. and Mrs. W. R. Scroggs, and Miss M. F. Wheeler in cabin.
 Per American steamer **City of Rio de Janeiro**, from San Francisco via Honolulu:—Commander M. R. S. Mackenzie, U.S.N., Mrs. R. E. Carney and infant, Rev. and Mrs. Harvey Bokaw, Miss Lulu Ribble, Mr. S. H. Salena, Mr. R. S. Hubbell,

Mrs. E. Bailey, Mr. and Mrs. T. P. Terry, Rev. H. G. C. Hallock, Mr. H. S. Tiemann, Miss A. L. Howe, Mrs. F. Fuller, Mrs. C. V. Ruthven, Mr. Cant Yen, and Mr. M. Morioka in cabin.
 Per British steamer **Tacoma**, from Hongkong via ports:—Mr. J. Katsuki and Miss Edwards (to England), Mr. G. E. Boardman, Mr. Booth, Mrs. Booth, Mr. F. Faucett, Miss Summers, Mr. A. T. Woodward, Mr. W. H. Gill, and Miss Waters in cabin; 2 Japanese in steerage. In transit:—53 Chinese in steerage for Canada and United States.
 Per Japanese steamer **Miike Maru**, from Seattle, Wash.:—Mr. K. Okamoto in cabin; 14 Japanese and one European in steerage. For Shanghai:—Mr. and Mrs. C. H. C. Möller and 3 children in cabin. For Kobe and ports:—5 Japanese, 2 Europeans, and 12 Chinese in steerage.
 Per Japanese steamer **Saito Maru**, from Shanghai via ports:—Mr. A. Cushing, Mr. M. Stempel, Dr. Kato, Mr. G. Miyake, Mr. Fujii, Mr. Arthur Wilm, Miss Tominaga, General C. Ikonderberg, General Von Paikan, Messrs. Kassianow, Flood, K. Yasukawa, Y. Nagata, G. Yokomaki, S. Tanimichi, Auiliatre, Professor W. K. Burton, Messrs. Z. Hamano, A. Levy, Takahashi, T. Matsuo, Hitching, S. Takahashi, Kendrick, H. B. Eden, Captain Ono, Messrs. G. Wa Boku, Kan Oh Ri, Bailord, S. Nojiri, and S. Osaki in cabin; Mrs. Chiura, Mr. Matsuda, Miss Y. Tominaga, Messrs. Asada, Martin, Ryan, Saphiere, Fukama, Mackenzie, Lawretti, M. Mihara, H. Nishida, Mrs. Nishida, Messrs. M. Fukuda, Higuchi, Inouye, Yebira, Onodera, Kan Tetsu Ho, Ju Shohitsu, M. Yueno, Minamishima, Osumi, Schinell, and Dr. Suzuki in second class, and 116 Japanese in steerage.

DEPARTED.

Per French steamer **Natal**, for Shanghai via Kobe:—Mr. J. Thompson, Mr. W. Daniels, Mr. E. Bethell, Mr. and Mrs. Graff, Mr. and Mrs. J. Magee and boy, Mr. and Mrs. S. Ellsworth and boy, Mr. and Mrs. H. Ziegfeld and 2 children, Mr. and Mrs. H. Horsey, Mr. and Mrs. Carroll and 4 children, Mrs. Connelly and 2 children, Miss E. Rubbit, Mr. F. Heinlein, Mr. E. Schussel, Mr. Ackerman, Captain J. Beusen, Lieut. and Mrs. Mathews, Mr. and Mrs. Sands, Messrs. Simpkins, H. Howard, H. Bretschneider, J. C. Corner, H. Pidgeon, Miss Elsie Adair, Mrs. J. Jar-dyne, Messrs. B. Vanderlip, J. Emmet, W. Kenake, T. Yoshida, F. Collins, Dr. and Mrs. Ringer, Mr. and Mrs. H. Howard, Mr. and Mrs. Mathews and child, Major and Mrs. Henham, Captain and Mrs. Bunjee and 3 infants, Mr. Deslandres, Mr. F. Mittau, Mr. J. Mittau, Lieut. Voisin, Mr. Muraour, Mr. Ray, Miss Ray, Miss E. Montgomery, Miss K. Schaeffer, Captain Venturme, Mr. Simon, Mr. Spieler, Mrs. Siwosky and 4 children, and Mr. Oitaviani in cabin.
 Per Japanese steamer **Yokohama Maru**, for Kobe:—Mr. F. S. Blackwell, Mr. Y. Murata, Mr. E. T. Shorland, Mr. K. Matsuda, Miss Patton, Miss Evans, Master W. Hall, Master V. Hall, Mr. G. Saji, Mr. Y. Matsudaira, and Mr. T. Ozawa in cabin; Messrs. F. Kato, T. Morikawa, T. Koide, K. Hattori, K. Kagima, and S. Tagiro in second class. For Shimonooseki:—Mrs. Momoko Kurogi in cabin; Mrs. Shimamura, Mr. H. Miyake, and Mr. K. Katata in second class. For Nagasaki:—Mr. G. Kato and Mr. R. Deura in cabin; Mr. K. Yotsumoto in second class. For Shanghai:—Rev. and Mrs. Edward James, Miss Sarah Peters, Miss M. C. Robinson, Miss S. R. Martin, Miss J. Sanders, Miss Clara E. Merrill, Miss Ida Deavers, Miss Ida Kahn, Miss Mary Stone, Dr. G. L. Hendry and family, Misses Low (3), Miss Ella Leverette, Miss M. J. Gates, Miss Margaret Polk, Miss M. Allen, Miss E. M. Gary, Miss Reynolds, Mrs. Howitz, Mr. R. W. Lambuth, Mr. Tsong, Mr. T. Bunt, Mrs. Bunt, Mr. W. Platt, Mrs. Laing and child, and Mr. M. Yagawa in cabin; 209 passengers in steerage in all ports.

Per British steamer **Belgia**, for San Francisco:—Dr. and Mrs. W. R. Scroggs, Mrs. R. Marshall Allen, Prince Michel Hilko and servant, Prince Michel A. Hilko, Mr. G. Tschertkoff, and Mr. V. Bolchakoff in cabin.
 Per American steamer **City of Rio de Janeiro**, for Hongkong via Nagasaki:—Miss W. L. Merriman, Rev. and Mrs. G. F. Shepherd, Rev. H. G. C. Hollock, Miss A. L. Howe, Mrs. Nepean, Mrs. J. C. Leonard, Commander Scheine, Commander Egomishoff, Mr. Frank Burton, Lieut. Holland, and Dr. E. Bailey in cabin.

CARGOES.

Per French steamer **Natal**, for Shanghai via Kobe:—Raw Silk for Europe, 285 bales; Waste Silk for Europe, 44 bales.
 Per Japanese steamer **Yokohama Maru**, for Shanghai via ports:—Treasure, \$1,500.
 Per British steamer **Belgia**, for San Francisco:—

American	2.20	to 2.22

SUGAR.

Brown—Sales have exceeded arrivals and prices are the two better all round. The business done has been in China and Manila sorts. Takao quiet and nominal. White—Something done (but not much) both in Ordinary and Refined. Market steady.

	PER CENT.
Brown Takao	\$4.00 to 4.05
Brown Manila	5.00 to 5.15
Brown Daiteng	3.55 to 3.60
Brown Canton	3.45 to 4.55
White Java and Penang	7.00 to 7.10
White Refined	7.00 to 9.00

EXPORTS.
RAW SILK.

A fair start has at last been made for the New York trade and the Pacific steamers this week have had some cargo. Considerable buying also for Europe in fine Filatures at quotations. This little revival has encouraged the native silkmen, who consequently pursue their usual course of asking "more money." The move in stock here has, however, brought forward more silk from the producing districts, and buyers are not so keen at top figures.

QUOTATIONS.	
Filatures—Extra 9/11, 10/12 den.	\$810 to 820
Filatures—Extra 13/15, 14/16 den.	760 to 770

BISSET & URE'S SHARE REPORT.

Yokohama, September 21st.

Telegraphic advices from Hongkong report that there are buyers of H. & K. Wharfs at \$55.50 and of Hongkong Lands at \$75. Hongkong Lands are weaker with sellers at \$192 per cent. premium.

Grand Hotels have been placed at \$170 but there are now no sellers under \$180. Club Hotels are on offer at \$69. Breweries have been placed at \$250.

Yokohama, September 23rd.

We hear by wire that H. and K. Wharfs have risen to \$57 with buyers at that rate, whilst H. and S. Banks have declined to 191 per cent., at which rate shares are offering in Hongkong. At \$57 H. and K. Wharfs were sold to Hongkong. Later advices, also by wire, report that there are enquiries for H. & K. Wharfs at \$58, at which rate shares might be placed to the Colony.

Grand Hotels have been placed to-day locally at \$180. Club Hotels are offering at \$69.

Yokohama, September 25th.

Telegraphic advices from Hongkong report the following changes in the share market:—Hongkong Banks are quoted at 191 per cent. premium, steady; Hongkong Lands \$76 Sellers; China Fires \$90 Buyers; H. & K. Wharfs \$58 Buyers, \$59 Sellers; Douglas's \$70 Sales; H. C. & M. Steamboats \$33.50 Sellers; Panjoni Mines \$10 Buyers; Raub Mines \$5.50 Buyers; Balmoral Mines \$2.50 Sellers; National Bank \$26.50 Sellers; Indo-China \$45 Sellers, Straits \$27.40 Sales; Unions \$250 Sales, and Traders \$82 Sellers.

H. & K. Wharfs have changed hands locally to-day at \$58.

Brett & Co.'s Shares have been sold to-day at \$8.50. Langfeldts and Debentures of kinds are enquired for at quotations.

1Y.

"Disfigured For Life"

Is the despairing cry of thousands afflicted with

Unsightly skin diseases.

Do you realize what this disfiguration means to sensitive souls?

It means isolation, seclusion.

It is a bar to social and business success.

Do you wonder that despair seizes upon these sufferers when

Doctors fail,

Standard remedies fail,

And nostrums prove worse than useless?

Skin diseases are most obstinate to cure or even relieve.

It is easy to claim to cure them, but quite another thing to do so.

CUTICURA REMEDIES

Have earned the right to be called Skin Specifics—

Because for years they have met with most remarkable success.

There are cases that they cannot cure, but they are few indeed.

It is no long-drawn-out, expensive experiment.

25c. invested in a tablet of

CUTICURA SOAP

Will prove most convincing.

In short,

CUTICURA WORKS WONDERS

And its cures are simply marvellous.

SPEEDY CURE TREATMENT.—Warm baths with CUTICURA SOAP, gentle applications of CUTICURA (ointment), followed by mild doses of CUTICURA RESOLVENT (the new blood purifier).

Sold throughout the world. British depot: F. NEWBERRY & SON, 1, King Edward-st., London, & C. J. FORTY, DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U.S.A.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation. Mr. J. T. Coover, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World. May 21, 1896.

FOR SALE,

Strongly bound in Leather and Cloth, with a Full Index,
HALF-YEARLY VOLUMES OF
THE "JAPAN WEEKLY MAIL."

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, OCT. 3RD, 1896.

BIRTHS.

On the 2nd Oct., at No. 7-C, Bluff, the wife of W. W. CAMPBELL of a Son.

On the 2nd October, at No. 159, Bluff, the wife of CHARLES V. SALE of a Son.

MARRIAGE.

At the Union Church, Yokohama, on the 26th of September, by the Rev. H. Loomis, Dr. J. H. WELLS, of Pyeng Yang, Korea, to Miss S. L. RIBBLE of Rhoads, Va., U.S.A.

SUMMARY OF NEWS.

A RUSSIAN fleet is cruising off the mouth of the Bosphorus.

THE *Tateyama* (of the Kure naval station), the *Kanju* (Yokosuka naval station), the *Manju*

(Sasebo), and the *Binsho* (Kure), will be struck off the list of effective men-of-war.

H.E. PRINCE KONOYE has received the Grand Insignia of the Imperial Paulownia.

SOME 2,000 troops left Yokohama on Wednesday to relieve the garrisons in Formosa.

THE Merchants' Bank, of Matsuyama, has decided to increase its capital to yen 400,000.

PRINCE KONOYE, it is said, will succeed to the vacant chair of President of the House of Peers.

YOKOHAMA has sent six, and Kobe five, cricketers to represent Japan at the Shanghai cricket week.

An athletic sports meeting is projected by the Y.C. & A.C. for the first Saturday in November.

OWING to tightness in the Kyoto money market the rate of interest has risen there to *sen* 3.3 per diem.

COUNT ITAGAKI TAISUKE (who holds the rank of *Shō-sammi*) has received the first-class of the Rising Sun.

THE presentation of Colours to the new regiments will take place in the presence of the Emperor.

THE state of uneasiness continues in Constantinople and many Mussulmans are sending their families away.

ON the 28th ult., a big meeting was held to consider the better drainage of the districts adjoining Lake Biwa.

MR. F. W. WHITEFIELD is the new Secretary, and Mr. A. B. Walford, Treasurer, of the Yokohama Choral Society.
